Being fully satisfy'd on this head, I make a third set of experiments, in order to know, whether any thing be requisite, beside the customary transition, towards the production of this phaenomenon of belief. I therefore change the first impression into an idea; and observe, that tho' the customary transition to the correlative idea still remains, yet there is in reality no belief nor perswasion. A present impression, then, is absolutely requisite to this whole operation; and when after this I compare an impression with an idea, and find that

their only difference consists in their different degrees of force and vivacity, I conclude upon the whole, that belief is a more vivid and intense conception of an idea, proceeding from its relation to a present impression.

Thus all probable reasoning is nothing but a species of sensation[21]. 'Tis not solely in poetry and music, we must follow our taste and sentiment, but likewise in philosophy. When I am convinc'd of any principle, 'tis only an idea, which strikes more strongly upon me. When I give the preference to one set of arguments above another, I do nothing but decide from my feeling concerning the superiority of their influence. Objects have no discoverable connexion together; nor is it from any other principle but custom operating upon the imagination, that we can draw any inference from the appearance of one to the existence of another.

'Twill here be worth our observation, that the past experience, on which all our judgments concerning cause and effect depend, may operate on our mind in such an insensible manner as never to be taken notice of, and may even in some measure be unknown to us. A person, who stops short in his journey upon meeting a river in his way, foresees the consequences of his proceeding forward; and his knowledge of these consequences is convey'd to him by past experience, which informs him of such certain conjunctions of causes and effects. But can we think, that on this occasion he reflects on any past experience, and calls to remembrance instances, that he has seen or heard of, in order to discover the effects of water on animal bodies? No surely; this is not the method, in which he proceeds in his reasoning. The idea of sinking is so closely connected with that of water, and the idea of suffocating with that of sinking, that the mind makes the transition without the assistance of the memory. The custom operates before we have time for reflection.

The objects seem so inseparable, that we interpose not a moment's delay in passing from the one to the other. But as this transition proceeds from experience, and not from any primary connexion betwixt the ideas, we must necessarily acknowledge, that experience may produce a belief and a judgment of causes and effects by a secret operation, and without being once thought of. This removes all pretext, if there yet remains any, for asserting that the mind is convinc'd by reasoning of that principle, that instances of

which we have no experience, must necessarily resemble those, of which we have. For we here find, that the understanding or imagination can draw inferences from past experience, without reflecting on it; much more without forming any principle concerning it, or reasoning upon that principle.

In general we may observe, that in all the most established and uniform conjunctions of causes and effects, such as those of gravity, impulse, solidity, etc. the mind never carries its view expressly to consider any past experience: Tho' in other associations of objects, which are more rare and unusual, it may assist the custom and transition of ideas by this reflection. Nay we find in some cases, that the reflection produces the belief without the custom; or more properly speaking, that the reflection produces the custom in an oblique and artificial manner. I explain myself. 'Tis certain, that not only in philosophy, but even in common life, we may attain the knowledge of a particular cause merely by one experiment, provided it be made with judgment, and after a careful removal of all foreign and superfluous circumstances. Now as after one experiment of this kind, the mind, upon the appearance either of the cause or the effect, can draw an inference concerning the existence of its correlative; and as a habit can never be acquir'd merely by one instance; it may be thought, that belief cannot in this case be esteem'd the effect of custom. But this difficulty will vanish, if we consider, that tho' we are here suppos'd to have had only one experiment of a particular effect, yet we have many millions to convince us of this principle; that like objects placed in like circumstances, will always produce like effects; and as this principle has established itself by a sufficient custom, it bestows an evidence and firmness on any opinion, to which it can be apply'd. The connexion of the ideas is not habitual after one experiment: but this connexion is comprehended under another principle, that is habitual; which brings us back to our hypothesis. In all cases we transfer our experience to instances, of which we have no experience, either expressly or tacitly, either directly or indirectly.

I must not conclude this subject without observing, that 'tis very difficult to talk of the operations of the mind with perfect propriety and exactness; because common language has seldom made any very nice distinctions among them, but has generally call'd by the same term all such as nearly resemble each other. And as this is a source

almost inevitable of obscurity and confusion in the author;so it may frequently give rise to doubts and objections in the reader,which otherwise he wou'd never have dream'd of. Thus my general position, that an opinion or belief is nothing but a strong and lively idea deriv'd from a present impression related to it, maybe liable to the following objection, by reason of a little ambiguity in those words strong and lively. It may be said, that not only an impression may give rise to reasoning, but that an idea may also have the same influence; especially upon my principle, that all our ideas are deriv'd-from correspondent impressions. For suppose I form at present an idea, of which I have forgot the correspondent impression, I am able to conclude from this idea, that such an impression did once exist; and as this conclusion is attended with belief, it may be ask'd,from whence are the qualities of force and vivacity[22] deriv'd,which constitute this belief? And to this I answer very readily, from the present idea. For as this idea is not here considered, as the representation of any absent object, but as a real perception in the mind, of which we are intimately conscious, it must be able to bestow on whatever is related to it the same quality, call it firmness, or solidity, or force,or vivacity, with which the mind reflects upon it, and is assur'd of its present existence. The idea here supplies the place of an impression, and is entirely the same, so far as regards our present purpose.

Upon the same principles we need not be surpriz'd to hear of the remembrance of an idea: that is, of the idea of an idea, and of its force and vivacity superior to the loose conceptions of the imagination. In thinking of our past thoughts we not only delineate out the objects, of which we were thinking, but also conceive the action of the mind in the meditation, that certain *je-ne-scai-quoi*, of which 'tis impossible to give any definition or description, but which every one sufficiently understands. When the memory offers an idea of this, and represents it as past, 'tis easily conceiv'd how that idea may have more vigour and firmness, than when we think of a past thought, of which we have no remembrance.After this any one will understand how we may form the idea of an impression and of an idea, and how we way believe the existence of an impression and of an idea.

SECT. IX

Of the effects of other relations and other habits

However convincing the foregoing arguments may appear, we .

must not rest contented with them, but must turn the subject on every side, in order to find some new points of view, from which we may illustrate and confirm such extraordinary, and such fundamental principles. A scrupulous hesitation to receive any new hypothesis is so laudable a disposition in philosophers, and so necessary to the examination of truth, that it deserves to be comply'd with, and requires that every argument be produc'd, which may tend to their satisfaction, and every objection remov'd, which may stop them in their reasoning.

I have often observ'd, that, beside cause and effect, the two relations of resemblance and contiguity, are to be consider'd as associating principles of thought, and as capable of conveying the imagination from one idea to another. I have also observ'd, that when of two objects connected to-ether by any of these relations, one is immediately present to the memory or senses, not only the mind is convey'd to its co-relative by means of the associating principle; but likewise conceives it with an additional force and vigour, by the united operation of that principle, and of the present impression. All this I have observ'd, in order to confirm by analogy, my explication of our judgments concerning cause and effect. But this very argument may, perhaps, be turn'd against me, and instead of a confirmation of my hypothesis, may become an objection to it. For it may be said, that if all the parts of that hypothesis be true, viz. that these three species of relation are deriv'd from the same principles; that their effects in informing and enlivening our ideas are the same; and that belief is nothing but a more forcible and vivid conception[23] of an idea; it shou'd follow, that that action of the mind may not only be deriv'd from the relation of cause and effect, but also from those of contiguity and resemblance. But as we find by experience, that belief arises only from causation, and that we can draw no inference from one object to another, except they be connected by this relation, we may conclude, that there is some error in that reasoning, which leads us into such difficulties.

This is the objection; let us now consider its solution. 'Tis evident, that whatever is present to the memory, striking upon the mind with a vivacity, which resembles an immediate impression, must become of considerable moment in all the operations of the mind, and must easily distinguish itself above the mere fictions of the imagination. Of these impressions or ideas of the memory we form a kind of system,

comprehending whatever we remember to have been present, either to our internal perception or senses; and every particular of that system, join'd to the present impressions, we are pleas'd to call a reality. But the mind stops not here. For finding, that with this system of perceptions, there is another connected by custom, or if you will, by the relation of cause or effect, it proceeds to the consideration of their ideas; and as it feels that 'tis in a manner necessarily determined to view these particular ideas, and that the custom or relation, by which it is determined, admits not of the least change, it forms them into a new system, which it likewise dignifies with the title of realities. The first of these systems is the object of the memory and senses; the second of the judgment.

'Tis this latter principle, which peoples the world, and brings us acquainted with such existences, as by their removal in time and place, lie beyond the reach of the senses and memory. By means of it I paint the universe in my imagination, and fix my attention on any part of it I please. I form an idea of Rome, which I neither see nor remember; but which is connected with such impressions as I remember to have received from the conversation and books of travellers and historians. This idea of Rome I place in a certain situation on the idea of an object, which I call the globe. I join to it the conception of a particular government, and religion, and manners. I look backward and consider its first foundation; its several revolutions, successes, and misfortunes. All this, and everything else, which I believe, are nothing but ideas; tho' by their force and settled order, arising from custom and the relation of cause and effect, they distinguish themselves from the other ideas, which are merely the offspring of the imagination.

As to the influence of contiguity and resemblance, we may observe, that if the contiguous and resembling object be comprehended in this system of realities, there is no doubt but these two relations will assist that of cause and effect, and infix the related idea with more force in the imagination. This I shall enlarge upon presently. Mean while I shall carry my observation a step farther, and assert, that even where the related object is but feign'd, the relation will serve to enliven the idea, and encrease its influence. A poet, no doubt, will be the better able to form a strong description of the Elysian fields, that he prompts his imagination by the view of a beautiful meadow or garden; as at another time he may by his fancy

place himself in the midst of these fabulous regions, that by the feign'd contiguity he may enliven his imagination.

But tho' I cannot altogether exclude the relations of resemblance and contiguity from operating on the fancy in this manner, 'tis observable that, when single, their influence is very feeble and uncertain. As the relation of cause and effect is requisite to persuade us of any real existence, so is this persuasion requisite to give force to these other relations. For where upon the appearance of an impression we not only feign another object, but likewise arbitrarily, and of our mere good-will and pleasure give it a particular relation to the impression, this can have but a small effect upon the mind; nor is there any reason, why, upon the return of the same impression, we shou'd be determined to place the same object in the same relation to it. There is no manner of necessity for the mind to feign any resembling and contiguous objects; and if it feigns such, there is as little necessity for it always to confine itself to the same, without any difference or variation. And indeed such a fiction is founded on so little reason, that nothing but pure caprice can determine the mind to form it; and that principle being fluctuating and uncertain, 'tis impossible it can ever operate with any considerable degree of force and constancy[24]. The mind foresees and anticipates the change; and even from the very first instant feels the looseness of its actions, and the weak hold it has of its objects.

And as this imperfection is very sensible in every single instance, it still encreases by experience and observation, when we compare the several instances we may remember, and form a general rule against the reposing any assurance in those momentary glimpses of light, which arise in the imagination from a feign'd resemblance and contiguity. The relation of cause and effect has all the opposite advantages. The objects it presents are fixt and unalterable. The impressions of the memory never change in any considerable degree; and each impression draws along with it a precise idea, which takes its place in the imagination as something solid and real, certain and invariable. The thought is always determin'd to pass from the impression to the idea, and from that particular impression to that particular idea, without any choice or hesitation.

But not content with removing this objection, I shall endeavour to extract from it a proof of the present doctrine. Contiguity and

resemblance have an effect much inferior to causation; but still have some effect, and augment the conviction of any opinion, and the vivacity of any conception. If this can be prov'd in several new instances, beside what we have already observ'd, 'twill be allow'd no inconsiderable argument, that belief is nothing but a lively idea related to a present impression.

To begin with contiguity; it has been remark'd among the Mahometans as well as Christians, that those pilgrims, who have seen MECCA or the HOLY LAND, are ever after more faithful and zealous believers, than those who have not had that advantage. A man, whose memory presents him with a lively image of the Red-Sea, and the Desert, and Jerusalem, and Galilee, can never doubt of any miraculous events, which are related either by Moses or the Evangelists. The lively idea of the places passes by an easy transition to the facts, which are suppos'd to have been related to them by contiguity, and encreases the belief by encreasing the vivacity of the conception. The remembrance of these fields and rivers has the same influence on the vulgar as a new argument; and from the same causes. We may form a like observation concerning resemblance.

We have remark'd, that the conclusion, which we draw from a present object to its absent cause or effect, is never founded on any qualities, which we observe in that object, consider'd in itself, or, in other words, that 'tis impossible to determine, otherwise than by experience, what will result from any phenomenon, or what has preceded it. But tho' this be so evident in itself, that it seem'd not to require any, proof[25]; yet some philosophers have imagin'd that there is an apparent cause for the communication of motion, and that a reasonable man might immediately infer the motion of one body from the impulse of another, without having recourse to any past observation. That this opinion is false will admit of an easy proof.

For if such an inference may be drawn merely from the ideas of body, of motion, and of impulse, it must amount to a demonstration, and must imply the absolute impossibility of any contrary supposition. Every effect, then, beside the communication of motion, implies a formal contradiction; and 'tis impossible not only that it can exist, but also that it can be conceiv'd. But we may soon satisfy ourselves of the contrary, by forming a clear and consistent idea of one body's moving upon another, and of its rest immediately upon the

contact, or of its returning back in the same line in which it came; or of its annihilation; or circular or elliptical motion: and in short, of an infinite number of other changes, which we may suppose it to undergo. These suppositions are all consistent and natural; and the reason, Why we imagine the communication of motion to be more consistent and natural not only than those suppositions, but also than any other natural effect, is founded on the relation of resemblance betwixt the cause and effect, which is here united to experience, and binds the objects in the closest and most intimate manner to each other, so as to make us imagine them to be absolutely inseparable. Resemblance, then, has the same or a parallel influence with experience; and as the only immediate effect of experience is to associate our ideas together, it follows, that all belief arises from the association of ideas, according to my hypothesis.

'Tis universally allow'd by the writers on optics, that the eye at all times sees an equal number of physical points, and that a man on the top of a mountain has no larger an image presented to his senses, than when he is coop'd up in the narrowest court or chamber. 'Tis only by experience that he infers the greatness of the object from some peculiar qualities of the image; and this inference of the judgment he confounds with sensation, as is common on other occasions. Now 'tis evident, that the inference of the judgment is here much more lively than what is usual in our common reasonings, and that a man has a more vivid conception of the vast extent of the ocean from the image he receives by the eye, when he stands on the top of the high promontory, than merely from hearing the roaring of the waters. He feels a more sensible pleasure from its magnificence; which is a proof of a more lively idea: And he confounds his judgment with sensation, which is another proof of it.

But as the inference is equally certain and immediate in both cases, this superior vivacity of our conception in one case can proceed from nothing but this, that in drawing an inference from the sight, beside the customary conjunction, there is also a resemblance betwixt the image and the object we infer; which strengthens the relation, and conveys the vivacity of the impression to the related idea with an easier and more natural movement.

No weakness of human nature is more universal and conspicuous than what we commonly call CREDULITY, or a too easy faith in the

testimony of others; and this weakness is also very naturally accounted for from the influence of resemblance. When we receive any matter of fact upon human testimony, our faith arises from the very same origin as our inferences from causes to effects, and from effects to causes; nor is there anything but our experience of the governing principles of human nature, which can give us any assurance of the veracity of men. But tho' experience be the true standard of this, as well as of all other judgments, we seldom regulate ourselves entirely by it; but have a remarkable propensity to believe whatever is reported, even concerning apparitions, enchantments, and prodigies, however contrary to daily experience and observation. The words or discourses of others have an intimate connexion with certain ideas in their mind; and these ideas have also a connexion with the facts or objects, which they represent.

This latter connexion is generally much over-rated, and commands our assent beyond what experience will justify; which can proceed from nothing beside the resemblance betwixt the ideas and the facts. Other effects only point out their causes in an oblique manner; but the testimony of men does it directly, and is to be considered as an image as well as an effect. No wonder, therefore, we are so rash in drawing our inferences from it, and are less guided by experience in our judgments concerning it, than in those upon any other subject.

As resemblance, when conjoin'd with causation, fortifies our reasonings; so the want of it in any very great degree is able almost entirely to destroy them. Of this there is a remarkable instance in the universal carelessness and stupidity of men with regard to a future state, where they show as obstinate an incredulity, as they do a blind credulity on other occasions. There is not indeed a more ample matter of wonder to the studious, and of regret to the pious man, than to observe the negligence of the bulk of mankind concerning their approaching condition; and 'tis with reason, that many eminent theologians have not scrupled to affirm, that tho' the vulgar have no formal principles of infidelity, yet they are really infidels in their hearts, and have nothing like what we can call a belief of the eternal duration of their souls. For let us consider on the one hand what divines have display'd with such eloquence concerning the importance of eternity; and at the same time reflect, that tho' in matters of rhetoric we ought to lay our account with some exaggeration, we must in this

case allow, that the strongest figures are infinitely inferior to the subject: And after this let us view on the other hand, the prodigious security of men in this particular: I ask, if these people really believe what is inculcated on them, and what they pretend to affirm; and the answer is obviously in the negative. As belief is an act of the mind arising from custom, 'tis not strange the want of resemblance should overthrow what custom has established, and diminish the force of the idea, as much as that latter principle encreases it. A future state is so far remov'd from our comprehension, and we have so obscure an idea of the manner, in which we shall exist after the dissolution of the body, that all the reasons we can invent, however strong in themselves, and however much assisted by education [26], are never able with slow imaginations to surmount this difficulty, or bestow a sufficient authority and force on the idea. I rather choose to ascribe this incredulity to the faint idea we form of our future condition, deriv'd from its want of resemblance to the present life, than to that deriv'd from its remoteness. For I observe, that men are everywhere concern'd about what may happen after their death, provided it regard this world; and that there are few to whom their name, their family, their friends, and their country are in any period of time entirely indifferent.

And indeed the want of resemblance in this case so entirely destroys belief, that except those few, who upon cool reflection on the importance of the subject, have taken care by repeated meditation to imprint in their minds the arguments for a future state, there scarce are any, who believe the immortality of the soul with a true and established judgment; such as is deriv'd from the testimony of travellers and historians. This appears very conspicuously wherever men have occasion to compare the pleasures and pains, the rewards and punishments of this life with those of a future; even tho' the case does not concern themselves, and there is no violent passion to disturb their judgment. The Roman Catholics are certainly the most zealous of any sect in the Christian world; and yet you'll find few among the more sensible people of that communion who do not blame the Gunpowder-treason, and the massacre of St.

Bartholomew, as cruel and barbarous, tho' projected or executed against those very people, whom without any scruple they condemn to eternal and infinite punishments. All we can say in excuse for this inconsistency is, that they really do not believe what they affirm

concerning a future state; nor is there any better proof of it than the very inconsistency.

We may add to this a remark; that in matters of religion[27]men take a pleasure in being terrify'd, and that no preachers are so popular, as those who excite the most dismal and gloomy passions. In the common affairs of life, where we feel and are penetrated with the solidity of the subject, nothing can be more disagreeable than fear and terror; and 'tis only in dramatic performances and in religious discourses, that they ever give pleasure. In these latter cases the imagination reposes itself indolently on the idea; and the passion,being soften'd by the want of belief in the subject, has no more than the agreeable effect of enlivening the mind, and fixing the attention.

The present hypothesis will receive additional confirmation,if we examine the effects of other kinds of custom, as well as of other relations. To understand this we must consider, that custom,to which I attribute all belief and reasoning, may operate upon the mind in invigorating an idea after two several ways. For supposing that in all past experience we have found two objects to have been always conjoin'd together, 'tis evident, that upon the appearance of one of these objects in an impression, we must from custom make an easy transition to the idea of that object, which usually attends it; and by means of the present impression and easy transition must conceive that idea in a stronger and more lively manner, than we do any loose floating image of the fancy. But let us next suppose, that a mere idea alone, without any of this curious and almost artificial preparation, shou'd frequently make its appearance in the mind,this idea must by degrees acquire a facility and force; and both by its firm hold and easy introduction distinguish itself from any new and unusual idea. This is the only particular, in which these two kinds of custom agree; and if it appear, that their effects on the judgment,are similar and proportionable, we may certainly conclude, that the foregoing explication of that faculty is satisfactory. But can we doubt of this agreement in their influence on the judgment, when we consider the nature and effects Of EDUCATION?

All those opinions and notions of things, to which we have been accustomed from our infancy, take such deep root, that 'tis impossible for us, by all the powers of reason and experience, to eradicate them;

and this habit not only approaches in its influence, but even on many occasions prevails over that which arises from the constant and inseparable union of causes and effects. Here we must not be contented with saying, that the vividness of the idea produces the belief: We must maintain that they are individually the same.

The frequent repetition of any idea infixes it in the imagination; but cou'd never possibly of itself produce belief, if that act of the mind was, by the original constitution of our natures, annex'd only to a reasoning and comparison [28] of ideas. Custom may lead us into some false comparison of ideas. This is the utmost effect we can conceive of it. But 'tis certain it cou'd never supply the place of that comparison, nor produce any act of the mind, which naturally belong'd to that principle.

A person, that has lost a leg or an arm by amputation, endeavours for a long time afterwards to serve himself with them.

After the death of any one, 'tis a common remark of the whole family, but especially of the servants, that they can scarce believe him to be dead, but still imagine him to be in his chamber or in any other place, where they were accustomed to find him. I have often heard in conversation, after talking of a person, that is any way celebrated, that one, who has no acquaintance with him, will say, I have never seen such-a-one, but almost fancy I have; so often have I heard talk of him. All these are parallel instances.

If we consider this argument from education in a proper light, 'twill appear very convincing; and the more so, that 'tis founded on one of the most common phaenomena, that is any where to be met with. I am persuaded, that upon examination we shall find more than one half of those opinions, that prevail among mankind, to be owing to education, and that the principles, which are thus implicitly embrac'd, overballance those, which are owing either to abstract reasoning or experience. As liars, by the frequent repetition of their lies, come at last to remember them; so the judgment, or rather the imagination, by the like means, may have ideas so strongly imprinted on it, and conceive them in so full a light, that they may operate upon the mind in the same manner with those, which the senses, memory or reason present to us. But as education is an artificial and not a natural cause, and as its maxims are frequently contrary to reason, and even to themselves in different times and places, it is never upon that

account recogniz'd by philosophers; tho' in reality it be built almost on the same foundation of custom and repetition as our reasonings from causes and effects.

SECT. X

Of the influence of belief

But tho' education be disclaim'd by philosophy, as a fallacious ground of assent to any opinion, it prevails nevertheless in the world, and is the cause why all systems are apt to be rejected at first as new and unusual. This perhaps will be the fate of what I have here advanc'd concerning belief, and tho' the proofs I have produc'd appear to me perfectly conclusive, I expect not to make many proselytes to my opinion. Men will scarce ever be persuaded, that effects of such consequence can flow from principles, which are seemingly so inconsiderable, and that the far greatest part of our reasonings with all our actions[29] and passions, can be deriv'd from nothing but custom and habit. To obviate this objection, I shall here anticipate a little what wou'd more properly fall under our consideration afterwards, when we come to treat of the passions and the sense of beauty.

There is implanted in the human mind a perception of pain and pleasure, as the chief spring and moving principle of all its actions. But pain and pleasure have two ways of making their appearance in the mind; of which the one has effects very different from the other. They may either appear in impression to the actual feeling, or only in idea, as at present when I mention them. 'Tis evident the influence of these upon our actions is far from being equal. Impressions always actuate the soul, and that in the highest degree; but 'tis not every idea which has the same effect. Nature has proceeded with caution in this came, and seems to have carefully avoided the inconveniences of two extremes. Did impressions alone influence the will, we should every moment of our lives be subject to the greatest calamities; because, tho' we foresaw their approach, we should not be provided by nature with any principle of action, which might impel us to avoid them. On the other hand, did every idea influence our actions, our condition would not be much mended.

For such is the unsteadiness and activity of thought, that the images of every thing, especially of goods and evils, are always wandering in the mind; and were it mov'd by every idle conception of

this kind, it would never enjoy a moment's peace and tranquillity.

Nature has, therefore, chosen a medium, and has neither bestow'd on every idea of good and evil the power of actuating the will, nor yet has entirely excluded them from this influence. Tho' an idle fiction has no efficacy, yet we find by experience, that the ideas of those objects, which we believe either are or will be existent, produce in a lesser degree the same effect with those impressions, which are immediately present to the senses and perception. The effect, then, of belief is to raise up a simple idea to an equality with our impressions, and bestow on it a like influence on the passions. This effect it can only have by making an idea approach an impression in force and vivacity. For as the different degrees of force make all the original difference betwixt an impression and an idea, they must of consequence be the source of all the differences in the effects of these perceptions, and their removal, in whole or in part, the cause of every new resemblance they acquire. Wherever we can make an idea approach the impressions in force and vivacity, it will likewise imitate them in its influence on the mind; and vice versa, where it imitates them in that influence, as in the present case, this must proceed from its approaching them in force and vivacity.

Belief, therefore, since it causes an idea to imitate the effects of the impressions, must make it resemble them in these qualities, and is nothing but a more vivid and intense conception of any idea. This, then, may both serve as an additional argument for the present system, and may give us a notion after what manner our reasonings from causation are able to operate on the will and passions.

As belief is almost absolutely requisite to the exciting our passions, so the passions in their turn are very favourable to belief; and not only such facts as convey agreeable emotions, but very often such as give pain, do upon that account become more readily the objects of faith and opinion. A coward, whose fears are easily awaken'd, readily assents to every account of danger he meets with; as a person of a sorrowful and melancholy disposition is very credulous of every thing, that nourishes his prevailing passion. When any affecting object is presented, it gives the alarm, and excites immediately a degree of its proper passion; especially in persons who are naturally inclined to that passion. This emotion passes by an easy transition to the imagination; and diffusing itself over our idea of the affecting object,

makes us form that idea with greater force and vivacity, and consequently assent to it, according to the precedent system. Admiration and surprize have the same effect as the other passions; and accordingly we may observe, that among the vulgar, quacks and projectors meet with a more easy faith upon account of their magnificent pretensions, than if they kept themselves within the bounds of moderation. The first astonishment, which naturally attends their miraculous relations, spreads itself over the whole soul, and so vivifies and enlivens the idea, that it resembles the inferences we draw from experience. This is a mystery, with which we may be already a little acquainted, and which we shall have farther occasion to be let into in the progress of this treatise.

After this account of the influence of belief on the passions, we this must proceed from its approaching them in force and vivacity.

Belief, therefore, since it causes an idea to imitate the effects of the impressions, must make it resemble them in these qualities, and is nothing but a more vivid and intense conception of any idea. This, then, may both serve as an additional argument for the present system, and may give us a notion after what manner our reasonings from causation are able to operate on the will and passions. As belief is almost absolutely requisite to the exciting our passions, so the passions in their turn are very favourable to belief; and not only such facts as convey agreeable emotions, but very often such as give pain, do upon that account become more readily the objects of faith and opinion. A coward, whose fears are easily awaken'd, readily assents to every account of danger he meets with; as a person of a sorrowful and melancholy disposition is very credulous of every thing, that nourishes his prevailing passion. When any affecting object is presented, it gives the alarm, and excites immediately a degree of its proper passion; especially in persons who are naturally inclined to that passion. This emotion passes by an easy transition to the imagination; and diffusing itself over our idea of the affecting object, makes us form that idea with greater force and vivacity, and consequently assent to it, according to the precedent system. Admiration and surprize have the same effect as the other passions; and accordingly we may observe, that among the vulgar, quacks and projectors meet with a more easy faith upon account of their magnificent pretensions, than if they kept themselves within the bounds of moderation. The first astonishment, which naturally attends their miraculous relations, spreads itself over

the whole soul, and so vivifies and enlivens the idea, that it resembles the inferences we draw from experience. This is a mystery, with which we may be already a little acquainted, and which we shall have farther occasion to be let into in the progress of this treatise.

After this account of the influence of belief on the passions, we this must proceed from its approaching them in force and vivacity. Belief, therefore, since it causes an idea to imitate the effects of the impressions, must make it resemble them in these qualities, and is nothing but a more vivid and intense conception of any idea. This, then, may both serve as an additional argument for the present system, and may give us a notion after what manner our reasonings from causation are able to operate on the will and passions.

As belief is almost absolutely requisite to the exciting our passions, so the passions in their turn are very favourable to belief; and not only such facts as convey agreeable emotions, but very often such as give pain, do upon that account become more readily the objects of faith and opinion. A coward, whose fears are easily awaken'd, readily assents to every account of danger he meets with; as a person of a sorrowful and melancholy disposition is very credulous of every thing, that nourishes his prevailing passion. When any affecting object is presented, it gives the alarm, and excites immediately a degree of its proper passion; especially in persons who are naturally inclined to that passion. This emotion passes by an easy transition to the imagination; and diffusing itself over our idea of the affecting object, makes us form that idea with greater force and vivacity, and consequently assent to it, according to the precedent system. Admiration and surprize have the same effect as the other passions; and accordingly we may observe, that among the vulgar, quacks and projectors meet with a more easy faith upon account of their magnificent pretensions, than if they kept themselves within the bounds of moderation. The first astonishment, which naturally attends their miraculous relations, spreads itself over the whole soul, and so vivifies and enlivens the idea, that it resembles the inferences we draw from experience. This is a mystery, with which we may be already a little acquainted, and which we shall have farther occasion to be let into in the progress of this treatise.

After this account of the influence of belief on the passions, we shall find less difficulty in explaining its effects on the

imagination, however extraordinary they may appear. 'Tis certain we cannot take pleasure in any discourse, where our judgment gives no assent to those images which are presented to our fancy. The conversation of those who have acquir'd a habit of lying, tho' in affairs of no moment, never gives any satisfaction; and that because those ideas they present to us, not being attended with belief, make no impression upon the mind. Poets themselves, tho' liars by profession, always endeavour to give an air of truth to their fictions; and where that is totally neglected, their performances, however ingenious, will never be able to afford much pleasure. In short, we may observe, that even when ideas have no manner of influence on the will and passions[30], truth and reality are still requisite, in order to make them entertaining to the imagination.

But if we compare together all the phenomena that occur on this head, we shall find, that truth, however necessary it may seem in all works of genius, has no other effect than to procure an easy reception for the ideas, and to make the mind acquiesce in them with satisfaction, or at least without reluctance. But as this is an effect, which may easily be supposed to flow from that solidity and force, which, according to my system, attend those ideas that are established by reasonings from causation; it follows, that all the influence of belief upon the fancy may be explained from that system. Accordingly we may observe, that wherever that influence arises from any other principles beside truth or reality, they supply its place, and give an equal entertainment to the imagination.

Poets have form'd what they call a poetical system of things, which tho' it be believ'd neither by themselves nor readers, is commonly esteem'd a sufficient foundation for any fiction. We have been so much accustomed to the names of MARS, JUPITER, VENUS, that in the same manner as education infixes any opinion, the constant repetition of these ideas makes them enter into the mind with facility, and prevail upon the fancy, without influencing the judgment. In like manner tragedians always borrow their fable, or at least the names of their principal actors, from some known passage in history; and that not in order to deceive the spectators; for they will frankly confess, that truth is not in any circumstance inviolably observed: but in order to procure a more easy reception into the imagination for those extraordinary events, which they represent.

But this is a precaution, which is not required of comic poets, whose personages and incidents, being of a more familiar kind, enter easily into the conception, and are received without any such formality, even tho' at first sight they be known to be fictitious, and the pure offspring of the fancy. This mixture of truth and falsehood in the fables of tragic poets not only serves our present purpose, by shewing, that the imagination can be satisfy'd without any absolute belief or assurance; but may in another view be regarded as a very strong confirmation of this system. 'Tis evident, that poets make use of this artifice of borrowing the names of their persons, and the chief events of their poems, from history, in order to procure a more easy reception for the whole, and cause it to make a deeper impression on the fancy and affections.

The several incidents of the piece acquire a kind of relation by being united into one poem or representation; and if any of these incidents be an object of belief, it bestows a force and vivacity on the others, which are related to it. The vividness of the first conception diffuses itself along the relations, and is convey'd, as by so many pipes or canals, to every idea that has any communication with the primary one. This, indeed, can never amount to a perfect assurance; and that because the union among the ideas is, in a manner, accidental: But still it approaches so near, in its influence, as may convince us, that they are deriv'd from the same origin. Belief must please the imagination by means of the force and vivacity which attends it; since every idea, which has force and vivacity, is found to be agreeable to that faculty.

To confirm this we may observe, that the assistance is mutual betwixt the judgment and fancy, as well as betwixt the judgment and passion; and that belief not only gives vigour to the imagination, but that a vigorous and strong imagination is of all talents the most proper to procure belief and authority. 'Tis difficult for us to withhold our assent from what is painted out to us in all the colours of eloquence; and the vivacity produc'd by the fancy is in many cases greater than that which arises from custom and experience. We are hurried away by the lively imagination of our author or companion; and even he himself is often a victim to his own fire and genius.

Nor will it be amiss to remark, that as a lively imagination very often degenerates into madness or folly, and bears it a great resemblance in its operations; so they influence the judgment after the

same manner, and produce belief from the very same principles.

When the imagination, from any extraordinary ferment of the blood and spirits, acquires such a vivacity as disorders all its powers and faculties, there is no means of distinguishing betwixt truth and falshood; but every loose fiction or idea, having the same influence as the impressions of the memory, or the conclusions of the judgment, is receiv'd on the same footing, and operates with equal force on the passions. A present impression and a customary transition are now no longer necessary to enliven our ideas. Every chimera of the brain is as vivid and intense as any of those inferences, which we formerly dignify'd with the name of conclusions concerning matters of fact, and sometimes as the present impressions of the senses.

[The following three paragraphs are inserted from the appendix.]

We may observe the same effect of poetry in a lesser degree; and this is common both to poetry and madness, that the vivacity they bestow on the ideas is not deriv'd from the particular situations or connexions of the objects of these ideas, but from the present temper and disposition of the person. But how great soever the pitch may be, to which this vivacity rises, 'tis evident, that in poetry it never has the same feeling with that which arises in the mind, when we reason, tho' even upon the lowest species of probability. The mind can easily distinguish betwixt the one and the other; and whatever emotion the poetical enthusiasm may give to the spirits, 'tis still the mere phantom of belief or persuasion. The case is the same with the idea, as with the passion it occasions. There is no passion of the human mind but what may arise from poetry; tho' at the same time the feelings of the passions are very different when excited by poetical fictions, from what they are when they are from belief and reality. A passion, which is disagreeable in real life, may afford the highest entertainment in a tragedy, or epic poem. In the latter case, it lies not with that weight upon us: It feels less firm and solid: And has no other than the agreeable effect of exciting the spirits, and rousing the attention. The difference in the passions is a clear proof of a like difference in those ideas, from which the passions are deriv'd. Where the vivacity arises from a customary conjunction with a present impression; tho' the imagination may not, in appearance, be so much mov'd; yet there is always something more forcible and real in its actions, than in the fervors of poetry and eloquence. The force of our mental actions in

this case, no more than in any other, is not to be measur'd by the apparent agitation of the mind. A poetical description may have a more sensible effect on the fancy, than an historical narration. It may collect more of those circumstances, that form a compleat image or picture. It may seem to set the object before us in more lively colours. But still the ideas it presents are different to the feeling from those, which arise from the memory and the judgment. There is something weak and imperfect amidst all that seeming vehemence of thought and sentiment, which attends the fictions of poetry.

We shall afterwards have occasion to remark both the resemblance and differences betwixt a poetical enthusiasm, and a serious conviction. In the mean time I cannot forbear observing, that the great difference in their feeling proceeds in some measure from reflection and general rules[31]. We observe, that the vigour of conception, which fictions receive from poetry and eloquence, is a circumstance merely accidental, of which every idea is equally susceptible; and that such fictions are connected with nothing that is real. This observation makes us only lend ourselves, so to speak, to the fiction: But causes the idea to feel very different from the eternal establish'd persuasions founded on memory and custom. They are somewhat of the same kind: But the one is much inferior to the other, both in its causes and effects.

A like reflection on general rules keeps us from augmenting our belief upon every encrease of the force and vivacity of our ideas.

Where an opinion admits of no doubt, or opposite probability, we attribute to it a full conviction: tho' the want of resemblance, or contiguity, may render its force inferior to that of other opinions.'Tis thus the understanding corrects the appearances of the senses, and makes us imagine, that an object at twenty foot distance seems even to the eye as large as one of the same dimensions at ten.

We may observe the same effect of poetry in a lesser degree; only with this difference, that the least reflection dissipates the illusions of poetry, and Places the objects in their proper light.'Tis however certain, that in the warmth of a poetical enthusiasm, a poet has a, counterfeit belief, and even a kind of vision of his objects: And if there be any shadow of argument to support this belief, nothing contributes more to his full conviction than a blaze of poetical figures and images, which have their effect upon the poet himself, as well as upon his

readers.

SECT. XI

Of the probability of chances

But in order to bestow on this system its full force and evidence[32], we must carry our eye from it a moment to consider its consequences, and explain from the same principles some other species of reasoning, which are deriv'd from the same origin.

Those philosophers, who have divided human reason into knowledge and probability, and have defin'd the first to be that evidence, which arises from the comparison of ideas, are oblig'd to comprehend all our arguments from causes or effects under the general term of probability. But tho' every one be free to use his terms in what sense he pleases; and accordingly in the precedent part of this discourse, I have follow'd this method of expression; 'tis however certain, that in common discourse we readily affirm, that many arguments from causation exceed probability, and may be receiv'd as a superior kind of evidence.' One wou'd appear ridiculous, who wou'd say, that 'tis only probable the sun will rise-tomorrow, or that all men must dye; tho' 'tis plain we have no further assurance of these facts, than what experience affords us.

For this reason, 'twould perhaps be more convenient, in order at once to preserve the common signification of words, and mark the several degrees of evidence, to distinguish human reason into three kinds, viz. that from knowledge, from proofs, and from probabilities. By knowledge, I mean the assurance arising from the comparison of ideas. By proofs, those arguments, which are deriv'd from the relation of cause and effect, and which are entirely free from doubt and uncertainty. By probability, that evidence, which is still attended with uncertainty. 'Tis this last species of reasoning, I proceed to examine.

Probability or reasoning from conjecture may be divided into two kinds, viz. that which is founded on chance, and that which arises from causes. We shall consider each of these in order.

The idea of cause and effect is deriv'd from experience, which presenting us with certain objects constantly conjoin'd with each other, produces such a habit of surveying them in that relation, that

we cannot without a sensible violence survey them iii any other.

On the other hand, as chance is nothing real in itself, and, properly speaking, is merely the negation of a cause, its influence on the mind is contrary to that of causation; and 'tis essential to it, to leave the imagination perfectly indifferent, either to consider the existence or non-existence of that object, which is regarded as contingent. A cause traces the way to our thought, and in a manner forces us to survey such certain objects, in such certain relations. Chance can only destroy this determination of the thought, and leave the mind in its native situation of indifference; in which, upon the absence of a cause, 'tis instantly re-instated.

Since therefore an entire indifference is essential to chance, no one chance can possibly be superior to another, otherwise than as it is compos'd of a superior number of equal chances. For if we affirm that one chance can, after any other manner, be superior to another, we must at the same time affirm, that there is something, which gives it the superiority, and determines the event rather to that side than the other: That is, in other words, we must allow of a cause, and destroy the supposition of chance; which we had before established. A perfect and total indifference is essential to chance, and one total indifference can never in itself be either superior or inferior to another. This truth is not peculiar to my system, but is acknowledged by every one, that forms calculations concerning chances.

And here 'tis remarkable, that tho' chance and causation be directly contrary, yet 'tis impossible for us to conceive this combination of chances, which is requisite to render one hazard superior to another, without supposing a mixture of causes among the chances, and a conjunction of necessity in some particulars, with a total indifference in others. Where nothing limits the chances, every notion, that the most extravagant fancy can form, is upon a footing of equality; nor can there be any circumstance to give one the advantage above another. Thus unless we allow, that there are some causes to make the dice fall, and preserve their form in their fall, and lie upon some one of their sides, we can form no calculation concerning the laws of hazard. But supposing these causes to operate, and supposing likewise all the rest to be indifferent and to be determined by chance, 'tis easy to arrive at a notion of a superior combination of chances. A dye that has four sides mark'd with a certain number of spots, and

only two with another, affords us an obvious and easy instance of this superiority. The mind is here limited by the causes to such a precise number and quality of the events; and at the same time is undetermined in its choice of any particular event.

Proceeding then in that reasoning, wherein we have advanc'd three steps; that chance is merely the negation of a cause, and produces a total indifference in the mind; that one negation of a cause and one total indifference can never be superior or inferior to another; and that there must always be a mixture of causes among the chances, in order to be the foundation of any reasoning: We are next to consider what effect a superior combination of chances can have upon the mind, and after what manner it influences our judgment and opinion. Here we may repeat all the same arguments we employ'd in examining that belief, which arises from causes; and may prove, after the same manner, that a superior number of chances produces our assent neither by demonstration nor probability. 'Tis indeed evident ' that we can 'never by the comparison of mere ideas make any discovery, which can be of consequence in this affairs and that 'tis impossible to prove with certainty[33], that any event must fall on that side where there is a superior number of chances. To, suppose in this case any certainty, were to overthrow what we have established concerning the opposition of chances, and their perfect equality and indifference.

Shou'd it be said, that tho' in an opposition of chances 'tis impossible to determine with certainty, on Which side the event will fall, yet we can pronounce with certainty, that 'tis more likely and probable, 'twill be on that side where there is a superior number of chances, than where there is an inferior: Shou'd this be said, I wou'd ask, what is here meant by likelihood and probability? The likelihood and probability of chances is a superior number of equal chances; and consequently when we say 'tis likely the event win fall on the side, which is superior, rather than on the inferior, we do no more than affirm, that where there is a superior number of chances there is actually a superior, and where there is an inferior there is an inferior; which are identical propositions, and of no consequence. The question is, by what means a superior number of equal chances operates upon the mind, and produces belief or assent; since it appears, that 'tis neither by arguments deriv'd from demonstration, nor from probability.

In order to clear up this difficulty, we shall suppose a person to take a dye, form'd after such a manner as that four of its sides are mark'd with one figure, or one number of spots, and two with another; and to put this dye into the box with an intention of throwing it: 'Tis plain, he must conclude the one figure to be more probable than the other, and give the preference to that which is inscrib'd on the greatest number of sides. He in a manner believes, that this will lie uppermost; tho' still with hesitation and doubt, in proportion[34] to the number of chances, which are contrary: And according as these contrary chances diminish, and the superiority encreases on the other side, his belief acquires new degrees of stability and assurance. This belief arises from an operation of the mind upon the simple and limited object before us; and therefore its nature will be the more easily discovered and explain'd. We have nothing but one single dye to contemplate, in order to comprehend one of the most curious operations of the understanding.

This dye, form'd as above, contains three circumstances worthy of our attention. First, Certain causes, such as gravity, solidity, a cubical figure, etc. which determine it to fall, to preserve its form in its fall, and to turn up one of its sides. Secondly, A certain number of sides, which are suppos'd indifferent. Thirdly, A certain figure inscrib'd on each side. These three particulars form the whole nature of the dye, so far as relates to our present purpose; and consequently are the only circumstances regarded by the mind in its forming a judgment concerning the result of such a throw. Let us, therefore, consider gradually and carefully what must be the influence of these circumstances on the thought and imagination.

First, we have already observ'd, that the mind is determin'd by custom to pass from any cause to its effect, and that upon the appearance of the one, 'tis almost impossible for it not to form an idea of the other. Their constant conjunction in past instances has produc'd such a habit in the mind, that it always conjoins them in its thought, and infers the existence of the one from that of its usual attendant. When it considers the dye as no longer supported by the box, it can not without violence regard it as suspended in the air; but naturally places it on the table, and views it as turning up one of its sides. This is the effect of the intermingled causes, which are requisite to our forming any calculation concerning chances.

Secondly, 'tis suppos'd, that tho' the dye be necessarily determin'd to fall, and turn up one of its sides, yet there is nothing to fix the particular side, but that this is determin'd entirely by chance. The very nature and essence of chance is a negation of causes, and the leaving the mind in a perfect indifference among those events, which are suppos'd contingent. When therefore the thought is determined by the causes to consider the dye as falling and turning up one of its sides, the chances present all these sides as equal, and make us consider every one of them, one after another, as alike probable and possible. The imagination passes from the cause, viz. the throwing of the dye, to the effect, viz. the turning up one of the six sides; and feels a kind of impossibility both of stopping short in the way, and of forming any other idea. But as all these six sides are incompatible, and the dye cannot turn up above one at once, this principle directs us not to consider all of them at once as lying uppermost; which we look upon as impossible: Neither does it direct us with its entire force to any particular side; for in that case this side wou'd be considered as certain and inevitable; but it directs us to the whole six sides after such a manner as to divide its force equally among them. We conclude in general, that some one of them must result from the throw: We run all of them over in our minds: The determination of the thought is common to all; but no more of its force falls to the share of any one, than what is suitable to its proportion with the rest. 'Tis after this manner the original impulse, and consequently the vivacity of thought, arising from the causes, is divided and split in pieces by the intermingled chances.

We have already seen the influence of the two first qualities of the dye, viz. the causes, and the number and indifference of the sides, and have learn'd how they give an impulse to the thought, and divide that impulse into as many parts as there are unites in the number of sides. We must now consider the effects of the third particular, viz. the figures inscrib'd on each side. 'Tis evident that where several sides have the same figure inscribe on them, they must concur in their influence on the mind, and must unite upon one image or idea of a figure all those divided impulses, that were dispers'd over the several sides, upon which that figure is inscrib'd. Were the question only what side will be turn'd up, these are all perfectly equal, and no one cou'd ever have any advantage above another. But as the question is concerning the figure, and as the same figure is presented by more than one side: 'tis evident, that the impulses belonging to all these

sides must re-unite in that one figure, and become stronger and more forcible by the union. Four sides are suppos'd in the present case to have the same figure inscrib'd on them, and two to have another figure. The impulses of the former are, therefore, superior to those of the latter. But as the events are contrary, and 'tis impossible both these figures can be turn'd up; the impulses likewise become contrary, and the inferior destroys the superior, as far as its strength goes. The vivacity of the idea is always proportionable to the degrees of the impulse or tendency to the transition; and belief is the same with the vivacity of the idea, according to the precedent doctrine.

SECT. XII

Of the probability of causes.

What I have said concerning the probability of chances can serve to no other purpose, than to assist us in explaining the probability of causes; since 'tis commonly allow'd by philosophers, that what the vulgar call chance is nothing but a secret and conceal'd-cause. That species of probability, therefore, is what we must chiefly examine.

The probabilities of causes are of several kinds; but are all deriv'd from the same origin, viz. the association of ideas to a present impression. As the habit, which produces the association, arises from the frequent conjunction of objects, it must arrive at its perfection by degrees, and must acquire new force from each instance, that falls under our observation. The first instance has little or no force: The second makes some addition to it: The third becomes still more sensible; and 'tis by these slow steps, that our judgment arrives at a full assurance. But before it attains this pitch of perfection, it passes thro' several inferior degrees, and in all of them is only to be esteem'd a presumption or probability. The gradation, therefore, from probabilities to proofs is in many cases insensible; and the difference betwixt these kinds of evidence is more easily perceiv'd in the remote degrees, than in the near and contiguous.

'Tis worthy of remark on this occasion, that tho' the species of probability here explain'd be the first in order, and naturally takes place before any entire proof can exist, yet no one, who is arriv'd at the age of maturity, can any longer be acquainted with it. 'Tis true, nothing is more common than for people of the most advanc'd-knowledge to have attain'd only an imperfect experience of

many particular events; which naturally produces only an imperfect habit and transition: But then we must consider, that the mind, having form'd another observation concerning the connexion of causes and effects, gives new force to its reasoning from that observation; and by means of it can build an argument on one single experiment, when duly prepar'd and examin'd. What we have found once to follow from any object, we conclude will for ever follow from it; and if this maxim be not always built upon as certain, 'tis not for want of a sufficient number of experiments, but because we frequently meet with instances to the contrary; which leads us to the second species of probability, where there is a contrariety in our experience and observation.

'Twou'd be very happy for men in the conduct of their lives and actions, were the same objects always conjoin'd together, and, we had nothing to fear but the mistakes of our own judgment, without having any reason to apprehend the uncertainty of nature. But as 'tis frequently found, that one observation is contrary to another, and that causes and effects follow not in the same order, of which we have I had experience, we are oblig'd to vary our reasoning on, account of this uncertainty, and take into consideration the contrariety of events. The first question, that occurs on this head, is concerning the nature and causes of the contrariety. The vulgar, who take things according to their first appearance, attribute the uncertainty of events to such an uncertainty in the causes, as makes them often fail of their usual influence, tho' they meet with no obstacle nor impediment in their operation.

But philosophers observing, that almost in every part of nature there is contain'd a vast variety of springs and principles, which are hid, by reason of their minuteness or remoteness, find that 'tis at least possible the contrariety of events may not proceed from any contingency in the cause, but from the secret operation of contrary causes. This possibility is converted into certainty by farther observation, when they remark, that upon an exact scrutiny, a contrariety of effects always betrays a contrariety of causes, and proceeds from their mutual hindrance and opposition. A peasant can give no better reason for the stopping of any clock or watch than to say, that commonly it does not go right: But an artizan easily perceives, that the same force in the spring or pendulum has always the same influence on the wheels; but fails of its usual effect, perhaps

by reason of a grain of dust, which puts a stop to the whole movement. From the observation of several parallel instances, philosophers form a maxim, that the connexion betwixt all causes and effects is equally necessary[35], and that its seeming uncertainty in some instances proceeds from the secret opposition of contrary causes.

But however philosophers and the vulgar may differ in their explication of the contrariety of events, their inferences from it are always of the same kind, and founded on the same principles. A contrariety of events in the past may give us a kind of hesitating belief for the future after two several ways. First, By producing an imperfect habit and transition from the present impression to the related idea. When the conjunction of any two objects is frequent, without being entirely constant, the mind is determined to pass from one object to the other; but not with so entire a habit, as when the union is uninterrupted, and all the instances we have ever met with are uniform and of a piece.. We find from common experience, in our actions as well as reasonings, that a constant perseverance in any course of life produces a strong inclination and tendency to continue for the future; tho' there are habits of inferior degrees of force, proportioned to the inferior degrees of steadiness and uniformity in our conduct.

There is no doubt but this principle sometimes takes place, and produces those inferences we draw from contrary phaenomena: tho' I am perswaded, that upon examination we shall not find it to be the principle, that most commonly influences the mind in this species of reasoning. When we follow only the habitual determination of the mind, we make the transition without any reflection, and interpose not a moment's delay betwixt the view of one object and the belief of that, which is often found to attend it. As the custom depends not upon any deliberation, it operates immediately, without allowing any time for reflection. But this method of proceeding we have but few instances of in our probable reasonings; and even fewer than in those, which are deriv'd from the uninterrupted conjunction of objects. In the former species of reasoning we commonly take knowingly into consideration the contrariety of past events; we compare the different sides of the contrariety, and carefully weigh the experiments, which we have on each side: Whence we may conclude, that our reasonings of this kind arise not directly from the habit, but in an oblique

manner; which we must now endeavour to explain.

'Tis evident, that when an object is attended with contrary effects, we judge of them only by our past experience, and always consider those as possible, which we have observ'd to follow from it. And as past experience regulates our judgment concerning the possibility of these effects, so it does that concerning their probability; and that effect, which has been the most common, we always esteem the most likely. Here then are two things to be considered, viz. the reasons which determine us to make the past a standard for the future, and the manner how we extract a single judgment from a contrariety of past events.

First we may observe, that the supposition, that the future resembles the past,, is not founded on arguments of any kind, but is deriv'd entirely from habit, by which we are determin'd to expect for the future the same train of objects, to which we have been accustom'd. This habit or determination to transfer the past to the future is full and perfect; and consequently the first impulse of the imagination in this species of reasoning is endow'd with the same qualities.

But, secondly, when in considering past experiments we find them of a contrary nature, this determination, tho' full and perfect in itself, presents us with no steady object, but offers us a number of disagreeing images in a certain order and proportion. The first impulse, therefore, is here broke into pieces, and diffuses itself over all those images, of which each partakes an equal share of that force and vivacity, that is deriv'd from the impulse. Any of these past events may again happen; and we judge, that when they do happen, they will be mix'd in the same proportion as in the past.

If our intention, therefore, be to consider the proportions of contrary events in a great number of instances, the images presented by our past experience must remain in their <first form>, and preserve their first proportions. Suppose, for instance, I have found by long observation, that of twenty ships, which go to sea, only nineteen return. Suppose I see at present twenty ships that leave the port: I transfer my past experience to the future, and represent to myself nineteen of these ships as returning in safety, and one as perishing. Concerning this there can be no difficulty. But as we frequently run over those several ideas of past events, in order to form a judgment

concerning one single event, which appears uncertain; this consideration must change the first form of our ideas, and draw together the divided images presented by experience; since 'tis to it we refer the determination of that particular event, upon which we reason. Many of these images are suppos'd to concur, and a superior number to concur on one side. These agreeing images unite together, and render the idea more strong and lively, not only than a mere fiction of the imagination, but also than any idea, which is supported by a lesser number of experiments. Each new experiment is as a new stroke of the pencil, which bestows an additional vivacity on the colours without either multiplying or enlarging the figure.

This operation of the mind has been so fully explain'd in treating of the probability of chance, that I need not here endeavour to render it more intelligible. Every past experiment may be consider'd as a kind of chance; it being uncertain to us, whether the object will exist conformable to one experiment or another. And for this reason every thing that has been said on the one subject is applicable to both.

Thus upon the whole, contrary experiments produce an imperfect belief, either by weakening the habit, or by dividing and afterwards joining in different parts, that perfect habit, which makes us conclude in general, that instances, of which we have no experience, must necessarily resemble those of which we have.

To justify still farther this account of the second species of probability, where we reason with knowledge and reflection from a contrariety of past experiments, I shall propose the following considerations, without fearing to give offence by that air of subtilty, which attends them. Just reasoning ought still, perhaps, to retain its force, however subtile; in the same manner as matter preserves its solidity in the air, and fire, and animal spirits, as well as in the grosser and more sensible forms.

First, We may observe, that there is no probability so great as not to allow of a contrary possibility; because otherwise 'twou'd cease to be a probability, and wou'd become a certainty. That probability of causes, which is most extensive, and which we at present examine, depends on a contrariety of experiments: and 'tis evident An experiment in the past proves at least a possibility for the future.

Secondly, The component parts of this possibility and probability

are of the same nature, and differ in number only, but not in kind. It has been observ'd, that all single chances are entirely equal, and that the only circumstance, which can give any event, that is contingent, a superiority over another is a superior number of chances. In like manner, as the uncertainty of causes is discovery by- experience, which presents us with a view of contrary events, 'tis plain, that when we transfer the past to the future, the known to the unknown, every past experiment has the same weight, and that 'tis only a superior number of them, which can throw the ballance on any side. The possibility, therefore, which enters into every reasoning of this kind, is compos'd of parts, which are of the same nature both among themselves, and with those, that compose the opposite probability.

Thirdly, We may establish it as a certain maxim, that in all moral[36] as well as natural phaenomena, wherever any cause consists of a number of parts, and the effect encreases or diminishes, according to the variation of that number, the effects properly speaking, is a compounded one, and arises from the union of the several effects, that proceed from each part of the cause. Thus, because the gravity of a body encreases or diminishes by the encrease or diminution of its parts, we conclude that each part contains this quality and contributes to the gravity of the whole.

The absence or presence of a part of the cause is attended with that of a proportionable part of the effect. This connexion or constant conjunction sufficiently proves the one part to be the cause of the other. As the belief which we have of any event, encreases or diminishes according to the number of chances or past experiments, 'tis to be considered as a compounded effect, of which each part arises from a proportionable number of chances or experiments.

Let us now join these three observations, and see what conclusion we can draw from them. To every probability there is an opposite possibility. This possibility is compos'd of parts, that are entirely of the same nature with those of the probability; and consequently have the same influence on the mind and understanding. The belief, which attends the probability, is a compounded effect, and is form'd by the concurrence of the several effects, which proceed from each part of the probability.

Since therefore each part of the probability contributes to the

production of the belief, each part of the possibility must have the same influence on the opposite side; the nature of these parts being entirely the same. The contrary belief, attending the possibility, implies a view of a certain object, as well as the probability does an opposite view. In this particular both these degrees of belief are alike. The only manner then, in which the superior number of similar component parts in the one can exert its influence, and prevail above the inferior in the other, is by producing a stronger and more lively view of its object. Each part presents a particular view; and all these views uniting together produce one general view, which is fuller and more distinct by the greater number of causes or principles, from which it is deriv'd.

The component parts of the probability and possibility, being alike in their nature, must produce like effects; and the likeness of their effects consists in this, that each of them presents a view of a particular object. But tho' these parts be alike in their nature, they are very different in their quantity and number; and this difference must appear in the effect as well as the similarity. Now as the view they present is in both cases full and entire, and comprehends the object in all its parts, 'tis impossible that in this particular there can be any difference; nor is there any thing but a superior vivacity in the probability, arising from the concurrence of a superior number of views, which can distinguish these effects.

Here is almost the same argument in a different light. All our reasonings concerning the probability of causes are founded on the transferring of past to future. The transferring of any past experiment to the future is sufficient to give us a view of the object; whether that experiment be single or combin'd with others of the same kind; whether it be entire, or oppos'd by others of a contrary kind. Suppose, then, it acquires both these qualities of combination and opposition, it loses not upon that account its former power of presenting a view of the object, but only concurs with and opposes other experiments, that have a like influence. A question, therefore, may arise concerning the manner both of the concurrence and opposition. As to the concurrence, there is only the choice left betwixt these two hypotheses. First, That the view of the object, occasioned by the transference of each past experiment, preserves itself entire, and only multiplies the number of views. Or, secondly, That it runs into the other similar and correspondent views, and gives them a superior

degree of force and vivacity. But that the first hypothesis is erroneous, is evident from experience, which informs us, that the belief, attending any reasoning, consists in one conclusion, not in a multitude of similar ones, which wou'd only distract the mind, and in many cases wou'd be too numerous to be comprehended distinctly by any finite capacity. It remains, therefore, as the only reasonable opinion, that these similar views run into each other, and unite their forces; so as to produce a stronger and clearer view, than what arises from any one alone. This is the manner, in which past experiments concur, when they are transfer'd to any future event. As to the manner of their opposition, 'tis evident, that as the contrary views are incompatible with each other, and 'tis impossible the object can at once exist conformable to both of them, their influence becomes mutually destructive, and the mind is determin'd to the superior only with that force, which remains, after subtracting the inferior.

I am sensible how abstruse all this reasoning must appear to the generality of readers, who not being accustom'd to such profound reflections on the intellectual faculties of the mind, will be apt to reject as chimerical whatever strikes not in with the common receiv'd notions, and with the easiest and most obvious principles of philosophy. And no doubt there are some pains requir'd to enter into these arguments; tho' perhaps very little are necessary to perceive the imperfection of every vulgar hypothesis on this subject, and the little light, which philosophy can yet afford us in such sublime and such curious speculations. Let men be once fully perswaded of these two principles, That there, is nothing in any object, consider'd in itself, which can afford us a reason for drawing a conclusion beyond it; and, That even after the observation of the frequent or constant conjunction of objects, we have no reason to draw any inference concerning any object beyond those of which we have had experience; I say, let men be once fully convinc'd of these two principles, and this will throw them so loose from all common systems, that they will make no difficulty of receiving any, which may appear the most extraordinary. These principles we have found to be sufficiently convincing, even with regard to our most certain reasonings from causation: But I shall venture to affirm, that with regard to these conjectural or probable reasonings they still acquire a new degree of evidence.

First, 'Tis obvious, that in reasonings of this kind, 'tis not the

object presented to us, which, consider'd in itself, affords us any reason to draw a conclusion concerning any other object or event. For as this latter object is suppos'd uncertain, and as the uncertainty is deriv'd from a conceal'd contrariety of causes in the former, were any of the causes plac'd in the known qualities of that object, they wou'd no longer be conceal'd, nor wou'd our conclusion be uncertain.

But, secondly, 'tis equally obvious in this species of reasoning, that if the transference of the past to the future were founded merely on a conclusion of the understanding, it cou'd never occasion any belief or assurance. When we transfer contrary experiments to the future, we can only repeat these contrary experiments with their particular proportions; which cou'd not produce assurance in any single event, upon which we reason, unless the fancy melted together all those images that concur, and extracted from them one single idea or image, which is intense and lively in proportion to the number of experiments from which it is deriv'd, and their superiority above their antagonists. Our past experience presents no determinate object; and as our belief, however faint, fixes itself on a determinate object, 'tis evident that the belief arises not merely from the transference of past to future, but from some operation of the fancy conjoin'd with it. This may lead us to conceive the manner, in which that faculty enters into all our reasonings.

I shall conclude this subject with two reflections, which may deserve our attention. The first may be explain'd after this manner. When the mind forms a reasoning concerning any matter of fact, which is only probable, it casts its eye backward upon past experience, and transferring it to the future, is presented with so many contrary views of its object, of which those that are of the same kind uniting together, and running into one act of the mind, serve to fortify and invliven it. But suppose that this multitude of views or glimpses of an object proceeds not from experience, but from. a voluntary act of the imagination; this effect does not follow, or at least, follows not in the same degree. For tho' custom and education produce belief by such a repetition, as is not deriv'd from experience, yet this requires a long tract of time, along with a very frequent and undesign'd repetition. In general we may pronounce, that a person who wou'd voluntarily repeat any idea in his mind, tho' supported by one past experience, wou'd be no more inclin'd to believe the existence of its object, than if he had contented himself with one survey of it. Beside the effect of

design; each act of the mind, being separate and independent, has a separate influence, and joins not its force with that of its fellows. Not being united by any common object, producing them, they have no relation to each other; and consequently make no transition or union of forces. This phaenomenon we shall understand better afterwards.

My second reflection is founded on those large probabilities, which the mind can judge of, and the minute differences it can observe betwixt them. When the chances or experiments on one side amount to ten thousand, and on the other to ten thousand and one, the judgment gives the preference to the latter, upon account of that superiority; tho' 'tis plainly impossible for the mind to run over every particular view, and distinguish the superior vivacity of the image arising from the superior number, where the difference is so inconsiderable. We have a parallel instance in the affections. 'Tis evident, according to the principles above-mention'd, that when an object produces any passion in us, which varies according to the different quantity of the object; I say, 'tis evident, that the passion, properly speaking, is not a simple emotion, but a compounded one, of a great number of weaker passions, deriv'd from a view of each part of the object. For otherwise 'twere impossible the passion shou'd encrease by the encrease of these parts. Thus a man, who desires [37] a thousand pound, has in reality a thousand or more desires which uniting together, seem to make only one passion; tho' the composition evidently betrays itself upon every alteration of the object, by the preference he gives to the larger number, if superior only by an unite. Yet nothing can be more certain, than that so small a difference wou'd not be discernible in the passions, nor cou'd render them distinguishable from each other. The difference, therefore, of our conduct in preferring the greater number depends not upon our passions, but upon custom, and general rules. We have found in a multitude of instances, that the augmenting the numbers of any sum augments the passion, where the numbers are precise and the difference sensible. The mind can perceive from its immediate feeling, that three guineas produce a greater passion than two; and this it transfers to larger numbers, because of the resemblance; and by a general rule assigns to a thousand guineas, a stronger passion than to nine hundred and ninety nine. These general rules we shall explain presently.

But beside these two species of probability, which are

deriv'd from an imperfect experience and from contrary causes, there is a third arising from ANALOGY, which differs from them in some material circumstances. According to the hypothesis above explain'd all kinds of reasoning from causes or effects are founded on two particulars, viz. the constant conjunction of any two objects in all past experience, and the resemblance of a present object to any one of them. The effect of these two particulars is, that the present object invigorates and inlivens the imagination; and the resemblance, along with the constant union, conveys this force and vivacity to the related idea; which we are therefore said to believe, or assent to. If you weaken either the union or resemblance, you weaken the principle of transition, and of consequence that belief, which arises from it. The vivacity of the first impression cannot be fully convey'd to the related idea, either where the conjunction of their objects is not constant, or where the present impression does not perfectly resemble any of those, whose union we are accustom'd to observe.

In those probabilities of chance and causes above-explain'd, 'tis the constancy of the union, which is diminish'd; and in the probability deriv'd from analogy, 'tis the resemblance only, which is affected.

Without some degree of resemblance, as well as union, 'tis impossible there can be any reasoning: but as this resemblance admits of many different degrees, the reasoning becomes proportionably more or less firm and certain. An experiment loses of its force, when transferr'd to instances, which are not exactly resembling; tho' 'tis evident it may still retain as much as may be the foundation of probability, as long as there is any resemblance remaining.

SECT. XIII

Of unphilosophical probability

All these kinds of probability are receiv'd by philosophers, and allow'd to be reasonable foundations of belief and opinion. But there are others, that are deriv'd from the same principles, tho' they have not had the good fortune to obtain the same sanction. The first probability of this kind may be accounted for thus. The diminution of the union, and of the resemblance, as above explained, diminishes the facility of the transition, and by that means weakens the evidence; and we may farther observe, that the same diminution of the evidence will follow from a diminution of the impression, and from the shading of

those colours, under which it appears to the memory or senses. The argument, which we found on any matter of fact we remember, is more or less convincing according as the fact is recent or remote; and tho' the difference in these degrees of evidence be not receiv'd by philosophy as solid and legitimate; because in that case an argument must have a different force to day, from what it shall have a month hence; yet notwithstanding the opposition of philosophy, 'tis certain, this circumstance has a considerable influence on the understanding, and secretly changes the authority of the same argument, according to the different times, in which it is propos'd to us. A greater force and vivacity in the impression naturally conveys a greater to the related idea; and 'tis on the degrees of force and vivacity, that the belief depends, according to the foregoing system.

There is a second difference, which we may frequently observe in our degrees of belief and assurance, and which never fails to take place, tho' disclaimed by philosophers. An experiment, that is recent and fresh in the memory, affects us more than one that is in some measure obliterated; and has a superior influence on the judgment, as well as on the passions. A lively impression produces more assurance than a faint one; because it has more original force to communicate to the related idea, which thereby acquires a greater force and vivacity. A recent observation has a like effect; because the custom and transition is there more entire, and preserves better the original force in the communication. Thus a drunkard, who has seen his companion die of a debauch, is struck with that instance for some time, and dreads a like accident for himself: But as the memory of it decays away by degrees, his former security returns, and the danger seems less certain and real.

I add, as a third instance of this kind, that tho' our reasonings from proofs and from probabilities be considerably different from each other, yet the former species of reasoning often degenerates insensibly into the latter, by nothing but the multitude of connected arguments. 'Tis certain, that when an inference is drawn immediately from an object, without any intermediate cause or effect, the conviction is much stronger, and the persuasion more lively, than when the imagination is carry'd thro' a long chain of connected arguments, however infallible the connexion of each link may be esteem'd. 'Tis from the original impression, that the vivacity of all the ideas is deriv'd, by means of the customary transition of the

imagination; and 'tis evident this vivacity must gradually decay in proportion to the distance, and must lose somewhat in each transition. Sometimes this distance has a greater influence than even contrary experiments wou'd have; and a man may receive a more lively conviction from a probable reasoning, which is close and immediate, than from a long chain of consequences, tho' just and conclusive in each part. Nay 'tis seldom such reasonings produce any conviction; and one must have a very strong and firm imagination to preserve the evidence to the end, where it passes thro' so many, stages.

But here it may not be amiss to remark a very curious phaenomenon, which the present subject suggests to us. 'Tis evident there is no point of ancient history, of which we can have any assurance, but by passing thro' many millions of causes and effects, and thro' a chain of arguments of almost an immeasurable length.

Before the knowledge of the fact cou'd come to the first historian, it must be convey'd thro' many mouths; and after it is committed to writing, each new copy is a new object, of which the connexion with the foregoing is known only by experience and observation. Perhaps, therefore, it may be concluded from the precedent reasoning, that the evidence of all ancient history must now be lost; or at least, will be lost in time, as the chain of causes encreases, and runs on to a greater length. But as it seems contrary to common sense to think, that if the republic of letters, and the art of printing continue on the same footing as at present, our posterity, even after a thousand ages, can ever doubt if there has been such a man as JULIUS CAESAR; this may be considered as an objection to the present system. If belief consisted only in a certain vivacity, convey'd from an original impression, it wou'd decay by the length of the transition, and must at Last be utterly extinguished: And vice versa, if belief on some occasions be not capable of such an extinction; it must be something different from that vivacity.

Before I answer this objection I shall observe, that from this topic there has been borrow'd a very celebrated argument against the Christian Religion; but with this difference, that the connexion betwixt each link of the chain in human testimony has been there suppos'd not to go beyond probability, and to be liable to a degree of doubt and uncertainty. And indeed it must be confest, that in this

manner of considering the subject, (which however is not a true one) there is no history or tradition, but what must in the end lose all its force and evidence. Every new probability diminishes the original conviction; and however great that conviction may be suppos'd, 'tis impossible it can subsist under such re-iterated diminutions. This is true in general; tho' we shall find afterwards, that there is one very memorable exception, which is of vast consequence in the present subject of the understanding.

Mean while to give a solution of the preceding objection upon the supposition, that historical evidence amounts at first to an entire proof; let us consider, that tho' the links are innumerable, that connect any original fact with the present impression, which is the foundation of belief; yet they are all of the same kind, and depend on the fidelity of Printers and Copyists. One edition passes into another, and that into a third, and so on, till we come to that volume we peruse at present. There is no variation in the steps.

After we know one we know all of them; and after we have made one, we can have no scruple as to the rest. This circumstance alone preserves the evidence of history, and will perpetuate the memory of the present age to the latest posterity. If all the long chain of causes and effects, which connect any past event with any volume of history, were compos'd of parts different from each other, and which 'twere necessary for the mind distinctly to conceive, 'tis impossible we shou'd preserve to the end any belief or evidence. But as most of these proofs are perfectly resembling, the mind runs easily along them, jumps from one part to another with facility, and forms but a confus'd and general notion of each link. By this means a long chain of argument, has as little effect in diminishing the original vivacity, as a much shorter wou'd have, if compos'd of parts, which were different from each other, and of which each requir'd a distinct consideration.

A fourth unphilosophical species of probability is that deriv'd from general rules, which we rashly form to ourselves, and which are the source of what we properly call PREJUDICE. An Irishman cannot have wit^[38], and a Frenchman cannot have solidity; for which reason, tho' the conversation of the former in any instance be visibly very agreeable, and of the latter very judicious, we have entertained such a prejudice against them, that they must be dunces or fops in spite of sense and reason. Human nature is very subject to

errors of this kind; and perhaps this nation as much as any other. Shou'd it be demanded why men form general rules, and allow them to influence their judgment, even contrary to present observation and experience, I shou'd reply, that in my opinion it proceeds from those very principles, on which all judgments concerning causes and effects depend. Our judgments concerning cause and effect are deriv'd from habit and experience; and when we have been accustomed to see one object united to another, our imagination passes from the first to the second, by a natural transition, which precedes reflection, and which cannot be prevented by it. Now 'tis the nature of custom not only to operate with its full force, when objects are presented, that are exactly the same with those to which we have been accusom'd; but also to operate in an inferior degree, when we discover such as are similar; and tho' the habit loses somewhat of its force by every difference, yet 'tis seldom entirely destroy'd, where any considerable circumstances remain the same. A man, who has contracted a custom of eating fruit by the use of pears or peaches, will satisfy himself with melons, where he cannot find his favourite fruit; as one, who has become a drunkard by the use of red wines, will be carried almost with the same violence to white, if presented to him. From this principle I have accounted for that species of probability, deriv'd from analogy, where we transfer our experience in past instances to objects which are resembling, but are not exactly the same with those concerning which we have had experience. In proportion as the resemblance decays, the probability diminishes; but still has some force as long as there remain any traces of the resemblance.

This observation we may carry farther; and may remark, that tho' custom be the foundation of all our judgments, yet sometimes it has an effect on the imagination in opposition to the judgment, and produces a contrariety in our sentiments concerning the same object.

I explain myself. In almost all kinds of causes there is a complication of circumstances, of which some are essential, and others superfluous; some are absolutely requisite to the production of the effect, and others are only conjoin'd by accident. Now we may observe, that when these superfluous circumstances are numerous, and remarkable, and frequently conjoin'd with the essential, they have such an influence on the imagination, that even in the absence of the latter they carry us on to the conception of the usual effect, and give

to that conception a force and vivacity, which make it superior to the mere fictions of the fancy. We may correct this propensity by a reflection on the nature of those circumstances: but 'tis still certain, that custom takes the start, and gives a bias to the imagination.

To illustrate this by a familiar instance, let us consider the case of a man, who, being hung out from a high tower in a cage of iron cannot forbear trembling, when he surveys the precipice below him, tho' he knows himself to be perfectly secure from falling, by his experience of the solidity of the iron, which supports him; and tho' the ideas of fall and descent, and harm and death, be deriv'd solely from custom and experience. The same custom goes beyond the instances, from which it is deriv'd, and to which it perfectly corresponds; and influences his ideas of such objects as are in some respect resembling, but fall not precisely under the same rule. The circumstances of depth and descent strike so strongly upon him, that their influence cannot be destroy'd by the contrary circumstances of support and solidity, which ought to give him a perfect security.

His imagination runs away with its object, and excites a passion proportion'd to it. That passion returns back upon the imagination and invivens the idea; which lively idea has a new influence on the passion, and in its turn augments its force and violence; and both his fancy and affections, thus mutually supporting each other, cause the whole to have a very great influence upon him.

But why need we seek for other instances, while the present subject of philosophical probabilities offers us so obvious an one, in the opposition betwixt the judgment and imagination arising from these effects of custom? According to my system, all reasonings are nothing but the effects of custom; and custom has no influence, but by invivening the imagination, and giving us a strong conception of any object. It may, therefore, be concluded, that our judgment and imagination can never be contrary, and that custom cannot operate on the latter faculty after such a manner, as to render it opposite to the former. This difficulty we can remove after no other manner, than by supposing the influence of general rules. We shall afterwards take notice of some general rules, by which we ought to regulate our judgment concerning causes and effects; and these rules are form'd on the nature of our understanding, and on our experience of its

operations in the judgments we form concerning objects. By them we learn to distinguish the accidental circumstances from the efficacious causes; and when we find that an effect can be produc'd without the concurrence of any particular circumstance, we conclude that that circumstance makes not a part of the efficacious cause, however frequently conjoin'd with it. But as this frequent conjunction necessity[39] makes it have some effect on the imagination, in spite of the opposite conclusion from general rules, the opposition of these two principles produces a contrariety in our thoughts, and causes us to ascribe the one inference to our judgment, and the other to our imagination. The general rule is attributed to our judgment; as being more extensive and constant. The exception to the imagination, as being more capricious and uncertain.

Thus our general rules are in a manner set in opposition to each other. When an object appears, that resembles any cause in very considerable circumstances, the imagination naturally carries us to a lively conception of the usual effect, Tho' the object be different in the most material and most efficacious circumstances from that cause. Here is the first influence of general rules. But when we take a review of this act of the mind, and compare it with the more general and authentic operations of the understanding, we find it to be of an irregular nature, and destructive of all the most established principles of reasonings; which is the cause of our rejecting it. This is a second influence of general rules, and implies the condemnation of the former. Sometimes the one, sometimes the other prevails, according to the disposition and character of the person. The vulgar are commonly guided by the first, and wise men by the second. Mean while the sceptics may here have the pleasure of observing a new and signal contradiction in our reason, and of seeing all philosophy ready to be subverted by a principle of human nature, and again sav'd by a new direction of the very same principle. The following of general rules is a very unphilosophical species of probability; and yet'tis only by following them that we can correct this, and all other unphilosophical probabilities.

Since we have instances, where general rules operate on the imagination even contrary to the judgment, we need not be surpriz'd to see their effects encrease, when conjoin'd with that latter faculty, and to observe that they bestow on the ideas they present to us a force superior to what attends any other. Every one knows, there is

an indirect manner of insinuating praise or blame, which is much less shocking than the open flattery or censure of any person. However he may communicate his sentiments by such secret insinuations, and make them known with equal certainty as by the open discovery of them, 'tis certain that their influence is not equally strong and powerful. One who lashes me with conceal'd strokes of satire[40], moves not my indignation to such a degree, as if he flatly told me I was a fool and coxcomb; tho' I equally understand his meaning, as if he did. This difference is to be attributed to the influence of general rules.

Whether a person openly, abuses me, or slyly intimates his contempt, in neither case do I immediately perceive his sentiment or opinion; and 'tis only by signs, that is, by its effects, I become sensible of it. The only difference, then, betwixt these two cases consists in this, that in the open discovery of his sentiments he makes use of signs, which are general and universal; and in the secret intimation employs such as are more singular and uncommon.

The effect of this circumstance is, that the imagination, in running from the present impression to the absent idea, makes the transition with greater facility, and consequently conceives the object with greater force, where the connexion is common and universal, than where it is more rare and particular. Accordingly we may observe, that the open declaration of our sentiments is call'd the taking off the mask, as the secret intimation of our opinions is said to be the veiling of them. The difference betwixt an idea produc'd by a general connexion, and that arising from a particular one is here compar'd to the difference betwixt an impression and an idea. This difference in the imagination has a suitable effect on the passions; and this effect is augmented by another circumstance. A secret intimation of anger or contempt shews that we still have some consideration for the person, and avoid the directly abusing him. This makes a conceal'd satire less disagreeable; but still this depends on the same principle.

For if an idea were not more feeble, when only intimated, it wou'd never be esteem'd a mark of greater respect to proceed in this method than in the other. Sometimes scurrility is less displeasing than delicate satire, because it revenges us in a manner for the injury at the very time it is committed, by affording us a just reason to blame and condemn the person, who injures us. But this phaenomenon likewise

depends upon the same principle. For why do we blame all gross and injurious language, unless it be, because we esteem it contrary to good breeding and humanity? And why is it contrary, unless it be more shocking than any delicate satire? The rules of good breeding condemn whatever is openly disobliging, and gives a sensible pain and confusion to those, with whom we converse. After this is once established, abusive language is universally blam'd, and gives less pain upon account of its coarseness and incivility, which render the person despicable, that employs it. It becomes less disagreeable, merely because originally it is more so; and 'tis more disagreeable, because it affords an inference by general and common rules, that are palpable and undeniable.

To this explication of the different influence of open and conceal'd flattery or satire, I shall add the consideration of another phenomenon, which is analogous to it. There are many particulars in the point of honour both of men and women, whose violations, when open and avow'd, the world never excuses, but which it is more apt to overlook, when the appearances are sav'd, and the transgression is secret and conceal'd. Even those, who know with equal certainty, that the fault is committed, pardon it more easily, when the proofs seem in some measure oblique and equivocal, than when they are direct and undeniable. The same idea is presented in both cases, and, properly speaking, is equally assented to by the judgment; and yet its influence is different, because of the different manner, in which it is presented.

Now if we compare these two cases, of the open and conceal'd-violations of the laws of honour, we shall find, that the difference betwixt them consists in this, that in the first ease the sign, from which we infer the blameable action, is single, and suffices alone to be the foundation of our reasoning and judgment; whereas in the latter the signs are numerous, and decide little or nothing when alone and unaccompany'd with many minute circumstances, which are almost imperceptible. But 'tis certainly true, that any reasoning is always the more convincing, the more single and united it is to the eye, and the less exercise it gives to the imagination to collect all its parts, and run from them to the correlative idea, which forms the conclusion. The labour of the thought disturbs the regular progress of the sentiments, as we shall observe presently. The idea strikes not on us with ouch vivacity; and consequently has no such influence on the passion and imagination.

From the same principles we may account for those observations of the CARDINAL DE RETZ, that there are many things, in which the world wishes to be deceiv'd; and that it more easily excuses a person in acting than in talking contrary to the decorum of his profession and character[41]. A fault in words is commonly more open and distinct than one in actions, which admit of many palliating excuses, and decide not so clearly concerning the intention and views of the actor.

Thus it appears upon the whole, that every kind of opinion or judgment, which amounts not to knowledge, is deriv'd entirely from the force and vivacity of the perception, and that these qualities constitute in the mind, what we call the BELIEF Of the existence of any object. This force and this vivacity are most conspicuous in the memory; and therefore our confidence in the veracity of that faculty is the greatest imaginable, and equals in many respects the assurance of a demonstration. The next degree of these qualities is that deriv'd from the relation of cause and effect; and this too is very great, especially when the conjunction is found by experience to be perfectly constant, and when the object, which is present to us, exactly resembles those, of which we have had experience. But below this degree of evidence there are many others, which have an influence on the passions and imagination, proportioned to that degree of force and vivacity, which they communicate to the ideas.

'Tis by habit we make the transition from cause to effect; and 'tis from some present impression we borrow that vivacity, which we diffuse over the correlative idea. But when we have not observ'd a sufficient number of instances, to produce a strong habit; or when these instances are contrary to each other; or when the resemblance is not exact; or the present impression is faint and obscure; or the experience in some measure obliterated from the memory; or the connexion dependent on a long chain of objects; or the inference deriv'd from general rules, and yet not conformable to them: In all these cases the evidence diminishes by the diminution of the force and intenseness of the idea. This therefore is the nature of the judgment and probability.,

What principally gives authority to this system is, beside the undoubted arguments, upon which each part is founded, the agreement of these parts, and the necessity of one to explain another. The belief, which attends our memory, is of the same nature with that,

which is deriv'd from our judgments: Nor is there any difference betwixt that judgment, which is deriv'd from a constant and uniform connexion of causes and effects, and that which depends upon an interrupted and uncertain. 'Tis indeed evident, that in all determinations, where the mind decides from contrary experiments, 'tis first divided within itself, and has an inclination to either side in proportion to the number of experiments we have seen and remember. This contest is at last determin'd to the advantage of that side, where we observe a superior number of these experiments; but still with a diminution of force in the evidence correspondent to the number of the opposite experiments. Each possibility, of which the probability is compos'd, operates separately upon the imagination; and 'tis the larger collection of possibilities, which at last prevails, and that with a force proportionable to its superiority.

All these phenomena lead directly to the precedent system; nor will it ever be possible upon any other principles to give a satisfactory and consistent explication of them. Without considering these judgments as the effects of custom on the imagination, we shall lose ourselves in perpetual contradiction and absurdity.

SECT. XIV

Of the idea of necessary connexion

Having thus explain'd the manner, in which we reason beyond our immediate impressions, and conclude that such particular causes must have such particular effects; we must now return upon our footsteps to examine that question, which first occur'd to us, and which we dropt in our way, viz. What is our idea of necessity, when we say that two objects are necessarily connected together. Upon this head I repeat what I have often had occasion to observe, that as we have no idea, that is not deriv'd from an impression, we must find some impression, that gives rise to this idea of necessity, if we assert we have really such an idea. In order to this I consider, in what objects necessity is commonly suppos'd to lie; and finding that it is always ascrib'd to causes and effects, I turn my eye to two objects suppos'd to be plac'd in that relation; and examine them in all the situations, of which they are susceptible. I immediately perceive, that they are contiguous in time and place, and that the object we call cause precedes the other we call effect. In no one instance can I go any farther, nor is it possible for me to discover any third relation

betwixt these objects. I therefore enlarge my view to comprehend several instances; where I find like objects always existing in like relations of contiguity and succession. At first sight this seems to serve but little to my purpose. The reflection on several instances only repeats the same objects; and therefore can never give rise to a new idea. But upon farther enquiry I find, that the repetition is not in every particular the same, but produces a new impression, and by that means the idea, which I at present examine. For after a frequent repetition, I find, that upon the appearance of one of the objects, the mind is determin'd by custom to consider its usual attendant, and to consider it in a stronger light upon account of its relation to the first object. 'Tis this impression, then, or determination, which affords me the idea of necessity.

I doubt not but these consequences will at first sight be receiv'd without difficulty, as being evident deductions from principles, which we have already established, and which we have often employ'd in our reasonings. This evidence both in the first principles, and in the deductions, may seduce us unwarily into the conclusion, and make us imagine it contains nothing extraordinary, nor worthy of our curiosity. But tho' such an inadvertence may facilitate the reception of this reasoning, 'twill make it be the more easily forgot; for which reason I think it proper to give warning, that I have just now examin'd one of the most sublime questions in philosophy, viz. that concerning the power and efficacy of causes; where all the sciences seem so much interested. Such a warning will naturally rouze up the attention of the reader, and make him desire a more full account of my doctrine, as well as of the arguments, on which it is founded.

This request is so reasonable, that I cannot refuse complying with it; especially as I am hopeful that these principles, the more they are examin'd, will acquire the more force and evidence.

There is no question, which on account of its importance, as well as difficulty, has caus'd more disputes both among antient and modern philosophers, than this concerning the efficacy of causes, or that quality which makes them be follow'd by their effects. But before they enter'd upon these disputes, methinks it wou'd not have been improper to have examin'd what idea we have of that efficacy, which is the subject of the controversy. This is what I find principally wanting in their reasonings, and what I shall here endeavour to

supply.

I begin with observing that the terms of efficacy, agency, power, force, energy, necessity, connexion, and productive quality [42], are all nearly synonymous; and therefore 'tis an absurdity to employ any of them in defining the rest. By this observation we reject at once all the vulgar definitions, which philosophers have given of power and efficacy; and instead of searching for the idea in these definitions, must look for it in the impressions, from which it is originally deriv'd. If it be a compound idea, it must arise from compound impressions. If simple, from simple impressions.

I believe the most general and most popular explication of this matter, is to say, that finding from experience, that there are several new productions in matter, such as the motions and variations of body, and concluding that there must somewhere be a power capable of producing them, we arrive at last by this reasoning at the idea of power and efficacy. But to be convinc'd that this explication is more popular than philosophical, we need but reflect on two very obvious principles. First, That reason alone can never give rise to any original idea, and secondly, that reason, as distinguish'd from experience, can never make us conclude, that a cause or productive quality is absolutely requisite to every beginning of existence. Both these considerations have been sufficiently explain'd: and therefore shall not at present be any farther insisted on.

I shall only infer from them, that since reason can never give rise to the idea of efficacy, that idea must be deriv'd from experience, and from some particular instances of this efficacy, which make their passage into the mind by the common channels of sensation or reflection. Ideas always represent their objects or impressions; and vice versa, there are some objects necessary to give rise to every idea. If we pretend, therefore, to have any just idea of this efficacy, we must produce some instance, wherein the efficacy is plainly discoverable to the mind, and its operations obvious to our consciousness or sensation. By the refusal of this, we acknowledge, that the idea is impossible and imaginary, since the principle of innate ideas, which alone can save us from this dilemma, has been already refuted, and is now almost universally rejected in the learned world. Our present business, then, must be to find some natural production, where the operation and efficacy of a cause can be clearly conceiv'd and

comprehended by the mind, without any danger of obscurity or mistake.

In this research we meet with very little encouragement from that prodigious diversity, which is found in the opinions of those philosophers, who have pretended to explain the secret force and energy of causes. There are some, who maintain, that bodies operate by their substantial form[43]; others, by their accidents or qualities; several, by their matter and form; some, by their form and accidents; others, by certain virtues and faculties distinct from all this. All these sentiments again are mix'd and vary'd in a thousand different ways; and form a strong presumption, that none of them have any solidity or evidence,, and that the supposition of an efficacy in any of the known qualities of matter is entirely without foundation. This presumption must encrease upon us, when we consider, that these principles of substantial forms, and accidents, and faculties, are not in reality any of the known properties of bodies, but are perfectly unintelligible and inexplicable. For 'tis evident philosophers wou'd never have had recourse to such obscure and uncertain principles, had they met with any satisfaction in such as are clear and intelligible; especially in such an affair as this, which must be an object of the simplest understanding, if not of the senses. Upon the whole, we may conclude, that 'tis impossible in any one instance to shew the principle, in which the force and agency of a cause is plac'd; and that the most refin'd and most vulgar understandings are equally at a loss in this particular. If any one think proper to refute this assertion, he need not put himself to the trouble of inventing any long reasonings: but may at once shew us an instance of a cause, where we discover the power or operating principle. This defiance we are oblig'd frequently to make use of, as being almost the only means of proving a negative in philosophy.

The small success, which has been met with in all the attempts to fix this power, has at last oblig'd philosophers to conclude, that the ultimate force and efficacy of nature is perfectly unknown to us, and that 'tis in vain we search for it in all the known qualities of matter. In this opinion they are almost unanimous; and 'tis only in the inference they draw from it, that they discover any difference in their sentiments. For some of them, as the Cartesians[44] in particular, having established it as a principle, that we are perfectly acquainted with the essence of matter, have very naturally inferr'd, that it is endow'd with no efficacy, and that 'tis impossible for it of

itself to communicate motion, or produce any of those effects, which we ascribe to it. As the essence of matter consists in extension, and as extension implies not actual motion, but only mobility; they conclude, that the energy, which produces the motion, cannot lie in the extension.

This conclusion leads them into another, which they regard as perfectly unavoidable. Matter, say they, is in itself entirely unactive, and depriv'd of any power, by which it may produce, or continue, or communicate motion: But since these effects are evident to our senses, and since the power, that produces them, must be plac'd somewhere, it must lie in the DEITY, or that divine being, who contains in his nature all excellency and perfection. 'Tis the deity, therefore, who is the prime mover of the universe, and who not only first created matter, and gave it it's original impulse, but likewise by a continu'd exertion of omnipotence, supports its existence, and successively bestows on it all those motions, and configurations, and qualities, with which it is endow'd.

This opinion is certainly very curious, and well worth our attention; but 'twill appear superfluous to examine it in this place, if we reflect a moment on our present purpose in taking notice of it. We have established it as a principle, that as all ideas are deriv'd from impressions, or some precedent perceptions, 'tis impossible we can have any idea of power and efficacy, unless some instances can be produc'd, wherein this power is perceiv'd to exert itself. Now, as these instances can never be discovered in body, the Cartesians, proceeding upon their principle of innate ideas, have had recourse to a supreme spirit or deity, whom they consider as the only active being in the universe, and as the immediate cause of every alteration in matter. But the principle of innate ideas being allow'd to be false, it follows, that the supposition of a deity can serve us in no stead, in accounting for that idea of agency, which we search for in vain in all the objects, which are presented to our senses, or which we are internally conscious of in our own minds. For if every idea be deriv'd from an impression, the idea of a deity proceeds from the same origin; and if no impression, either of sensation or reflection, implies any force or efficacy, 'tis equally impossible to discover or even imagine any such active principle in the deity. Since these philosophers, therefore, have concluded, that matter cannot be endow'd with any efficacious principle, because 'tis impossible to discover in it such a principle; the

same course of reasoning shou'd-determine them to exclude it from the supreme being. Or if they esteem that opinion absurd and impious, as it really is, I shall tell them how they may avoid it; and that is, by concluding from the very first, that they have no adequate idea of power or efficacy in any object; since neither in body nor spirit, neither in superior nor inferior natures, are they able to discover one single instance of it.

The same conclusion is unavoidable upon the hypothesis of those, who maintain the efficacy of second causes, and attribute a derivative, but a real power and energy to matter. For as they confess, that this energy lies not in any of the known qualities of matter, the difficulty still remains concerning the origin of its idea.

If we have really an idea of power, we may attribute power to an unknown quality: But as 'tis impossible, that that idea can be deriv'd-from such a quality, and as there is nothing in known qualities, which can produce it; it follows that we deceive ourselves, when we imagine we are possest of any idea of this kind, after the manner we commonly understand it. All ideas are deriv'd from, and represent impressions. We never have any impression, that contains any power or efficacy. We never therefore have any idea of power.

[This paragraph is inserted from the appendix.] Some have asserted, that we feel an energy, or power, in our own mind; and that having in this manner acquir'd the idea of power, we transfer that quality to matter, where we are not able immediately to discover it. The motions of our body, and the thoughts and sentiments of our mind, (say they) obey the will; nor do we seek any farther to acquire a just notion of force or power.

But to convince us how fallacious this reasoning is, we need only consider, that the will being here consider'd as a cause, has no more a discoverable connexion with its effects, than any material cause has with its proper effect. So far from perceiving the connexion betwixt an act of volition[45], and a motion of the body; 'tis allow'd that no effect is more inexplicable from the powers and essence of thought and matter. Nor is the empire of the will over our mind more intelligible. The effect is there distinguishable and separable from the cause, and cou'd not be foreseen without the experience of their constant conjunction. We have command over our mind to a certain degree, but beyond that, lose all empire over it: And 'tis evidently impossible

to fix any precise bounds to our authority, where we consult not experience. In short, the actions of the mind are, in this respect, the same with those of matter. We perceive only their constant conjunction; nor can we ever reason beyond it.

No internal impression has an apparent energy, more than external objects have. Since, therefore, matter is confess'd by philosophers to operate by an unknown force, we shou'd in vain hope to attain an idea of force by consulting our own minds. It has been established as a certain principle, that general or abstract ideas are nothing but individual ones taken in a certain light, and that, in reflecting on any object, 'tis as impossible to exclude from our thought all particular degrees of quantity and quality as from the real nature of things. If we be possess'd, therefore, of any idea of power in general, we must also be able to conceive some particular species of it; and as power cannot subsist alone, but is always regarded as an attribute of some being or existence, we must be able. to place this power in some particular being, and conceive that being as endow'd with a real force and energy, by which such a particular effect necessarily results from its operation. We must distinctly and particularly conceive the connexion betwixt the cause and effect, and be able to pronounce, from a simple view of the one, that it must be follow'd or preceded by the other. This is the true manner of conceiving a particular power in a particular body: and a general idea being impossible without an individual; where the latter is impossible, 'tis certain the former can never exist. Now nothing is more evident, than that the human mind cannot form such an idea of two objects, as to conceive any connexion betwixt them, or comprehend distinctly that power or efficacy, by which they are united. Such a connexion wou'd amount to a demonstration, and wou'd imply the absolute impossibility for the one object not to follow, or to be conceiv'd not to follow upon the other: Which kind of connexion has already been rejected in all cases. If any one is of a contrary opinion, and thinks he has attain'd a notion of power in any particular object, I desire he may point out to me that object. But till I meet with such-a-one, which I despair of, I cannot forbear concluding, that since we can never distinctly conceive how any particular power can possibly reside in any particular object, we deceive ourselves in imagining we can form any such general idea.

Thus upon the whole we may infer, that when we talk of any being, whether of a superior or inferior nature, as endow'd with a

power or force, proportioned to any effect; when we speak of a necessary connexion betwixt objects, and suppose, that this connexion depends upon an efficacy or energy, with which any of these objects are endow'd; in all these expressions, so apply'd, we have really no distinct meaning, and make use only of common words, without any clear and determinate ideas. But as 'tis more probable, that these expressions do here lose their true meaning by being wrong apply'd, than that they never have any meaning; 'twill be proper to bestow another consideration on this subject, to see if possibly we can discover the nature and origin of those ideas, we annex to them.

Suppose two objects to be presented to us, of which the one is the cause and the other the effect; 'tis plain, that from the simple consideration of one, or both these objects we never shall perceive the tie by which they are united, or be able certainly to pronounce, that there is a connexion betwixt them. 'Tis not, therefore, from any one instance, that we arrive at the idea of cause and effect, of a necessary connexion of power, of force, of energy, and of efficacy. Did we never see any but particular conjunctions of objects, entirely different from each other, we shou'd never be able to form any such ideas.

But again; suppose we observe several instances, in which the same objects are always conjoin'd together, we immediately conceive a connexion betwixt them, and begin to draw an inference from one to another. This multiplicity of resembling instances, therefore, constitutes the very essence of power or connexion, and is the source from which the idea of it arises. In order, then, to understand the idea of power, we must consider that multiplicity; nor do I ask more to give a solution of that difficulty, which has so long perplex'd us. For thus I reason. The repetition of perfectly similar instances can never alone give rise to an original idea, different from what is to be found in any particular instance, as has been observ'd, and as evidently follows from our fundamental principle, that all ideas are copy'd from impressions. Since therefore the idea of power is a new original idea, not to be found in any one instance, and which yet arises from the repetition of several instances, it follows, that the repetition alone has not that effect, but must either discover or produce something new, which is the source of that idea. Did the repetition neither discover nor produce anything new, our ideas might be multiply'd by it, but wou'd not be enlarg'd above what they are upon the observation of one single instance. Every

enlargement, therefore, (such as the idea of power or connexion) which arises from the multiplicity of similar instances, is copy'd from some effects of the multiplicity, and will be perfectly understood by understanding these effects. Wherever we find anything new to be discovered or produc'd by the repetition, there we must place the power, and must never look for it in any other object.

But 'tis evident, in the first place, that the repetition of like objects in like relations of succession[46] and contiguity discovers nothing new in any one of them: since we can draw no inference from it, nor make it a subject either of our demonstrative or probable reasonings; as has been already prov'd. Nay suppose we cou'd draw an inference, 'twou'd be of no consequence in the present case; since no kind of reasoning can give rise to a new idea, such as this of power is; but wherever we reason, we must antecedently be possess'd of clear ideas, which may be the objects of our reasoning. The conception always precedes the understanding; and where the one is obscure, the other is uncertain; where the one fails, the other must fail also.

Secondly, 'tis certain that this repetition of similar objects in similar situations produces nothing new either in these objects, or in any external body. For 'twill readily be allow'd, that the several instances we have of the conjunction of resembling causes and effects are in themselves entirely independent, and that the communication of motion, which I see result at present from the shock of two billiard-balls, is totally distinct from that which I saw result from such an impulse a twelve-month ago. These impulses have no influence on each other. They are entirely divided by time and place; and the one might have existed and communicated motion, tho' the other never had been in being.

There is, then, nothing new either discovered or produc'd in any objects by their constant conjunction, and by the uninterrupted resemblance of their relations of succession and contiguity. But 'tis from this resemblance, that the ideas of necessity, of power, and of efficacy, are deriv'd. These ideas, therefore, represent not anything, that does or can belong to the objects, which are constantly conjoined. This is an argument, which, in every view we can examine it, will be found perfectly unanswerable. Similar instances are still the first source of our idea of power or necessity; at the same time that they have no influence by their similarity either on each other, or on

any external object. We must, therefore, turn ourselves to some other quarter to seek the origin of that idea. Tho' the several resembling instances, which give rise to the idea of power, have no influence on each other, and can never produce any new quality in the object, which can be the model of that idea, yet the observation of this resemblance produces a new impression in the mind, which is its real model. For after we have observ'd the resemblance in a sufficient number of instances, we immediately feel a determination of the mind to pass from one object to its usual attendant, and to conceive it in a stronger light upon account of that relation. This determination is the only effect of the resemblance; and therefore must be the same with power or efficacy, whose idea is deriv'd from the resemblance. The several instances of resembling conjunctions lead us into the notion of power and necessity. These instances are in themselves totally distinct from each other, and have no union but in the mind, which observes them, and collects their ideas. Necessity, then, is the effect of this observation, and is nothing but an internal impression of. the mind, or a determination to carry our thoughts from one object to another.

Without considering it in this view, we can never arrive at the most distant notion of it, or be able to attribute it either to external or internal objects, to spirit or body, to causes or effects.

The necessary connexion betwixt causes and effects is the foundation of our inference from one to the other. The foundation of our inference is the transition arising from the accustomed union. These are, therefore, the same. The idea of necessity arises from some impression. There is no impression convey'd by our senses, which can give rise to that idea. It must, therefore, be deriv'd from some internal impression, or impression of reflection. There is no internal impression, which has any relation to the present business, but that propensity, which custom produces, to pass from an object to the idea of its usual attendant. This therefore is the essence of necessity. Upon the whole, necessity is something, that exists in the mind, not in objects; nor - is it possible for us ever to form the most distant idea of it, considered as a quality in bodies. Either we have no idea of necessity, or necessity is nothing but that determination of the thought to pass from causes to effects, and from effects to causes, according to their experienced union.

Thus as the necessity, which makes two times two equal to

four, or three angles of a triangle equal to two right ones, lies only in the act of the understanding, by which - we consider and compare these ideas; in like manner the necessity or power, which unites causes and effects, lies in the determination of the mind to pass from the one to the other. The efficacy or 'energy of causes is neither plac'd in the causes themselves, nor in the deity, nor in the concurrence of these two principles; but belongs entirely to the soul, which considers the union of two or more objects in all past instances. 'Tis here that the real power of causes is plac'd along with their connexion and necessity.

I am sensible, that of all the paradoxes, which I, have had, or shall hereafter have occasion to advance in the course of this treatise, the present one is the most violent, and that 'tis merely by dint of solid proof and reasoning I can ever hope it will have admission, and overcome the inveterate prejudices[47] of mankind. Before we are reconciled to this doctrine, how often must we repeat to ourselves, that the simple view of any two objects or actions, however related, can never give us any idea, of power, or of a connexion betwixt them: that this idea arises from the repetition of their union: that the repetition neither discovers nor causes any thing in the objects, but has an influence only on the mind, by that customary transition it produces: that this customary transition is, therefore, the same with the power and necessity; which are consequently qualities of perceptions, not of objects, and are internally felt by the soul, and not perceiv'd externally in bodies? There is commonly an astonishment attending every thing extraordinary; and this astonishment changes immediately into the highest degree of esteem or contempt, according as we approve or disapprove of the subject.

I am much afraid, that tho' the foregoing reasoning appears to me the shortest and most decisive imaginable; yet with the generality of readers the bias of the mind will prevail, and give them a prejudice against the present doctrine.

This contrary bias is easily accounted for. 'Tis a common observation, that the mind has a great propensity to spread itself on external objects, and to conjoin with them any internal impressions, which they occasion, and which always make their appearance at the same time that these objects discover themselves to the senses.

Thus as certain sounds and smells are always found to attend certain visible objects, we naturally imagine a conjunction, even in place, betwixt the objects and qualities, tho' the qualities be of such a nature as to admit of no such conjunction, and really exist no where. But of this more fully hereafter. Mean while 'tis sufficient to observe, that the same propensity is the reason, why we suppose necessity and power to lie in the objects we consider, not in our mind that considers them; notwithstanding it is not possible for us to form the most distant idea of that quality, when it is not taken for the determination of the mind, to pass from the idea of an object to that of its usual attendant.

But tho' this be the only reasonable account we can give of necessity, the contrary notion is; so riveted in the mind from the principles above-mention'd, that I doubt not but my sentiments will be treated by many as extravagant and ridiculous. What! the efficacy of causes lie in the determination of the mind! As if causes did not operate entirely independent of the mind, and wou'd not continue their operation, even tho' there was no mind existent to contemplate them, or reason concerning them. Thought may well depend on causes for its operation, but not causes on thought. This is to reverse the order of nature, and make that secondary, which is really primary, To every operation there is a power proportioned; and this power must be plac'd on the body, that operates. If we remove the power from one cause, we must ascribe it to another: But to remove it from all causes, and bestow it on a being, that is no ways related to the cause or effect, but by perceiving them, is a gross absurdity, and contrary to the most certain principles of human reason.

I can only reply to all these arguments, that the case is here much the same, as if a blind man shou'd pretend to find a great many absurdities in the supposition, that the colour of scarlet is not the same with the sound of a trumpet, nor light the same with solidity. If we have really no idea of a power or efficacy in any object, or of any real connexion betwixt causes and effects, 'twill be to little purpose to prove, that an efficacy is necessary in all operations. We do not understand our own meaning in talking so, but ignorantly confound ideas, which are entirely distinct from each other. I am, indeed, ready to allow, that there may be several qualities both in material and immaterial objects, with which we are utterly unacquainted; and if we please to call these power or efficacy, 'twill be of little consequence to the world. But when, instead of meaning these unknown qualities, we

make the terms of power and efficacy signify something, of which we have a clear idea, and which is incompatible with those objects, to which we apply it, obscurity and error begin then to take place, and we are led astray by a false philosophy. This is the case, when we transfer the determination of the thought to external objects, and suppose any real intelligible connexion betwixt them; that being a quality, which can only belong to the mind that considers them.

As to what may be said, that the operations of nature are independent of our thought and reasoning, I allow it; and accordingly have observ'd, that objects bear to each other the relations of contiguity and succession: that like objects may be observ'd in several instances to have like relations; and that all this is independent of, and antecedent to the operations of the understanding. But if we go any farther, and ascribe a power or necessary connexion to these objects; this is what we can never observe in them, but must draw the idea of it from what we feel internally in contemplating them. And this I carry so far, that I am ready to convert my present reasoning into an instance of it, by a subtilty, which it will not be difficult to comprehend.

When any object is presented to us, it immediately conveys to the mind a lively idea of that object, which is usually found to attend it; and this determination of the mind forms the necessary connexion of these objects. But when we change the point of view, from the objects to the perceptions; in that case the impression is to be considered as the cause, and the lively idea as the effect; and their necessary connexion is that new determination, which we feel to pass from the idea of the one to that of the other. The uniting principle among our internal perceptions is as unintelligible as that among external objects, and is not known to us any other way than by experience. Now the nature and effects of experience have been already sufficiently examin'd and explain'd. It never gives us any insight into the internal structure or operating principle of objects, but only accustoms the mind to pass from one to another.

'Tis now time to collect all the different parts of this reasoning, and by joining them together form an exact definition of the relation of cause and effect, which makes the subject of the present enquiry.

This order wou'd not have been excusable, of first examining our

inference from the relation before we had explain'd the relation itself, had it been possible to proceed in a different method. But as the nature of the relation depends so much on that of the inference, we have been oblig'd to advance in this seemingly preposterous manner, and make use of terms before we were able exactly to define them, or fix their meaning. We shall now correct this fault by giving a precise definition of cause and effect.

There may two definitions be given of this relation, which are only different, by their presenting a different view of the same object, and making us consider it either as a philosophical or as a natural relation; either as a comparison of two ideas, or as an association betwixt them. We may define a CAUSE to be 'An object precedent and contiguous to another, and where all the objects resembling the former are plac'd in like relations of precedency and contiguity to those objects that resemble the latter.' 1 If this definition be esteem'd defective, because drawn from objects foreign to the cause, we may substitute this other definition in its place, viz. 'A CAUSE is an object precedent and contiguous to another, and so united with it, that the idea, of the one determines the mind to form the idea of the other, and the impression of the one to form a more lively idea of the other.' 2 Shou'd this definition also be rejected for the same reason, I know no other remedy, than that the persons, who express this delicacy, shou'd substitute a juster definition in its place.

But for my part I must own my incapacity for such an undertaking. When I examine with the utmost accuracy those objects, which are commonly denominated causes and effects, I find, in considering a single instance, that the one object is precedent and contiguous to the other; and in enlarging my view to consider several instances, I find only, that like objects are constantly plac'd in like relations of succession and contiguity. Again, when I consider the influence of this constant conjunction, I perceive, that such a relation can never be an object of reasoning, and can never operate upon the mind, but by means of custom, which determines the imagination to make a transition from the idea of one object to that of its usual attendant, and from the impression of one to a more lively idea of the other. However extraordinary these sentiments may appear, I think it fruitless to trouble myself with any farther enquiry or reasoning upon the subject, but shall repose myself on them as on established maxims. 'Twill only be proper, before we leave this subject, to draw some

corollaries from it, by which we may remove several prejudices and popular errors, that have very much prevail'd in philosophy.

First, We may learn from the foregoing, doctrine, that all causes are of the same kind, and that in particular there is no foundation for that distinction, which we sometimes make betwixt efficient causes and causes sine qua non; or betwixt efficient causes, and formal, and material, and exemplary [48], and final causes. For as our idea of efficiency is deriv'd from the constant conjunction of two objects, wherever this is observ'd, the cause is efficient; and where it is not, there can never be a cause of any kind. For the same reason we must reject the distinction betwixt cause and occasion, when suppos'd to signify any thing essentially different from each other. If constant conjunction be imply'd in what we call occasion, 'tis a real cause. If not, 'tis no relation at all, and cannot give rise to any argument or reasoning.

Secondly, The same course of reasoning will make us conclude, that there is but one kind of necessity, as there is but one kind of cause, and that the common distinction betwixt moral and physical [49] necessity is without any foundation in nature. This clearly appears from the precedent explication of necessity. 'Tis the constant conjunction of objects, along with the determination of the mind, which constitutes a physical necessity: And the removal of these is the same thing with chance. As objects must either be conjoin'd or not, and as the mind must either be determined or not to pass from one object to another, 'tis impossible to admit of any medium betwixt chance and an absolute necessity. In weakening this conjunction and determination you do not change the nature of the necessity; since even in the operation of bodies, these have different degrees of constancy and force, without producing a different species of that relation. The distinction, which we often make betwixt <power> and the <exercise> of it, is equally without foundation.

Thirdly, We may now be able fully to overcome all that repugnance, which 'tis so natural for us to entertain against the foregoing reasoning, by which we endeavour'd to prove, that the necessity of a cause to every beginning of existence is not founded on any arguments either demonstrative or intuitive. Such an opinion will not appear strange after the foregoing definitions. If we define a cause to be an object precedent and contiguous to another, and where all

the objects resembling the farmer are plac'd in a like relation of .priority and contiguity to those objects, that resemble the latter; we may easily conceive, that there is no absolute nor metaphysical necessity, that every beginning of existence shou'd be attended with such an object. If we define a cause to be, An object precedent and contiguous to another, and so united with it in the imagination, that the idea of the one determines the mind to form the idea of the other, and the impression of the one to form a more lively idea of the other; we shall make still less difficulty of assenting to this opinion. Such an influence on the mind is in itself perfectly extraordinary and incomprehensible; nor can we be certain of its reality, but from experience and observation.

I shall add as a fourth corollary that we can never have reason to believe that any object exists, of which we cannot form an idea. For as all our reasonings concerning existence are deriv'd from causation, and as all our reasonings concerning causation are deriv'd from the experienced conjunction of objects, not from any reasoning or reflection, the same experience must give us a notion of these objects, and must remove all mystery from our conclusions. This is so evident, that 'twou'd scarce have merited our attention, were it not to obviate certain objections of this kind, which might arise against the following reasonings concerning matter and substance. I need not observe, that a full knowledge of the object is not requisite, but only of those qualities of it, which we believe to exist.

SECT. XV

Rules by which to judge of causes and effects

According to the precedent doctrine, there are no objects which by the mere survey, without consulting experience, we can determine to be the causes of any other; and no objects, which we can certainly determine in the same manner not to be the causes.

Any thing may produce any thing. Creation, annihilation, motion, reason, volition; all these may arise from one another, or from any other object we can imagine. Nor will this appear strange, if we compare two principles explain'd above, that the constant conjunction of objects determines their causation, and that, property speaking, no objects are contrary to each other but existence and non-existence. Where objects are not contrary, nothing hinders them from having that

constant conjunction, on which the relation of cause and effect totally depends.

Since therefore 'tis possible for all objects to become causes or effects to each other, it may be proper to fix some general rules, by which we may know when they really are so.

(1) The cause and effect must be contiguous in space and time.

(2) The cause must be prior to the effect.

(3) There must be a constant union betwixt the cause and effect. 'Tis chiefly this quality, that constitutes the relation.

(4) The same cause always produces the same effect, and the same effect never arises but from the same cause. This principle we derive from experience, and is the source of most of our philosophical reasonings. For when by any clear experiment we have discovered the causes or effects of any phaenomenon, we immediately extend our observation to every phenomenon of the same kind, without waiting for that constant repetition, from which the first idea of this relation is deriv'd.

(5) There is another principle, which hangs upon this, viz. that where several different objects produce the same effect, it must be by means of some quality, which we discover to be common amongst them. For as like effects imply like causes, we must always ascribe the causation to the circumstance, wherein we discover the resemblance.

(6) The following principle is founded on the same reason.

The difference in the effects of two resembling objects must proceed from that particular, in which they differ. For as like causes always produce like effects, when in any instance we find our expectation to be disappointed, we must conclude that this irregularity proceeds from some difference in the causes.

(7) When any object encreases or diminishes with the encrease or diminution of its cause, 'tis to be regarded as a compounded effect, deriv'd from the union of the several different effects, which arise from the several different parts of the cause. The absence or presence of one part of the cause is here suppos'd to be always attended with the absence or presence of a proportionable part of the

effect. This constant conjunction sufficiently proves, that the one part is the cause of the other. We must, however, beware not to draw such a conclusion from a few experiments. A certain degree of heat gives pleasure; if you diminish that heat, the pleasure diminishes; but it does not follow, that if you augment it beyond a certain degree, the pleasure will likewise augment; for we find that it degenerates into pain.

(8) The eighth and last rule I shall take notice of is, that an object, which exists for any time in its full perfection without any effect, is not the sole cause of that effect, but requires to be assisted by some other principle, which may forward its influence and operation. For as like effects necessarily follow from like causes, and in a contiguous time and place, their separation for a moment shews, that these causes are not complete ones.

Here is all the LOGIC I think proper to employ in my reasoning; and perhaps even this was not very necessary, but might have been supplied by the natural principles of our understanding.

Our scholastic[50] the mere vulgar in their reason and ability, as to give us any inclination to imitate them in delivering a long system of rules and precepts to direct our judgment, in philosophy. All the rules of this nature are very easy in their invention, but extremely difficult in their application; and even experimental philosophy, which seems the most natural and simple of any, requires the utmost stretch of human judgment. There is no phaenomenon in nature, but what is compounded and modified by so many different circumstances, that in order to arrive at the decisive point, we must carefully separate whatever is superfluous, and enquire by new experiments, if every particular circumstance of the first experiment was essential to it.

These new experiments are liable to a discussion of the same kind; so that the utmost constancy is required to make us persevere in our enquiry, and the utmost sagacity to choose the right way among so many that present themselves. If this be the case even in natural philosophy, how much more in moral, where there is a much greater complication of circumstances, and where those views and sentiments, which are essential to any action of the mind, are so implicit and obscure, that they often escape our strictest attention, and are not only unaccountable in their causes, but even unknown in their existence? I am much afraid lest the small success I meet with in my enquiries will

make this observation bear the air of an apology rather than of boasting.

If any thing can give me security in this particular, 'twill be the enlarging of the sphere of my experiments as much as possible; for which reason it may be proper in this place to examine the reasoning faculty of brutes, as well as that of human creatures.

SECT. XVI

Of the reason of animals

Next to the ridicule of denying an evident truth, is that of taking much pains to defend it; and no truth appears to me more evident, than that beasts are endowd with thought and reason as well as men. The arguments are in this case so obvious, that they never escape the most stupid and ignorant.

We are conscious, that we ourselves, in adapting means to ends, are guided by reason and design, and that 'tis not ignorantly nor casually we perform those actions, which tend to self-preservation, to the obtaining pleasure, and avoiding pain. When therefore we see other creatures, in millions of instances, perform like actions, and direct them to the ends, all our principles of reason and probability carry us with an invincible force to believe the existence of a like cause. 'Tis needless in my opinion to illustrate this argument by the enumeration of particulars. The smallest attention will supply us with more than are requisite. The resemblance betwixt the actions of animals and those of men is so entire in this respect, that the very first action of the first animal we shall please to pitch on, will afford us an incontestable argument for the present doctrine.

This doctrine is as useful as it is obvious, and furnishes us with a kind of touchstone, by which we may try every system in this species of philosophy. 'Tis from the resemblance of the external actions of animals to those we ourselves perform, that we judge their internal likewise to resemble ours; and the same principle of reasoning, carryd one step farther, will make us conclude that since our internal actions resemble each other, the causes, from which they are derivd, must also be resembling. When any hypothesis, therefore, is advanced to explain a mental operation, which is common to men and beasts, we must apply the same hypothesis to both; and as every true hypothesis will

abide this trial, so I may venture to affirm, that no false one will ever be able to endure it. The common defect of those systems, which philosophers have employd to account for the actions of the mind, is, that they suppose such a subtilty and refinement of thought, as not only exceeds the capacity of mere animals, but even of children and the common people in our own species; who are notwithstanding susceptible of the same emotions and affections as persons of the most accomplishd genius and understanding. Such a subtilty is a dear proof of the falshood, as the contrary simplicity of the truth, of any system. Let us therefore put our present system concerning the nature of the understanding to this decisive trial, and see whether it will equally account for the reasonings of beasts as for these of the human species.

Here we must make a distinction betwixt those actions of animals, which are of a vulgar nature, and seem to be on a level with their common capacities, and those more extraordinary instances of sagacity, which they sometimes discover for their own preservation, and the propagation of their species. A dog, that avoids fire and precipices, that shuns strangers, and caresses his master, affords us an instance of the first kind. A bird, that chooses with such care and nicety the place and materials of her nest, and sits upon her eggs for a due time, and in suitable season, with all the precaution that a chymist is capable of in the most delicate projection, furnishes us with a lively instance of the second.

As to the former actions, I assert they proceed from a reasoning, that is not in itself different, nor founded on different principles, from that which appears in human nature. 'Tis necessary in the first place, that there be some impression immediately present to their memory or senses, in order to be the foundation of their judgment.

From the tone of voice the dog infers his masters anger, and foresees his own punishment[51]. From a certain sensation affecting his smell, he judges his game not to be far distant from him.

Secondly, The inference he draws from the present impression is built on experience, and on his observation of the conjunction of objects in past instances. As you vary this experience, he varies his reasoning. Make a beating follow upon one sign or motion for some time, and afterwards upon another; and he will successively draw

different conclusions, according to his most recent experience.

Now let any philosopher make a trial, and endeavour to explain that act of the mind, which we call belief, and give an account of the principles, from which it is derivd, independent of the influence of custom on the imagination. and let his hypothesis be equally applicable to beasts as to the human species; and after he has done this, I promise to embrace his opinion. But at the same time I demand as an equitable condition, that if my system be the only one, which can answer to all these terms, it may be receivd as entirely satisfactory and convincing. And that 'tis the only one, is evident almost without any reasoning. Beasts certainly never perceive any real connexion among objects. 'Tis therefore by experience they infer one from another. They can never by any arguments form a general conclusion, that those objects, of which they have had no experience, resemble those of which they have. 'Tis therefore by means of custom alone, that experience operates upon them. All this was sufficiently evident with respect to man. But with respect to beasts there cannot be the least suspicion of mistake; which must be ownd to be a strong confirmation, or rather an invincible proof of my system.

Nothing shews more the force of habit in reconciling us to any phaenomenoun, than this, that men are not astonish'd at the operations of their own reason, at the same time, that they admire the instinct of animals, and find a difficulty in explaining it, merely because it cannot be reducd to the very same principles. To consider the matter aright, reason is nothing but a wonderful and unintelligible instinct in our souls, which carries us along a certain train of ideas, and endows them with particular qualities, according to their particular situations and relations. This instinct, 'tis true, arises from past observation and experience; but can any one give the ultimate reason, why past experience and observation produces such an effect, any more than why nature alone shoud produce it?

Nature may certainly produce whatever can arise from habit: Nay, habit is nothing but one of the principles of nature, and derives all its force from that origin.

Gottfried Wilhelm Leibniz (1646—1716)

[1] knowledge: 知识, 指人类认识世界的成果。哲学上主要以主体与客体之间关系为内容, 研究知识的来源、性质和取得的方法。

[2] 偶有性。

[3] chiliagon: 千边形, 由一千个边组成的形状, 笛卡尔在《第一哲学沉思集》中曾经为千边形为例, 说明人的想象能力是有限的。

[4] productive quality: 产生性质。

[5] prior: 先在的, 在前的。

[6] necessary connexion: 必然联系。必然性和偶然性是一组相对的哲学范畴, 必然性指事物发展中合乎规律的确定不移的趋向; 偶然性指可能发生, 也可能不发生, 可以这样发生, 也可以那样发生的不确定现象。

[7] intuitive: 直观的。直观: 指人的感受器官在与事物的直接接触中产生的感觉、知觉和表象等的反映形式。它不经过中间环节, 是对客观事物直接的、生动的反映。

[8] memory: 记忆。记忆没有改变简单观念的秩序和为位置的能力, 与想象之间的差别就在与它的强力和活泼性。

[9] creative power: 创造性的力量, 此处指造物主。

[10] belief: 信念, 由对于当下印象有一种关系而产生的一个活泼观念, 与不信的观念的差别在于观想它们的方式。

[11] Inference：推理。由一个或一组命题（前提）推出另一个命题（结论）的思维形式。

[12] motions：运动。休谟认为，运动或物质是我们知觉的原因。

[13] presumption：假设。1. 以已有的事实材料和科学原理为依据对未知的事实或规律所提出的一种推测说明，即假定。2. 形成和验证某一假定的思维过程。

[14] general-rule：总则。

[15] essential：本质的，是物体必不可少的组成部分；固有的、基本的。本质的和偶有的条件被想象所混淆，判断借助通则的帮助才把它们区分出来。

[16] perception：感知

[17] in-infinitum: 无限制。

[18] governing-principle：支配原则 and person.

[19] Catholic：天主教的。天主教是基督宗教三大宗派之一，正式名称为公教或公教会。起源自拉丁语的“catholicus”，意思是“普遍的”，翻译作中文“公”是取自“天下为公”的“公”。另外两个宗派是：东正教和新教。

[20] reasonings：推理。两个对象比较，和对于它们的恒定的或不恒定的关系的发现，当至少有一个对象不呈现于感觉时，才是应用推理的恰当场合。

[21] sensation：感觉。与推理相对立。

[22] vivacity: 活泼性。活泼性区别印象和观念，凡达不到知识地步的每一个信念或判断都完全是从知觉的劲强和活泼性的来的，而且这些性质就是在心灵中构成所谓任何物体的存在的信仰

[23] 概念：知性的一切活动，不论推理、判断或信念都可以还原为概念。

[24] 恒定性，我们的印象的恒定性是人们所以虚构它们的继续存在的根据，后来又是虚构它们的独立存在的根源。

[25] 证明，由根据原因和结果而进行的论证所得来的确信；有时包括在概然推理中，有时不包括在其中。

[26] 教育：直接产生信念的习惯

[27] 宗教，是对神明的信仰与崇敬，或者一般而言，宗教就是一套信仰，是对宇宙存在的解释，通常包括信仰与仪式的遵从。宗教常常有一部道德准则，以调整人类自身行为。

[28] comparison：比较。人类在判断时，多依据比较，而少依据它们的内在价值。比较必须行于同样事物之内的分子之间。

[29] 行动。

[30] 情感，是次生的印象，或反省的印象，它们是由某种本来的感觉印象发生的，而发生要不是直接的，要不是以观念为媒介的。

[31] general-rules：一般的规则，非哲学的概然性或偏见的一个来源。

[32] 证据，包括概然的和自然的证据。

[33] 确实性，七种哲学关系中只有四种是知识的对象和确实性的对象；在根据因果成立的论证中，确实性是由经验得来的；在特殊问题上，怀疑主义者也不否认自己有确信。

[34] proportion：比例。

[35] necessary：必然的。

[36] moral：道德的，道德上的善恶是非不是来自于理性。道德上的原则是由道德感而来的。

[37] 欲望，一种直接的情感，使敌人受害，使友人得福的欲望、肉欲、饥饿等，都是直接的情感，它们是由完全不可解释的自然冲动和本能发生的。

[38] 机智，英国霍布斯、洛克、休谟等用语。休谟把机智同判断、理智对立起来，认为机智夹杂着主观的感情。真机智只能凭鉴别力（即所产生的快乐）来区别。机智是一个使人愉快的性质，因而是善良的。

[39] necessity：必然性。必然性只是由恒常的联合所产生的心灵的强制倾向。

[40] 讽刺。

[41] 性格、品格。人的一种较经久较恒常的东西，给予他的行为以

一种道德的性质。可根据性格来判断行为的可能性。

[42]效能、动力、能力、力量、功能、必然性、联系和产生性质。

[43] substantial-form：实体的形式。

[44] Cartesians：笛卡尔主义者：泛指信奉笛卡尔主义的哲学家及偶因论者。

[45] 意欲，是本来的事实和实在，因而不是符合理性而成为真或违反理性而成为假。

[46]持续，独立于知觉活动之外，容易与同一性相混。

[47] 偏见，由通则所产生，开始也只能为通则所改正。

[48] 模式的，模式因。

[49]moral and physical: 道德的和物理的。

[50] scholastic: 经院派的

[51] 惩罚。只能用必然学说加以辩护。

PART IV OF THE SCEPTICAL AND OTHER SYSTEMS OF PHILOSOPHY

SECT. I

Of scepticism with regard to reason

In all demonstrative sciences the rules are certain and infallible; but when we apply them, our fallible said uncertain faculties are very apt to depart from them, and fall into error. We must, therefore, in every reasoning form a new judgment, as a check or controul on our first judgment or belief; and must enlarge our view to comprehend a kind of history of all the instances, wherein our understanding has deceiv'd us, compar'd with those, wherein its testimony was just and true. Our reason must be considered as a kind of cause, of which truth is the natural effect; but such-a-one as by the irruption of other causes, and by the inconstancy of our mental powers, may frequently be prevented. By this means all knowledge degenerates into probability; and this probability is greater or less, according to our experience of the veracity or deceitfulness of our understanding, and according to the simplicity or intricacy of the question.

There is no Algebraist nor Mathematician so expert in his science, as to place entire confidence in any truth immediately upon his discovery of it, or regard it as any thing, but a mere probability.

Every time he runs over his proofs, his confidence encreases; but still more by the approbation of his friends; and is rais'd to its utmost perfection by the universal assent and applauses of the, learned world. Now 'tis evident, that this gradual encrease of assurance is nothing but the addition of new probabilities, and is deriv'd from the constant union of causes and effects, according to past experience and observation.

In accompts of any length or importance, Merchants seldom trust to the, infallible certainty of numbers for their security; but by the artificial structure of the accompts, produce a probability beyond what is deriv'd from the skill and experience of the accomptant. For that is plainly of itself some degree of probability; tho' uncertain and

variable, according to the degrees of his experience and length of the accompt. Now as none will maintain, that our assurance in a long numeration exceeds probability, I may safely affirm, that there scarce is any proposition concerning numbers, of which we can have a fuller security. For 'tis easily possible, by gradually diminishing the numbers, to reduce the longest series of addition to the most simple question, which can be form'd, to an addition of two single numbers; and upon this supposition we shall find it impracticable to shew the precise limits of knowledge and of probability, or discover that particular number, at which the one ends and the other begins.

But knowledge and probability are of such contrary and disagreeing natures, that they cannot well run insensibly into each other, and that because they will not divide, but must be either entirely present, or entirely absent. Besides, if any single addition were certain, every one wou'd be so, and consequently the whole or total sum; unless the whole can be different from all its parts. I had almost said, that this was certain; but I reflect that it must reduce itself, as well as every other reasoning, and from knowledge degenerate into probability.

Since therefore all knowledge resolves itself into probability, and becomes at last of the same nature with that evidence, which we employ in common life, we must now examine this latter species of reasoning, and see on what foundation it stands.

In every judgment, which we can form concerning probability, as well as concerning knowledge, we ought always to correct the first judgment, deriv'd from the nature of the object, by another judgment, deriv'd from the nature of the understanding. 'Tis certain a man of solid sense and long experience ought to have, and usually has, a greater assurance in his opinions, than one that is foolish and ignorant, and that our sentiments have different degrees of authority, even with ourselves, in proportion to the degrees of our reason and experience. In the man of the best sense and longest experience, this authority is never entire; since even such-a-one must be conscious of many errors in the past, and must still dread the like for the future.

Here then arises a new species of probability to correct and regulate the first, and fix its just standard^[1] and proportion. As demonstration is subject to the controul of probability, so is

probability liable to a new correction by a reflex act of the mind, wherein the nature of our understanding, and our reasoning from the first probability become our objects.

Having thus found in every probability, beside the original uncertainty inherent in the subject, a new uncertainty deriv'd from the weakness of that faculty, which judges, and having adjusted these two together, we are oblig'd by our reason to add a new doubt deriv'd from the possibility of error in the estimation we make of the truth and fidelity of our faculties. This is a doubt, which immediately occurs to us, and of which, if we wou'd closely pursue our reason, we cannot avoid giving a decision. But this decision, tho' it shou'd be favourable to our preceding judgment, being founded only on probability, must weaken still further our first evidence, and must itself be weaken'd by a fourth doubt of the same kind, and so on in infinitum: till at last there remain nothing of the original probability, however great we may suppose it to have been, and however small the diminution by every new uncertainty. No finite object can subsist under a decrease repeated in infinitum; and even the vastest quantity, which can enter into human imagination, must in this manner be reduc'd to nothing. Let our first belief be never so strong, it must infallibly perish by passing thro' so many new examinations, of which each diminishes somewhat of its force and vigour. When I reflect on the natural fallibility of my judgment, I have less confidence in my opinions, than when I only consider the objects concerning which I reason; and when I proceed still farther, to turn the scrutiny against every successive estimation I make of my faculties, all the rules of logic require a continual diminution, and at last a total extinction of belief and evidence.

Shou'd it here be ask'd me, whether I sincerely assent to this argument, which I seem to take such pains to inculcate, and whether I be really one of those sceptics, who hold that all is uncertain, and that our judgment is not in any thing possest of any measures of truth and falshood; I shou'd reply, that this question is entirely superfluous, and that neither I, nor any other person was ever sincerely and constantly of that opinion. Nature, by an absolute and uncontrollable necessity has determin'd us to judge as well as to breathe and feel; nor can we any more forbear viewing certain objects in a stronger and fuller light, upon account of their customary connexion with a present impression, than we can hinder ourselves from thinking as long, as we are awake,

or seeing the surrounding bodies, when we turn our eyes towards them in broad sunshine. Whoever has taken the pains to refute the cavils of this total scepticism, has really disputed without an antagonist, and endeavour'd by arguments to establish a faculty, which nature has antecedently implanted in the mind, and render'd unavoidable.

My intention[2] then in displaying so carefully the arguments of that fantastic sect, is only to make the reader sensible of the truth of my hypothesis, that all our reasonings concerning causes and effects are deriv'd from nothing but custom; and that belief is more properly an act of the, sensitive, than of the cogitative part of our natures.

I have here prov'd, that the very same principles, which make us form a decision upon any subject, and correct that decision by the consideration of our genius and capacity, and of the situation of our mind, when we examin'd that subject; I say, I have prov'd, that these same principles, when carry'd farther, and apply'd to every new reflex judgment, must, by continually diminishing the original evidence, at last reduce it to nothing, and utterly subvert all belief and opinion.

If belief, therefore, were a simple act of the thought, without any peculiar manner of conception, or the addition of a force and vivacity, it must infallibly destroy itself, and in every case terminate in a total suspense of judgment. But as experience will sufficiently convince any one, who thinks it worth while to try, that tho' he can find no error in the foregoing arguments, yet he still continues to believe, and think, and reason as usual, he may safely conclude, that his reasoning and belief is some sensation or peculiar manner of conception, which 'tis impossible for mere ideas and reflections to destroy.

But here, perhaps, it may be demanded, how it happens, even upon my hypothesis, that these arguments above-explain'd produce not a total suspense of judgment, and after what manner the mind ever retains a degree of assurance in any subject? For as these new probabilities, which by their repetition perpetually diminish the original evidence, are founded on the very same principles, whether of thought or sensation, as the primary judgment, it may seem unavoidable, that in either case they must equally subvert it, and by the opposition, either of contrary thoughts or sensations, reduce the mind to a total uncertainty. I suppose, there is some question propos'd to me, and that after revolving over the impressions of my memory

and senses, and carrying my thoughts from them to such objects, as are commonly conjoin'd with them, I feel a stronger and more forcible conception on the one side, than on the other. This strong conception forms my first decision. I suppose, that afterwards I examine my judgment itself, and observing from experience, that 'tis sometimes just and sometimes erroneous, I consider it as regulated by contrary principles or causes, of which some lead to truth, and some to error; and in ballancing these contrary causes, I diminish by a new probability the assurance of my first decision. This new probability is liable to the same diminution as the foregoing, and so on, in infinitum. 'Tis therefore demanded, how it happens, that even after all we retain a degree of belief, which is sufficient for our purpose, either in philosophy or common life.

I answer, that after the first and second decision; as the action of the mind becomes forc'd and unnatural, and the ideas faint and obscure; tho' the principles of judgment, and the ballancing of opposite causes be the same as at the very beginning; yet their influence on the imagination, and the vigour they add to, or diminish from the thought, is by no means equal. Where the mind reaches not its objects with easiness and facility, the same principles have not the same effect as in a more natural conception of the ideas; nor does the imagination feel a sensation, which holds any proportion with that which arises from its common judgments and opinions. The attention is on the stretch: The posture of the mind is uneasy; and the spirits being diverted from their natural course, are not govern'd in their movements by the same laws, at least not to the same degree, as when they flow in their usual channel.

If we desire similar instances, 'twill not be very difficult to find them. The present subject of metaphysics will supply us abundantly.

The same argument, which wou'd have been esteem'd convincing in a reasoning concerning history or politics, has little or no influence in these abstruser subjects, even tho' it be perfectly comprehended; and that because there is requir'd a study and an effort of thought, in order to its being comprehended: And this effort of thought disturbs the operation of our sentiments, on which the belief depends. The case is the same in other subjects. The straining of the imagination always hinders the regular flowing of the passions and sentiments.

A tragic poet, that wou'd represent his heroes as very ingenious and witty in their misfortunes, wou'd never touch the passions. As the emotions of the soul prevent any subtile reasoning and reflection, so these latter actions of the mind are equally prejudicial to the former.

The mind, as well as the body, seems to be endow'd with a certain precise degree of force and activity, which it never employs in one action, but at the expense of all the rest. This is more evidently true, where the actions are of quite different natures; since in that case the force of the mind is not only diverted, but even the disposition chang'd, so as to render us incapable of a sudden transition from one action to the other, and still more of performing both at once. No wonder, then, the conviction, which arises from a subtile reasoning, diminishes in proportion to the efforts, which the imagination makes to enter into the reasoning, and to conceive it in all its parts. Belief, being a lively conception, can never be entire, where it is not founded on something natural and easy.

This I take to be the true state of the question, and cannot approve of that expeditious way, which some take with the sceptics, to reject at once all their arguments without enquiry or examination.

If the sceptical reasonings be strong, say they, 'tis a proof, that reason may have some force and authority: if weak, they can never be sufficient to invalidate all the conclusions of our understanding.

This argument is not just; because the sceptical reasonings, were it possible for them to exist, and were they not destroy'd by their subtlety, wou'd be successively both strong and weak, according to the successive dispositions of the mind. Reason first appears in possession^[3] of the throne, prescribing laws, and imposing maxims, with an absolute sway and authority. Her enemy, therefore, is oblig'd to take shelter under her protection, and by making use of rational arguments to prove the fallaciousness and imbecility of reason, produces, in a manner, a patent under her band and seal. This patent has at first an authority, proportioned to the present and immediate authority of reason, from which it is deriv'd. But as it is suppos'd to be contradictory to reason, it gradually diminishes the force of that governing power and its own at the same time; till at last they both vanish away into nothing, by a regulax and just diminution.

The sceptical and dogmatical reasons are of the same kind,

tho' contrary in their operation and tendency; so that where the latter is strong, it has an enemy of equal force in the former to encounter; and as their forces were at first equal, they still continue so, as long as either of them subsists; nor does one of them lose any force in the contest, without taking as much from its antagonist. 'Tis happy, therefore, that nature breaks the force of all sceptical arguments in time, and keeps them from having any considerable influence on the understanding. Were we to trust entirely to their selfdestruction, that can never take place, 'till they have first subverted all conviction, and have totally destroy'd human reason.

SECT. II

Of scepticism with regard to the senses

Thus the sceptic still continues to reason and believe, even tho' he asserts, that he cannot defend his reason by reason; and by the same rule he must assent to the principle concerning the existence of body[4], tho' he cannot pretend by any arguments of philosophy to maintain its veracity. Nature has not left this to his choice, and has doubtless, esteem'd it an affair of too great importance to be trusted to our uncertain reasonings and speculations. We may well ask, What causes induce us to believe in the existence of body? but 'tis in vain to ask, Whether there be body or not? That is a point, which we must take for granted in all our reasonings.

The subject, then, of our present enquiry is concerning the causes which induce us to believe in the existence of body: And my reasonings on this head I shall begin with a distinction, which at first sight may seem superfluous, but which will contribute very much to the perfect understanding of what follows. We ought to examine apart those two questions, which are commonly confounded together, viz. Why we attribute a continu'd existence to objects, even when they are not present to the senses; and why we suppose them to have an existence DISTINCT from the mind and perception. Under this last head I comprehend their situation as well as relations, their external position as well as the independence of their existence and operation. These two questions concerning the continu'd and distinct existence of body are intimately connected together. For if the objects of our senses continue to exist, even when they are not perceiv'd, their existence is of course independent of and distinct from the perception: and vice versa, if their existence be independent of the perception and

distinct from it, they must continue to exist, even tho' they be not perceiv'd. But tho' the decision of the one question decides the other; yet that we may the more easily discover the principles of human nature, from whence the decision arises, we shall carry along with us this distinction, and shall consider, whether it be the senses, reason, or the imagination, that produces the opinion of a continu'd or of a distinct existence.

These are the only questions, that are intelligible on the present subject. For as to the notion of external existence, when taken for something specially different from our perceptions,³² we have already shewn its absurdity.

To begin with the SENSES, 'tis evident these faculties are incapable of giving rise to the notion of the continu'd existence of their objects, after they no longer appear to the senses. For that is a contradiction in terms, and suppose that the senses continue to operate, even after they have ceas'd all manner of operation. These faculties, therefore, if they have any influence in the present case, must produce the opinion of a distinct, not of a continu'd existence; and in order to that, must present their impressions either as images and representations, or as these very distinct and external existences.

That our senses offer not their impressions as the images of something distinct, or independent, and external, is evident; because they convey to us nothing but a single perception, and never give us the least intimation of any thing beyond. A single perception can never produce the idea of a double existence, but by some inference either of the reason or imagination. When the mind looks farther than what immediately appears to it, its conclusions can never be put to the account of the senses; and it certainly looks farther, when from a single perception it infers a double existence, and supposes the relations of resemblance and causation betwixt them.

If our senses, therefore, suggest any idea of distinct existences, they must convey the impressions as those very existences, by a kind of fallacy and illusion. Upon this bead we may observe, that all sensations are felt by the mind, such as they really are, and that when we doubt, whether they present themselves as distinct objects, or as mere impressions, the difficulty is not concerning their nature, but concerning their relations and situation.' Now if the senses presented our impressions as external to, and independent of

ourselves, both the objects and ourselves must be obvious to our senses, otherwise they cou'd not be compar'd by these faculties. The difficulty, then, is how far we are ourselves the objects of our senses.

'Tis certain there is no question in philosophy more abstruse than that concerning identity, and the nature of the uniting principle, which constitutes a person. So far from being able by our senses merely to determine this question, we must have recourse to the most profound metaphysics to give a satisfactory answer to it; and in common life 'tis evident these ideas of self and person are never very fix'd nor determinate. 'Tis absurd, therefore, to imagine the senses can ever distinguish betwixt ourselves and external objects.

Add to this, that every impression, external and internal, passions, affections, sensations, pains and pleasures, are originally on the same footing; and that whatever other differences we may observe among them, they appear, all of them, in their true colours, as impressions or perceptions. And indeed, if we consider the matter aright, 'tis scarce possible it shou'd be otherwise, nor is it conceivable that our senses shou'd be more capable of deceiving us in the situation and relations, than in the nature of our impressions.

For since all actions and sensations of the mind are known to us by consciousness, they must necessarily appear in every particular what they are, and be what they appear. Every thing that enters the mind, being in reality a perception, 'tis impossible any thing shou'd to feeling appear different. This were to suppose, that even where we are most intimately conscious, we might be mistaken.

But not to lose time in examining, whether 'tis possible for our senses to deceive us, and represent our perceptions as distinct from ourselves, that is as external to and independent of us; let us consider whether they really do so, and whether this error proceeds from an immediate sensation, or from some other causes.

To begin with the question concerning external[5] existence, it may perhaps be said, that setting aside the metaphysical question of the identity of a thinking - substance, our own body evidently belongs to us; and as several impressions appear exterior to the body, we suppose them also exterior to ourselves. The paper, on which I write at present, is beyond my hand. The table is beyond the paper. The walls of the chamber beyond the table. And in casting my eye towards

the window, I perceive a great extent of fields and buildings beyond my chamber. From all this it may be infer'd, that no other faculty is requir'd, beside the senses, to convince us of the external existence of body. But to prevent this inference, we need only weigh the three following considerations. First, That, properly speaking, 'tis not our body we perceive, when we regard our limbs and members, but certain impressions, which enter by the senses; so that the ascribing a real and corporeal existence to these impressions, or to their objects, is an act of the mind as difficult to explain, as that which we examine at present. Secondly, Sounds, and tastes, and smells, tho' commonly regarded by the mind as continu'd independent qualities, appear not to have any existence in extension, and consequently cannot appear to the senses as situated externally to the body.' The reason, why we ascribe a place to them, shall be: considered afterwards. Thirdly, Even our sight informs us not of distance or outness^[6] (so to speak) immediately and without a certain reasoning and experience, as is acknowledged by the most rational philosophers.

As to the independency of our perceptions on ourselves, this can never be an object of the senses; but any opinion we form concerning it, must be deriv'd from experience and observation: And we shall see afterwards, that our conclusions from experience are far from being favourable to the doctrine of the independency of our perceptions. Mean while we may observe that when we talk of real distinct existences, we have commonly more in our eye their independency than external situation in place, and think an object has a sufficient reality, when its Being is uninterrupted, and independent of the incessant revolutions, which we are conscious of in ourselves.

Thus to resume what I have said concerning the senses; they give us no notion of continu'd existence, because they cannot operate beyond the extent, in which they really operate. They as little produce the opinion of a distinct existence, because they neither can offer it to the mind as represented, nor as original. To offer it as represented, they must present both an object and an image. To make it appear as original, they must convey a falshood; and this falshood must lie in the relations and situation: In order to which they must be able to compare the object with ourselves; and even in that case they do not, nor is it possible they shou'd, deceive us. We may, therefore, conclude with certainty, that the opinion of a continu'd and of a distinct existence never arises from the senses.

To confirm this we may observe, that there are three different kinds of impressions convey'd by the senses. The first are those of the figure, bulk, motion and solidity of bodies. The second those of colours, tastes, smells, sounds, heat and cold. The third are the pains and pleasures, that arise from the application of objects to our bodies, as by the cutting of our flesh with steel, and such like.

Both philosophers and the vulgar suppose the first of these to have a distinct continu'd existence. The vulgar only regard the second as on the same footing. Both philosophers and the vulgar, again, esteem the third to be merely perceptions and consequently interrupted and dependent beings.

Now 'tis evident, that, whatever may be our philosophical opinion, colours, Sounds, heat and cold, as far as appears to the senses, exist after the same manner with motion and solidity, and that the difference we make betwixt them in this respect, arises not from the mere perception. So strong the prejudice for the distinct continu'd existence Of the former qualities, that when the contrary opinion is advanc'd by modern philosophers, people imagine they can almost refute it from their feeling and experience, and that their very senses contradict this philosophy. 'Tis also evident, that colours, sounds, etc. are originally on the same footing with the pain that arises from steel, and pleasure that proceeds from a fire; and that the difference betwixt them is founded neither on perception nor reason, but on the imagination. For as they are confest to be, both of them, nothing but perceptions arising from the particular configurations and motions of the parts of body, wherein possibly can their difference consist? Upon the whole, then, we may conclude, that as far as the senses are judges, all perceptions are the same in the manner of their existence.

We may also observe in this instance of sounds and colours, that we can attribute a distinct continu'd existence to objects without ever consulting REASON, or weighing our opinions by any philosophical principles. And indeed, whatever convincing arguments philosophers may fancy they can produce to establish the belief of objects independent of the mind, 'tis obvious these arguments are known but to very few, and that 'tis not by them, that children, peasants, and the greatest part of mankind are induc'd to attribute objects to some impressions, and deny them to others.

Accordingly we find, that all the conclusions, which the vulgar

form on this head, are directly' contrary to those, which are confirm'd by philosophy. For philosophy informs us, that every thing, which appears to the mind, is nothing but a perception, and is interrupted, and dependent on the mind: whereas the vulgar confound perceptions and objects, and attribute a distinct continu'd existence to the very things they feel or see. This sentiment, then, as it is entirely unreasonable, must proceed from some other faculty than the understanding. To which we may add, that as long as we take our perceptions and objects to be the same, we can never infer the existence of the one from that of the other, nor form any argument from the relation of cause and effect; which is the only one that can assure us of matter of fact. Even after we distinguish our perceptions from our objects, 'twill appear presently, that we are still incapable of reasoning from the existence of one to that of the other: So that upon the whole our reason neither does, nor is it possible it ever should, upon any supposition, give us an assurance of the continu'd and distinct existence of body. That opinion must be entirely owing to the IMAGINATION: which must now be the subject of our enquiry.

Since all impressions are internal and perishing existences, and appear as such, the notion of their distinct and continu'd existence must arise from a concurrence of some of their qualities with the qualities of the imagination, and since this notion does not extend to all of them, it must arise from certain qualities peculiar to some impressions. 'Twill therefore be easy for us to discover these qualities by a comparison of the impressions, to which we attribute a distinct and continu'd existence, with those, which we regard as internal and perishing.

We may observe, then, that 'tis neither upon account of the involuntariness of certain impressions, as is commonly suppos'd, nor of their superior force and violence, that we attribute to them a reality, and continu'd existence, which we refuse to others, that are voluntary or feeble. For 'tis evident our pains and pleasures, our passions and affections, which we never suppose to have any existence beyond our perception, operate with greater violence, and are equally involuntary, as the impressions of figure and extension, colour and sound, which we suppose to be permanent beings. The heat of a fire, when moderate, is suppos'd to exist in the fire; but the pain, which it causes upon a near approach, is not taken to have any being, except in the perception.

These vulgar opinions, then, being rejected, we must search for some other hypothesis, by which we may discover those peculiar qualities in our impressions, which makes us attribute to them a distinct and continu'd existence.

After a little examination, we shall find, that all those objects, to which we attribute a continu'd existence, have a peculiar constancy, which distinguishes them from the impressions, whose existence depends upon our perception. Those mountains, and houses, and trees, which lie at present under my eye, have always appear'd to me in the same order; and when I lose sight of them by shutting my eyes or turning my head, I soon after find them return upon me without the least alteration. My bed and table, my books and papers, present themselves in the same uniform manner, and change not upon account of any interruption in my seeing or perceiv'ing them. This is the case with all the impressions, whose objects are suppos'd to have an external existence; and is the case with no other impressions, whether gentle or violent, voluntary or involuntary.

This constancy, however, is not so perfect as not to admit of very considerable exceptions. Bodies often change their position and qualities, and after a little absence or interruption may become hardly knowable. But here 'tis observable, that even in these changes they preserve a coherence^[7], and have a regular dependence on each other; which is the foundation of a kind of reasoning from causation, and produces the opinion of their continu'd existence. When I return to my chamber after an hour's absence, I find not my fire in the same situation, in which I left it: But then I am accustomed in other instances to see a like alteration produc'd in a like time, whether I am present or absent, near or remote. This coherence, therefore, in their changes is one of the characteristics of external objects, as well as their constancy.

Having found that the opinion of the continu'd existence of body depends on the COHERENCE, and CONSTANCY of certain impressions, I now proceed to examine after what manner these qualities give rise to so extraordinary an opinion. To begin with the coherence; we may observe, that tho' those internal impressions, which we regard as fleeting and perishing, have also a certain coherence or regularity in their appearances, yet 'tis of somewhat a different nature, from that which we discover in bodies. Our passions are found by

experience to have a mutual connexion with and dependence on each other; but on no occasion is it necessary to suppose, that they have existed and operated, when they were not perceiv'd, in order to preserve the same dependence and connexion, of which we have had experience. The case is not the same with relation to external objects. Those require a continu'd existence, or otherwise lose, in a great measure, the regularity of their operation.

I am here seated in my chamber with my face to the fire; and all the objects, that strike my senses, are contain'd in a few yards around me.

My memory, indeed, informs me of the existence of many objects; but then this information extends not beyond their past existence, nor do either my senses or memory give any testimony to the continuance of their being. When therefore I am thus seated, and revolve over these thoughts, I hear on a sudden a noise as of a door turning upon its hinges; and a little after see a porter, who advances towards me. This gives occasion to many new reflections and reasonings. First, I never have observ'd, that this noise cou'd proceed from any thing but the motion of a door; and therefore conclude, that the present phaenomenon is a contradiction to all past experience, unless the door, which I remember on t'other side the chamber, be still in being. Again, I have always found, that a human body was possest of a quality, which I call gravity, and which hinders it from mounting in the air, as this porter must have done to arrive at my chamber, unless the stairs I remember be not annihilated by my absence. But this is not all. I receive a letter, which upon, opening it I perceive by the hand-writing and subscription to have come from a friend, who says he is two hundred leagues distant. 'Tis evident I can never account for this phenomenon, conformable to my experience in other instances, without spreading out in my mind the whole sea and continent between us, and supposing the effects and continu'd existence of posts and ferries, according to my Memory and observation. To consider these phaenomena of the porter and letter in a certain light, they are contradictions to common experience, and may be regarded as objections to those maxims, which we form concerning the connexions of causes and effects. I am accustomed to hear such a sound, and see such an object in motion at the same time. I have not receiv'd in this particular instance both these perceptions. These observations are contrary, unless I suppose that the door still remains,

and that it was open'd without my perceiving it: And this supposition, which was at first entirely arbitrary and hypothetical, acquires a force and evidence by its being the only one, upon which I can reconcile these contradictions. There is scarce a moment of my life, wherein there is not a similar instance presented to me, and I have not occasion to suppose the continu'd existence of objects, in order to connect their past and present appearances, and give them such an union with each other, as I have found by experience to be suitable to their particular natures and circumstances. Here then I am naturally led to regard the world, as something real and durable, and as preserving its existence, even when it is no longer present to my perception.

But tho' this conclusion from the coherence of appearances may seem to be of the same nature with our reasonings concerning causes and effects; as being deriv'd from custom, and regulated by past experience; we shall find upon examination, that they are at the bottom considerably different from each other, and that this inference arises from the understanding, and from custom in an indirect and oblique manner. For 'twill readily be allow'd, that since nothing is ever really present to the mind, besides its own perceptions, 'tis not only impossible, that any habit shou'd ever be acquir'd otherwise than by the regular succession of these perceptions, but also that any habit shou'd ever exceed that degree of regularity. Any degree, therefore, of regularity in our perceptions, can never be a foundation for us to infer a, greater degree of regularity in some objects, which are not perceiv'd; since this supposes a contradiction, viz. a habit acquir'd by what was never present to the mind.' But 'tis evident, that whenever we infer the continu'd existence of the objects of sense from their coherence, and the frequency of their union, 'tis in order to bestow on the objects a greater regularity than what is observ'd in our mere perceptions.

We remark a connexion betwixt two kinds of objects in their past appearance to the senses, but are not able to observe this connexion to be perfectly constant, since the turning about of our head or the shutting of our eyes is able to break it. What then do we suppose in this case, but that these objects still continue their usual connexion, notwithstanding their apparent interruption, and that the irregular appearances are join'd by something, of which we are insensible?

But as all reasoning concerning matters of fact arises only from custom, and custom can only be the effect of repeated perceptions, the extending of custom and reasoning beyond the perceptions can never be the direct and natural effect of the constant repetition and connexion, but must arise from the co-operation of some other principles.

I have already observ'd,³³ in examining the foundation of mathematics, that the imagination, when set into any train of thinking, is apt to continue, even when its object fails it, and like a galley put in motion by the oars, carries on its course without any new impulse. This I have assign'd for the reason, why, after considering several loose standards of equality, and correcting them by each other, we proceed to imagine so correct and exact a standard of that relation, as is not liable to the least error or variation. The same principle makes us easily entertain this opinion of the continu'd existence of body. Objects have a certain coherence even as they appear to our senses; but this coherence is much greater and more uniform, if we suppose the object to have a continu'd existence; and as the mind is once in the train of observing an uniformity among objects, it naturally continues, till it renders the uniformity as compleat as possible. The simple supposition of their continu'd existence suffices for this purpose, and gives us a notion of a much greater regularity among objects, than what they have when we look no farther than our senses.

But whatever force we may ascribe to this principle, I am afraid 'tis too weak to support alone so vast an edifice, as is that of the continu'd existence of all external bodies; and that we must join the constancy of their appearance to the coherence, in order to give a satisfactory account of that opinion. As the explication of this will lead me into a considerable compass of very profound reasoning; I think it proper, in order to avoid confusion, to give a short sketch or abridgment of my system, and afterwards draw out all its parts in their full compass. This inference from the constancy of our perceptions, like the precedent from their coherence, gives rise to the opinion of the continu'd existence of body, which is prior to that of its distinct existence, and produces that latter principle.

When we have been accustomed to observe a constancy in certain impressions, and have found, that the perception of the sun or ocean,

for instance, returns upon us after an absence or annihilation with like parts and in a like order, as at its first appearance, we are not apt to regard these interrupted perceptions as different, (which they really are) but on the contrary consider them as individually the same, upon account of their resemblance.

But as this interruption of their existence is contrary to their perfect identity, and makes us regard the first impression as annihilated, and the second as newly created, we find ourselves somewhat at a loss, and are involv'd in a kind of contradiction. In order to free ourselves from this difficulty, we disguise, as much as possible, the interruption, or rather remove it entirely, by supposing that these interrupted perceptions are connected by a real existence, of which we are insensible. This supposition, or idea of continu'd existence, acquires a force and vivacity from the memory of these broken impressions, and from that propensity, which they give us, to suppose them the same; and according to the precedent reasoning, the very essence of belief consists in the force and vivacity of the conception. In order to justify this system, there are four things requisite.

First, To explain the principium individuationis [8], or principle of identity. Secondly, Give a reason, why the resemblance of our broken and interrupted perceptions induces us to attribute an identity to them. <Thirdly>, Account for that propensity, which this illusion gives, to unite these broken appearances by a continued existence. Fourthly and lastly, Explain that force and vivacity of conception, which arises from the propensity.

First, As to the principle of individuation; we may observe, that the view of any one object is not sufficient to convey the idea of identity. For in that proposition, an object is the same with itself, if the idea express'd by the word, object, were no ways distinguished from that meant by itself; we really shou'd mean nothing, nor wou'd the proposition contain a predicate and a subject, which however are imply'd in this affirmation. One single object conveys the idea of unity [9], not that of identity.

On the other hand, a multiplicity of objects can never convey this idea, however resembling they may be suppos'd. The mind always pronounces the one not to be the other, and considers them as forming two, three, or any determinate number of objects, whose existences

are entirely distinct and independent.

Since then both number and unity are incompatible with the relation of identity, it must lie in something that is neither of them.

But to tell the truth, at first sight this seems utterly impossible. Betwixt unity and number there can be no medium; no more than betwixt existence and nonexistence. After one object is suppos'd to exist, we must either suppose another also to exist; in which case we have the idea of number: Or we must suppose it not to exist; in which case the first object remains at unity.

To remove this difficulty, let us have recourse to the idea of time or duration. I have already observ'd,³⁴ that time, in a strict sense, implies succession, and that when we apply its idea to any unchangeable object, 'tis only by a fiction of the imagination, by which the unchangeable object is suppos'd to participate of the changes of the co-existent objects, and in particular of that of our perceptions. This fiction of the imagination almost universally takes place; and 'tis by means of it, that a single object, plac'd before us, and survey'd for any time without our discovering in it any interruption or variation, is able to give us a notion of identity. For when we consider any two points of this time, we may place them in different lights: We may either survey them at the very same instant; in which case they give us the idea of number, both by themselves and by the object; which must be multiply'd, in order to be conceiv'd at once, as existent in these two different points of time: Or on the other hand, we may trace the succession of time by a like succession of ideas, and conceiving first one moment, along with the object then existent, imagine afterwards a change in the time without any variation or interruption^[10] in the object; in which case it gives us the idea of unity.

Here then is an idea, which is a medium betwixt unity and number; or more properly speaking, is either of them, according to the view, in which we take it: And this idea we call that of identity. We cannot, in any propriety of speech, say, that an object is the same with itself, unless we mean, that the object existent at one time is the same with itself existent at another. By this means we make a difference, betwixt the idea meant by the word, object, and that meant by itself, without going the length of number, and at the same time without restraining ourselves to a strict and absolute unity.

Thus the principle of individuation is nothing but the invariableness and uninterruptedness of any object, thro a supposd variation of time, by which the mind can trace it in the different periods of its existence, without any break of the view, and without being obligd to form the idea of multiplicity or number.

I now proceed to explain the second part of my system, and shew why the constancy of our perceptions makes us ascribe to them a perfect numerical identity, tho there be very long intervals betwixt their appearance, and they have only one of the essential qualities of identity, viz, invariableness. That I may avoid all ambiguity and confusion on this head, I shall observe, that I here account for the opinions and belief of the vulgar with regard to the existence of body; and therefore must entirely conform myself to their manner of thinking and of expressing themselves. Now we have already observd, that however philosophers may distinguish betwixt the objects and perceptions of the senses; which they suppose co-existent and resembling; yet this is a distinction, which is not comprehended by the generality of mankind, who as they perceive only one being, can never assent to the opinion of a double existence and representation. Those very sensations, which enter by the eye or ear, are with them the true objects, nor can they readily conceive that this pen or paper, which is immediately perceivd, represents another, which is different from, but resembling it. In order, therefore, to accommodate myself to their notions, I shall at first suppose; that there is only a single existence, which I shall call indifferently object or perception, according as it shall seem best to suit my purpose, understanding by both of them what any common man means by a hat, or shoe, or stone, or any other impression, conveyd to him by his senses. I shall be sure to give warning, when I return to a more philosophical way of speaking and thinking.

To enter, therefore, upon the question concerning the source of the error and deception with regard to identity, when we attribute it to our resembling perceptions, notwithstanding their interruption; I must here recal an observation, which I have already provd and explaind.³⁵ Nothing is more apt to make us mistake one idea for another, than any relation betwixt them, which associates them together in the imagination, and makes it pass with facility from one to the other. Of all relations, that of resemblance is in this respect the most efficacious; and that because it not only causes an association of ideas,

but also of dispositions, and makes us conceive the one idea by an act or operation of the mind, similar to that by which we conceive the other. This circumstance I have observ'd to be of great moment; and we may establish it for a general rule, that whatever ideas place the mind in the same disposition or in similar ones, are very apt to be confounded. The mind readily passes from one to the other, and perceives not the change without a strict attention, of which, generally speaking, 'tis wholly incapable.

In order to apply this general maxim, we must first examine the disposition of the mind in viewing any object which preserves a perfect identity, and then find some other object, that is confounded with it, by causing a similar disposition. When we fix our thought on any object, and suppose it to continue the same for some time; 'tis evident we suppose the change to lie only in the time, and never exert ourselves to produce any new image or idea of the object. The faculties of the mind repose themselves in a manner, and take no more exercise, than what is necessary to continue that idea, of which we were formerly possess'd, and which subsists without variation or interruption. The passage from one moment to another is scarce felt, and distinguishes not itself by a different perception or idea, which may require a different direction of the spirits, in order to its conception.

Now what other objects, beside identical ones, are capable of placing the mind in the same disposition, when it considers them, and of causing the same uninterrupted passage of the imagination from one idea to another? This question is of the last importance. For if we can find any such objects, we may certainly conclude, from the foregoing principle, that they are very naturally confounded with identical ones, and are taken for them in most of our reasonings.

But tho' this question be very important, 'tis not very difficult nor doubtful. For I immediately reply, that a succession of related objects places the mind in this disposition, and is consider'd with the same smooth and uninterrupted progress of the imagination, as attends the view of the same invariable object. The very nature and essence of relation is to connect our ideas with each other, and upon the appearance of one, to facilitate the transition to its correlative.

The passage betwixt related ideas is, therefore, so smooth and easy, that it produces little alteration on the mind, and seems like the

continuation of the same action; and as the continuation of the same action is an effect of the continu'd view of the same object, 'tis for this reason we attribute sameness to every succession of related objects. The thought slides along the succession with equal facility, as if it consider'd only one object; and therefore confounds the succession with the identity.

We shall afterwards see many instances of this tendency of relation to make us ascribe an identity to different objects; but shall here confine ourselves to the present subject. We find by experience, that there is such a constancy in almost all the impressions of the senses, that their interruption produces no alteration on them, and hinders them not from returning the same in appearance and in situation as at their first existence. I survey the furniture of my chamber; I shut my eyes, and afterwards open them; and find the new perceptions to resemble perfectly those, which formerly struck my senses. This resemblance is observ'd in a thousand instances, and naturally connects together our ideas of these interrupted perceptions by the strongest relation. and conveys the mind with an easy transition from one to another. .kn easy transition or passage of the imagination, along the ideas of these different and interrupted perceptions, is almost the same disposition of mind with that in which we consider one constant and uninterrupted perception. 'Tis therefore very natural for us to mistake the one for the other.³⁶ The persons, who entertain this opinion concerning the identity of our resembling perceptions, are in general an the unthinking and unphilosophical part of mankind, (that is, all of us, at one time or other) and consequently such as suppose their perceptions to be their only objects, and never think of a double existence internal and external, representing and represented. The very image, which is present to the senses, is with us the real body; and 'tis to these interrupted images we ascribe a perfect identity. But as the interruption of the appearance seems contrary to the identity, and naturally leads us to regard these resembling perceptions as different from each other, we here find ourselves at a loss how to reconcile such opposite opinions. The smooth passage of the imagination along the ideas of the resembling perceptions makes us ascribe to them a perfect identity. The interrupted manner of their appearance makes us consider them as so many resembling, but still distinct beings, which appear after certain intervals. The perplexity arising from this contradiction produces a propensity to unite these broken appearances by the fiction^[11] of a continu'd existence, which

is the third part of that hypothesis I propos'd to explain.

Nothing is more certain from experience, than that any contradiction either to the sentiments or passions gives a sensible uneasiness, whether it proceeds from without or from within; from the opposition of external objects, or from the combat of internal principles. On the contrary, whatever strikes in with the natural propensities, and either externally forwards their satisfaction, or internally concurs with their movements, is sure to give a sensible pleasure. Now there being here an opposition betwixt the notion of the identity of resembling perceptions, and the interruption of their appearance, the mind must be uneasy in that situation, and will naturally seek relief from the uneasiness. Since the uneasiness arises from the opposition of two contrary principles, it must look for relief by sacrificing the one to the other. But as the smooth passage of our thought along our resembling perceptions makes us ascribe to them an identity, we can never without reluctance yield up that opinion. We must, therefore, turn to the other side, and suppose that our perceptions are no longer interrupted, but preserve a continu'd as well as an invariable existence, and are by that means entirely the same. But here the interruptions in the appearance of these perceptions are so long and frequent, that 'tis impossible to overlook them; and as the appearance of a perception in the mind and its existence seem at first sight entirely the same, it may be doubted, whether we can ever assent to so palpable a contradiction, and suppose a perception to exist without being present to the mind. In order to clear up this matter, and learn how the interruption in the appearance of a perception implies not necessarily an interruption in its existence, 'twill be proper to touch upon some principles, which we shall have occasion to explain more fully afterwards.³⁷ We may begin with observing, that the difficulty in the present case is not concerning the matter of fact, or whether the mind forms such a conclusion concerning the continu'd existence of its perceptions, but only concerning the manner in which the conclusion is form'd, and principles from which it is deriv'd. 'Tis certain, that almost all mankind, and even philosophers themselves, for the greatest part of their lives, take their perceptions to be their only objects, and suppose, that the very being, which is intimately present to the mind, is the real body or material existence. 'Tis also certain, that this very perception or object is suppos'd to have a continu'd uninterrupted being, and neither to be annihilated by our absence, nor to be brought into existence by our presence. When we are absent

from it, we say it still exists, but that we do not feel, we do not see it. When we are present, we say we feel, or see it. Here then may arise two questions; First, How we can satisfy ourselves in supposing a perception to be absent from the mind without being annihilated. Secondly, After what manner we conceive an object to become present to the mind, without some new creation of a perception or image; and what we mean by this seeing, and feeling, and perceiving.

As to the first question; we may observe, that what we call a mind, is nothing but a heap or collection of different perceptions, united together by certain relations, and suppos'd, tho' falsely, to be endow'd with a perfect simplicity and identity. Now as every perception is distinguishable from another, and may be considered as separately existent; it evidently follows, that there is no absurdity in separating any particular perception from the mind; that is, in breaking off all its relations, with that connected mass of perceptions, which constitute a thinking being.

The same reasoning affords us an answer to the second question. If the name of perception renders not this separation from a mind absurd and contradictory, the name of object, standing for the very same thing, can never render their conjunction impossible.

External objects are seen, and felt, and become present to the mind; that is, they acquire such a relation to a connected heap of perceptions, as to influence them very considerably in augmenting their number by present reflections and passions, and in storing the memory with ideas. The same continu'd and uninterrupted Being may, therefore, be sometimes present to the mind, and sometimes absent from it, without any real or essential change in the Being itself. An interrupted appearance to the senses implies not necessarily an interruption in the existence. The supposition of the continu'd existence of sensible objects or perceptions involves no contradiction. We may easily indulge our inclination to that supposition. When the exact resemblance of our perceptions makes us ascribe to them an identity, we may remove the seeming interruption by feigning a continu'd being, which may fill those intervals, and preserve a perfect and entire identity to our perceptions.

But as we here not only feign but believe this continu'd existence, the question is, from whence arises such a belief; and this question leads us to the fourth member of this system. It has been prov'd

already, that belief in general consists in nothing, but the vivacity of an idea; and that an idea may acquire this vivacity by its relation to some present impression. Impressions are naturally the most vivid perceptions of the mind; and this quality is in part convey'd by the relation to every connected idea. The relation causes a smooth passage from the impression to the idea, and even gives a propensity to that passage. The mind falls so easily from the one perception to the other, that it scarce perceives the change, but retains in the second a considerable share of the vivacity of the first. It is excited by the lively impression; and this vivacity is convey'd to the related idea, without any great diminution in the passage, by reason of the smooth transition and the propensity of the imagination.

But suppose, that this propensity arises from some other principle, besides that of relation; 'tis evident it must still have the same effect, and convey the vivacity from the impression to the idea. Now this is exactly the present case. Our memory presents us with a vast number of instances of perceptions perfectly resembling each other, that return at different distances of time, and after considerable interruptions. This resemblance gives us a propensity to consider these interrupted perceptions as the same; and also a propensity to connect them by a continu'd existence, in order to justify this identity, and avoid the contradiction, in which the interrupted appearance of these perceptions seems necessarily to involve us. Here then we have a propensity to feign the continu'd existence of all sensible objects; and as this propensity arises from some lively impressions of the memory, it bestows a vivacity on that fiction: or in other words, makes us believe the continu'd existence of body. If sometimes we ascribe a continu'd existence to objects, which are perfectly new to us, and of whose constancy and coherence we have no experience, 'tis because the manner, in which they present themselves to our senses, resembles that of constant and coherent objects; and this resemblance is a source of reasoning and analogy, and leads us to attribute the same qualities to similar objects.

I believe an intelligent reader will find less difficulty to assent to this system, than to comprehend it fully and distinctly, and will allow, after a little reflection, that every part carries its own proof along with it. 'Tis indeed evident, that as the vulgar suppose their perceptions to be their only objects, and at the same time believe the continu'd existence of matter, we must account for the origin of the belief upon

that supposition. Now upon that supposition, 'tis a false opinion that any of our objects, or perceptions, are identically the same after an interruption; and consequently the opinion of their identity can never arise from reason, but must arise from the imagination. The imagination is seduc'd into such an opinion only by means of the resemblance of certain perceptions; since we find they are only our resembling perceptions, which we have a propensity to suppose the same. This propensity to bestow an identity on our resembling perceptions, produces the fiction of a continu'd existence; since that fiction, as well as the identity, is really false, as is acknowledged by all philosophers, and has no other effect than to remedy the interruption of our perceptions, which is the only circumstance that is contrary to their identity. In the last place this propensity causes belief by means of the present impressions of the memory; since without the remembrance of former sensations, 'tis plain we never shou'd have any belief of the continu'd existence of body. Thus in examining all these parts, we find that each of them is supported by the strongest proofs: and that all of them together form a consistent system, which is perfectly convincing. A strong propensity or inclination alone, without any present impression, will sometimes cause a belief or opinion. How much more when aided by that circumstance?

But tho' we are led after this manner, by the natural propensity of the imagination, to ascribe a continu'd existence to those sensible objects or perceptions, which we find to resemble each other in their interrupted appearance; yet a very little reflection and philosophy is sufficient to make us perceive the fallacy[\[12\]](#) of that opinion. I have already observ'd, that there is an intimate connexion betwixt those two principles, of a continu'd and of a distinct or independent existence, and that we no sooner establish the one than the other follows, as a necessary consequence. 'Tis the opinion of a continu'd existence, which first takes place, and without much study or reflection draws the other along with it, wherever the mind follows its first and most natural tendency. But when we compare experiments, and reason a little upon them, we quickly perceive, that the doctrine of the independent existence of our sensible perceptions is contrary to the plainest experience. This leads us backward upon our footsteps to perceive our error in attributing a continu'd existence to our perceptions, and is the origin of many very curious opinions, which we shall here endeavour to account for.

'Twill first be proper to observe a few of those experiments, which convince us, that our perceptions are not possest of any independent existence. When we press one eye with a finger, we immediately perceive all the objects to become double, and one half of them to be remov'd from their common and natural position. But as we do not attribute to continu'd existence to both these perceptions, and as they are both of the same nature, we clearly perceive, that all our perceptions are dependent on our organs, and the disposition of our nerves and animal spirits. This opinion is confirm'd by the seeming encrease and diminution of objects, according to their distance; by the apparent alterations in their figure; by the changes in their colour and other qualities from our sickness and distempers; and by an infinite number of other experiments of the same kind; from all which we learn, that our sensible perceptions are not possest of any distinct or independent existence.

The natural consequence of this reasoning shou'd be, that our perceptions have no more a continued than an independent existence; and indeed philosophers have so far run into this opinion, that they change their system, and distinguish, (as we shall do for the future) betwixt perceptions and objects, of which the former are suppos'd to be interrupted, and perishing, and different at every different return; the latter to be uninterrupted, and to preserve a continu'd existence and identity. But however philosophical this new system may be esteem'd, I assert that 'tis only a palliative remedy, and that it contains all the difficulties of the vulgar system, with some others, that are peculiar to itself. There are no principles either of the understanding or fancy, which lead us directly to embrace this opinion of the double existence of perceptions and objects, nor can we arrive at it but by passing thro' the common hypothesis of the identity and continuance of our interrupted perceptions. Were we not first perswaded, that our perceptions are our only objects, and continue to exist even when they no longer make their appearance to the senses, we shou'd never be led to think, that our perceptions and objects are different, and that our objects alone preserve a continu'd existence. 'The latter hypothesis has no primary recommendation either to reason or the imagination, but acquires all its influence on the imagination from the former.' This proposition contains two parts, which we shall endeavour to prove as distinctly and clearly, as such abstruse subjects will permit.

As to the first part of the proposition, that this philosophical hypothesis has no primary recommendation,, either to reason, or the imagination, we may soon satisfy ourselves with regard to reason by the following reflections. The only existences, of which we are certain, are perceptions, which being immediately present to us by consciousness, command our strongest assent, and are the first foundation of all our conclusions. The only conclusion we can draw from the existence of one thing to that of another, is by means of the relation of cause and effect, which shews, that there is a connexion betwixt them, and that the existence of one is dependent on that of the other. The idea of this relation is deriv'd from past experience,by which we find, that two beings are constantly conjoin'd together,and are always present at once to the mind. But as no beings are ever present to the mind but perceptions; it follows that we may observe a con. unction or a relation of cause and effect between different perceptions, but can never observe it between perceptions and objects. 'Tis impossible, therefore, that from the existence or any of the qualities of the former, we can ever form any conclusion concerning the existence of the latter, or ever satisfy our reason in this particular.

'Tis no less certain, that this philosophical system has no primary recommendation to the imagination, and that that faculty wou'd never, of itself, and by its original tendency, have fallen upon such a principle. I confess it will be somewhat difficult to prove this to the fall satisfaction of the reader; because it implies a negative,which in many cases will not admit of any positive proof. If any one wou'd take the pains to examine this question, and wou'd invent a system, to account for the direct origin of this opinion from the imagination, we shou'd be able, by the examination of that system,to pronounce a certain judgment in the present subject. Let it be taken for granted, that our perceptions are broken, and interrupted,and however like, are still different from each other; and let any one upon this supposition shew why the fancy, directly and immediately,proceeds to the belief of another existence, resembling these perceptions in their nature, but yet continu'd, and uninterrupted,and identical; and after he has done this to my satisfaction, I promise to renounce my present opinion. Mean while I cannot forbear concluding, from the very abstractedness and difficulty of the first supposition, that 'tis an improper subject for the fancy to work upon. Whoever wou'd explain the origin of the common opinion concerning the continu'd and distinct existence of body, must take the mind in its common situation, and must proceed

upon the supposition, that our perceptions are our only objects, and continue to exist even when they are not perceiv'd. Tho' this opinion be false, 'tis the most natural of any, and has alone any primary recommendation to the fancy.

As to the second part of the proposition, that the philosophical system acquires all its influence on the imagination from the vulgar one; we may observe, that this is a natural and unavoidable consequence of the foregoing conclusion, that it has no primary recommendation to reason or the imagination. For as the philosophical system is found by experience to take hold of many minds, and in particular of all those, who reflect ever so little on this subject, it must derive all its authority from the vulgar system; since it has no original authority of its own. The manner, in which these two systems, tho' directly contrary, are connected together, may be explains, as follows.

The imagination naturally runs on in this train of thinking. Our perceptions are our only objects: Resembling perceptions are the same, however broken or uninterrupted in their appearance: This appealing interruption is contrary to the identity: The interruption consequently extends not beyond the appearance, and the perception or object really continues to exist, even when absent from us: Our sensible perceptions have, therefore, a continu'd and uninterrupted existence. But as a little reflection destroys this conclusion, that our perceptions have a continu'd existence, by shewing that they have a dependent one, 'twou'd naturally be expected, that we must altogether reject the opinion, that there is such a thing in nature as a continu'd existence, which is preserv'd even when it no longer appears to the senses. The case, however, is otherwise. Philosophers are so far from rejecting the opinion of a continu'd existence upon rejecting that of the independence and continuance of our sensible perceptions, that tho' all sects agree in the latter sentiment, the former, which is, in a manner, its necessary consequence, has been peculiar to a few extravagant sceptics; who after all maintained that opinion in words only, and were never able to bring themselves sincerely to believe it.

There is a great difference betwixt such opinions as we form after a calm [\[13\]](#) and profound reflection, and such as we embrace by a kind of instinct or natural impulse, on account of their suitableness and conformity to the mind. If these opinions become contrary, 'tis not

difficult to foresee which of them will have the advantage.

As long as our attention is bent upon the subject, the philosophical and study'd principle may prevail; but the moment we relax our thoughts, nature will display herself, and draw us back to our former opinion. Nay she has sometimes such an influence, that she can stop our progress, even in the midst of our most profound reflections, and keep us from running on with all the consequences of any philosophical opinion. Thus tho' we clearly perceive the dependence and interruption of our perceptions, we stop short in our career, and never upon that account reject the notion of an independent and continu'd existence. That opinion has taken such deep root in the imagination, that 'tis impossible ever to eradicate it, nor will any strain'd metaphysical conviction of the dependence of our perceptions be sufficient for that purpose.

But tho' our natural and obvious principles here prevail above our study'd reflections, 'tis certain there must be sonic struggle and opposition in the case: at least so long as these rejections retain any force or vivacity. In order to set ourselves at ease in this particular, we contrive a new hypothesis, which seems to comprehend both these principles of reason and imagination. This hypothesis is the philosophical, one of the double existence of perceptions and objects; which pleases our reason, in allowing, that our dependent perceptions are interrupted and different; and at the same time is agreeable to the imagination, in attributing a continu'd existence to something else, which we call objects. This philosophical system, therefore, is the monstrous offspring of two principles, which are contrary to each other, which are both at once embrac'd by the mind, and which are unable mutually to destroy each other. The imagination tells us, that our resembling perceptions have a continu'd and uninterrupted existence, and are not annihilated by their absence. Reflection tells us, that even our resembling perceptions are interrupted in their existence, and different from each other.

The contradiction betwixt these opinions we elude by a new fiction, which is conformable to the hypotheses both of reflection and fancy, by ascribing these contrary qualities to different existences; the interruption to perceptions, and the continuance to objects. Nature is obstinate, and will not quit the field, however strongly attack'd by reason; and at the same time reason is so clear in the point, that there

is no possibility of disguising her. Not being able to reconcile these two enemies, we endeavour to set ourselves at ease as much as possible, by successively granting to each whatever it demands, and by feigning a double existence, where each may find something, that has all the conditions it desires. Were we fully convinc'd, that our resembling perceptions are continu'd, and identical, and independent, we shou'd never run into this opinion of a double existence. since we shou'd find satisfaction in our first supposition, and wou'd not look beyond. Again, were we fully convinc'd, that our perceptions are dependent, and interrupted, and different, we shou'd be as little inclin'd to embrace the opinion of a double existence; since in that case we shou'd clearly perceive the error of our first supposition of a continu'd existence, and wou'd never regard it any farther. 'Tis therefore from the intermediate situation of the mind, that this opinion arises, and from such an adherence to these two contrary principles, as makes us seek some pretext to justify our receiving both; which happily at last is found in the system of a double existence.

Another advantage of this philosophical system is its similarity to the vulgar one; by which means we can humour our reason for a moment, when it becomes troublesome and solicitous; and yet upon its least negligence or inattention, can easily return to our vulgar and natural notions. Accordingly we find, that philosophers neglect not this advantage; but immediately upon leaving their closets, mingle with the rest of mankind in those exploded opinions, that our perceptions are our only objects, and continue identically and uninterruptedly the same in all their interrupted appearances.

There are other particulars of this system, wherein we may remark its dependence on the fancy, in a very conspicuous manner.

Of these, I shall observe the two following. First, We suppose external objects to resemble internal perceptions. I have already shewn, that the relation of cause and effect can never afford us any just conclusion from the existence or qualities of our perceptions to the existence of external continu'd objects: And I shall farther add, that even tho' they cou'd afford such a conclusion, we shou'd never have any reason to infer, that our objects resemble our perceptions.

That opinion, therefore, is deriv'd from nothing but the quality of the fancy above-explain'd, <that it borrows all its ideas from some precedent perception>. We never can conceive any thing but

perceptions, and therefore must make every thing resemble them.

Secondly, As we suppose our objects in general to resemble our perceptions, so we take it for granted, that every particular resembles that perception, which it causes. The relation of cause and effect determines us to join the other of resemblance; and the ideas of these existences being already united together in the fancy by the former relation, we naturally add the latter to compleat the union.

We have a strong propensity to compleat every union by joining new relations to those which we have before observ'd betwixt any ideas, as we shall have occasion to observe presently.³⁸ Having thus given an account of all the systems both popular and philosophical, with regard to external existences, I cannot forbear giving vent to a certain sentiment, which arises upon reviewing those systems. I begun this subject with premising, that we ought to have an implicit faith in our senses, and that this wou'd be the conclusion, I shou'd draw from the whole of my reasoning.

But to be ingenuous, I feel myself at present of a quite contrary sentiment, and am more inclin'd to repose no faith at all in my senses, or rather imagination, than to place in it such an implicit confidence. I cannot conceive bow such trivial qualities of the fancy, conducted by such false suppositions, can ever lead to any solid and rational system. They are the coherence and constancy of our perceptions, which produce the opinion of their continu'd existence; tho' these qualities of perceptions have no perceivable connexion with such an existence. The constancy of our]perceptions has the most considerable effect, and yet is attended with the greatest difficulties. 'Tis a gross illusion to suppose, that our resembling perceptions are numerically the same; and 'tis this illusion, which leads us into the opinion, that these perceptions are uninterrupted, and are still existent, even when they are not present to the senses.

This is the case with our popular system. And as to our philosophical one, 'tis liable to the same difficulties; and is over-and-above loaded with this absurdity, that it at once denies and establishes the vulgar supposition. Philosophers deny our resembling perceptions to be identically the same, and uninterrupted; and yet have so great a propensity to believe them such, that they arbitrarily invent a new set of perceptions, to which they attribute these qualities. I say, a new set of perceptions: For we may well suppose in general, but 'tis impossible

for us distinctly to conceive, objects to be in their nature any thing but exactly the same with perceptions. What then can we look for from this confusion of groundless and extraordinary opinions but error and falshood? And how can we justify to ourselves any belief we repose in them?

This sceptical doubt, both with respect to reason and the senses, is a malady, which can never be radically cur'd, but must return upon us every moment, however we may chace it away, and sometimes may seem entirely free from it. 'Tis impossible upon any system to defend either our understanding or senses; and we but expose them farther when we endeavour to justify them in that manner. As the sceptical doubt arises naturally from a profound and intense reflection on those subjects, it always encreases, the farther we carry our reflections, whether in opposition or conformity to it. Carelessness and in-attention alone can afford us any remedy.

For this reason I rely entirely upon them; and take it for granted, whatever may be the reader's opinion at this present moment, that an hour hence he will be persuaded there is both an external and internal world; and going upon that supposition, I intend to examine some general systems both ancient and modern, which have been propos'd of both, before I proceed to a more particular enquiry concerning our impressions. This will not, perhaps, in the end be found foreign to our present purpose.

SECT. III

Of the antient philosophy

Several moralists have recommended it as an excellent method of becoming acquainted with our own hearts, and knowing our progress in virtue, to recollect our dreams in a morning, and examine them with the same rigour, that we wou'd our most serious and most deliberate actions. Our character is the same throughout, say they, and appears best where artifice, fear, and policy have no place, and men can neither be hypocrites with themselves nor others. The generosity, or baseness of our temper, our meekness or cruelty, our courage or pusillanimity, influence the fictions of the imagination with the most unbounded liberty, and discover themselves in the most glaring colours. In like manner, I am persuaded, there might be several useful discoveries made from a criticism of the fictions of the antient

philosophy, concerning substances, and substantial form, and accidents, and occult qualities[14]; which, however unreasonable and capricious, have a very intimate connexion with the principles of human nature.

'Tis confest by the most judicious philosophers, that our ideas of bodies are nothing but collections form'd by the mind of the ideas of the several distinct sensible qualities, of which objects are compos'd, and which we find to have a constant union with each other. But however these qualities may in themselves be entirely distinct, 'tis certain we commonly regard the compound, which they form, as ONE thing, and as continuing the SAME under very considerable alterations. The acknowledg'd composition is evidently contrary to this supposed simplicity, and the variation to the identity. It may, therefore, be worth while to consider the causes, which make us almost universally fall into such evident contradictions, as well as the means by which we endeavour to conceal them.

'Tis evident, that as the ideas of the several distinct, successive qualities of objects are -united together by a very close relation, the mind, in looking along the succession, must be carry'd from one part of it to another by an easy transition, and will no more perceive the change, than if it contemplated the same unchangeable object. This easy transition is the effect, or rather essence of relation; I and as the imagination readily takes one idea for another, where their influence on the mind is similar; hence it proceeds., that any such succession of related qualities is readily consider'd as one continu'd object, existing without any variation. The smooth and uninterrupted progress of the thought, being alike in both cases, readily deceives the mind, and makes us ascribe an identity to the changeable succession of connected qualities.

But when we alter our method of considering the succession, and instead of tracing it gradually thro' the successive points of time, survey at once Any two distinct periods of its duration, and compare the different conditions of the successive qualities; in that case the variations, which were insensible when they arose gradually, do now appear of consequence, and seem entirely to destroy the identity. By this means there arises a kind of contrariety in our method of thinking, from the different points of view, in which we survey the object, and from the nearness or remoteness of those instants of time,

which we compare together. When we gradually follow an object in its successive changes, the smooth progress of the thought makes us ascribe to identity to the succession; because'tis by a similar act of the mind we consider an unchangeable object.

When we compare its situation after a considerable change the progress of the thought is broke; and consequently we are presented with the idea of diversity: In order to reconcile which contradictions the imagination is apt to feign something unknown and invisible, which it supposes to continue the same under all these variations; and this unintelligible something it calls a substance, or original and first matter.

We entertain a like notion with regard to the simplicity of substances, and from like causes. Suppose an object perfectly simple and indivisible to be presented, along with another object, whose co-existent parts are connected together by a strong relation, 'tis evident the actions of the mind, in considering these two objects, are not very different. The imagination conceives the simple object at once, with facility, by a single effort of thought, without change or variation. The connexion of parts in the compound object has almost the same effect, and so unites the object within itself, that the fancy feels not the transition in passing from one part to another.

Hence the colour, taste, figure, solidity, and other qualities, combin'd in a peach or melon, are conceiv'd to form one thing; and that on account of their close relation, which makes them affect the thought in the ' same manner, as if perfectly uncompoundd. But the mind rests not here. Whenever it views the object in another light, it finds that all these qualities are different, and distinguishable, and separable from each other; which view of things being destructive of its primary and more natural notions, obliges the imagination to feign an unknown something, or original substance and matter, as a principle of union or cohesion among these qualities, and as what may give the compound object a title to be call'd one thing, notwithstanding its diversity and composition.

The peripatetic philosophy asserts the original matter to be perfectly homogeneous in all bodies, and considers fire, water, earth, and air, as of the very same substance; on account of their gradual revolutions and changes into each other. At the same time it assigns to each of these species of objects a distinct substantial form,

which it supposes to be the source of all those different qualities they possess, and to be a new foundation of simplicity and identity to each particular species. All depends on our manner of viewing the objects.

When we look along the insensible changes of bodies, we suppose all of them to be of the same substance or essence. When we consider their sensible differences, we attribute to each of them a substantial and essential difference. And in order to indulge ourselves in both these ways of considering our objects, we suppose all bodies to have at once a substance and a substantial form. The notion of accidents is an unavoidable consequence of this method of thinking with regard to substances and substantial forms; nor can we forbear looking upon colours, sounds, tastes, figures, and other properties of bodies, as existences, which cannot subsist apart, but require a subject of inhesion to sustain and support them. For having never discover'd any of these sensible qualities, where, for the reasons above-mention'd, we did not likewise fancy a substance to exist; the same habit, which makes us infer a connexion betwixt cause and effect, makes us here infer a dependence of every quality on the unknown substance. The custom of imagining a dependence has the same effect as the custom of observing it wou'd have. This conceit, however, is no more reasonable than any of the foregoing.

Every quality being a distinct thing from another, may be conceiv'd to exist apart, and may exist apart, not only from every other quality, but from that unintelligible chimera of a substance.

But these philosophers carry their fictions still farther in their sentiments concerning occult qualities, and both suppose a substance supporting, which they do not understand, and an accident supported, of which they have as imperfect an idea. The whole system, therefore, is entirely incomprehensible, and yet is deriv'd from principles as natural as any of these above-explain'd.

In considering this subject we may observe a gradation of three opinions, that rise above each other, according as the persons, who form them, acquire new degrees of reason and knowledge. These opinions are that of the vulgar, that of a false philosophy, and that of the true; where we shall find upon enquiry, that the true philosophy approaches nearer to the sentiments of the vulgar, than to those of a mistaken knowledge. 'Tis natural, for men, in their common and careless way of thinking, to imagine they perceive a connexion betwixt

such objects as they have constantly found united together;and because custom has render'd it difficult to separate the ideas,they are apt to fancy such a separation to be in itself impossible and absurd. But philosophers, who abstract from the effects of custom,and compare the ideas of objects, immediately perceive the falshood of these vulgar sentiments, and discover that there is no known connexion among objects. Every different object appears to them entirely distinct and separate; and they perceive, that 'tis not from a view of the nature and qualities of objects we infer one from another, but only when in several instances we observe them to have been constantly conjoin'd. But these philosophers, instead of drawing a just inference from this observation, and concluding, that we have no idea of power or agency, separate from the mind, and belonging to causes; I say, instead of drawing this conclusion, they frequently search for the qualities, in which this agency consists,and are displeased with every system, which their reason suggests to them, in order to explain it. They have sufficient force of genius to free them from the vulgar error, that there is a natural and perceivable connexion betwixt the several sensible qualities and.actions of matter; but not sufficient to keep them from ever seeking for this connexion in matter, or causes. Had they fallen upon the just conclusion, they wou'd have return'd back to the situation of the vulgar, and wou'd have regarded all these disquisitions with indolence[15] and indifference. At present they seem to be in a very lamentable condition, and such as the poets have given us but a faint notion of in their descriptions of the punishment of Sisypus [16]and Tantalus[17]. For what can be imagin'd more tormenting, than to seek with eagerness, what for ever flies us; and seek for it in a place,where 'tis impossible it can ever exist?

But as nature seems to have observ'd a kind of justice and compensation in every thing, she has not neglected philosophers more than the rest of the creation; but has reserv'd them a consolation amid all their disappointments and afflictions. This consolation principally consists in their invention of the words:faculty and occult quality. For it being usual, after the frequent use of terms, which are really significant and intelligible, to omit the idea,which we wou'd express by them, and to preserve only the custom,by which we recal the idea at pleasure; so it naturally happens, that after the frequent use of terms, which are wholly insignificant and unintelligible, we fancy them to be on the same footing with the precedent, and to have a secret meaning, which we might discover by reflection. The

resemblance of their appearance deceives the mind, as is usual, and makes us imagine a thorough resemblance and conformity. By this means these philosophers set themselves at ease, and arrive at last, by an illusion, at the same indifference, which the people attain by their stupidity, and true philosophers by their moderate scepticism. They need only say, that any phenomenon, which puzzles them, arises from a faculty or an occult quality, and there is an end of all dispute and enquiry upon the matter.

But among all the instances, wherein the Peripatetics have shewn they were guided by every trivial propensity of the imagination, no one is more remarkable than their sympathies, antipathies, and horrors of a vacuum. There is a very remarkable inclination in human nature, to bestow on external objects the same emotions, which it observes in itself; and to find every where those ideas, which are most present to it. This inclination, 'tis true, is suppressed by a little reflection, and only takes place in children, poets, and the antient philosophers. It appears in children, by their desire of beating the stones, which hurt them: In poets, by their readiness to personify every thing: And in the antient philosophers, by these fictions of sympathy and antipathy. We must pardon children, because of their age; poets, because they profess to follow implicitly the suggestions of their fancy: But what excuse shall we find to justify our philosophers in so signal a weakness?

SECT. IV

Of the modern philosophy

But here it may be objected, that the imagination, according to my own confession, being the ultimate judge of all systems of philosophy, I am unjust in blaming the antient philosophers for making use of that faculty, and allowing themselves to be entirely guided by it in their reasonings. In order to justify myself, I must distinguish in the imagination betwixt the principles which are permanent, irresistible, and universal; such as the customary transition from causes to effects, and from effects to causes: And the principles, which are changeable, weak, and irregular; such as those I have just now taken notice of. The former are the foundation of all our thoughts and actions, so that upon their removal human nature must immediately perish and go to ruin. The latter are neither unavoidable to mankind, nor necessary, or so much as useful in the

conduct of life; but on the contrary are observ'd only to take place in weak minds, and being opposite to the other principles of custom and reasoning, may easily be subverted by a due contrast and opposition. For this reason the former are received by philosophy, and the latter rejected. One who concludes somebody to be near him, when he hears an articulate voice in the dark, reasons justly and naturally; tho' that conclusion be deriv'd from nothing but custom, which infixes and inlivens the idea of a human creature, on account of his usual conjunction with the present impression. But one, who is tormented he knows not why, with the apprehension of spectres in the dark, may, perhaps, be said to reason, and to reason naturally too: But then it must be in the same sense, that a malady is said to be natural; as arising from natural causes, tho' it be contrary to health, the most agreeable and most natural situation of man.

The opinions of the antient philosophers, their fictions of substance and accident, and their reasonings concerning substantial forms and occult qualities, are like the spectres in the dark, and are deriv'd from principles, which, however common, are neither universal nor unavoidable in human nature. The modern philosophy pretends to be entirely free from this defect, and to arise only from the solid, permanent, and consistent principles of the imagination.

Upon what grounds this pretension is founded must now be the subject of our enquiry. The fundamental principle of that philosophy is the opinion concerning colours, sounds, tastes, smells, heat and cold; which it asserts to be nothing but impressions in the mind, deriv'd from the operation of external objects, and without any resemblance to the qualities of the objects. Upon examination, I find only one of the reasons commonly produc'd for this opinion to be satisfactory, viz.

that deriv'd from the variations of those impressions, even while the external object, to all appearance, continues the same. These variations depend upon several circumstances. Upon the different situations of our health: A man in a malady feels a disagreeable taste in meats, which before pleas'd him the most. Upon the different complexions and constitutions of men That seems bitter to one, which is sweet to another. Upon the difference of their external situation and position: Colours reflected from the clouds change according to the distance of the clouds, and according to the angle they make with the eye and luminous body. Fire. also communicates the sensation of

pleasure at one distance, and that of pain at another.

Instances of this kind are very numerous and frequent.

The conclusion drawn from them, is likewise as satisfactory as can possibly be imagin'd. 'Tis certain, that when different impressions of the same sense arise from any object, every one of these impressions has not a resembling quality existent in the object.

For as the same object cannot, at the same time, be endow'd with different qualities of the same sense, and as the same quality cannot resemble impressions entirely different; it evidently follows, that many of our impressions have no external model or archetype. Now from like effects we presume like causes. Many of the impressions of colour, sound, etc. are confest to be nothing but internal existences, and to arise from causes, which no ways resemble them. These impressions are in appearance nothing different from the other impressions of colour, sound, etc. We conclude, therefore, that they are, all of them, deriv'd from a like origin.

This principle being once admitted, all the other doctrines of that philosophy seem to follow by an easy consequence. For upon the removal of sounds, colours, heat, cold, and other sensible qualities, from the rank of continu'd independent existences, we are reduc'd merely to what are called primary qualities, as the only real ones, of which we have any adequate notion. These primary qualities are extension and solidity, with their different mixtures and modifications; figure, motion, gravity, and cohesion. The generation, increase, decay, and corruption of animals and vegetables, are nothing but changes of figure and motion; as also the operations of all bodies on each other; of fire, of light, water, air, earth, and of all the elements and powers of nature. One figure and motion produces another figure and motion; nor does there remain in the material universe any other principle, either active or passive, of which we can form the most distant idea.

I believe many objections might be made to this system. But at present I shall confine myself to one, which is in my opinion very decisive. I assert, that instead of explaining the operations of external objects by its means, we utterly annihilate all these objects, and reduce ourselves to the opinions of the most extravagant scepticism concerning them. If colours, sounds, tastes, and smells be merely perceptions, nothing we can conceive is possest of a real, continu'd,

and independent existence; not even motion, extension and solidity, which are the primary qualities chiefly insisted on. To begin with the examination of motion; 'tis evident this is a quality altogether inconceivable alone, and without a reference to some other object. The idea of motion necessarily supposes that of a body moving. Now what is our idea of the moving body, without which motion is incomprehensible? It must resolve itself into the idea of extension or of solidity; and consequently the reality of motion depends upon that of these other qualities.

This opinion, which is universally acknowledg'd concerning motion, I have prov'd to be true with regard to extension; and have shewn that 'tis impossible to conceive extension, but as compos'd of parts, endow'd with colour or solidity. The idea of extension is a compound idea; but as it is not compounded of an infinite number of parts or inferior ideas, it must at last resolve itself into such as are perfectly simple and indivisible. These simple and indivisible parts, not being ideas of extension, must be non entities, unless conceiv'd as colour'd or solid. Colour is excluded from any real existence.

The reality, therefore, of our idea of extension depends upon the reality of that of solidity, nor can the former be just while the latter is chimerical. Let us, then, lend our attention to the examination of the idea of solidity.

The idea of solidity^[18] is that of two objects, which being impell'd by the utmost force, cannot penetrate each other; but still maintain a separate and distinct existence. Solidity, therefore, is perfectly incomprehensible alone, and without the conception of some bodies, which are solid, and maintain this separate and distinct existence. Now what idea have we of these bodies? The ideas of colours, sounds, and other secondary qualities are excluded. The idea of motion depends on that of extension, and the idea of extension on that of solidity. 'Tis impossible, therefore, that the idea of solidity can depend on either of them. For that wou'd be to run in a circle, and make one idea depend on another, while at the same time the latter depends on the former. Our modern philosophy, therefore, leaves us no just nor satisfactory idea of solidity; nor consequently of matter.

This argument will appear entirely conclusive to every one that comprehends it; but because it may seem abstruse and intricate to the generality of readers, I hope to be excus'd, if I endeavour to render it

more obvious by some variation of the expression. In order to form an idea of solidity, we must conceive two bodies pressing on each other without any penetration; and 'tis impossible to arrive at this idea, when we confine ourselves to one object, much more without conceiving any. Two non-entities cannot exclude each other from their places; because they -never possess any place, nor can be endow'd with any quality. Now I ask, what idea do we form of these bodies or objects, to which we suppose solidity to belong? To say, that we conceive them merely as solid, is to run on in infinitum.

To affirm, that we paint them out to ourselves as extended, either resolves all into a false idea, or returns in a circle. Extension must necessarily be considered either as colour'd, which is a false idea; I or as solid, which brings us back to the first question. We may make the same observation concerning mobility and figure; and upon the whole must conclude, that after the exclusion of colours, sounds, heat and cold from the rank of external existences, there remains nothing, which can afford us a just and constituent idea of body.

Add to this, that, properly speaking, solidity or impenetrability is nothing, but an impossibility of annihilation, as³⁹ has been already observ'd: For which reason 'tis the more necessary for us to form some distinct idea of that object, whose annihilation we suppose impossible. An impossibility of being annihilated cannot exist, and can never be conceived to exist, by itself: but necessarily requires some object or real existence, to which it may belong. Now the difficulty still remains, how to form an idea of this object or existence, without having recourse to the secondary and sensible qualities.

Nor must we omit on this occasion our accustomed method of examining ideas by considering those impressions, from which they are deriv'd. The impressions, which enter by the sight and hearing, the smell and taste, are affirm'd by modern philosophy to be without any resembling objects; and consequently the idea of solidity, which is suppos'd to be real, can never be deriv'd from any of these senses.

There remains, therefore, the feeling as the only sense, that can convey the impression, which is original to the idea of solidity; and indeed we naturally imagine, that we feel the solidity of bodies, and need but touch any object in order to perceive this quality. But this method of thinking is more popular than philosophical; as will appear from the following reflections.

First, 'Tis easy to observe, that tho' bodies are felt by means of their solidity, yet the feeling is a quite different thing from the solidity; and that they have not the least resemblance to each other.

A man, who has the palsey in one hand, has as perfect an idea of impenetrability, when he observes that hand to be supported by the table, as when he feels the same table with the other hand. An object, that presses upon any of our members, meets with resistance; and that resistance, by the motion it gives to the nerves and animal spirits, conveys a certain sensation to the mind; but it does not follow, that the sensation, motion, and resistance are any ways resembling.

Secondly, The impressions of touch are simple impressions, except when considered with regard to their extension; which makes nothing to the present purpose: And from this simplicity I infer, that they neither represent solidity, nor any real object. For let us put two cases, viz. that of a man, who presses a stone, or any solid body, with his hand, and that of two stones, which press each other; 'twill readily be allow'd, that these two cases are not in every respect alike, but that in the former there is conjoin'd with the solidity, a feeling or sensation, of which there is no appearance in the latter. In order, therefore, to make these two cases alike, 'tis necessary to remove some part of the impression, which the man feels by his hand, or organ of sensation; and that being impossible in a simple impression, obliges us to remove the whole, and proves that this whole impression has no archetype or model in external objects. To which we may add, that solidity necessarily supposes two bodies, along with contiguity and impulse; which being a compound object, can never be represented by a simple impression. Not to mention, that tho' solidity continues always invariably the same, the impressions of touch change every moment upon us; which is a clear proof that the latter are not representations of the former.

Thus there is a direct and total opposition betwixt our reason and our senses; or more properly speaking, betwixt those conclusions we form from cause and effect, and those that persuade us of the continu'd and independent existence of body. When we reason from cause and effect, we conclude, that neither colour, sound, taste, nor smell have a continu'd and independent existence. When we exclude these sensible qualities there remains nothing in the universe, which has such an existence.

Of the immateriality of the soul

Having found such contradictions and difficulties in every system concerning external objects, and in the idea of matter, which we fancy so clear and determinate, We shall naturally expect still greater difficulties and contradictions in every hypothesis concerning our internal perceptions, and the nature of the mind, which we are apt to imagine so much more obscure, and uncertain. But in this we shou'd deceive ourselves. The intellectual world, tho' involv'd in infinite obscurities, is not perplex'd with any such contradictions, as those we have discovered in the natural. What is known concerning it, agrees with itself; and what is unknown, we must be contented to leave so.

'Tis true, wou'd we hearken to certain philosophers, they promise to diminish our ignorance; but I am afraid 'tis at the hazard of running us into contradictions, from which the subject is of itself exempted. These philosophers are the curious reasoners concerning the material or immaterial substances, in which they suppose our perceptions to inhere. In order to put a stop to these endless cavils on both sides, I know no better method, than to ask these philosophers in a few words, What they mean by substance and inhesion[19]? And after they have answer'd this question, 'twill then be reasonable, and not till then, to enter seriously into the dispute.

This question we have found impossible to be answer'd with regard to matter and body: But besides that in the case of the mind, it labours under all the same difficulties, 'tis burthen'd with some additional ones, which are peculiar to that subject. As every idea is deriv'd from a precedent impression, had we any idea of the substance of our minds, we must also have an impression of it; which is very difficult, if not impossible, to be conceiv'd. For how can an impression represent a substance, otherwise than by resembling it? And how can an impression resemble a substance, since, according to this philosophy, it is not a substance, and has none of the peculiar qualities or characteristics of a substance?

But leaving the question of what may or may not be, for that other what actually is, I desire those philosophers, who pretend that we have an idea of the substance of our minds, to point out the impression that produces it, and tell distinctly after what manner that

impression operates, and from what object it is deriv'd. Is it an impression of sensation or of reflection? Is it pleasant, or painful, or indifferent? Does it attend us at all times, or does it only return at intervals? If at intervals, at what times principally does it return, and by what causes is it produced?

If instead of answering these questions, any one shou'd evade the difficulty, by saying, that the definition of a substance is something which may exist by itself; and that this definition ought to satisfy us: Shou'd this be said, I shou'd observe, that this definition agrees to every thing, that can possibly be conceiv'd; and never will serve to distinguish substance from accident, or the soul from its perceptions. For thus I reason. Whatever is clearly conceiv'd may exist; and whatever is clearly conceiv'd, after any manner, may exist after the same manner. This is one principle, which has been already acknowledged. Again, every thing, which is different, is distinguishable, and every thing which is distinguishable, is separable by the imagination. This is another principle. My conclusion from both is, that since all our perceptions are different from each other, and from every thing else in the universe, they are also distinct and separable, and may be considered as separately existent, and may exist separately, and have no need of any thing else to support their existence.' They are, therefore, substances, as far as this definition explains a substance.

Thus neither by considering the first origin of ideas, nor by means of a definition are we able to arrive at any satisfactory notion of substance; which seems to me a sufficient reason for abandoning utterly that dispute concerning the materiality and immateriality of the soul, and makes me absolutely condemn even the question itself. We have no perfect idea of any thing but of a perception. A substance is entirely different from a perception. We have, therefore, no idea of a substance. Inhesion in something is suppos'd to be requisite to support the existence of our perceptions. Nothing appears requisite to support the existence of a perception. We have, therefore, no idea of inhesion. What possibility then of answering that question, Whether perceptions inhere in a material or immaterial substance, when we do not so much as understand the meaning of the question?

There is one argument commonly employ'd for the immateriality of the soul, which seems to me remarkable. Whatever is extended

consists of parts; and whatever consists of parts is divisible, if not in reality, at least in the imagination. But 'tis impossible anything divisible can be conjoin'd to a thought or perception, which is a being altogether inseparable and indivisible.

For supposing such a conjunction, wou'd the indivisible thought exist on the left or on the right hand of this extended divisible body?

On the surface or in the middle? On the back- or fore- side of it? If it be conjoin'd with the extension, it must exist somewhere within its dimensions. If it exist within its dimensions, it must either exist in one particular part; and then that particular part is indivisible, and the perception is conjoined only with it, not with the extension: Or if the thought exists in every part, it must also be extended, and separable, and divisible, as well as the body; which is utterly absurd and contradictory. For can any one conceive a passion of a yard in length, a foot in breadth, and an inch in thickness? Thought, therefore, and extension are qualities wholly incompatible, and never can incorporate together into one subject.

This argument affects not the question concerning the substance of the soul, but only that concerning its local conjunction with matter; and therefore it may not be improper to consider in general what objects are, or are not susceptible of a local conjunction. This is a curious question, and may lead us to some discoveries of considerable moment.

The first notion of space and extension is deriv'd solely from the senses of sight and feeling; nor is there any thing, but what is colour'd or tangible, that has parts dispos'd after such a manner, as to convey that idea. When we diminish or encrease a relish, 'tis not after the same manner that we diminish or encrease any visible object; and when several sounds strike our hearing at once, custom and reflection alone make us form an idea of the degrees of the distance and contiguity of those bodies, from which they are deriv'd. Whatever marks the place of its existence either must be extended, or must be a mathematical point, without parts or composition. What is extended must have a particular figure, as square, round, triangular; none of which will agree to a desire, or indeed to any impression or idea, except- o these two senses abovemention'd.

Neither ought a desire, tho' indivisible, to be considered as a

mathematical point. For in that case 'twou'd be possible, by the addition of others, to make two, three, four desires, and these dispos'd and situated in such a manner, as to have a determinate length, breadth and thickness; which is evidently absurd.

'Twill not be surprising after this, if I deliver a maxim, which is condemn'd by several metaphysicians, and is esteem'd contrary to the most certain principles of hum reason. This maxim is that an object may exist, and yet be no where: and I assert, that this is not only possible, but that the greatest part of beings do and must exist after this manner. An object may be said to be no where, when its parts are not so situated with respect to each other, as to form any figure or quantity; nor the whole with respect to other bodies so as to answer to our notions of contiguity or distance. Now this is evidently the case with all our perceptions and objects, except those of the sight and feeling. A moral reflection cannot be plac'd on the right or on the left hand of a passion, -nor can a smell or sound be either of a circular or a square figure. These objects and perceptions, so far from requiring any particular place, are absolutely incompatible with it, and even the imagination cannot attribute it to them. And as to the absurdity of supposing them to be no where, we may consider, that if the passions and sentiments appear to the perception to have any particular place, the idea of extension might be deriv'd from them, as well as from the sight and touch; contrary to what we have already establish'd. If they appear not to have any particular place, they may possibly exist in the same manner; since whatever we conceive is possible.

'Twill not now be necessary to prove, that those perceptions, which are simple, and exist no where, are incapable of any conjunction in place with matter or body, which is extended and divisible; since 'tis impossible to found a relation but on some common quality. It may be better worth our while to remark, that this question of the local conjunction of objects does not only occur in metaphysical disputes concerning the nature of the soul, but that even in common life we have every moment occasion to examine it. Thus supposing we consider a fig at one end of the table, and an olive at the other, 'tis evident, that in forming the complex ideas of these substances, one of the most obvious is that of their different relishes; and 'tis as evident, that we incorporate and conjoin these qualities with such as are colour'd and tangible. The bitter taste of the one, and sweet of the other are suppos'd to lie in the very visible body, and to

be separated from each other by the whole length of the table. This is so notable and so natural an illusion[20], that it may be proper to consider the principles, from which it is deriv'd.

Tho' an extended object be incapable of a conjunction in place with another, that exists without any place or extension, yet are they susceptible of many other relations. Thus the taste and smell of any fruit are inseparable from its other qualities of colour and tangibility; and which- ever of them be the cause or effect, 'tis certain they are always co-existent.' Nor are they only co-existent in general, but also co-temporary in their appearance in the mind; and 'tis upon the application of the extended body to our senses we perceive its particular taste and smell. These relations, then, of causation, and contiguity in the time of their appearance, betwixt the extended object and the quality, which exists without any particular place, must have such an effect on the mind, that upon the appearance of one it will immediately turn its thought to the conception of the other. Nor is this all. We not only turn our thought from one to the other upon account of their relation, but likewise endeavour to give them a new relation, viz. that of a conjunction in place, that we may render the transition more easy and natural. For 'tis a quality, which I shall often have occasion to remark in human nature, and shall explain more fully in its proper place, that when objects are united by any relation, we have a strong propensity to add some new relation to them, in order to compleat the union. In our arrangement of bodies we never fail to place such as are resembling, in contiguity to each other, or at least in correspondent points of view: Why? but because we feel a satisfaction in joining the relation of contiguity to that of resemblance, or the resemblance of situation to that of qualities. The effects this propensity have been⁴⁰ already observ'd in that resemblance, which we so readily suppose betwixt particular impressions and their external causes. But we shall not find a more evident effect of it, than in the present instance, where from the relations of causation and contiguity in time betwixt two objects, we feign likewise that of a conjunction in place, in order to strengthen the connexion.

But whatever confus'd notions we may form of an union in place betwixt an extended body, as a fig, and its particular taste, 'tis certain that upon reflection we must observe this union something altogether unintelligible and contradictory. For shou'd we ask ourselves one obvious question, viz. if the taste, which we conceive to be contain'd

in the circumference of the body, is in every part of it or in one only, we must quickly find ourselves at a loss, and perceive the impossibility of ever giving a satisfactory answer. We cannot rely, that 'tis only in one part: For experience convinces us, that every part has the same relish. We can as little reply, that it exists in every part: For then we must suppose it figur'd and extended; which is absurd and incomprehensible. Here then we are influenc'd by two principles directly contrary to each other, viz. that inclination of our fancy by which we are determin'd to incorporate the taste with the extended object, and our reason, which shows us the impossibility of such an union. Being divided betwixt these opposite principles, we renounce neither one nor the other, but involve the subject in such confusion and obscurity, that we no longer perceive the opposition.

We suppose, that the taste exists within the circumference of the body, but in such a manner, that it fills the whole without extension, and exists entire in every part without separation. In short, we use in our most familiar way of thinking, that scholastic principle, which, when crudely propos'd, appears so shocking, of totum in toto & totum in qualibet parte[21]: Which is much the same, as if we shou'd say, that a thing is in a certain place, and yet is not there.

All this absurdity proceeds from our endeavouring to bestow a place on what is utterly incapable of it; and that endeavour again arises from our inclination to compleat an union, which is founded on causation, and a contiguity of time, by attributing to the objects a conjunction in place. But if ever reason be of sufficient force to overcome prejudice, 'tis certain, that in the present case it must prevail. For we have only this choice left, either to suppose that some beings exist without any place; or that they are figur'd and extended; or that when they are incorporated with extended objects, the whole is in the whole, and the whole in every part.

The absurdity of the two last suppositions proves sufficiently the veracity of the first. Nor is there any fourth opinion. For as to the supposition of their existence in the manner of mathematical points, it resolves itself into the second opinion, and supposes, that several passions may be plac'd in a circular figure, and that a certain number of smells, conjoin'd with a certain number of sounds, may make a body of twelve cubic inches; which appears ridiculous upon the bare mentioning of it.

But tho' in this view of things we cannot refuse to condemn the materialists, who conjoin all thought with extension; yet a little reflection will show us equal reason for blaming their antagonists, who conjoin all thought with a simple and indivisible substance. The most vulgar philosophy informs us, that no external object can make itself known to the mind immediately, and without the interposition of an image or perception. That table, which just now appears to me, is only a perception, and all its qualities are qualities of a perception. Now the most obvious of all its qualities is extension.

The perception consists of parts. These parts are so situated, as to afford us the notion of distance and contiguity; of length, breadth, and thickness. The termination of these three dimensions is what we call figure. This figure is moveable, separable, and divisible. Mobility, and separability are the distinguishing properties of extended objects.

And to cut short all disputes, the very idea of extension is copy'd from nothing but an impression, and consequently must perfectly agree to it. To say the idea of extension agrees to any thing, is to say it is extended.

The free-thinker may now triumph in his turn; and having found there are impressions and ideas really extended, may ask his antagonists, how they can incorporate a simple and indivisible subject with an extended perception? All the arguments of Theologians may here be retorted upon them. Is the indivisible subject, or immaterial substance, if you will, on the left or on the right hand of the perception? Is it in this particular part, or in that other? Is it in every part without being extended? Or is it entire in any one part without deserting the rest? 'Tis impossible to give any answer to these questions, but what will both be absurd in itself, and will account for the union of our indivisible perceptions with an extended substance.

This gives me an occasion to take a-new into consideration the question concerning the substance of the soul; and tho' I have condemn'd that question as utterly unintelligible, yet I cannot forbear proposing some farther reflections concerning it. I assert, that the doctrine of the immateriality, simplicity, and indivisibility of a thinking substance is a true atheism[22], and will serve to justify all those sentiments, for which Spinoza[23] is so universally infamous.

From this topic, I hope at least to reap one advantage, that my

adversaries will not have any pretext to render the present doctrine odious by their declamations, when they see that they can be so easily retorted on them.

The fundamental principle of the atheism of Spinoza is the doctrine of the simplicity of the universe, and the unity of that substance, in which he supposes both thought and matter to inhere.

There is only one substance, says he, in the world; and that substance is perfectly simple and indivisible, and exists every where, without any local presence. Whatever we discover externally by sensation; whatever we feel internally by reflection; all these are nothing but modifications of that one, simple, and necessarily existent being, and are not possest of any separate or distinct existence. Every passion of the soul; every configuration of matter, however different and various, inhere in the same substance, and preserve in themselves their characters of distinction, without communicating them to that subject, in which they inhere. The same substratum[24], if I may so speak, supports the most different modifications, without any difference in itself; and varies them, without any variation. Neither time, nor place, nor all the diversity of nature are able to produce any composition or change in its perfect simplicity and identity.

I believe this brief exposition of the principles of that famous atheist will be sufficient for the present purpose, and that without entering farther into these gloomy and obscure regions, I shall be able to shew, that this hideous hypothesis is almost the same with that of the immateriality of the soul, which has become so popular.

To make this evident, let us⁴¹ remember, that as every idea is deriv'd from a preceding perception, 'tis impossible our idea of a perception, and that of an object or external existence can ever represent what are specifically different from each other. Whatever difference we may suppose betwixt them, 'tis still incomprehensible to us; and we are oblig'd either to conceive an external object merely as a relation without a relative, or to make it the very same with a perception or impression.

The consequence I shall draw from this may, at first sight, appear a mere sophism; but upon the least examination will be found solid and satisfactory. I say then, that since we may suppose, but never can conceive a specific deference betwixt an object and impression; any

conclusion we form concerning the connexion and repugnance of impressions, will not be known certainly to be applicable to objects; but that on the other hand, whatever conclusions of this kind we form concerning objects, will most certainly be applicable to impressions. The reason is not difficult. As an object is suppos'd to be different from an impression, we cannot be sure, that the circumstance, upon which we found our reasoning, is common to both, supposing we form the reasoning -upon the impression. 'Tis still possible, that the object may differ from it in that particular. But when we first form our reasoning concerning the object, 'tis beyond doubt, that the same reasoning must extend to the impression: And that because the quality of the object, upon which the argument is founded, must at least be conceiv'd by the mind; and cou'd not be conceiv'd, unless it were common to an impression; since we have no idea but what is deriv'd from that origin. Thus we may establish it as a certain maxim, that we can never, by any principle, but by an irregular kind⁴² of reasoning from experience, discover a connexion or repugnance betwixt objects, which extends not to impressions; tho' the inverse proposition may not be equally true, that all the discoverable relations of impressions are common to objects.

To apply this to the present case; there are two different systems of being presented, to which I suppose myself under a necessity of assigning some substance, or ground of inhesion. I observe first the universe of objects or of body: The sun, moon and stars; the earth, seas, plants, animals, men, ships, houses, and other productions either of art or nature. Here Spinoza appears, and tells me, that these are only modifications; and that the subject, in which they inhere, is simple, uncompounded, and indivisible. After this I consider the other system of beings, viz. the universe of thought, or my impressions and ideas. There I observe another sun, moon and stars; an earth, and seas, cover'd and inhabited by plants and animals; towns, houses, mountains, rivers; and in short every thing I can discover or conceive in the first system. Upon my enquiring concerning these, Theologians present themselves, and tell me, that these also are modifications, and modifications of one simple, uncompounded, and indivisible substance. Immediately upon which I am deafen'd with the noise of a hundred voices, that treat the first hypothesis with detestation and scorn, and the second with applause and veneration. I turn my attention to these hypotheses to see what may be the reason of so great a partiality; and find that they have the same fault of being unintelligible, and that as

far as we can understand them, they are so much alike, that 'tis impossible to discover any absurdity in one, which is not common to both of them. We have no idea of any quality in an object, which does not agree to, and may not represent a quality in an impression; and that because all our ideas are deriv'd from our impressions. We can never, therefore, find any repugnance betwixt an extended object as a modification, and a simple un compounded essence, as its substance, unless that repugnance takes place equally betwixt the perception or impression of that extended object, and the same un compounded essence. Every idea of a quality in an object passes thro' an impression; and therefore every perceivable relation, whether of connexion or repugnance, must be common both to objects and impressions.

But tho' this argument, considered in general, seems evident beyond all doubt and contradiction, yet to make it more clear and sensible, let us survey it in detail; and see whether all the absurdities, which have been found in the system of Spinoza, may not likewise be discovered in that of Theologians[25]. First, It has been said against Spinoza, according to the scholastic way of talking, rather than thinking, that a mode, not being any distinct or separate existence, must be the very same with its substance, and consequently the extension of the universe, must be in a manner identify'd with that, simple, un compounded essence, in which the universe is suppos'd to inhere. But this, it may be pretended, is utterly impossible and inconceivable unless the indivisible substance expand itself, so as to correspond to the extension, or the extension contract itself, so as to answer to the indivisible substance. This argument seems just, as far as we can understand it; and 'tis plain nothing is requir'd, but a change in the terms, to apply the same argument to our extended perceptions, and the simple essence of the soul; the ideas of objects and perceptions being in every respect the same, only attended with the supposition of a difference, that is unknown and incomprehensible.

Secondly, It has been said, that we have no idea of substance, which is not applicable to matter; nor any idea of a distinct substance, which is not applicable to every distinct portion of matter. Matter, therefore, is not a mode but a substance, and each part of matter is not a distinct mode, but a distinct substance. I have already prov'd, that we have no perfect idea of substance; but that taking it for

something, that can exist by itself, 'tis evident every perception is a substance, and every distinct part of a perception a distinct substance: And consequently the one hypothesis labours under the same difficulties in this respect with the other.

Thirdly, It has been objected to the system of one simple substance in the universe, that this substance being the support or substratum of every thing, must at the very same instant be modify'd into forms, which are contrary and incompatible. The round and square figures are incompatible in the same substance at the same time. How then is it possible, that the same substance can at once be modify'd into that square table, and into this round one? I ask the same question concerning the impressions of these tables; and find that the answer is no more satisfactory in one case than in the other.

It appears, then, that to whatever side we turn, the same difficulties follow us, and that we cannot advance one step towards the establishing the simplicity and immateriality of the soul, without preparing the way for a dangerous and irrecoverable atheism. 'Tis the same case, if instead of calling thought a modification of the soul, we shou'd give it the more antient, and yet more modish name of an action. By an action we mean much the same thing, as what is commonly call'd an abstract mode; that is, something, which, properly speaking, is neither distinguishable, nor separable from its substance, and is only conceiv'd by a distinction of reason, or an abstraction. But nothing is gain'd by this change of the term of modification, for that of action; nor do we free ourselves from one single difficulty by its means; as will appear from the two following reflexions. First, I observe, that the word, action, according to this explication of it, can never justly be apply'd to any perception, as deriv'd from a mind or thinking substance. Our perceptions are all really different, and separable, and distinguishable from each other, and from everything else, which we can imagine: and therefore 'tis impossible to conceive, how they can be the action or abstract mode of any substance. The instance of motion, which is commonly made use of to shew after what manner perception depends, as an action, upon its substance, rather confounds than instructs us. Motion to all appearance induces no real nor essential change on the body, but only varies its relation to other objects. But betwixt a person in the morning walking a garden with company, agreeable to him; and a person in the afternoon inclos'd in a dungeon, and full of terror, despair, and resentment, there

seems to be a radical difference, and of quite another kind, than what is produc'd on a body by the change of its situation. As we conclude from the distinction and separability of their ideas, that external objects have a separate existence from each other; so when we make these ideas themselves our objects, we must draw the same conclusion concerning them, according to the precedent reasoning. At least it must be confest, that having idea of the substance of the soul, 'tis impossible for us to tell how it can admit of such differences, and even contrarieties of perception without any fundamental change; and consequently can never tell in what sense perceptions are actions of that substance. The use, therefore, of the word, action, unaccompany'd with any meaning, instead of that of modification, makes no addition to our knowledge, nor is of any advantage to the doctrine of the immateriality of the soul.

I add in the second place, that if it brings any advantage to that cause, it must bring an equal to the cause of atheism. For do our Theologians pretend to make a monopoly of the word, action, and may not the atheists likewise take possession of it, and affirm that plants, animals, men, etc. are nothing but particular actions of one simple universal substance, which exerts itself from a blind and absolute necessity? This you'll say is utterly absurd. I own 'tis unintelligible; but at the same time assert, according to the principles above-explain'd, that 'tis impossible to discover any absurdity in the supposition, that all the various objects in nature are actions of one simple substance, which absurdity will not be applicable to a like supposition concerning impressions and ideas.

From these hypotheses concerning the substance and local conjunction of our perceptions, we may pass to another, which is more intelligible than the former, and more important than the latter, viz. concerning the cause of our perceptions. Matter and motion, 'tis commonly said in the schools, however vary'd, are still matter and motion, and produce only a difference in the position and situation of objects. Divide a body as often as you please, 'tis still body. Place it in any figure, nothing ever results but figure, or the relation of parts. Move it in any manner, you still find motion or a change of relation. 'Tis absurd to imagine, that motion in a circle, for instance, shou'd be nothing but merely motion in a circle; while motion in another direction, as in an ellipse, shou'd also be a passion or moral reflection: That the shocking of two globular particles shou'd become a sensation

of pain, and that the meeting of two triangular ones shou'd afford a pleasure. Now as these different shocks, and variations, and mixtures are the only changes, of which matter is susceptible, and as these never afford us any idea of thought or perception, 'tis concluded to be impossible, that thought can ever be caus'd by matter.

Few have been able to withstand the seeming evidence of this argument; and yet nothing in the world is more easy than to refute it. We need only reflect on what has been prov'd at large, that we are never sensible of any connexion betwixt causes and effects, and that 'tis only by our experience of their constant conjunction, we can arrive at any knowledge of this relation. Now as all objects, which are not contrary, are susceptible of a constant conjunction, and as no real objects are contrary;⁴⁴ I have inferr'd from these principles, that to consider the matter a priori^[26], any thing may produce any thing, and that we shall never discover a reason, why any object may or may not be the cause of any other, however great, or however little the resemblance may be betwixt them. This evidently destroys the precedent reasoning concerning the cause of thought or perception. For tho' there appear no manner of connexion betwixt motion or thought, the case is the same with all other causes and effects. Place one body of a pound weight on one end of a lever, and another body of the same weight on another end; you will never find in these bodies any principle of motion dependent on their distances from the center, more than of thought and perception.

If you pretend, therefore, to prove a priori, that such a position of bodies can never cause thought; because turn it which way you will, 'tis nothing but a position of bodies; you must by the same course of reasoning conclude, that it can never produce motion; since there is no more apparent connexion in the one case than in the other.

But as this latter conclusion is contrary to evident experience, and as 'tis possible we may have a like experience in the operations of the mind, and may perceive a constant conjunction of thought and motion; you reason too hastily, when from the mere consideration of the ideas, you conclude that 'tis impossible motion can ever produce thought, or a different position of parts give rise to a different passion or reflection. Nay 'tis not only possible we may have such an experience, but 'tis certain we have it; since every one may perceive, that the different dispositions of his body change his thoughts

and sentiments. And shou'd it be said, that this depends on the union of soul and body; I wou'd answer, that we must separate the question concerning the substance of the mind from that concerning the cause of its thought; and that confining ourselves to the latter question we find by the comparing their ideas, that thought and motion are different from each other, and by experience, that they are constantly united; which being all the circumstances, that enter into the idea of cause and effect, when apply'd to the operations of matter, we may certainly conclude, that motion may be, and actually is, the cause of thought and perception.

There seems only this dilemma left us in the present case; either to assert, that nothing can be the cause of another, but where the mind can perceive the connexion in its idea of the objects: Or to maintain, that all objects, which we find constantly conjoin'd, are upon that account to be regarded as causes and effects. If we choose the first part of the dilemma, these are the consequences. First, We in reality affirm, that there is no such thing in the universe as a cause or productive principle, not even the deity himself; since our idea of that supreme Being is deriv'd from particular impressions, none of which contain any efficacy, nor seem to have any connexion with any other existence. As to what may be said, that the connexion betwixt the idea of an infinitely powerful being, and that of any effect, which he wills, is necessary and unavoidable; I answer, that we have no idea of a being endow'd with any power, much less of one endow'd with infinit[27]epower. But if we will change expressions, we can only define power by connexion; and then in saying, that the idea, of an infinitely powerful being is connected with that of every effect, which he wills, we really do no -more than assert, that a being, whose volition is connected with every effect, is connected with every effect: which is an identical proposition, and gives us no insight into the nature of this power or connexion. But, secondly, supposing, that the deity were the great and efficacious principle, which supplies the deficiency of all causes, this leads us into the grossest impieties and absurdities. For upon the same account, that we have recourse to him in natural operations, and assert that matter cannot of itself communicate motion, or produce thought, viz. because there is no apparent connexion betwixt these objects; I say, upon the very same account, we must acknowledge that the deity is the author of all our volitions and perceptions; since they have no more apparent connexion either with one another, or with the suppos'd but unknown

substance of the soul. This agency of the supreme Being we know to have been asserted by⁴⁵ several philosophers with relation to all the actions of the mind, except volition, or rather an inconsiderable part of volition; tho' 'tis easy to perceive, that this exception is a mere pretext, to avoid the dangerous consequences. of that doctrine. If nothing be active but what has an apparent power, thought is in no case any more active than matter; and if this inactivity must make us have recourse to a deity, the supreme being is the real cause of all our actions, bad as well as good, vicious as well as virtuous.

Thus we are necessarily reduc'd to the other side of the dilemma, viz. that all objects, which are found to be constantly conjoin'd, are upon that account only to be regarded as causes and effects. Now as all objects, which are not contrary, are susceptible of a constant conjunction, and as no real objects are contrary; it follows, that for ought we can determine by the mere ideas, any thing may be the cause or effect of any thing; which evidently gives the advantage to the materialists above their antagonists.

To pronounce, then, the final decision upon the whole; the question concerning the substance of the soul is absolutely unintelligible: All our perceptions are not susceptible of a local union, either with what is extended or unextended: there being some of them of the one kind, and some of the other: And as the constant conjunction of objects constitutes the very essence of cause and effect, matter and motion may often be regarded as the causes of thought, as far as we have any notion of that relation. 'Tis certainly a kind of indignity to philosophy, whose sovereign authority ought every where to be acknowledged, to oblige her on every occasion to make apologies for her conclusions, and justify herself to every particular art and science, which may be offended at her. This puts one in mind of a king arraing'd for high-treason against his subjects. There is only one occasion, when philosophy will think it necessary and even honourable to justify herself, and that is, when religion may seem to be in the least offended; whose rights are as dear to her as her own, and are indeed the same. If any one, therefore, shou'd imagine that the foregoing arguments are any ways dangerous to religion, I hope the following apology will remove his apprehensions.

There is no foundation for any conclusion a priori, either concerning the operations or duration of any object, of which'tis

possible for the human mind to form a conception. Any object may be imagin'd to become entirely inactive, or to be annihilated in a moment; and 'tis an evident principle, that whatever we can imagine, is possible. Now this is no more true of matter, than of spirit; of an extended compounded substance, than of a simple and unextended. In both cases the metaphysical arguments for the immortality[28] of the soul are equally inconclusive: and in both cases the moral arguments and those deriv'd from the analogy of nature are equally strong and convincing. If my philosophy, therefore, makes no addition to the arguments for religion, I have at least the satisfaction to think it takes nothing from them, but that every thing remains precisely as before.

SECT. VI

Of personal identity

There are some philosophers. who imagine we are every moment intimately conscious of what we call our SELF; that we feel its existence and its continuance in existence; and are certain, beyond the evidence of a demonstration, both o its perfect identity and simplicity. The strongest sensation, the most violent passion, say they, instead of distracting us from this view, only fix it the more intensely, and make us consider their influence on self either by their pain or pleasure. To attempt a farther proof of this were to weaken its evidence; since no proof can be deriv'd from any fact, of which we are so intimately conscious; nor is there any thing, of which we can be certain, if we doubt of this.

Unluckily all these positive assertions are contrary to that very experience, which is pleaded for them, nor have we any idea of self, after the manner it is here explain'd. For from what impression cou'd this idea be deriv'd? This question 'tis impossible to answer without a manifest contradiction and absurdity; and yet 'tis a question, which must necessarily be answer'd, if we wou'd have the idea of self pass for clear and intelligible, It must be some one impression, that gives rise to every real idea. But self or person is not any one impression, but that to which our several impressions and ideas are suppos'd to have a reference. If any impression gives rise to the idea of self, that impression must continue invariably the same, thro' the whole course of our lives; since self is suppos'd to exist after that manner.

But there is no impression constant and invariable. Pain and pleasure, grief and joy, passions and sensations succeed each other, and never all exist at the same time. It cannot, therefore, be from any of these impressions, or from any other, that the idea of self is deriv'd; and consequently there is no such idea.

But farther, what must become of all our particular perceptions upon this hypothesis? All these are different, and distinguishable, and separable from each other, and may be separately consider'd, and may exist separately, and have no Deed of tiny thing to support their existence. After what manner, therefore, do they belong to self ; and how are they connected with it? For my part, when I enter most intimately into what I call myself, I always stumble on some particular perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch myself at any time without a perception, and never can observe any thing but the perception. When my perceptions are remov'd for any time, as by sound sleep; so long am I insensible of myself, and may truly be said not to exist. And were all my perceptions remov'd by death, and cou'd I neither think, nor feel, nor see, nor love, nor hate after the dissolution of my body, I shou'd be entirely annihilated, nor do I conceive what is farther requisite to make me a perfect non-entity.

If any one, upon serious and unprejudic'd reflection thinks he has a different notion of himself, I must confess I call reason no longer with him. All I can allow him is, that he may be in the right as well as I, and that we are essentially different in this particular. He may, perhaps, perceive something simple and continu'd, which he calls himself; tho' I am certain there is no such principle in me.

But setting aside some metaphysicians of this kind, I may venture to affirm of the rest of mankind, that they are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement. Our eyes cannot turn in their sockets without varying our perceptions. Our thought is still more variable than our sight; and all our other senses and faculties contribute to this change; nor is there any single power of the soul, which remains unalterably the same, perhaps for one moment. The mind is a .kind of theatre, where several perceptions successively make their appearance[29]; pass, re-pass, glide away, and mingle in an infinite variety of postures and situations. There is

properly no simplicity in it at one time, nor identity in different; whatever natural propension we may have to imagine that simplicity and identity. The comparison of the theatre must not mislead us. They are the successive perceptions only, that constitute the mind; nor have we the most distant notion of the place, where these scenes are represented, or of the materials, of which it is compos'd.

What then gives us so great a propension to ascribe an identity to these successive perceptions, and to suppose ourselves possess of an invariable and uninterrupted existence thro' the whole course of our lives? In order to answer this question, we must distinguish betwixt personal identity, as it regards our thought or imagination, and as it regards our passions or the concern we take in ourselves.

The first is our present subject; and to explain it perfectly we must take the matter pretty deep, and account for that identity, which we attribute to plants and animals; there being a great analogy betwixt it, and the identity of a self or person.

We have a distinct idea of an object, that remains invariable and uninterrupted thro' a suppos'd variation of time; and this idea we call that of identity or sameness. We have also a distinct idea of several different objects existing in succession, and connected together by a close relation; and this to an accurate view affords as perfect a notion of diversity, as if there was no manner of relation among the objects. But tho' these two ideas of identity, and a succession of related objects be in themselves perfectly distinct, and even contrary, yet 'tis certain, that in our common way of thinking they are generally confounded with each other. That action of the imagination, by which we consider the uninterrupted and invariable object, and that by which we reflect on the succession of related objects, are almost the same to the feeling, nor is there much more effort of thought requir'd in the latter case than in the former. The relation facilitates the transition of the mind from one object to another, and renders its passage as smooth as if it contemplated one continu'd object. This resemblance is the cause of the confusion and mistake, and makes us substitute the notion of identity, instead of that of related objects. However at one instant we may consider the related succession as variable or interrupted, we are sure the next to ascribe to it a perfect identity, and regard it as envious and uninterrupted. Our propensity to this mistake is so great from the resemblance above-mention'd, that we fall into it before we

are aware; and tho' we incessantly correct ourselves by reflection, and return to a more accurate method of thinking, yet we cannot long sustain our philosophy, or take off this bias from the imagination.

Our last resource is to yield to it, and boldly assert that these different related objects are in effect the same, however interrupted and variable. In order to justify to ourselves this absurdity, we often feign some new and unintelligible principle, that connects the objects together, and prevents their interruption or variation. Thus we feign the continu'd existence of the perceptions of our senses, to remove the interruption: and run into the notion of a soul, and self, and substance, to disguise the variation. But we may farther observe, that where we do not give rise to such a fiction, our propensity to confound identity with relation is so great, that we are apt to imagine something unknown and mysterious, connecting the parts, beside their relation; and this I take to be the case with regard to the identity we ascribe to plants and vegetables. And even when this does not take place, we still feel a propensity to confound these ideas, tho' we are not able fully to satisfy ourselves in that particular, nor find any thing invariable and uninterrupted to justify our notion of identity.

Thus the controversy concerning identity is not merely a dispute of words. For when we attribute identity, in an improper sense, to variable or interrupted objects, our mistake is not confin'd to the expression, but is commonly attended with a fiction, either of something invariable and uninterrupted, or of something mysterious and inexplicable, or at least with a propensity to such fictions.

What will suffice to prove this hypothesis to the satisfaction of every fair enquirer, is to shew from daily experience and observation, that the objects, which are variable or interrupted, and yet are suppos'd to continue the same, are such only as consist of a succession of parts, connected together by resemblance, contiguity, or causation. For as such a succession answers evidently to our notion of diversity, it can only be by mistake we ascribe to it an identity; and as the relation of parts, which leads us into this mistake, is really nothing but a quality, which produces an association of ideas, and an easy transition of the imagination from one to another, it can only be from the resemblance, which this act of the mind bears to that, by which we contemplate one continu'd object, that the error arises. Our chief business, then, must be to prove, that all objects, to which we ascribe

identity, without observing their invariableness and uninterruptedness, are such as consist of a succession of related objects.

In order to this, suppose any mass of matter, of which the parts are contiguous and connected, to be plac'd before us; 'tis plain we must attribute a perfect identity to this mass, provided all the parts continue uninterruptedly and invariably the same, whatever motion or change of place we may observe either in the whole or in any of the parts. But supposing some very small or inconsiderable part to be added to the mass, or subtracted from it; tho' this absolutely destroys the identity of the whole, strictly speaking; yet as we seldom think so accurately, we scruple not to pronounce a mass of matter the same, where we find so trivial an alteration. The passage of the thought from the object before the change to the object after it, is so smooth and easy, that we scarce perceive the transition, and are apt to imagine, that 'tis nothing but a continu'd survey of the same object.

There is a very remarkable circumstance, that attends this experiment; which is, that tho' the change of any considerable part in a mass of matter destroys the identity of the whole, let we must measure the greatness of the part, not absolutely, but by its proportion to the whole. The addition or diminution of a mountain wou'd not be sufficient to produce a diversity in a planet: tho' the change of a very few inches wou'd be able to destroy the identity of some bodies. 'Twill be impossible to account for this, but by reflecting that objects operate upon the mind, and break or interrupt the continuity of its actions not according to their real greatness, but according to their proportion to each other: And therefore, since this interruption makes an object cease to appear the same, it must be the uninterrupted progress of the thought, which constitutes the imperfect identity.

This may be confirm'd by another phenomenon. A change in any considerable part of a body destroys its identity; but 'tis remarkable, that where the change is produc'd gradually and insensibly we are less apt to ascribe to it the same effect. The reason can plainly be no other, than that the mind, in following the successive changes of the body, feels an easy passage from the surveying its condition in one moment to the viewing of it in another, and at no particular time perceives any interruption in its actions. From which continu'd perception, it ascribes a continu'd existence and identity to the object.

But whatever precaution[30] we may use in introducing the changes gradually, and making them proportionable to the whole,'tis certain, that where the changes are at last observ'd to become considerable, we make a scruple of ascribing identity to such different objects. There is, however, another artifice,, by which we may induce the imagination to advance a step farther; and that is, by producing a reference of the parts to each other, and a combination to some common end or purpose. A ship, of which a considerable part has been chang'd by frequent reparations, is still considered as the same; nor does the difference of the materials hinder us from ascribing an identity to it. The common end, in which the parts conspire, is the same under all their variations, and affords an easy transition of the imagination from one situation of the body to another.

But this is still more remarkable, when we add a sympathy of parts to their common end, and suppose that they bear to each other, the reciprocal relation of cause and effect in all their actions and operations. This is the case with all animals and vegetables;where not only the several parts have a reference to some general purpose, but also a mutual dependence on, and connexion with each other. The effect of so strong a relation is, that tho' every one must allow, that in a very few years both vegetables and animals endure a total change, yet we still attribute identity to them, while their form,size, and substance are entirely alter'd. An oak, that grows from a small plant to a large tree, is still the same oak; tho' there be not one particle of matter, or figure of its parts the same. An infant becomes a man-, and is sometimes fat, sometimes lean, without any change in his identity.

We may also consider the two following phaenomena, which are remarkable in their kind. The first is, that tho' we commonly be able to distinguish pretty exactly betwixt numerical and specific identity, yet it sometimes happens, that we confound them, and in our thinking and reasoning employ the one for the other. Thus a man, who bears a noise, that is frequently interrupted and renew'd,says, it is still the same noise; tho' 'tis evident the sounds have only a specific identity or resemblance, and there is nothing numerically the same, but the cause, which produc'd them. In like manner it may be said without breach of the propriety of language, that such a church, which was formerly of brick, fell to ruin, and that the parish rebuilt the same church of free-stone, and according to modern architecture. Here neither the form nor materials are the same, nor is there any thing

common to the two objects, but their relation to the inhabitants of the parish; and yet this alone is sufficient to make us denominate them the same. But we must observe, that in these cases the first object is in a manner annihilated before the second comes into existence; by which means, we are never presented in any one point of time with the idea of difference and multiplicity: and for that reason are less scrupulous in calling them the same.

Secondly, We may remark, that tho' in a succession of related objects, it be in a manner requisite, that the change of parts be not sudden nor entire, in order to preserve the identity, yet where the objects are in their nature changeable and inconstant, we admit of a more sudden transition, than wou'd otherwise be consistent with that relation. Thus as the nature of a river consists in the motion and change of parts; tho' in less than four and twenty hours these be totally alter'd; this hinders not the river from continuing the same during several ages. What is natural and essential to any thing is, in a manner, expected; and what is expected makes less impression, and appears of less moment, than what is unusual and extraordinary.

A considerable change of the former kind seems really less to the imagination, than the most trivial alteration of the latter; and by breaking less the continuity of the thought, has less influence in destroying the identity.

We now proceed to explain the nature of personal identity, which has become so great a question in philosophy, especially of late years in England, where all the abstruser sciences are study'd with a peculiar ardour and application. And here 'tis evident, the same method of reasoning must be continu'd, which has so successfully explain'd the identity of plants, and animals, and ships, and houses, and of all the compounded and changeable productions either of art or nature. The identity, which we ascribe to the mind of man, is only a fictitious one, and of a like kind with that which we ascribe to vegetables and animal bodies. It cannot, therefore, have a different origin, but must proceed from a like operation of the imagination upon like objects.

But lest this argument shou'd not convince the reader; tho' in my opinion perfectly decisive; let him weigh the following reasoning, which is still closer and more immediate. 'Tis evident, that the identity, which we attribute to the human mind, however perfect we may imagine it to be, is not able to run the several different

perceptions into one, and make them lose their characters of distinction and difference, which are essential to them. 'Tis still true, that every distinct perception, which enters into the composition of the mind, is a distinct existence, and is different, and distinguishable, and separable from every other perception, either contemporary or successive. But, as, notwithstanding this distinction and separability, we suppose the whole train of perceptions to be united by identity, a question naturally arises concerning this relation of identity; whether it be something that really binds our several perceptions together, or only associates their ideas in the imagination. That is, in other words, whether in pronouncing concerning the identity of a person, we observe some real bond among his perceptions, or only feel one among the ideas we form of them. This question we might easily decide, if we wou'd recollect what has been already said at large, that the understanding never observes any real connexion among objects, and that even the union of cause and effect, when strictly examin'd, resolves itself into a customary association of ideas. For from thence it evidently follows, that identity is nothing really belonging to these different perceptions, and uniting them together; but is merely a quality, which we attribute to them, because of the union of their ideas in the imagination, when we reflect upon them. Now the only qualities, which can give ideas an union in the imagination, are these three relations above-mention'd. There are the uniting principles in the ideal world, and without them every distinct object is separable by the mind, and may be separately considered, and appears not to have any more connexion with any other object, than if disjoin'd by the greatest difference and remoteness. 'Tis, therefore, on some of these three relations of resemblance, contiguity and causation, that identity depends; and as the very essence of these relations consists in their producing an easy transition of ideas; it follows, that our notions of personal identity, proceed entirely from the smooth and uninterrupted progress of the thought along a train of connected ideas, according to the principles above-explain'd.

The only question, therefore, which remains, is, by what relations this uninterrupted progress of our thought is produc'd, when we consider the successive existence of a mind or thinking person.

And here 'tis evident we must confine ourselves to resemblance and causation, and must drop contiguity, which has little or no influence in the present case.

To begin with resemblance; suppose we cou'd see clearly into the breast of another, and observe that succession of perceptions, which constitutes his mind or thinking principle, and suppose that he always preserves the memory of a considerable part of past perceptions; 'tis evident that nothing cou'd more contribute to the bestowing a relation on this succession amidst all its variations. For what is the memory but a faculty, by which we raise up the images of past perceptions? And as an image necessarily resembles its object, must not. the frequent placing of these resembling perceptions in the chain of thought, convey the imagination more easily from one link to another, and make the whole seem like the continuance of one object? In this particular, then, the memory not only discovers the identity, but also contributes to its production, by producing the relation of resemblance among the perceptions. The case is the same whether we consider ourselves or others.

As to causation; we may observe, that the true idea of the human mind, is to consider it as a system of different perceptions or different existences, which are link'd together by the relation of cause and effect, and mutually produce, destroy, influence, and modify each other. Our impressions give rise to their correspondent ideas; said these ideas in their turn produce other impressions. One thought chases another, and draws after it a third, by which it is expell'd in its turn. In this respect, I cannot compare the soul more properly to any thing than to a republic or commonwealth, in which the several members are united by the reciprocal ties of government and subordination, and give rise to other persons, who propagate the same republic in the incessant changes of its parts. And as the same individual republic may not only change its members, but also its laws and constitutions; in like manner the same person may vary his character and disposition, as well as his impressions and ideas, without losing his identity. Whatever changes he endures, his several parts are still connected by the relation of causation.

And in this view our identity with regard to the passions serves to corroborate that with regard to the imagination, by the making our distant perceptions influence each other, and by giving us a present concern for our past or future pains or pleasures.

As a memory alone acquaints us with the continuance and extent of this succession of perceptions, 'tis to be considered, upon that

account chiefly, as the source of personal identity. Had we no memory, we never shou'd have any notion of causation, nor consequently of that chain of causes and effects, which constitute our self or person. But having once acquir'd this notion of causation from the memory, we can extend the same chain of causes, and consequently the identity of our persons beyond our memory, and can comprehend times, and circumstances, and actions, which we have entirely forgot, but suppose in general to have existed. For how few of our past actions are there, of which we have any memory?

Who can tell me, for instance, what were his thoughts and actions on the 1st of January 1715, the 11th of March 1719, and the 3rd of August 1733? Or will he affirm, because he has entirely forgot the incidents of these days, that the present self is not the same person with the self of that time; and by that means overturn all the most established notions of personal identity? In this view, therefore, memory does not so much produce as discover personal identity, by shewing us the relation of cause and effect among our different perceptions. 'Twill be incumbent on those, who affirm that memory produces entirely our personal identity, to give a reason why we can thus extend our identity beyond our memory.

The whole of this doctrine leads us to a conclusion, which is of great importance in the present affair, viz. that all the nice and subtle questions concerning personal identity can never possibly be decided, and are to be regarded rather as grammatical than as philosophical difficulties. Identity depends on the relations of ideas; and these relations produce identity, by means of that easy transition they occasion.' But as the relations, and the easiness of the transition may diminish by insensible degrees, we have no just standard, by which we can decide any dispute concerning the time, when they acquire or lose a title to the name of identity. All the disputes concerning the identity of connected objects are merely verbal, except so far as the relation of parts - gives rise to some fiction or imaginary principle of union, as we have already observed.

What I have said concerning the first origin and uncertainty of our notion of identity, as apply'd to the human mind, may be extended with little or no variation to that of simplicity. An object, whose different co-existent parts are bound together by a close relation, operates upon the imagination after much the same manner

as one perfectly simple and indivisible and requires not a much greater stretch of thought in order to its conception. From this similarity of operation we attribute a simplicity to it, and feign a principle of union as the support of this simplicity, and the center of all the different parts and qualities of the object.

Thus we have finish'd our examination of the several systems of philosophy, both of the intellectual and natural world; and in our miscellaneous way of reasoning have been led into several topics; which will either illustrate and confirm some preceding part of this discourse, or prepare the way for our following opinions. 'Tis now time to return to a more close examination of our subject, and to proceed in the accurate anatomy of human nature, having fully explain'd the nature of our judgment and understandings.

SECT. VII

Conclusion of this book

But before I launch out into those immense depths of philosophy, which lie before me, I find myself inclin'd to stop a moment in my present station, and to ponder that voyage, which I have undertaken, and which undoubtedly requires the utmost art and industry to be brought to a happy conclusion. Methinks I am like a man, who having struck on many shoals, and having narrowly escap'd shipwreck in passing a small frith, has yet the temerity to put out to sea in the same leaky weather-beaten vessel, and even carries his ambition so far as to think of compassing the globe under these disadvantageous circumstances. My memory of past errors and perplexities, makes me diffident for the future. The wretched condition, weakness, and disorder of the faculties, I must employ in my enquiries, encrease my apprehensions. And the impossibility of amending or correcting these faculties, reduces me almost to despair, and makes me resolve to perish on the barren rock, on which I am at present, rather than venture myself upon that boundless ocean, which runs out into immensity. This sudden view of my danger strikes me with melancholy; and as 'tis usual for that passion, above all others, to indulge itself; I cannot forbear feeding my despair, with all those desponding reflections, which the present subject furnishes me with in such abundance.

I am first affrighted and confounded with that forelorn solitude, in which I am plac'd in my philosophy, and fancy myself some strange

uncouth monster, who not being able to mingle and unite in society, has been expell'd all human commerce, and left utterly abandon'd and disconsolate. Fain wou'd I run into the crowd for shelter and warmth; but cannot prevail with myself to mix with such deformity. I call upon others to join me, in order to make a company apart; but no one will hearken to me. Every one keeps at a distance, and dreads that storm, which beats upon me from every side. I have expos'd myself to the enmity of all metaphysicians, logicians, mathematicians, and even theologians; and can I wonder at the insults I must suffer? I have declar'd my disapprobation of their systems; and can I be surpriz'd, if they shou'd express a hatred of mine and of my person? When I look abroad, I foresee on every side, dispute, contradiction, anger, calumny and detraction. When I turn my eye inward, I find nothing but doubt and ignorance. All the world conspires to oppose and contradict me; tho' such is my weakness, that I feel all my opinions loosen and fall of themselves, when unsupported by the approbation of others. Every step I take is with hesitation, and every new reflection makes me dread an error and absurdity in my reasoning.

For with what confidence can I venture upon such bold enterprises, when beside those numberless infirmities peculiar to myself, I find so many which are common to human nature? Can I be sure, that in leaving all established opinions I am following truth; and by what criterion shall I distinguish her, even if fortune shou'd at last guide me on her foot-steps? After the most accurate and exact of my reasonings, I can give no reason why I shou'd assent to it; and feel nothing but a strong propensity to consider objects strongly in that view, under which they appear to me. Experience is a principle, which instructs me in the several conjunctions of objects for the past. Habit is another principle, which determines me to expect the same for the future; and both of them conspiring to operate upon the imagination, make me form certain ideas in a more intense and lively manner, than others, which are not attended with the same advantages. Without this quality, by which the mind enlivens some ideas beyond others (which seemingly is so trivial, and so little founded on reason) we cou'd never assent to any argument, nor carry our view beyond those few objects, which are present to our senses. Nay, even to these objects we cou'd never attribute any existence, but what was dependent on the senses; and must comprehend them entirely in that succession of perceptions, which constitutes our self or person. Nay farther, even with relation to that succession, we cou'd only admit of those perceptions, which are

immediately present to our consciousness, nor cou'd those lively images, with which the memory presents us, be ever receiv'd as true pictures of past perceptions. The memory, senses, and understanding are, therefore, all of them founded on the imagination, or the vivacity of our ideas.

No wonder a principle so inconstant and fallacious shou'd lead us into errors, when implicitly follow'd (as it must be) in all its variations. 'Tis this principle, which makes us reason from causes and effects; and 'tis the same principle, which convinces us of the continu'd existence of external objects, when absent from the senses.

But tho' these two operations be equally natural and necessary in the human mind, yet in some circumstances they are⁴⁷ directly contrary, nor is it possible for us to reason justly and regularly from causes and effects, and at the same time believe the continu'd existence of matter. How then shall we adjust those principles together? Which of them shall we prefer? Or in case we prefer neither of them, but successively assent to both, as is usual among philosophers, with what confidence can we afterwards usurp that glorious title, when we thus knowingly embrace a manifest contradiction?

This contradiction⁴⁸ wou'd be more excusable, were it compensated by any degree of solidity and satisfaction in the other parts of our reasoning. But the case is quite contrary. When we trace up the human understanding to its first principles, we find it to lead us into such sentiments, as seem to turn into ridicule all our past pains and industry, and to discourage us from future enquiries.

Nothing is more curiously enquir'd after by the mind of man, than the causes of every phenomenon; nor are we content with knowing the immediate causes, but push on our enquiries, till we arrive at the original and ultimate principle. We wou'd not willingly stop before we are acquainted with that energy in the cause, by which it operates on its effect; that tie, which connects them together; and that efficacious quality, on which the tie depends. This is our aim in all our studies and reflections: And how must we be disappointed, when we learn, that this connexion, tie, or energy lies merely in ourselves, and is nothing but that determination of the mind, which is acquir'd by custom, and causes us to make a transition from an object to its usual attendant, and from the impression of one to the lively idea of the

other? Such a discovery not only cuts off all hope of ever attaining satisfaction, but even prevents our very wishes; since it appears, that when we say we desire to know the ultimate and operating principle, as something, which resides in the external object, we either contradict ourselves, or talk without a meaning.

This deficiency in our ideas is not, indeed, perceived in common life, nor are we sensible, that in the most usual conjunctions of cause and effect we are as ignorant of the ultimate principle, which binds them together, as in the most unusual and extraordinary. But this proceeds merely from an illusion of the imagination; and the question is, how far we ought to yield to these illusions. This question is very difficult, and reduces us to a very dangerous dilemma, whichever way we answer it. For if we assent to every trivial suggestion of the fancy; beside that these suggestions are often contrary to each other; they lead us into such errors, absurdities, and obscurities, that we must at last become ashamed of our credulity. Nothing is more dangerous to reason than the flights of the imagination, and nothing has been the occasion of more mistakes among philosophers. Men of bright fancies may in this respect be compared to those angels, whom the scripture represents as covering their eyes with their wings. This has already appeared in so many instances, that we may spare ourselves the trouble of enlarging upon it any farther.

But on the other hand, if the consideration of these instances makes us take a resolution to reject all the trivial suggestions of the fancy, and adhere to the understanding, that is, to the general and more established properties of the imagination; even this resolution, if steadily executed, would be dangerous, and attended with the most fatal consequences. For I have already shewn,⁴⁹ that the understanding, when it acts alone, and according to its most general principles, entirely subverts itself, and leaves not the lowest degree of evidence in any proposition, either in philosophy or common life.

We save ourselves from this total scepticism only by means of that singular and seemingly trivial property of the fancy, by which we enter with difficulty into remote views of things, and are not able to accompany them with so sensible an impression, as we do those, which are more easy and natural. Shall we, then, establish it for a general maxim, that no refined or elaborate reasoning is ever to be received? Consider well the consequences of such a principle. By this means you

cut off entirely all science and philosophy: You proceed upon one singular quality of the imagination, and by a parity of reason must embrace all of them: And you expressly contradict yourself; since this maxim must be built on the preceding reasoning, which will be allow'd to be sufficiently refin'd and metaphysical.

What party, then, shall we choose among these difficulties? If we embrace this principle, and condemn all refin'd reasoning, we run into the most manifest absurdities. If we reject it in favour of these reasonings, we subvert entirely the, human understanding. We have, therefore, no choice left but betwixt a false reason and none at all. For my part, know not what ought to be done in the present case. I can only observe what is commonly done; which is, that this difficulty is seldom or never thought of; and even where it has once been present to the mind, is quickly forgot, and leaves but a small impression behind it. Very refin'd reflections have little or no influence upon us; and yet we do not, and cannot establish it for a rule, that they ought not to have any influence; which implies a manifest contradiction.

But what have I here said, that reflections very refin'd and metaphysical have little or no influence upon us? This opinion I can scarce forbear retracting, and condemning from my present feeling and experience. The intense view of these manifold contradictions and imperfections in human reason has so wrought upon me, and heated my brain, that I am ready to reject all belief and reasoning, and can look upon no opinion even as more probable or likely than another. Where am I, or what? From what causes do I derive my existence, and to what condition shall I return? Whose favour shall I court, and whose anger must I dread? What beings surround me?

and on whom have, I any influence, or who have any influence on me? I am confounded with all these questions, and begin to fancy myself in the most deplorable condition imaginable, environ'd with the deepest darkness, and utterly depriv'd of the use of every member and faculty.

Most fortunately it happens, that since reason is incapable of dispelling these clouds, nature herself suffices to that purpose, and cures me of this philosophical melancholy and delirium, either by relaxing this bent of mind, or by some avocation, and lively impression of my senses, which obliterate all these chimeras. I dine, I play a game of backgammon, I converse, and am merry with my

friends; and when after three or four hours' amusement, I wou'd return to these speculations, they appear so cold, and strain'd, and ridiculous, that I cannot find in my heart to enter into them any farther.

Here then I find myself absolutely and necessarily determin'd to live, and talk, and act like other people in the common affairs of life. But notwithstanding that my natural propensity, and the course of my animal spirits and passions reduce me to this indolent belief in the general maxims of the world, I still feel such remains of my former disposition, that I am ready to throw all my books and papers into the fire, and resolve never more to renounce the pleasures of life for the sake of reasoning and philosophy. For those are my sentiments in that splenetic humour, which governs me at present.

I may, nay I must yield to the current of nature, in submitting to my senses and understanding; and in this blind submission I shew most perfectly my sceptical disposition and principles. But does it follow, that I must strive against the current of nature, which leads me to indolence and pleasure; that I must seclude myself, in some measure, from the commerce and society of men, which is so agreeable; and that I must torture my brains with subtilities and sophistries, at the very time that I cannot satisfy myself concerning the reasonableness of so painful an application, nor have any tolerable prospect of arriving by its means at truth and certainty. Under what obligation[31] do I lie of making such an abuse of time? And to what end can it serve either for the service of mankind, or for my own private interest? No: If I must be a fool, as all those who reason or believe any thing certainly are, my follies shall at least be natural and agreeable. Where I strive against my inclination, I shall have a good reason for my resistance; and will no more be led a wandering into such dreary solitudes, and rough passages, as I have hitherto met with.

These are the sentiments of my spleen and indolence; and indeed I must confess, that philosophy has nothing to oppose to them, and expects a victory more from the returns of a serious good-humour'd disposition, than from the force of reason and conviction. In all the incidents of life we ought still to preserve our scepticism. If we believe, that fire warms, or water refreshes, 'tis only because it costs us too much pains to think otherwise. Nay if we are philosophers, it ought only to be upon sceptical principles, and from an inclination,

which we feel to the employing ourselves after that manner. Where reason is lively, and mixes itself with some propensity, it ought to be assented to. Where it does not, it never can have any title to operate upon us.

At the time, therefore, that I am tir'd with amusement and company, and have indulg'd a reverie in my chamber, or in a solitary walk by a river-side, I feel my mind all collected within itself, and am naturally inclin'd to carry my view into all those subjects, about which I have met with so many disputes in the course of my reading and conversation. I cannot forbear having a curiosity to be acquainted with the principles of moral good and evil, the nature and foundation of government^[32], and the cause of those several passions and inclinations, which actuate and govern me. I am uneasy to think I approve of one object, and disapprove of another; call one thing beautiful, and another deform'd; decide concerning truth and falshood, reason and folly, without knowing upon what principles I proceed. I am concern'd for the condition of the learned world, which lies under such a deplorable ignorance in all these particulars.

I feel an ambition to arise in me of contributing to the instruction of mankind, and of acquiring a name by my inventions and discoveries.

These sentiments spring up naturally in my present disposition; and shou'd I endeavour to banish them, by attaching myself to any other business or diversion, I feel I shou'd be a loser in point of pleasure; and this is the origin of my philosophy.

But even suppose this curiosity and ambition shou'd not transport me into speculations without the sphere of common life, it wou'd necessarily happen, that from my very weakness I must be led into such enquiries. 'Tis certain, that superstition is much more bold in its systems and hypotheses than philosophy; and while the latter contents itself with assigning new causes and principles to the phaenomena, which appear in the visible world, the former opens a world of its own, and presents us with scenes, and beings, and objects, which are altogether new. Since therefore 'tis almost impossible for the mind of man to rest, like those of beasts, in that narrow circle of objects, which are the subject of daily conversation and action, we ought only to deliberate concerning the choice of our guide, and ought to prefer that which is safest and most agreeable.

And in this respect I make bold to recommend philosophy, and shall not scruple to give it the preference to superstition of every kind or denomination. For as superstition arises naturally and easily from the popular opinions of mankind, it seizes more strongly on the mind, and is often able to disturb us in the conduct of our lives and actions.

Philosophy on the contrary, if just, can present us only with mild and moderate sentiments; and if false and extravagant, its opinions are merely the objects of a cold and general speculation, and seldom go so far as to interrupt the course of our natural propensities. The CYNICS[33] are an extraordinary instance of philosophers, who from reasonings purely philosophical ran into as great extravagancies of conduct as any Monk or Dervise that ever was in the world.

Generally speaking, the errors in religion are dangerous; those in philosophy only ridiculous.

I am sensible, that these two cases of the strength and weakness of the mind will not comprehend all mankind, and that there are in England, in particular, many honest gentlemen, who being always employ'd in their domestic affairs, or amusing themselves in common recreations, have carried their thoughts very little beyond those objects, which are every day expos'd to their senses. And indeed, of such as these I pretend not to make philosophers, nor do I expect them either to be associates in these researches or auditors of these discoveries. They do well to keep themselves in their present situation; and instead of refining them into philosophers, I wish we cou'd communicate to our founders of systems, a share of this gross earthy mixture, as an ingredient, which they commonly stand much in need of, and which wou'd serve to temper those fiery particles, of which they are compos'd. While a warm imagination is allow'd to enter into philosophy, and hypotheses embrac'd merely for being specious and agreeable, we can never have any steady principles, nor any sentiments, which will suit with common practice and experience. But were these hypotheses once remov'd, we might hope to establish a system or set of opinions, which if not true (for that, perhaps, is too much to be hop'd for) might at least be satisfactory to the human mind, and might stand the test of the most critical examination. Nor shou'd we despair of attaining this end, because of the many chimerical systems, which have successively arisen and decay'd away

among men, wou'd we consider the shortness of that period, wherein these questions have been the subjects of enquiry and reasoning. Two thousand years with such long interruptions, and under such mighty discouragements are a small space of time to give any tolerable perfection to the sciences; and perhaps we are still in too early an age of the world to discover any principles, which will bear the examination of the latest posterity. For my part, my only hope is, that I may contribute a little to the advancement of knowledge, by giving in some particulars a different turn to the speculations of philosophers, and pointing out to them more distinctly those subjects, where alone they can expect assurance and conviction. Human Nature is the only science of man; and yet has been hitherto the most neglected. 'Twill be sufficient for me, if I can bring it a little more into fashion; and the hope of this serves to compose my temper from that spleen, and invigorate it from that indolence, which sometimes prevail upon me. If the reader finds himself in the same easy disposition, let him follow me in my future speculations. If not, let him follow his inclination, and wait the returns of application and good humour. The conduct of a man, who studies philosophy in this careless manner, is more truly sceptical than that of one, who feeling in himself an inclination to it, is yet so overwhelmed with doubts and scruples, as totally to reject it. A true sceptic will be diffident of his philosophical doubts, as well as of his philosophical conviction; and will never refuse any innocent satisfaction, which offers itself, upon account of either of them.

Nor is it only proper we shou'd in general indulge our inclination in the most elaborate philosophical researches, notwithstanding our sceptical principles, but also that we shou'd yield to that propensity, which inclines us to be positive and certain in particular points, according to the light, in which we survey them in any particular instant. 'Tis easier to forbear all examination and enquiry, than to check ourselves in so natural a propensity, and guard against that assurance, which always arises from an exact and full survey of an object. On such an occasion we are apt not only to forget our scepticism, but even our modesty too; and make use of such terms as these, 'tis evident, 'tis certain, 'tis undeniable; which a due deference to the public ought, perhaps, to prevent. I may have fallen into this fault after the example of others; but I here enter a caveat against any Objections, which may be offer'd on that head; and declare that such expressions were extorted from me by the present view of the object, and imply no dogmatical spirit, nor conceited idea of my own

judgment, which are sentiments that I am sensible can become no body, and a sceptic still less than any other.

NOTES:

1. I here make use of these terms, impression and idea, in a sense different from what is usual, and I hope this liberty will be allowed me. Perhaps I rather restore the word, idea, to its original sense, from which Mr Locke[34] had perverted it, in making it stand for all our perceptions. By the terms of impression I would not be understood to express the manner, in which our lively perceptions are produced in the soul, but merely the perceptions themselves; for which there is no particular name either in the English or any other language, that I know of.

3. Dr. Berkeley[35].

4. [The following note is inserted from Humes Appendix to Book III]

'Tis evident, that even different simple ideas may have a similarity or resemblance to each other; nor is it necessary, that the point or circumstance of resemblance should be distinct or separable from that in which they differ. Blue and green are different simple ideas, but are more resembling than blue and scarlet; tho their perfect simplicity excludes all possibility of separation or distinction.

'Tis the same case with particular sounds, and tastes and smells.

These admit of infinite resemblances upon the general appearance and comparison, without having any common circumstance the same. And of this we may be certain, even from the very abstract terms simple idea. They comprehend all simple ideas under them.

These resemble each other in their simplicity. And yet from their very nature, which excludes all composition, this circumstance, In which they resemble, Is not distinguishable nor separable from the rest. 'Tis the same case with all the degrees In any quality. They are all resembling and yet the quality, In any individual, Is not distinct from the degree.

5. It has been objected to me, that infinite divisibility supposes only an infinite number of proportional not of aliquot parts, and that an infinite number of proportional parts does not form an infinite extension. But this distinction is entirely frivolous. Whether these parts be call'd aliquot or proportional, they cannot be inferior to those minute parts we conceive; and therefore cannot form a less extension by their conjunction.

11. [The following note is inserted from the appendix to Book III.]

As long as we confine our speculations to the appearances of objects to our senses, without entering into disquisitions concerning their real nature and operations, we are safe from all difficulties, and can. never be embarrass'd by any question. Thus, if it be ask'd, if the invisible and intangible distance, interposed betwixt two objects, be something or nothing: 'Tis easy to answer, that it is something, VIZ. a property of the objects, which affect the senses after such a particular manner. If it be ask'd whether two objects, having such a distance betwixt them, touch or not: it may be answer'd, that this depends upon the definition of the word, touch. If objects be said to touch, when there is nothing sensible interpos'd betwixt them, these objects touch: it objects be said to touch, when their images strike contiguous parts of the eye, and when the hand feels both objects successively, without any interpos'd motion, these objects do not touch. The appearances of objects to our senses are all consistent; and no difficulties can ever arise, but from the obscurity of the terms we make use of.

If we carry our enquiry beyond the appearances of objects to the senses, I am afraid, that most of our conclusions will be full of scepticism and uncertainty. Thus if it be ask'd, whether or not the invisible and intangible distance be always full of body, or of

something that by an improvement of our organs might become visible or tangible, I must acknowledge, that I find no very decisive arguments on either side; tho' I am inclin'd to the contrary opinion, as being more suitable to vulgar and popular notions. If the Newtonian philosophy be rightly understood, it will be found to mean no more. A vacuum is asserted: That is, bodies are said to be plac'd after such a manner, is to receive bodies betwixt them, without impulsions or penetration. The real nature of this position of bodies is unknown. We are only acquainted with its effects on the senses, and its power of receiving body. Nothing is more suitable to that philosophy, than a modest scepticism to a certain degree, and a fair confession of ignorance in subjects, that exceed all human capacity.

19. We may here take occasion to observe a very remarkable error, which being frequently inculcated in the schools, has become a kind of establishd maxim, and is universally received by all logicians. This error consists in the vulgar division of the acts of the understanding, into conception, judgment and reasoning, and in the definitions we give of them. Conception is defin'd to be the simple survey of one or more ideas: Judgment to be the separating or uniting of different ideas: Reasoning to be the separating or uniting of different ideas by the interposition of others, which show the relation they bear to each other. But these distinctions and definitions are faulty in very considerable articles. For first, 'tis far from being true, that in every judgment, which we form, we unite two different ideas; since in that proposition, God is, or indeed any other, which regards existence, the idea of existence is no distinct idea, which we unite with that of the object, and which is capable of forming a compound idea by the union. Secondly, As we can thus form a proposition, which

contains only one idea, so we may exert our reason without employing more than two ideas, and without having recourse to a third to serve as a medium betwixt them. We infer a cause immediately from its effect; and this inference is not only a true species of reasoning, but the strongest of all others, and more convincing than when we interpose another idea to connect the two extremes. What we may in general affirm concerning these three acts of the understanding is, that taking them in a proper light, they all resolve themselves into the first, and are nothing but particular ways of conceiving our objects. Whether we consider a single object, or several; whether we dwell on these objects, or run from them to others; and in whatever form or order we survey them, the act of the mind exceeds not a simple conception; and the only remarkable difference, which occurs on this occasion, is, when we join belief to the conception, and are persuaded of the truth of what we conceive. This act of the mind has never yet been explained by any philosopher; and therefore I am at liberty to propose my hypothesis concerning it; which is, that 'tis only a strong and steady conception of any idea, and such as approaches in some measure to an immediate impression.

20. [The following note is inserted from Humes Appendix to Book]Naturane nobis, in quit, datum dicam, an errore quodam, ut, cum ea loca videamus, in quibus memoria dignos viros acceperimus multum esse versatos, magis moveamur, quam siquando eorum ipsorum aut Jacta audiamus, aut scriptum aliquod legamus? velut ego nunc moveor. Venit enim mihi Platonis in mentem: quem accipimus primurn hic disputare solitum: Cujus etiam illi hortuli propinqui non memoriam solum mihi afferunt, sed ipsum videntur in conspectu meo hic ponere. Hic Speusippus, hic Xenocrates, hic ejus auditor Polemo; cujus ipsa illa sessio fuit, quam videamus.

Equidem etiam curiam nostram, hostiliam dico, non hanc novam, quae mihi minor esse videtur post quam est major, sole barn intuens Scipionem, Catonem, Laclium, nostrum vero in primis avum cogitare. Tanta vis admonitionis inest in locis; ut non sine causa ex his memoriae ducta sit disciplina. Cicero de Finibus, lib. 5.

'Should I, he said, 'attribute to instinct or to some kind of illusion the fact that when we see those places in which we are told notable men spent much of their time, we are more powerfully affected than when we hear of the exploits of the men themselves or read something

written? This is just what is happening to me now; for I am reminded of Plato who, we are told, was the first to make a practice of holding discussions here. Those gardens of his near by do not merely put me in mind of him; they seem to set the man himself before my very eyes. Speusippus was here; so was Xenocrates; so was his pupil, Polemo, and that very seat which we may view was his.

Then again, when I looked at our Senate-house (I mean the old building of Hostilius, not this new one; when it was enlarged, it diminished in my estimation), I used to think of Scipio, Cato, Laelius and in particular of my own grandfather.

Such is the power of places to evoke associations; so it is with good reason that they are used as a basis for memory training.

21. In general we may observe, that as our assent to all probable reasonings is founded on the vivacity of ideas, It resembles many of those whimsies and prejudices, which are rejected under the opprobrious character of being the offspring of the imagination. By this expression it appears that the word, imagination, is commonly used in two different senses; and tho' nothing be more contrary to true philosophy, than this inaccuracy, yet in the following reasonings I have often been obliged to fall into it. When I oppose the Imagination to the memory, I mean the faculty, by which we form our fainter ideas. When I oppose it to reason, I mean the same faculty, excluding only our demonstrative and probable reasonings.

When I oppose it to neither, 'tis indifferent whether it be taken in the larger or more limited sense, or at least the context will sufficiently explain the meaning.

36. This reasoning, it must be confessed, is somewhat abstruse, and difficult to be comprehended; but it is remarkable, that this very difficulty may be converted into a proof of the reasoning. We may observe, that there are two relations, and both of them resemblances, which contribute to our mistaking the succession of our interrupted perceptions for an identical object. The first is, the resemblance of the perceptions: The second is the resemblance, which the act of the mind in surveying a succession of resembling objects bears to that in surveying an identical object. Now these resemblances we are apt to confound with each other; and 'tis natural we should, according to this very reasoning. But let us keep them distinct, and we shall find no difficulty in conceiving the precedent argument.

[15]懒惰。

[16] 西西弗斯，是希腊神话中一位被惩罚的神。他受罚的方式是：必须将一块巨石推上山顶，而每次到达山顶后巨石又滚回山下，如此永无止境地重复下去。

[17] 坦塔卢斯，希腊神话人物，他被惩罚入阴间，想喝水时，河水就后退，想吃水果时，就被风吹走。

[18] 填充性，填充性依赖于对象，对象又依赖于其他性质。

[19]寓存。

[20]幻觉。

[21]这句拉丁文的意思是：全体存在于全体，全体又存在于各部分。

[22] 无神论，是认为神灵不存在[22] 或者不接受有神论的一种哲学思想和立场，广义上则是对神存在缺乏相信的思想的总和。无神论并没有统一的哲学思想，一些无神论者可能完全否定任何超自然事物，但另一些无神论者可能相信诸如占星术等伪科学。无神论亦经常同反神论（或反有神论）相混淆，前者是拒绝相信有神论，而后者是直接明确反对有神论。

[23] 斯宾诺莎(1632-1677 年)，荷兰犹太人哲学家，17 世纪唯理论的主要代表人物。其父母为逃避葡萄牙的天主教迫害而来到荷兰。早期对新科学和哲学思想的兴趣使他在1656 年被逐出犹太教，其后靠磨镜片和抛光工作来谋生。他的哲学代表了对笛卡儿哲学的发展和否定，其大多数震撼性的学说中很多都是对笛卡儿主义哲学难题的解决。其主要著作有《伦理学》、《神学政治论》、和未完成的《政治论》。

[24] 基体。

[25]神学家，他们关于思维实体的学说是地道的无神主义，和斯宾诺莎的学说一样。；他们的体系和斯宾诺莎的体系有共同荒谬之点。

[26]先验，先天的，先于经验的。先验地讲，任何东西都可以被任何东西产生出来。没有先天必然的联系存在。

[27]无限。

[28] 不朽、永生。此处指灵魂的永生。

[29] 现象，现象和一切存在和实在对感官说来都是同一的。

[30] 预防。

[31]义务，伦理学用语，指人在社会行为中对别人所担负的责任。

[32]政府，人有舍远求近，因而有破坏财产法则的倾向，必须由政府加以补救；补救就在于使遵守那些法则成为某些少数人的切身利益。

[33]犬儒学派，是古希腊一个哲学学派，由苏格拉底的学生安提西尼创立，这个学派的信奉者被称为犬儒。该学派否定社会与文明，提倡回归自然，清心寡欲，鄙弃俗世的荣华富贵；要求人克己无求，独善其身。最著名的犬儒学派人士是安提西尼的弟子狄奥根尼。

[34]约翰 洛克：(1632—1704)英国哲学家。在《人类理智论》(1690 年)中，他提出了经验论原则，他的《政府两记》(1690 年)影响了《独立宣言》。在知识论上，洛克与戴维 休谟、乔治 贝克莱三人被列为英国经验主义的代表人物。

[35]乔治 贝克莱(1685 年3 月12 日 - 1753 年1 月14 日)。他是爱尔兰哲学家，与约翰 洛克和大卫 休谟被认为是英国近代经验主义哲学家的三位代表人物。他著有《视觉新论》(1709 年)和《人类知识原理》(1710 年)等。美国加州的柏克莱市是以乔治 贝克莱而命名的。

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

Part I OF PRIDE AND HUMILITY [1]

SECT. I

Division of the subject

As all the perceptions of the mind may be divided into impressions and ideas, so the impressions admit of another division into original and secondary. This division of the impressions is the same with that which I formerly made use of when I distinguish'd them into impressions of sensation and reflection. Original impressions or impressions of sensation are such as without any antecedent perception arise in the soul, from the constitution of the body, from the animal spirits, or from the application of objects to the external organs. Secondary, or reflective impressions are such as proceed from some of these original ones, either immediately or by the interposition of its idea. Of the first kind are all the impressions of the senses, and all bodily pains and pleasures: Of the second are the passions, and other emotions resembling them.

Tis certain, that the mind, in its perceptions, must begin somewhere; and that since the impressions precede their correspondent ideas, there must be some impressions, which without any introduction make their appearance in the soul. As these depend upon natural and physical causes, the examination of them wou'd lead me too far from my present subject, into the sciences of anatomy and natural philosophy. For this reason I shall here confine myself to those other impressions, which I have call'd secondary and reflective, as arising either from the original impressions, or from their ideas.

Bodily pains and pleasures are the source of many passions, both when felt and consider'd by the mind; but arise originally in the soul, or in the body, whichever you please to call it, without any preceding thought or perception. A fit of the gout produces a long train of passions, as grief, hope, fear; but is not deriv'd immediately from any affection or idea. The reflective impressions may be divided into two kinds, viz. the calm and the violent. Of the first kind is the sense of beauty and deformity in action, composition, and external objects. Of the second are the passions of love[2] and hatred, grief and joy, pride and humility. This division is far from being exact. The raptures of

poetry and music frequently rise to the greatest height; while those other impressions, properly call'd passions, may decay into so soft an emotion, as to become, in a manner, imperceptible.

But as in general the passions are more violent than the emotions arising from beauty and deformity, these impressions have been commonly distinguish'd from each other. The subject of the human mind being so copious and various, I shall here take advantage of this vulgar and spacious division, that I may proceed with the greater order; and having said all I thought necessary concerning our ideas, shall now explain those violent emotions or passions, their nature, origin, causes, and effects.

When we take a survey of the passions, there occurs a division of them into direct and indirect. By direct passions I understand such as arise immediately from good or evil, from pain or pleasure.

By indirect such as proceed from the same principles, but by the conjunction of other qualities. This distinction I cannot at present justify or explain any farther. I can only observe in general, that under the indirect passions I comprehend pride, humility, ambition, vanity, love, hatred, envy[3], pity[4], malice, generosity, with their dependants. And under the direct passions, desire, aversion, grief, joy, hope, fear, despair and security. I shall begin with the former.

SECT. II

Of pride and humility; their objects and causes

The passions of PRIDE and HUMILITY being simple and uniform impressions, 'tis impossible we can ever, by a multitude of words, give a just definition of them, or indeed of any of the passions. The utmost we can pretend to is a description of them, by an enumeration of such circumstances, as attend them: But as these words, pride and humility, are of general use, and the impressions they represent the most common of any, every one, of himself, will be able to form a just idea of them, without any danger of mistake.

For which reason, not to lose time upon preliminaries, I shall immediately enter upon the examination of these passions.

'Tis evident, that pride and humility, tho' directly contrary, have yet the same OBJECT. This object is self, or that succession of related

ideas and impressions, of which we have an intimate memory and consciousness. 'Here the view always fixes when we are actuated by either of these passions. According as our idea of ourself is more or less advantageous, we feel either of those opposite affections, and are elated by pride, or dejected with humility. Whatever other objects may be comprehended by the mind, they are always consider'd with a view to ourselves; otherwise they would never be able either to excite these passions, or produce the smallest encrease or diminution of them. When self enters not into the consideration, there is no room either for pride or humility.

But tho' that connected succession of perceptions, which we call self, be always the object of these two passions, 'tis impossible it can be their CAUSE, or be sufficient alone to excite them. For as these passions are directly contrary, and have the same object in common; were their object also their cause; it cou'd never produce any degree of the one passion, but at the same time it must excite an equal degree of the other; which opposition and contrariety must destroy both. 'Tis impossible a man can at the same time be both proud and humble; and where he has different reasons for these passions, as frequently happens, the passions either take place alternately; or if they encounter, the one annihilates the other, as far as its strength goes, and the remainder only of that, which is superior, continues to operate upon the mind. But in the present case neither of the passions cou'd ever become superior; because supposing it to be the view only of ourself, which excited them, that being perfectly indifferent to either, must produce both in the very same proportion; or in other words, can produce neither. To excite any passion, and at the same time raise an equal share of its antagonist, is immediately to undo what was done, and must leave the mind at last perfectly calm and indifferent.

We must therefore, make a distinction betwixt the cause and the object of these passions; betwixt that idea, which excites them, and that to which they direct their view, when excited. Pride and humility, being once rais'd, immediately turn our attention to ourself, and regard that as their ultimate and final object; but there is something farther requisite in order to raise them: Something, which is peculiar to one of the passions, and produces not both in the very same degree. The first idea, that is presented to the mind, is that of the cause or productive principle. This excites the passion, connected with it; and that passion, when excited, turns our view to another idea, which is

that of self. Here then is a passion plac'd betwixt two ideas, of which the one produces it, and the other is produc'd by it. The first idea, therefore, represents the cause, the second the object of the passion.

To begin with the causes of pride and humility; we may observe, that their most obvious and remarkable property is the vast variety of subjects, on which they may be plac'd. Every valuable quality of the mind, whether of the imagination, judgment, memory or disposition; wit, good-sense, learning, courage, justice, integrity; all these are the cause of pride; and their opposites of humility. Nor are these passions confin'd to the mind but extend their view to the body likewise. A man may be proud of his beauty, strength, agility, good mein, address in dancing, riding, and of his dexterity in any manual business or manufacture. But this is not all. The passions looking farther, comprehend whatever objects are in the least ally'd or related to us. Our country, family, children, relations, riches^[5], houses, gardens, horses, dogs, cloaths; any of these may become a cause either of pride or of humility.

From the consideration of these causes, it appears necessary we should make a new distinction in the causes of the passion, betwixt that quality, which operates, and the subject, on which it is plac'd. A man, for instance, is vain of a beautiful house, which belongs to him, or which he has himself built and contriv'd. Here the object of the passion is himself, and the cause is the beautiful house: Which cause again is sub-divided into two parts, viz. the quality, which operates upon the passion, and the subject in which the quality inheres. The quality is the beauty, and the subject is the house, consider'd as his property or contrivance. Both these parts are essential, nor is the distinction vain and chimerical. Beauty, consider'd merely as such, unless plac'd upon something related to us, never produces any pride or vanity; and the strongest relation alone, without beauty, or something else in its place, has as little influence on that passion.

Since, therefore, these two particulars are easily separated and there is a necessity for their conjunction, in order to produce the passion, we ought to consider them as component parts of the cause; and infix in our minds an exact idea of this distinction.

SECT. III

Whence these objects and causes are deriv'd

Being so far advanc'd as to observe a difference betwixt the object of the passions and their cause, and to distinguish in the cause the quality, which operates on the passions, from the subject, in which it inheres; we now proceed to examine what determines each of them to be what it is, and assigns such a particular object, and quality, and subject to these affections. By this means we shall fully understand the origin of pride and humility.

'Tis evident in the first place, that these passions are derermin'd to have self for their object, not only by a natural but also by an original property. No one can doubt but this property is natural from the constancy and steadiness of its operations. 'Tis always self, which is the object of pride and humility; and whenever the passions look beyond, 'tis still with a view to ourselves, nor can any person or object otherwise have any influence upon us.

That this proceeds from an original quality or primary impulse, will likewise appear evident, if we consider that 'tis the distinguishing characteristic of these passions Unless nature had given some original qualities to the mind, it cou'd never have any secondary ones; because in that case it wou'd have no foundation for action, nor cou'd ever begin to exert itself. Now these qualities, which we must consider as original, are such as are most inseparable from the soul, and can be resolv'd into no other: And such is the quality, which determines the object of pride and humility. We may, perhaps, make it a greater question, whether the causes, that produce the passion, be as natural as the object, to which it is directed, and whether all that vast variety proceeds from caprice or from the constitution of the mind. This doubt we shall soon remove, if we cast our eye upon human nature, and consider that in all nations and ages, the same objects still give rise to pride and humility; and that upon the view even of a stranger, we can know pretty nearly, what will either encrease or diminish his passions of this kind. If there be any variation in this particular, it proceeds from nothing but a difference in the tempers and complexions of men; and is besides very inconsiderable. Can we imagine it possible, that while human nature remains the same, men will ever become entirely indifferent to their power, riches, beauty or personal merit, and that their pride and vanity will not be affected by these advantages?

But tho' the causes of pride and humility be plainly natural, we shall find upon examination, that they are not original, and that 'tis

utterly impossible they shou'd each of them be adapted to these passions by a particular provision, and primary constitution of nature, Beside their prodigious number, many of them are the effects of art, and arise partly from the industry, partly from the caprice, and partly from the good fortune of men, Industry produces houses, furniture, cloaths. Caprice determines their particular kinds and qualities. And good fortune frequently contributes to all this, by discovering the effects that result from the different mixtures and combinations of bodies. 'Tis absurd, therefore, to imagine, that each of these was foreseen and provided for by nature, and that every new production of art, which causes pride or humility; instead of adapting itself to the passion by partaking of some general quality, that naturally operates on the mind; is itself the object of an original principle, which till then lay conceal'd in the soul, and is only by accident at last brought to light. Thus the first mechanic, that invented a fine *scritoire*, produc'd pride in him, who became possess'd of it, by principles different from those, which made him proud of handsome chairs and tables. As this appears evidently ridiculous, we must conclude, that each cause of pride and humility is not adapted to the passions by a distinct original quality; but that there are some one or more circumstances common to all of them, on which their efficacy depends.

Besides, we find in the course of nature, that tho' the effects be many, the principles, from which they arise, are commonly but few and simple, and that 'tis the sign of an unskilful naturalist to have recourse to a different quality, in order to explain every different operation. How much more must this be true with regard to the human mind, which being so confin'd a subject may justly be thought incapable of containing such a monstrous heap of principles, as wou'd be necessary to excite the passions of pride and humility, were each distinct cause adapted to the passion by a distinct set of principles?

Here, therefore, moral philosophy is in the same condition as natural, with regard to astronomy before the time of Copernicus[6].

The antients, tho' sensible of that maxim, that nature does nothing in vain, contriv'd such intricate systems of the heavens, as seem'd inconsistent with true philosophy, and gave place at last to something more simple and natural. To invent without scruple a new principle to every new phaenomenon, instead of adapting it to the old; to overload our hypotheses with a variety of this kind; are certain

proofs, that none of these principles is the just one, and that we only desire, by a number of falsehoods, to cover our ignorance of the truth.

SECT. IV

Of the relations of impressions and ideas

Thus we have establish'd two truths without any obstacle or difficulty, that 'tis from natural principles this variety of causes excites pride and humility, and that 'tis not by a different principle each different cause is adapted to its passion. We shall now proceed to enquire how we may reduce these principles to a lesser number, and find among the causes something common, on which their influence depends.

In order to this we must reflect on certain properties of human nature, which tho' they have a mighty influence on every operation both of the understanding and passions, are not commonly much insisted on by philosophers. The first of these is the association of ideas, which I have so often observ'd and explain'd. 'Tis impossible for the mind to fix itself steadily upon one idea for any considerable time; nor can it by its utmost efforts ever arrive at such a constancy.

But however changeable our thoughts may be, they are not entirely without rule and method in their changes. The rule, by which they proceed, is to pass from one object to what is resembling, contiguous to, or produc'd by it. When one idea is present to the imagination, any other, united by these relations, naturally follows it, and enters with more facility by means of that introduction.

The second property I shall observe in the human mind is a like association of impressions. All resembling impressions are connected together, and no sooner one arises than the 'rest immediately follow. Grief and disappointment give rise to anger, anger to envy, envy to malice[7], and malice to grief again, till the whole circle be compleated. In like manner our temper, when elevated with joy, naturally throws itself into love, generosity, pity, courage, pride, and the other resembling affections. 'Tis difficult for the mind, when actuated by any passion, to confine itself to that passion alone, without any change or variation. Human nature is too inconstant to admit of any such regularity. Changeableness is essential to it.

And to what can it so naturally change as to affections or emotions, which are suitable to the temper, and agree with that set of passions, which then prevail? 'Tis evident, then, there is an attraction or association among impressions, as well as among ideas; tho' with this remarkable difference, that ideas are associated by resemblance, contiguity, and causation; and impressions only by resemblance.

In the third place, 'tis observable of these two kinds of association, that they very much assist and forward each other, and that the transition is more easily made where they both concur in the same object. Thus a man, who, by any injury from another, is very much compos'd and ruffled in his temper, is apt to find a hundred subjects of discontent, impatience, fear, and other uneasy passions; especially if he can discover these subjects in or near the person, who was the cause of his first passion. Those principles, which forward the transition of ideas, here concur with those, which operate on the passions; and both uniting in one action, bestow on the mind a double impulse. The new passion, therefore, must arise with so much greater violence, and the transition to it must be render'd so much more easy and natural.

Upon this occasion I may cite the authority of an elegant writer, who expresses himself in the following manner.

'As the fancy delights in every thing that is great, strange, or beautiful, and is still more pleas'd the more it finds of these perfections in the same object, so it is capable of receiving a new satisfaction by the assistance of another sense. Thus any continu'd-sound, as the music of birds, or a fall of waters, awakens every moment the mind of the beholder, and makes him more attentive to the several beauties of the place, that lie before him. Thus if there arises a fragrantcy of smells or perfumes, they heighten the pleasure of the imagination, and make even the colours and verdure of the landscape appear more agreeable; for the ideas of both senses recommend each other, and are pleasanter together than when they enter the mind separately: As the different colours of a picture, when they are well disposed, set off one another, and receive an additional beauty from the advantage of the situation.' Addison, *Spectator*, final paragraph.] In this phaenomenon we may remark the association both of impressions and ideas, as well as the mutual assistance they lend

each other.

SECT. V

Of the influence of these relations on pride and humility

These principles being establish'd on unquestionable experience, I begin to consider how we shall apply them, by revolving over all the causes of pride and humility, whether these causes be regarded, as the qualities, that operate, or as the subjects, on which the qualities are plac'd. In examining these qualities I immediately find many of them to concur in producing the sensation of pain and pleasure, independent of those affections, which I here endeavour to explain. Thus the beauty of our person, of itself, and by its very appearance, gives pleasure, as well as pride; and its deformity, pain as well as humility. A magnificent feast delights us, and a sordid one displeases. What I discover to be true in some instances, I suppose to be so in all; and take it for granted at present, without any farther proof, that every cause of pride, by its peculiar qualities, produces a separate pleasure, and of humility a separate uneasiness.

Again, in considering the subjects, to which these qualities adhere, I make a new supposition, which also appears probable from many obvious instances, viz, that these subjects are either parts of ourselves, or something nearly related to us. Thus the good and bad qualities of our actions and manners constitute virtue and vice, and determine our personal character, than which nothing operates more strongly on these passions. In like manner, 'tis the beauty or deformity of our person, houses, equipage, or furniture, by which we are render'd either vain or humble. The same qualities, when transfer'd to subjects, which bear us no relation, influence not in the smallest degree either of these affections.

Having thus in a manner suppos'd two properties of the causes of these affections, viz, that the qualities produce a separate pain or pleasure, and that the subjects, on which the qualities are plac'd, are related to self; I proceed to examine the passions themselves, in order to find something in them, correspondent to the suppos'd-properties of their causes. First, I find, that the peculiar object of pride and humility is determin'd by an original and natural instinct[8], and that 'tis absolutely impossible, from the primary constitution of the mind, that these passions shou'd ever look beyond self, or that individual person.

of whose actions and sentiments each of us is intimately conscious. Here at last the view always rests, when we are actuated by either of these passions; nor can we, in that situation of mind, ever lose sight of this object. For this I pretend not to give any reason; but consider such a peculiar direction of the thought as an original quality.

The second quality, which I discover in these passions, and which I likewise consider an original quality, is their sensations, or the peculiar emotions they excite in the soul, and which constitute their very being and essence. Thus pride is a pleasant sensation, and humility a painful; and upon the removal of the pleasure and pain, there is in reality no pride nor humility. Of this our very feeling convinces us; and beyond our feeling, 'tis here in vain to reason or dispute.

If I compare, therefore, these two establish'd properties of the passions, viz, their object, which is self, and their sensation, which is either pleasant or painful, to the two suppos'd properties of the causes, viz, their relation to self, and their tendency to produce a pain or pleasure, independent of the passion; I immediately find, that taking these suppositions to be just, the true system breaks in upon me with an irresistible evidence. That cause, which excites the passion, is related to the object, which nature has attributed to the passion; the sensation, which the cause separately produces, is related to the sensation of the passion: From this double relation of ideas and impressions, the passion is deriv'd. The one idea is easily converted into its correlative; and the one impression into that, which resembles and corresponds to it: With how much greater facility must this transition be made, where these movements mutually assist each other, and the mind receives a double impulse from the relations both of its impressions and ideas?

That we may comprehend this the better, we must suppose, that nature has given to the organs of the human mind, a certain disposition fitted to produce a peculiar impression or emotion, which we call pride: To this emotion she has assign'd a certain idea, viz, that of self, which it never fails to produce. This contrivance of nature is easily conceiv'd. We have many instances of such a situation of affairs. The nerves of the nose and palate are so dispos'd, as in certain circumstances to convey such peculiar sensations to the mind: The sensations of lust and hunger always produce in us the idea of those

peculiar objects, which are suitable to each appetite. These two circumstances are united in pride. The organs are so dispos'd as to produce the passion; and the passion, after its production, naturally produces a certain idea. All this needs no proof. 'Tis evident we never shou'd be possest of that passion, were there not a disposition of mind proper for it; and 'tis as evident, that the passion always turns our view to ourselves, and makes us think of our own qualities and circumstances.

This being fully comprehended, it may now be ask'd, Whether nature produces the passion immediately, of herself; or whether she must be assisted by the co-operation[9] of other causes? For 'tis observable, that in this particular her conduct is different in the different passions and sensations. The palate must be excited by an external object, in order to produce any relish: But hunger arises internally, without the concurrence of any external object. But however the case may stand with other passions and impressions, 'tis certain, that pride requires the assistance of some foreign object, and that the organs, which produce it, exert not themselves like the heart and arteries, by an original internal movement. For first, daily experience convinces us, that pride requires certain causes to excite it, and languishes when unsupported by some excellency in the character, in bodily accomplishments, in cloaths, equipage or fortune. Secondly, 'tis evident pride wou'd be perpetual, if it arose immediately from nature; since the object is always the same, and there is no disposition of body peculiar to pride, as there is to thirst and hunger. Thirdly, Humility is in the very same situation with pride; and therefore, either must, upon this supposition, be perpetual likewise, or must destroy the contrary passion from, the very first moment; so that none of them cou'd ever make its appearance.

Upon the whole, we may rest satisfy'd with the foregoing conclusion, that pride must have a cause, as well as an object, and that the one has no influence without the other.

The difficulty, then, is only to discover this cause, and find what it is that gives the first motion to pride, and sets those organs in action, which are naturally fitted to produce that emotion.

Upon my consulting experience, in order to resolve this difficulty, I immediately find a hundred different causes, that produce pride; and upon examining these causes, I suppose, what at first I perceive to be

probable, that all of them concur in two circumstances; which are, that of themselves they produce an impression, ally'd to the passion, and are plac'd on a subject, ally'd to the object of the passion. When I consider after this the nature of relation, and its effects both on the passions and ideas, I can no longer doubt, upon these suppositions, that 'tis the very principle, which gives rise to pride, and bestows motion on those organs, which being naturally dispos'd to produce that affection, require only a first impulse or beginning to their action. Any thing, that gives a pleasant sensation, and is related to self, excites the passion of pride, which is also agreeable, and has self for its object.

What I have said of pride is equally true of humility. The sensation of humility is uneasy, as that of pride is agreeable; for which reason the separate sensation, arising from the causes, must be revers'd, while the relation to self continues the same. Tho' pride and humility are directly contrary in their effects, and in their sensations, they have notwithstanding the same object; so that 'tis requisite only to change the relation of impressions, without making any change upon that of ideas. Accordingly we find, that a beautiful house, belonging to ourselves, produces pride; and that the same house, still belonging to ourselves, produces humility, when by any accident its beauty is chang'd into deformity, and thereby the sensation of pleasure, which corresponded to pride, is transform'd into pain, which is related to humility. The double relation between the ideas and impressions subsists in both cases, and produces an easy transition from the one emotion to the other.

In a word, nature has bestow'd a kind of attraction on certain impressions and ideas, by which one of them, upon its appearance, naturally introduces its correlative. If these two attractions or associations of impressions and ideas concur on the same object, they mutually assist each other, and the transition of the affections and of the imagination is made with the greatest ease and facility.

When an idea produces an impression, related to an impression, which is connected with an idea, related to the first idea, these two impressions must be in a manner inseparable, nor will the one in any case be unattended with the other. 'Tis after this manner, that the particular causes of pride and humility are determin'd. The

quality, which operates on the passion, produces separately an impression resembling it; the subject, to which the quality adheres, is related to self, the object of the passion: No wonder the whole cause, consisting of a quality and of a subject, does so unavoidably give rise to the passion.

To illustrate this hypothesis. we may compare it to that, by which I have already explain'd the belief attending the judgments, which we form from causation. I have observ'd, that in all judgments of this kind, there is always a present impression. and a related idea; and that the present impression gives a vivacity to the fancy, and the relation conveys this vivacity, by an easy transition, to the related idea. Without the present impression, the attention is not fix'd, nor the spirits excited. Without the relation, this attention rests on its first object, and has no farther consequence. There is evidently a great analogy betwixt that hypothesis. and our present one of an impression and idea, that transfuse themselves into another impression and idea by means of their double relation: Which analogy must be allow'd to be no despicable proof of both hypotheses.

SECT. VI

Limitations of this system

But before we proceed farther in this subject, and examine particularly all the causes of pride and humility, 'twill be proper to make some limitations to the general system, that all agreeable objects, related to ourselves, by an association of ideas and of impressions, produce pride, and disagreeable ones, humility: And these limitations are deriv'd from the very nature of the subject.

I. Suppose an agreeable object to acquire a relation to self, the first passion, that appears on this occasion, is joy; and this passion discovers itself upon a slighter relation than pride and vain-glory.

We may feel joy upon being present at a feast, where our senses are regard with delicacies of every kind: But 'tis only the master of the feast, who, beside the same joy, has the additional passion of self-applause and vanity[10]. 'Tis true, men sometimes boast of a great entertainment, at which they have only been present; and by so small a relation convert their pleasure into pride: But however, this must in general be own'd, that joy arises from a more inconsiderable relation

than vanity, and that many things, which are too foreign to produce pride, are yet able to give us a delight and pleasure, The reason of the difference may be explain'd thus. A relation is requisite to joy, in order to approach the object to us, and make it give us any satisfaction. But beside this, which is common to both passions, 'tis requisite to pride, in order to produce a transition from one passion to another, and convert the falsification into vanity. As it has a double task to perform, it must be endow'd with double force and energy. To which we may add, that where agreeable objects bear not a very close relation to ourselves, they commonly do to some other person; and this latter relation not only excels, but even diminishes, and sometimes destroys the former, as we shall see afterwards.² Here then is the first limitation, we must make to our general position, that every thing related to us, which produces pleasure or pain, produces likewise pride or humility. There is not only a relation requir'd, but a close one, and a closer than is requir'd to joy.

II. The second limitation is, that the agreeable or disagreeable object be not only closely related, but also peculiar to ourselves, or at least common to us with a few persons. 'Tis a quality observable in human nature, and which we shall endeavour to explain afterwards, that every thing, which is often presented. and to which we have been long accusom'd, loses its value in our eyes, and is in a little time despis'd and neglected. We likewise judge of objects more from comparison than from their real and intrinsic merit; and where we cannot by some contrast enhance their value, we are apt to overlook even what is essentially good in them. These qualities of the mind have an effect upon joy as well as pride; and 'tis remarkable, that goods. which are common to all mankind, and have become familiar to us by custom, give us little satisfaction; tho' perhaps of a more excellent kind, than those on which, for their singularity, we set a much higher value. But tho' this circumstance operates on both these passions, it has a much greater influence on vanity. We are rejoic'd for many goods, which, on account of their frequency, give us no pride. Health, when it returns after a long absence, affords us a very sensible satisfaction; but is seldom regarded as a subject of vanity, because 'tis shar'd with such vast numbers.

The reason, why pride is so much more delicate in this particular than joy, I take to be, as follows. In order to excite pride, there are always two objects we must contemplate. viz, the cause or that object

which produces pleasure; and self, which is the real object of the passion. But joy has only one object necessary to its production. viz, that which gives pleasure; and tho' it be requisite, that this bear some relation to self, yet that is only requisite in order to render it agreeable; nor is self, properly speaking, the object of this passion. Since, therefore, pride has in a manner two objects, to which it directs our view; it follows, that where neither of them have any singularity, the passion must be more weaken'd upon that account, than a passion, which has only one object. Upon comparing ourselves with others, as we are every moment apt to do, we find we are not in the least distinguish'd; and upon comparing the object we possess, we discover still the same unlucky circumstance. By two comparisons so disadvantageous the passion must be entirely destroy'd.

III The-third limitation is, that the pleasant or painful object be very discernible and obvious, and that not only to ourselves, but to others also. This circumstance, like the two foregoing, has an effect upon joy, as well as pride. We fancy Ourselves more happy, as well as more virtuous or beautiful, when we appear so to others; but are still more ostentatious of our virtues than of our pleasures. This proceeds from causes, which I shall endeavour to explain afterwards. IV. The fourth limitation is deriv'd from the inconstancy of the cause of these passions, and from the short duration of its connexion with ourselves. What is casual and inconstant gives but little joy, and less pride. We are not much satisfy'd with the thing itself; and are still less apt to feel any new degrees of self-satisfaction upon its account. We foresee and anticipate its change by the imagination; which makes us little satisfy'd with the thing: We compare it to ourselves, whose existence is more durable; by which means its inconstancy appears still greater. It seems ridiculous to infer an excellency in ourselves from an object, which is of so much shorter duration, and attends us during so small a part of our existence. 'Twill be easy to comprehend the reason, why this cause operates not with the same force in joy as in pride; since the idea of self is not so essential to the former passion as to the latter.

V. I may add as a fifth limitation, or rather enlargement of this system, that general rules have a great influence upon pride and humility, as well as on all the other passions. Hence we form a notion of different ranks of men, suitable to the power of riches they are possest of; and this notion we change not upon account of any peculiarities of the health or temper of the persons, which may

deprive them of all enjoyment in their possessions. This may be accounted for from the same principles, that explain'd the influence of general rules on the understanding. Custom readily carries us beyond the just bounds in our passions, as well as in our reasonings.

It may not be amiss to observe on this occasion, that the influence of general rules and maxims on the passions very much contributes to facilitate the effects of all the principles, which we shall explain in the progress of this treatise. For 'tis evident, that if a person full-grown, and of the same nature with ourselves, were on a sudden-transported into our world, he wou'd be very much embarrassed with every object, and wou'd. not readily find what degree of love or hatred, pride or humility, or any other passion he ought to attribute to it. The passions are often vary'd by very inconsiderable principles; and these do not always play with a perfect regularity, especially on the first trial. But as custom and practice have brought to light all these principles, and have settled the just value of every thing; this must certainly contribute to the easy production of the passions, and guide us, by means of general establish'd maxims, in the proportions we ought to observe in preferring one object to another. This remark may, perhaps, serve to obviate difficulties, that may arise concerning some causes, which I shall hereafter ascribe -to particular passions, and which may be esteem'd too refin'd to operate so universally and certainly, as they are found to do.

I shall close this subject with a reflection deriv'd from these five limitations. This reflection is, that the persons, who are proudest, and who in the eye of the world have most reason for their pride, are not always the happiest; nor the most humble always the most miserable, as may at first sight be imagin'd from this system. An evil may be real, tho' its cause has no relation to us: It may be real, without being peculiar: It may be real, without shewing itself to others: It may be real, without being constant: And it may be real, without falling under the general rules. Such evils as these will not fail to render us miserable, tho' they have little tendency to diminish pride: And perhaps the most real and the most solid evils of life will be found of this nature.

SECT. VII

Of vice and virtue

Taking these limitations along with us, let us proceed to examine the causes of pride and humility; and see, whether in every case we can discover the double relations, by which they operate on the passions. If we find that all these causes are related to self, and produce a pleasure or uneasiness separate from the passion, there will remain no farther scruple with regard to the present system. We shall principally endeavour to prove the latter point; the former being in a manner self-evident.

To begin, with vice and virtue; which are the most obvious causes of these passions; 'twou'd be entirely foreign to my present purpose to enter upon the controversy, which of late years has so much excited the curiosity of the publick. whether these moral distinctions be founded on natural and original principles, or arise from interest and education. The examination of this I reserve for the following book; and in the mean time I shall endeavour to show, that my system maintains its ground upon either of these hypotheses; which will be a strong proof of its solidity.

For granting that morality had no foundation in nature, it must still be allow'd, that vice and virtue, either from self-interest or the prejudices of education, produce in us a real pain and pleasure; and this we may observe to be strenuously asserted by the defenders of that hypothesis. Every passion, habit, or turn of character (say they) which has a tendency to our advantage or prejudice, gives a delight or uneasiness; and 'tis from thence the approbation or disapprobation arises. We easily gain from the liberality of others, but are always in danger of losing by their avarice: Courage^[11] defends us, but cowardice lays us open to every attack: Justice is the support of society, but injustice, unless check'd wou'd quickly prove its ruin: Humility exalts; but pride mortifies us. For these reasons the former qualities are esteem'd virtues, and the latter regarded as vices. Now since 'tis granted there is a delight or uneasiness still attending merit or demerit of every kind, this is all that is requisite for my purpose.

But I go farther, and observe, that this moral hypothesis and my present system not only agree together, but also that, allowing the former to be just, 'tis an absolute and invincible proof of the latter.

For if all morality be founded on the pain or pleasure, which arises from the prospect of any loss or advantage, that may result from

our own characters, or from those of others, all the effects of morality must-be deriv'd from the same pain or pleasure, and among the rest, the passions of pride and humility. The very essence of virtue,according to this hypothesis, is to produce pleasure and that of vice to give pain. The virtue and vice must be part of our character in order to excite pride or humility. What farther proof can we desire for the double relation of impressions and ideas?

The same unquestionable argument may be deriv'd from the opinion of those, who maintain that morality is something real,essential, and founded on nature. The most probable hypothesis,which has been advanc'd to explain the distinction betwixt vice and virtue, and the origin of moral rights and obligations, is, that from a primary constitution of nature certain characters and passions,by the very view and contemplation, produce a pain, and others in like manner excite a pleasure. The uneasiness and satisfaction are not only inseparable from vice and virtue, but constitute their very nature and essence. To approve of a character is to feel an original delight upon its appearance. To disapprove of it is to be sensible of an uneasiness. The pain and pleasure, therefore, being the primary causes of vice and virtue, must also be the causes of all their effects,and consequently of pride and humility, which are the unavoidable attendants of that distinction.

But supposing this hypothesis of moral philosophy shou'd be allow'd to be false, 'tis still evident, that pain and pleasure, if not the causes of vice and virtue, are at least inseparable from them.

A generous and noble character affords a satisfaction even in the survey; and when presented to us, tho' only in a poem or fable,never fails to charm and delight us. On the other hand cruelty and treachery displease from their very nature; nor is it possible ever to reconcile us to these qualities, either in ourselves or others. Thus one hypothesis of morality is an undeniable proof of the foregoing system, and the other at worst agrees with it. But pride and humility arise not from these qualities alone of the mind, which, according to the vulgar systems of ethicks, have been comprehended as parts of moral duty[12], but from any other that has a connexion with pleasure and uneasiness. Nothing flatters our vanity more than the talent of pleasing by our wit, good humour, or any other accomplishment; and nothing gives us a more sensible mortification than a disappointment in any attempt of

that nature. No one has ever been able to tell what wit is, and to-shew why such a system of thought must be receiv'd under that denomination, and such another rejected. 'Tis only by taste we can decide concerning it, nor are we possest of any other standard, upon which we can form a judgment of this kind. Now what is this taste, from which true and false wit in a manner receive their being, and without which no thought can have a title to either of these denominations? 'Tis plainly nothing but a sensation of pleasure from true wit, and of uneasiness from false, without oar being able to tell the reasons of that pleasure or uneasiness. The power of bestowing these opposite sensations is. therefore, the very essence of true and false wit; and consequently the cause of that pride or humility, which arises from them.

There may, perhaps, be some, who being accustom'd to the style of the schools and pulpit. and having never consider'd human nature in any other light, than that in which they place it, may here be surpriz'd to hear me talk of virtue as exciting pride, which they look upon as a vice; and of vice as producing humility, which they have been taught to consider as a virtue. But not to dispute about words, I observe, that by pride I understand that agreeable impression, which arises in the mind, when the view either of our virtue, beauty, riches or power makes us satisfy'd with ourselves: and that by humility I mean the opposite impression. 'Tis evident the former impression is not always vicious, nor the latter virtuous. The most rigid morality allows us to receive a pleasure from reflecting on a generous action; and 'tis by none esteem'd a virtue to feel any fruitless remorse upon the thoughts of past villainy and baseness. Let us, therefore, examine these impressions, consider'd in themselves; and enquire into their causes, whether plac'd on the mind or body, without troubling ourselves at present with that merit or blame, which may attend them.

SECT. VIII

Of beauty and deformity

Whether we consider the body as a part of ourselves, or assent to those philosophers, who regard it as something external, it must still be allow'd to be near enough connected with us to form one of these double relations, which I have asserted to be necessary to the causes of pride and humility. Wherever, therefore, we can find the other relation of impressions to join to this of ideas, we may expect with

assurance either of these passions, according as the impression is pleasant or uneasy. But beauty of all kinds gives us a peculiar delight and satisfaction; as deformity produces pain, upon whatever subject it may be plac'd, and whether survey'd in an animate or inanimate object. If the beauty or deformity, therefore, be plac'd upon our own bodies, this pleasure or uneasiness must be converted into pride or humility, as having in this case all the circumstances requisite to produce a perfect transition of impressions and ideas.

These opposite sensations are related to the opposite passions. The beauty or deformity is closely related to self, the object of both these passions. No wonder, then our own beauty becomes an object of pride, and deformity of humility.

But this effect of personal and bodily qualities is not only a proof of. the present system, by shewing that the passions arise not in this case without all the circumstances I have requir'd, but may be employ'd as a stronger and more convincing argument. If we consider all the hypotheses, which have been form'd either by philosophy or common reason, to explain the difference betwixt beauty and deformity, we shall find that' all of them resolve into this, that beauty is such an order and construction of parts, as either by the primary constitution of our nature, by custom, or by caprice, is fitted to give a pleasure and satisfaction to the soul. This is the distinguishing character of beauty, and forms all the difference betwixt it and deformity, whose natural tendency is to produce uneasiness. Pleasure and pain, therefore, are not only necessary attendants of beauty and deformity, but constitute their very essence.

And indeed, if we consider, that a great part of the beauty, which we admire either in animals or in other objects, is deriv'd from the idea of convenience and utility, we shall make no scruple to assent to this opinion. That shape, which produces strength, is beautiful in one animal; and that which is a sign of agility in another. The order and convenience of a palace are no less essential to its beauty, than its mere figure and appearance. In like manner the rules of architecture require, that the top of a pillar shou'd be more slender than its base, and that because such a figure conveys to us the idea of security, which is pleasant; whereas the contrary form gives us the apprehension of danger, which is uneasy. From innumerable instances of this kind, as well as from considering that beauty like wit, cannot

be defin'd, but is discern'd only by a taste or sensation, we may conclude, that beauty is nothing but a form, which produces pleasure, as deformity is a structure of parts, which conveys pain; and since the power of producing pain and pleasure make in this manner the essence of beauty and deformity, all the effects of these qualities must be deriv'd from the sensation; and among the rest pride and humility, which of all their effects are the most common and remarkable.

This argument I esteem just and decisive; but in order to give greater authority to the present reasoning, let us suppose it false for a moment, and see what will follow. 'Tis certain, then, that if the power of producing pleasure and pain forms not the essence of beauty and deformity, the sensations are at least inseparable from the qualities, and 'tis even difficult to consider them apart. Now there is nothing common to natural and moral beauty, (both of which are the causes of pride) but this power of producing pleasure; and as a common effect supposes always a common cause, 'tis plain the pleasure must in both cases be the real and influencing cause of the passion. Again; there is nothing originally different betwixt the beauty of our bodies and the beauty of external and foreign objects, but that the one has a near relation to ourselves, which is wanting in the other. This original difference, therefore, must be the cause of all their other differences, and among the rest, of their different influence upon the passion of pride, which is excited by the beauty of our person, but is not affected in the least by that of foreign and external objects. Placing, then, these two conclusions together, we find they compose the preceding system betwixt them, viz, that pleasure, as a related or resembling impression, when plac'd on a related object. by a natural transition, produces pride; and its contrary, humility. This system, then, seems already sufficiently confirm'd by experience; the' we have not yet exhausted all our arguments.

'Tis not the beauty of the body alone that produces pride, but also its strength and force. Strength is a kind of power; and therefore the desire to excel in strength is to be consider'd as an inferior species of ambition[13]. For this reason the present phaenomenon will be sufficiently accounted for, in explaining that passion.

Concerning all other bodily accomplishments we may observe in general, that whatever in ourselves is either useful, beautiful, or surprising, is an object of pride; and it's contrary, of humility. Now 'tis

obvious, that every thing useful, beautiful or surprising, agrees in producing a separate pleasure and agrees in nothing else. The pleasure, therefore, with the relation to self must be the cause^[14] of the passion.

Tho' it shou'd be question'd, whether beauty be not something real, and different from the power of producing pleasure, it can never be disputed, that as surprize is nothing but a pleasure arising from novelty, it is not, properly speaking, a quality in any object, but merely a passion or impression in the soul. It must, therefore, be from that impression, that pride by a natural transition arises. And it arises so naturally, that there is nothing in us or belonging to us, which produces surprize, that does not at the same time excite that other passion. Thus we are vain of the surprising adventures we have met with, the escapes we have made, and dangers we have been expos'd to. Hence the origin of vulgar lying; where men without any interest, and merely out of vanity, heap up a number of extraordinary events, which are either the fictions of their brain, or if true, have at least no connexion with themselves. Their fruitful invention supplies them with a variety of adventures; and where that talent is wanting, they appropriate such as belong to others, in order to satisfy their vanity.

In this phaenomenon are contain'd two curious experiments, which if we compare them together, according to the known rules, by which we judge of cause and effect in anatomy, natural philosophy, and other sciences, will be an undeniable argument for that influence of the double relations above-mention'd. By one of these experiments we find, that an object produces pride merely by the interposition of pleasure; and that because the quality, by which it produces pride, is in reality nothing but the power of producing pleasure. By the other experiment we find, that the pleasure produces the pride by a transition along related ideas; because when we cut off that relation the passion is immediately destroy'd.. A surprising adventure, in which we have been ourselves engag'd, is related to us, and by that means produces pride: But the adventures of others, tho' they may cause pleasure, yet for want of this relation of ideas, never excite that passion. What farther proof can be desired for the present system?

There is only one objection to this system with regard to our body: which is, that tho' nothing be more agreeable than health, and

more painful than sickness, yet commonly men are neither proud of the one, nor mortify'd with the other. This will easily be accounted for, if we consider the second and fourth limitations, propos'd to our general system. It was observ'd, that no object ever produces pride or humility, if it has not something peculiar to ourself; as also, that every cause of that passion must be in some measure constant, and hold some proportion to the duration of our self, which, is its object.

Now as health and sickness vary incessantly to all men, and there is none, who is solely or certainly fix'd in either, these accidental blessings and calamities are in a manner separated from us, and are never consider'd as connected with our being and existence. And that this account is just appears hence, that wherever a malady of any kind is so rooted in our constitution, that we no longer entertain any hopes of recovery, from that moment it becomes an object of humility; as is evident in old men, whom nothing mortifies more than the consideration of their age and infirmities. They endeavour, as long as possible, to conceal their blindness and deafness, their rheums and gouts; nor do they ever confess them without reluctance and uneasiness. And tho' young men are not asham'd of every head-ach or cold they fall into, yet no topic is so proper to mortify human pride, and make us entertain a mean opinion of our nature, than this, that we are every moment of our lives subject to such infirmities. This sufficiently proves that bodily pain and sickness are in themselves proper causes of humility; tho' the custom of estimating every thing by comparison more than by its intrinsic worth and value, makes us overlook these calamities, which we find to be incident to every one, and causes us to form an idea of our merit and character independent of them.

We are asham'd of such maladies as affect others, and are either dangerous or disagreeable to them. Of the epilepsy; because it gives a horror to every one present: Of the itch; because it is infectious: Of the king's-evil; because it commonly goes to posterity. Men always consider the sentiments of others in their judgment of themselves.

This has evidently appear'd in some of the foregoing reasonings; and will appear still more evidently, and be more fully explain'd afterwards,

SECT. IX

Of external advantages and disadvantages

But tho' pride and humility have the qualities of our mind and body. that is self, for their natural and more immediate causes, we find by experience, that there are many other objects, which produce these affections, and that the primary one is, in some measure,obscur'd and lost by the rnultiplicity of foreign and extrinsic. We found a vanity upon houses, gardens, equipages, as well as upon personal merit and accomplishments; and tho' these external advantages be in themselves widely distant from thought or a person,yet they considerably influence even a passion, which is directed to that as its ultimate object, This, happens when external objects acquire any particular relation to ourselves, and are associated or connected with us. A beautiful fish in the ocean, an animal in a desart, and indeed any thing that neither belongs, nor is related to us, has no manner of influence on our vanity, whatever extraordinary qualities it may be endow'd with, and whatever degree of surprize and admiration it may naturally occasion. It must be some way associated with us in order to touch our pride. Its idea must hang in a manner, upon that of ourselves and the transition from the one to the other must be easy and natural.But here 'tis remarkable, that tho' the relation of resemblance operates upon the mind in the same manner as contiguity and causation, in conveying us from one idea to another, yet 'tis seldom a foundation either of pride or of humility. If we resemble a person in any of the valuable parts of his character, we must, in some degree,possess the quality, in which we resemble him; and this quality we always chuse to survey directly in ourselves rather than by reflexion in another person, when we wou'd found upon it any degree of vanity. So that tho' a likeness may occasionally produce that passion by suggesting a more advantageous idea of ourselves, 'tis there the view fixes at last, and the passion finds its ultimate and final cause.

There are instances, indeed, wherein men shew a vanity in resembling a great man in his countenance, shape, air, or other minute circumstances, that contribute not in any degree to his reputation; but it must be confess'd that this extends not very far, nor is of any considerable moment in these affections. For this I assign the following reason. We can never have a vanity of resembling in trifles any person, unless he be possess'd of very shining qualities, which give us a respect and veneration for him. These qualities, then, are,

properly speaking, the causes of our vanity, by means of their relation to ourselves. Now after what manner are they related to ourselves? They are parts of the person we value, and consequently connected with these trifles; which are also suppos'd to be parts of him. These trifles are connected with the resembling qualities in us; and these qualities in us, being parts, are connected with the whole; and by that means form a chain of several links of the person we resemble. But besides that this multitude of relations must weaken the connexion; 'tis evident the mind, in passing from the shining qualities to the trivial ones, must by that contrast the better perceive the minuteness of the latter, and be in some measure ashamed of the comparison and resemblance.

The relation, therefore, of contiguity, or that of causation, betwixt the cause and object of pride and humility, is alone requisite to give rise to these passions; and these relations are nothing else but qualities, by which the imagination is convey'd from one idea to another. Now let us consider what effect these can possibly have upon the mind, and by what means they become so requisite to the production of the passions. 'Tis evident, that the association of ideas operates in so silent and imperceptible a manner, that we are scarce sensible of it, and discover it more by its effects than by any immediate feeling or perception. It produces no emotion, and gives rise to no new impression of any kind, but only modifies those ideas, of which the mind was formerly possess'd, and which it cou'd recal upon occasion. From this reasoning, as well as from undoubted experience, we may conclude, that an association of ideas, however necessary, is not alone sufficient to give rise to any passion.

'Tis evident, then, that when the mind feels the passion either of pride or humility upon the appearance of related object, there is, beside the relation or transition of thought, an emotion or original impression produc'd by some other principle. The question is, whether the emotion first produc'd be the passion itself, or some other impression related to it. This question we cannot be long in deciding, For besides all the other arguments, with which this subject abounds, it must evidently appear, that the relation of ideas, which experience shews to be so requisite a circumstance to the production of the passion, wou'd be entirely superfluous, were it not to second a relation of affections, and facilitate the transition from one impression to another. If nature produc'd immediately the passion of pride or

humility, it wou'd be compleated in itself, and wou'd require no farther addition or encrease from any other affection. But supposing the first emotion to be only related to pride or humility,'tis easily conceiv'd to what purpose the relation of objects may serve, and how the two different associations, of impressions and ideas, by uniting their forces, may assist each other's operation. This is not only easily conceiv'd, but I will venture to affirm 'tis the only manner, in which we can conceive this subject. An easy transition of ideas, which, of itself, causes no emotion, can never be necessary, or even useful to the passions, but by forwarding the transition betwixt some related impressions. Not to mention, that the same object causes a greater or smaller degree of pride, not only in proportion to the encrease or decrease of its qualities, but also to the distance or nearness of the relation; which is a clear argument for the transition of affections along the relation of ideas; since every change in the relation produces a proportionable change in the passion. Thus one part of the preceding system, concerning the relations of ideas is a sufficient proof of the other, concerning that of impressions; and is itself so evidently founded on experience, that 'twou'd be lost time to endeavour farther to prove it.

This will appear still more evidently in particular instances.

Men are vain of the beauty of their country, of their county, of their parish. Here the idea of beauty plainly produces a pleasure. This pleasure is related to pride. The object or cause of this pleasure is, by the supposition, related to self, or the object of pride. By this double relation of impressions and ideas, a transition is made from the one impression to the other.

Men are also vain of the temperature of the climate, in which they were born; of the fertility of their native soil; of the goodness of the wines, fruits or victuals, produc'd by it; of the softness or force of their language; with other particulars of that kind. These objects have plainly a reference to the pleasures of the senses, and are originally consider'd as agreeable to the feeling, taste or hearing.

How is it possible they cou'd ever become objects of pride, except by means of that transition above-explain'd?

There are some, that discover a vanity of an opposite kind, and affect to depreciate their own country, in comparison of those, to

which they have travell'd. These persons find, when they are at home, and surrounded with their countrymen, that the strong relation betwixt them and their own nation is shar'd with so many, that 'tis in a manner lost to them; whereas their distant relation to a foreign country, which is form'd by their having seen it and liv'd in it, is augmented by their considering how few there are who have done the same. For this reason they always admire the beauty, utility and rarity of what is abroad, above what is at home.

Since we can be vain of a country, climate or any inanimate object, which bears a relation to us, 'tis no wonder we are vain of the qualities of those, who are connected with us by blood or friendship[15]. Accordingly we find, that the very same qualities, which in ourselves produce pride, produce also in a lesser degree the same affection, when discover'd in persons related to us. The beauty, address, merit, credit and honours of their kindred are carefully display'd by the proud, as some of their most considerable sources of their vanity.

As we are proud of riches in ourselves, so to satisfy our vanity we desire that every one, who has any connexion with us, shou'd likewise be possest of them, and are asham'd of any one, that is mean or poor, among our friends and relations. For this reason we remove the poor as far from us as possible; and as we cannot prevent poverty in some distant collaterals, and our forefathers are taken to be our nearest relations; upon this account every one affects to be of a good family, and to be descended from a long succession of rich and honourable ancestors.

I have frequently observ'd, that those, who boast of the antiquity of their families, are glad when they can join this circumstance, that their ancestors for many generations have been uninterrupted proprietors of the same portion of land, and that their family has never chang'd its possessions, or been transplanted into any other county or province. I have also observ'd, that 'tis an additional subject of vanity, when they can boast, that these possessions have been transmitted thro' a descent compos'd entirely of males, and that the honour, and fortune have never past thro' any female. Let us endeavour to explain these phaenomena by the foregoing system.

'Tis evident, that when any one boasts of the antiquity of his family, the subjects of his vanity are not merely the extent of time and

number of ancestors, but also their riches and credit, which are suppos'd to reflect a lustre on himself on account of his relation to them. He first considers these objects; is affected by them in an agreeable manner; and then returning back to himself, thro'the relation of parent and child, is elevated with the passion of pride, by means of the double relation, of impressions and ideas.

Since therefore the passion depends on these relations, whatever strengthens any of the relations must also encrease the passion, and whatever weakens the relations must diminish the passion. Now 'tis certain the identity of the possession strengthens the relation of ideas arising from blood and kindred, and conveys the fancy with greater facility from one generation to another, from the remote ancestors to their posterity, who are both their heirs and their descendants. By this facility the impression is transmitted more entire, and excites a greater degree of pride and vanity.

The case is the same with the transmission of the honours and fortune thro' a succession of males without their passing thro' any female. 'Tis a quality of human nature, which we shall consider afterwards, that the imagination naturally turns to whatever is important and considerable; and where two 'objects are presented to it, a small and a great one, usually leaves the former, and dwells entirely upon the latter. As in the society of marriage, the male sex has the advantage above the female, the husband first engages our attention; and whether we consider him directly. or reach him by passing thro' related objects, the thought both rests upon him with greater satisfaction, and arrives at him with greater facility than his consort. 'Tis easy to see, that this property must strengthen the child's relation to the father, and weaken that to the mother. For as all relations are nothing hut a propensity to pass from one idea ma another, whatever strengthens the propensity strengthens the relation; and as we have a stronger propensity to pass from the idea of the children to that of the father, than from the same idea to that of the mother, we ought to regard the former relation as the closer and more considerable. This is the reason why children commonly bear their father's name, and are esteem'd to be of nobler or baser birth, according to his family. And tho' the mother shou'd be possess of a superior spirit and genius to the father, as often happens, the general rule prevails, notwithstanding the exceprion, according to the doctrine above-explain'd. Nay even when a superiority of any kind is so great,

or when any other reasons have such an effect, as to make the children rather represent :the mother's family than the father's, the general rule still retains such an efficacy that it weakens the relation, and makes a kind of break in the line of ancestors. The imagination runs not along them with facility, nor is able to transfer the honour and credit of the ancestors to their posterity of the same name and family so readily, as when the transition is conformable to the general rules, and passes from father to son, or from brother to brother.

SECT. X

Of property and riches

But the relation, which is esteem'd the closest, and which of all others produces most commonly the passion of pride, is that of property. This relation 'twill be impossible for me fully to explain before I come to treat of justice and the other moral virtues. 'Tis sufficient to observe on this occasion, that property may be defin'd, such a relation betwixt a person and an. object as permits him, but forbids any other, the free use and possession of it, without violating the laws of justice and moral equity. If justice, therefore, be a virtue, which has a natural and original influence on the human mind, property may be look'd upon as a particular species of causation; whether we consider the liberty it gives the proprietor to operate as he please upon the object or the advantages, which he reaps from it. 'Tis the same case, if justice, according to the system of certain philosophers, shou'd be esteemed an artificial and not a natural virtue. For then honour, and custom, and civil laws supply the place of natural conscience[16], and produce, in some degree, the same effects.

This in the mean time is certain, that the mention of the property naturally carries our thought to the proprietor, and of the proprietor to the property; which being a proof of a perfect relation of ideas is all that is requisite to our present purpose. A relation of ideas, join'd to that of impressions, always produces a transition of affections; and therefore, whenever any pleasure or pain arises from an object, connected with us by property. we may be certain, that either pride or humility must arise from this conjunction of relations; if the foregoing system be solid and satisfactory. And whether it be so or not, we may soon satisfy ourselves by the most cursory view of human life.

Every thing belonging to a vain man is the best that is any where to be found. His houses, equipage, furniture, doaths, horses, hounds, excel all others in his conceit; and 'tis easy to observe, that from the least advantage in any of these, he draws a new subject of pride and vanity. His wine, if you'll believe him, has a finer flavour than any other; his cookery is more exquisite; his table more orderly; his servants more expert; the air, in which he lives, more healthful; the soil he cultivates more fertile; his fruits ripen earlier and to greater perfection: Such a thing is remarkable for its novelty; such another for its antiquity: This is the workmanship of a famous artist; that belong'd once to such a prince or great man: All objects, in a word, that are useful, beautiful or surprising, or are related to such, may, by means of property, give rise to this passion. These agree in giving pleasure, and agree in nothing else. This alone is common to them; and therefore must be the quality that produces the passion, which is their common effect. As every new instance is a new argument, and as the instances are here without number, I may venture to affirm, that scarce any system was ever so fully prov'd by experience, as that which I have here advanc'd.

If the property of any thing, that gives pleasure either by its utility, beauty or novelty, produces also pride by a double relation of impressions and ideas; we need not be surpriz'd, that the power of acquiring this property, shou'd have the same effect. Now riches are to be consider'd as the power of acquiring the property of what pleases; and 'tis only in this view they have any influence on the passions. Paper will, on many occasions, be consider'd as riches, and that because it may convey the power of acquiring money: And money is not riches, as it is a metal endow'd with certain qualities of solidity, weight and fusibility; but only as it has a relation to the pleasures and conveniences of life. Taking then this for granted, which is in itself so evident, we may draw from it one of the strongest arguments I have yet employ'd to prove the influence of the double relations on pride and humility.

It has been observ'd in treating of the understanding, that the distinction, which we sometimes make betwixt a power and the exercise of it, is entirely frivolous, and that neither man nor any other being ought ever to be thought possess'd of any ability, unless it be exerted and put in action. But tho' this be strictly true in a just and philosophical way of thinking, 'tis certain it is not the philosophy of

our passions; but that many things operate upon them by means of the idea and supposition of power, independent of its actual exercise. We are pleas'd when we acquire an ability of procuring pleasure, and are displeas'd when another acquires a power of giving pain. This is evident from experience; but in order to give a just explication of the matter, and account for this satisfaction and uneasiness, we must weigh the following reflections.

Tis evident the error of distinguishing power from its exercise proceeds not entirely from the scholastic doctrine of free-will, which, indeed, enters very little into common life, and has but small influence on our vulgar and popular ways of thinking. According to that doctrine, motives^[17] deprive us not of free-will, nor take away our power of performing or forbearing any action. But according to common notions a man has no power, where very considerable motives lie betwixt him and the satisfaction of his desires, and determine him to forbear what he wishes to perform. I do not think I have fallen into my enemy's power, when I see him pass me in the streets with a sword by his side, while I am unprovided of any weapon. I know that the fear of the civil magistrate is as strong a restraint as any of iron, and that I am in as perfect safety as if he were chain'd or imprison'd. But when a person acquires such an authority over me, that not only there is no external obstacle to his actions; but also that he may punish or reward me as he pleases, without any dread of punishment in his turn, I then attribute a full power to him, and consider myself as his subject or vassal.

Now if we compare these two cases, that of a person, who has very strong motives of interest or safety to forbear any action, and that of another, who lies under no such obligation, we shall find, according to the philosophy explain'd in the foregoing book, that the only known difference betwixt them lies in this, that in the former case we conclude from past experience, that the person never will perform that action, and in the latter, that he possibly or probably will perform it. Nothing is more fluctuating and inconstant on many occasions, than the will of man; nor is there any thing but strong motives, which can give us an absolute certainty in pronouncing concerning any of his future actions. When we see a person free from these motives, we suppose a possibility either of his acting or forbearing; and tho' in general we may conclude him to be determin'd by motives and causes, yet this removes not the

uncertainty of our judgment concerning these causes, nor the influence of that uncertainty on the passions. Since therefore we ascribe a power of performing an action to every one, who has no very powerful motive to forbear it, and refuse it to such as have; it may justly be concluded, that power has always a reference to its exercise, either actual or probable, and that we consider a person as endow'd with any ability when we find from past experience, that 'tis probable, or at least possible he may exert it. And indeed, as our passions always regard the real existence of objects, and we always judge of this reality from past instances; nothing can be more likely of itself, without any farther reasoning, than that power consists in the possibility or probability of any action, as discover'd by experience and the practice of the world.

Now 'tis evident, that wherever a person is in such a situation with regard to me, that there is no very powerful motive to deter him from injuring me, and consequently 'tis uncertain whether he will injure me or not, I must be uneasy in such a situation, and cannot consider the possibility or probability of that injury without a sensible concern. The passions are not only affected by such events as are certain and infallible, but also in an inferior degree by such as are possible and contingent. And tho' perhaps I never really feel any harm, and discover by the event, that, philosophically speaking, the person never had any power of harming me; since he did not exert any; this prevents not my uneasiness from the preceding uncertainty.

The agreeable passions may here operate as well as the uneasy, and convey a pleasure when I perceive a good to become either possible or probable by the possibility or probability of another's bestowing it on me, upon the removal of any strong motives, which might formerly have hinder'd him.

But we may farther observe, that this satisfaction encreases, when any good approaches in such a manner that it is in one's own power to take or leave it, and there neither is any physical impediment, nor any very strong motive to hinder our enjoyment.

As all men desire pleasure, nothing can be more probable, than its existence when there is no external obstacle to the producing it, and men perceive no danger in following their inclinations. In that case their imagination easily anticipates the satisfaction, and conveys the same joy, as if they were persuaded of its real and actual existence.

But this accounts not sufficiently for the satisfaction, which attends riches. A miser receives delight from his money; that is, from the power it affords him of procuring all the pleasures and conveniences of life, tho' he knows he has enjoy'd his riches for forty years without ever employing them; and consequently cannot conclude by any species of reasoning, that the real existence of these pleasures is nearer, than if he were entirely depriv'd of all his possessions. But tho' he cannot form any such conclusion in a way of reasoning concerning the nearer approach of the pleasure, 'tis certain he imagines it to approach nearer, whenever all external obstacles are remov'd, along with the more powerful motives of interest and danger, which oppose it. For farther satisfaction on this head I must refer to my account of the will, where I shall explain that false sensation of liberty, which makes us imagine we can perform any thing, that is not very dangerous or destructive. Whenever any other person is under no strong obligations of interest to forbear any pleasure, we judge from experience, that the pleasure will exist, and that he will probably obtain it. But when ourselves are in that situation, we judge from an illusion of the fancy, that the pleasure is still closer and more immediate. The will seems to move easily every way, and casts a shadow or image of itself, even to that side, on which it did not settle. By means of this image the enjoyment seems to approach nearer to us, and gives us the same lively satisfaction, as if it were perfectly certain and unavoidable.

'Twill now be easy to draw this whole reasoning to a point, and to prove, that when riches produce any pride or vanity in their possessors, as they never fail so do, 'tis only by means of a double relation of impressions and ideas. The very essence of riches consists in the power of procuring the pleasures and conveniences of life.

The very essence of this consists in the probability of its exercise, and in its causing us to anticipate, by a true or false reasoning, the real existence of the pleasure. This anticipation of pleasure is, in itself, a very considerable pleasure; and as its cause is some possession or property, which we enjoy, and which is thereby related to us, we here clearly see all the parts of the foregoing system most exactly and distinctly drawn out before us. For the same reason, that riches cause pleasure and pride, and poverty excites uneasiness and humility, power must produce the former emotions, and slavery the latter.

Power or an authority over others makes us capable of satisfying all our desires; as slavery, by subjecting us to the will of others, exposes us to a thousand wants, and mortifications.

'Tis here worth observing, that the vanity of power, or shame of slavery, are much augmented by the consideration of the persons, over whom we exercise our authority, or who exercise it over us.

For supposing it possible to frame statues of such an admirable mechanism, that they cou'd move and act in obedience to the will; 'tis evident the possession of them wou'd give pleasure and pride, but not to such a degree, as the same authority, when exerted over sensible and rational creatures, whose condition, being compar'd to our own, makes it seem more agreeable and honourable. Comparison is in every case a sure method of augmenting our esteem of any thing. A rich man feels the felicity of his condition better by opposing it to that of a beggar. But there is a peculiar advantage in power, by the contrast, which is, in a manner, presented to us, betwixt ourselves and the person we command. The comparison is obvious and natural: The imagination finds it in the very subject: The passage of the thought to its conception is smooth and easy. And that this circumstance has a considerable effect in augmenting its influence, will appear afterwards in examining the nature of malice and envy.

SECT. XI

Of the love of fame [18]

But beside these original causes of pride and humility, there is a secondary one in the opinions of others, which has an equal influence on the affections. Our reputation, our character, our name are considerations of vast weight and importance; and even the other causes of pride; virtue, beauty and riches; have little influence, when not seconded by the opinions and sentiments of others. In order to account for this phaenomenon 'twill be necessary to take some compass, and first explain the nature of sympathy.

No quality of human nature is more remarkable, both in itself and in its consequences, than that propensity we have to sympathize with others, and to receive by communication their inclinations and sentiments, however different from, or even contrary to our own.

This is not only conspicuous in children, who implicitly embrace every opinion propos'd to them; but also in men of the greatest judgment and understanding, who find it very difficult to follow their own reason or inclination, in opposition to that of their friends and daily companions. To this principle we ought to ascribe the great uniformity we may observe in the humours and turn of thinking of those of the same nation; and 'tis much more probable, that this resemblance arises from sympathy[19], than from any influence of the soil and climate, which, tho' they continue invariably the same, are not able to preserve the character of a nation the same for a century together. A good-natur'd man finds himself in an instant of the same humour with his company; and even the proudest and most surly take a tincture from their countrymen and acquaintance. A chearful countenance infuses a sensible complacency and serenity into my mind; as an angry or sorrowful one throws a sudden dump upon me.

Hatred, resentment, esteem, love, courage, mirth and melancholy; all these passions I feel more from communication than from my own natural temper and disposition. So remarkable a phaenomenon merits our attention, and must be trac'd up to its first principles.

When any affection is infus'd by sympathy, it is at first known only by its effects, and by those external signs in the countenance and conversation, which convey an idea of it. This idea is presently converted into an impression, and acquires such a degree of force and vivacity, as to become the very passion itself, and produce an equal emotion, as any original affection. However instantaneous this change of the idea into an impression may be, it proceeds from certain views and reflections, which will not escape the strict scrutiny of a philosopher, tho' they may the person himself, who makes them.

'Tis evident, that the idea, or rather impression of ourselves is always intimately present with us, and that our consciousness gives us so lively a conception of our own person, that 'tis not possible to imagine, that any thing can in this particular go beyond it. Whatever object, therefore, is related to ourselves must be conceived with a little vivacity of conception, according to the foregoing principles; and tho' this relation shou'd not be so strong as that of causation, it must still have a considerable influence. Resemblance and contiguity are relations not to be neglected; especially when by an inference from

cause and effect, and by the observation of external signs, we are inform'd of the real existence of the object, which is resembling or contiguous.

Now 'tis obvious, that nature has preserv'd a great resemblance among all human creatures, and that we never remark any passion or principle in others, of which, in some degree or other, we may not find a parallel in ourselves. The case is the same with the fabric of the mind, as with that of the body. However the parts may differ in shape or size, their structure and composition are in general the same. There is a very remarkable resemblance, which preserves itself amidst all their variety; and this resemblance must very much contribute to make us enter into the sentiments of others; and embrace them with facility and pleasure. Accordingly we find, that where, beside the general resemblance of our natures, there is any peculiar similarity in our manners, or character, or country, or language; it facilitates the sympathy. The stronger the relation is betwixt ourselves and any object, the more easily does the imagination make the transition, and convey to the related idea the vivacity of conception, with which we always form the idea of our own person.

Nor is resemblance the only relation, which has this effect, but receives new force from other relations, that may accompany it. The sentiments of others have little influence, when far remov'd from us, and require the relation of contiguity, to make them communicate themselves entirely. The relations of blood, being a species of causation, may sometimes contribute to the same effect; as also acquaintance, which operates in the same manner with education and custom; as we shall see more fully afterwards. All these relations, when united together, convey the impression or consciousness of our own person to the idea of the sentiments or passions of others, and makes us conceive them in the strongest and most lively manner.

It has been remark'd in the beginning of this treatise, that all ideas are borrow'd from impressions, and that these two kinds of perceptions differ only in the degrees of force and vivacity, with which they strike upon the soul. The component part. of ideas and impressions are precisely alike. The manner and order of their appearance may be the same. The different degrees of their force and vivacity are, therefore, the only particulars, that distinguish them: And as this difference may be remov'd, in some measure, by a relation

betwixt the impressions and ideas, 'tis no wonder an idea of a sentiment or passion, may by this means be inliven'd as to become the very sentiment or passion. The lively idea of any object always approaches is impression; and 'tis certain we may feel sickness and pain from the mere force of imagination, and make a malady real by often thinking of it. But this is most remarkable in the opinions and affections; and 'tis there principally that a lively idea is converted into an impression. Our affections depend more upon ourselves, and the internal operations of the mind, than any other impressions; for which reason they arise more naturally from the imagination, and from every lively idea we form of them. This is the nature and cause of sympathy; and 'tis after this manner we enter so deep into the opinions and affections of others, whenever we discover them.

What is principally remarkable in this whole affair is the strong confirmation these phaenomena give to the foregoing system concerning the understanding, and consequently to the present one concerning the passions; since these are analogous to each other.'Tis indeed evident, that when we sympathize with the passions and sentiments of others, these movements appear at first in our mind as mere ideas, and are conceiv'd to belong to another person, as we conceive any other matter of fact. Tis also evident, that the ideas of the affections of others are converted into the very impressions they represent, and that the passions arise in conformity to the images we form of them. AU this is an object of the plainest experience, and depends not on any hypothesis of philosophy. That science can only be admitted to explain the phaenomena; tho' at the same time it must be confest, they are so clear of themselves, that there is but little occasion to employ it. For besides the relation of cause and effect, by which we are convinc'd of the reality of the passion, with which we sympathize; besides this, I say, we must be assisted by the relations of resemblance and contiguity, in order to feel the sympathy in its full perfection. And since these relations can entirely convert an idea into an impression, and convey the vivacity of the latter into the former, so perfectly as to lose nothing of it in the transition, we may easily conceive how the relation of cause and effect alone, may serve to strengthen and inliven an idea. In sympathy there is an evident conversion of an idea into an impression. This conversion arises from the relation of objects to ourself. Ourself is always intimately present to us. Let us compare all these circumstances, and we shall find, that sympathy is exactly correspondent to the operations of our

understanding; and even contains something more surprizing and extraordinary.

'Tis now time to turn our view from the general consideration of sympathy, to its influence on pride and humility, when these passions arise from praise and blame, from reputation and infamy.

We may observe, that no person is ever prais'd by another for any quality, which wou'd not, if real, produce, of itself, a pride in the person possess of it. The eulogiums either turn upon his power, or riches, or family, or virtue; all of which are subjects of vanity, that we have already explain'd and accounted for. 'Tis certain, then, that if a person consider'd himself in the same light, in which he appears to his admirer, he wou'd first receive a separate pleasure, and afterwards a pride or self-satisfaction, according to the hypothesis above explain'd. Now nothing is more natural than for us to embrace the opinions of others in this particular; both from sympathy, which renders all their sentiments intimately present to us; and from reasoning, which makes us regard their judgment, as a kind of argument for what they affirm. These two principles of authority and sympathy influence almost all our opinions; but must have a peculiar influence, when we judge of our own worth and character.

Such judgments are always attended with passion;⁶ and nothing tends more to disturb our understanding, and precipitate us into any opinions, however unreasonable, than their connexion with passion; which diffuses itself over the imagination, and gives an additional force to every related idea. To which we may add, that being conscious of great partiality in our own favour, we are peculiarly pleas'd with any thing, that confirms the good opinion we have of ourselves, and are easily shock'd with whatever opposes it.

All this appears very probable in theory; but in order to bestow a full certainty on this reasoning, we must examine the phaenomena of the passions, and see if they agree with it. Among these phaenomena we may esteem it a very favourable one to our present purposes that tho' fame in general be agreeable, yet we receive a much greater satisfaction from the approbation of those, whom we ourselves esteem and approve of, than of those, whom we hate and despise. In like measure we are principally mortify'd with the contempt of persons, upon whose judgment we set some value, and are, in a peat measure, indifferent about the opinions of the rest of mankind. But if the mind

receiv'd from any original instinct a desire of fame and aversion to infamy, fame and infamy wou'd influence us without distinction; and every opinion, according as it were favourable or unfavourable, wou'd equally excite that desire or aversion. The judgment of a fool is the judgment of another person, as well as that of a wise man, and is only inferior in its influence on our own judgment[20].

We are not only better pleas'd with the approbation of a wise man than with that of a fool, but receive an additional satisfaction from the former, when 'tis obtain'd after a long and intimate acquaintance. This is accounted for after the same manner.

The praises of others never give us much pleasure, unless they concur with our own opinion, and extol us for those qualities, in which we chiefly excel. A mere soldier little values the character of eloquence: A gownman of courage: A bishop of humour: Or a merchant of learning. Whatever esteem a man may have for any quality, abstractedly consider'd; when he is conscious he is not possess'd of it; the opinions of the whole world will give him little pleasure in that particular, and that because they never will be able to draw his own opinion after them.

Nothing is more usual than for men of good families, but narrow circumstances, to leave their friends and country, and rather seek their livelihood by mean and mechanical employments among strangers, than among those, who are acquainted with their birth and education. We shall be unknown, say they, where we go.

No body will suspect from what family we are sprung. We shall be remov'd from all our friends and acquaintance, and our poverty and meanness will by that means sit more easy upon us. In examining these sentiments, I find they afford many very convincing arguments for my present purpose.

First, We may infer from them, that the uneasiness of being contemn'd depends on sympathy, and that sympathy depends on the relation of objects to ourselves; since we are most uneasy under the contempt of persons, who are both related to us by blood, and contiguous in place. Hence we seek to diminish this sympathy and uneasiness by separating these relations, and placing ourselves in a contiguity to strangers, and at a distance from relations.

Secondly, We may conclude, that relations are requisite to sympathy, not absolutely consider'd as relations, but by their influence in converting our ideas of the sentiments of others into the very sentiments[21], by means of the association betwixt the idea of their persons, and that of our own. For here the relations of kindred and contiguity both subsist; but not being united in the same persons, they contribute in a less degree to the sympathy.

Thirdly, This very circumstance of the diminution of sympathy by the separation of relations is worthy of our attention. Suppose I am plac'd in a poor condition among strangers, and consequently am but lightly treated; I yet find myself easier in that situation, than when I was every day expos'd to the contempt of my kindred and countrymen. Here I feel a double contempt; from my relations, but they are absent; from those about me, but they are strangers. This double contempt is likewise strengthen'd by the two relations of kindred and contiguity. But as the persons are not the same, who are connected with me by those two relations, this difference of ideas separates the impressions arising from the contempt, and keeps them from running into each other. The contempt of my neighbours has a certain influence; as has also that of my kindred: But these influences are distinct, and never unite; as when the contempt proceeds from persons who are at once both my neighbours and kindred. This phaenomenon is analogous to the system of pride and humility above-explain'd, which may seem so extraordinary to vulgar apprehensions.

Fourthly, A person in these circumstances naturally conceals his birth from those among whom he lives, and is very uneasy, if any one suspects him to be of a family, much superior to his present fortune and way of living. Every thing in this world is judg'd of by comparison. What is an immense fortune for a private gentleman is beggary for a prince. A peasant wou'd think himself happy in what cannot afford necessaries for a gentleman. When a man has either been acustom'd to a more splendid way of living, or thinks himself intitled to it by his birth and quality, every thing below is disagreeable and even shameful; and 'tis with she greatest industry he conceals his pretensions to a better fortune. Here he himself knows his misfortunes; but as those, with whom he lives. are ignorant of them, he has the disagreeable reflection and comparison suggested only by his own thoughts, and never receives it by a sympathy with others; which must contribute very much so his ease and satisfaction.

If there be any objections to this hypothesis, that the pleasure, which we receive from praise, arises from a communication of sentiments, we shall find, upon examination, that these objections, when taken in a proper light, will serve to confirm it. Popular fame may be agreeable even to a man, who despises the vulgar; but 'tis because their multitude gives them additional weight and authority.

Plagiaries are delighted with praises, which they are conscious they do not deserve; but this is a kind of castle-building, where the imagination amuses itself with its own fictions, and strives to render them firm and stable by a sympathy with the sentiments of others.

Proud men are most shock'd with contempt, sho' they do not most readily assent to it; but 'tis because of the opposition betwixt the passion, which is natural so them, and that receiv'd by sympathy.

A violent lover in like manner is very much disp pleas'd when you blame and condemn his love; tho' 'tis evident your opposition can have no influence, but by the hold it takes of himself, and by his sympathy with you. If he despises you, or perceives you are in jest, whatever you say has no effect upon him.

SECT. XII

Of the pride and humility of animals

Thus in whatever light we consider this subject, we may still observe, that the causes of pride and humility correspond exactly to our hypothesis, and that nothing can excite either of these passions, unless it be both related to ourselves, and produces a pleasure or pain independent of the passion. We have not only prov'd, that a tendency to produce pleasure or pain is common to all the causes of pride or humility, but also that 'tis the only thing, which is common; and consequently is the quality, by which they operate. We have farther prov'd, that the most considerable causes of these passions are really nothing but the power of producing either agreeable or uneasy sensations; and therefore that all their effects, and amongst the rest, pride and humility, are deriv'd solely from that origin. Such simple and natural principles, founded on such solid proofs, cannot fail to be receiv'd by philosophers, unless oppos'd by some objections, that have escaped me.

'Tis usual with anatomists to join their observations and experiments on human bodies to those on beasts, and from the agreement of these experiments to derive an additional argument for any particular hypothesis. 'Tis indeed certain, that where the structure of parts in brutes is the same as in men, and the operation of these parts also the same, the causes of that operation cannot be different, and that whatever we discover to be true of the one species, may be concluded without hesitation to be certain of the other. Thus tho' the mixture of humours and the composition of minute parts may justly be presum'd so be somewhat different in men from what it is in mere animals; and therefore any experiment we make upon the one concerning the effects of medicines will not always apply to the other; yet as the structure of the veins and muscles, the fabric and situation of the heart, of the lungs, the stomach, the liver and other parts, are the same or nearly the same in all animals, the very same hypothesis, which in one species explains muscular motion, the progress of the chyle, the circulation of the blood, must be applicable to every one; and according as it agrees or disagrees with the experiments we may make in any species of creatures, we may draw a proof of its truth or falshood on the whole. Let us, therefore, apply this method of enquiry, which is found so just and useful in reasonings concerning the body, to our present anatomy of the mind, and see what discoveries we can make by it.

In order to this we must first shew the correspondence of passions in men and animals, and afterwards compare the causes, which produce these passions.

'Tis plain, that almost in every species of creatures, but especially of the nobler kind, there are many evident marks of pride and humility. The very port and gait of a swan, or turkey, or peacock show the high idea he has entertain'd of himself, and his contempt of all others. This is the more remarkable, that in the two last species of animals, the pride always attends the beauty, and is discover'd in the male only. The vanity and emulation of nightingales in singing have been commonly remark'd; as likewise that of horses in swiftness, of hounds in sagacity and smell, of the bull and cock in strength, and of every other animal in his particular excellency. Add to this, that every species of creatures, which approach so often to man, as to familiarize themselves with him, show an evident pride in his approbation, and are pleas'd with his praises and caresses, independent of every other

consideration. Nor are they the caresses of every one without distinction, which give them this vanity, but those principally of the persons they know and love; in the same manner as that passion is excited in mankind. All these are evident proofs, that pride and humility are not merely human passions, but extend themselves over the whole animal creation.

The causes of these passions are likewise much the same in beasts as in us, making a just allowance for our superior knowledge and understanding. Thus animals have little or no sense of virtue or vice; they quickly lose sight of the relations of blood; and are incapable of that of right and property: For which reason the causes of their pride and humility must lie solely in the body, and can never be plac'd either in the mind or external objects. But so far as regards the body, the same qualities cause pride in the animal as in the human kind; and 'tis on beauty, strength, swiftness or some other useful or agreeable quality that this passion is always founded.

The next question is, whether, since those passions are the same, and arise from the same causes thro' the whole creation, the manner, in which the causes operate, be also the same. According to all rules of analogy, this is justly to be expected; and if we find upon trial, that the explication of these phaenomena, which we make use of in one species, will not apply to the rest, we may presume that that explication, however specious, is in reality without foundation.

In order to decide this question, let us consider, that there is evidently the same relation of ideas, and deriv'd from the same causes, in the minds of animals as in those of men. A dog, that has hid a bone, often forgets the place; but when brought to it, his thought passes easily to what he formerly conceal'd, by means of the contiguity, which produces a relation among his ideas. In like manner, when he has been heartily beat in any place, he will tremble on his approach to it, even tho' he discover no signs of any present danger. The effects of resemblance are not so remarkable; but as that relation makes a considerable ingredient in causation, of which all animals shew so evident a judgment, we may conclude that the three relations of resemblance, contiguity and causation operate in the same manner upon beasts as upon human creatures.

There are also instances of the relation of impressions, sufficient to convince us, that there is an union of certain affections with each

other in the inferior species of creatures as well as in the superior, and that their minds are frequently convey'd thro' a series of connected emotions. A dog, when elevated with joy, runs naturally into love and kindness, whether of his master or of the sex. In like manner, when full of pain and sorrow, he becomes quarrelsome and illnatur'd; and that passion; which at first was grief, is by the smallest occasion converted into anger.

Thus all the internal principles, that are necessary in us to produce either pride or humility, are common to all creature; and since the causes, which excite these passions, are likewise the same, we may justly conclude, that these causes operate after the same manner thro' the whole animal creation. My hypothesis is so simple, and supposes so little reflection and judgment, that 'tis applicable to every sensible creature; which must not only be allow'd to be a convincing proof of its veracity, but, I am confident, will be found an objection to every other system.

George Berkeley (1685—1753)

[1] 谦卑。

[2] 爱，爱的对象是其他某一个人，与骄傲得到同样的说明，但它永远伴随着一种欲望，这就使它区别于骄傲。

[3] envy: 妒忌。

[4] pity: 怜悯，第二性的感情，由同情而发生。由于怜悯是痛苦的，而与慈善有关（慈善是愉快的），因为它们的冲动或反向是类似的，或相应的。

[5] riches: 财富。

[6] 哥白尼：（1473—1543 年）是波兰天文学家，是第一位提出太阳为中心——日心说的欧洲天文学家，一般认为他著的《天体运行论》是现代天文学的起步点。

[7] malice: 恶意。

[8] instinct: 本能。本能与反省相对对立，等于想象与理性的对立。心灵会借着原始的本能，企图趋福避祸。

[9] 协作，协作可以增加人的能力。

[10] 虚荣，一种社会的情感。

[11] 勇敢，勇敢的责任，大部分是用人为措施所励行的。

Part II OF LOVE AND HATRED

SECT. I

Of the object and causes of love and hatred

'Tis altogether impossible to give any definition of the passions of love and hatred; and that because they produce merely a simple impression, without any mixture or composition. Twou'd be as unnecessary to attempt any description of them, drawn from their nature, origin, causes and objects; and that both because these are the subjects of our present enquiry, and because these passions of themselves are sufficiently known from our common feeling and experience. This we have already observ'd concerning pride and humility, and here repeat it concerning love and hatred; and indeed there is so great a resemblance betwixt these two sets of passions, that we shall be oblig'd to begin with a kind of abridgment of our reasonings concerning the former, in order to explain the latter.

As the immediate object of pride and humility is self or that identical person, of whose thoughts, actions, and sensations we are intimately conscious; so the object of love and hatred is some other person, of whose thoughts, actions, and sensations we are not conscious. This is sufficiently evident from experience. Our love and hatred are always directed to some sensible being external to us; and when we talk of self-love^[1], 'tis not in a proper sense, nor has the sensation it produces any thing in common with that tender emotion which is excited by a friend or mistress. 'Tis the same case with hatred. We may be mortified by our own faults and follies; but never feel any anger or hatred. except from the injuries of others.

But tho' the object of love and hatred be always some other person, 'tis plain that the object is not, properly speaking, the cause of these passions, or alone sufficient to excite them. For since love and hatred are directly contrary in their sensation, and have the same object in common, if that object were also their cause, it wou'd produce these opposite passions in an equal degree; and as they must, from the very first moment, destroy each other, none of them wou'd ever be able to make its appearance. There must, therefore, be some cause different from the object.

If we consider the causes of love and hatred, we shall find they are very much diversify'd, and have not many things in common.

The virtue, knowledge, wit, good sense, good humour of any person, produce love and esteem; as the opposite qualities, hatred and contempt. The same passions arise from bodily accomplishments, such as beauty, force, swiftness, dexterity; and from their contraries; as likewise from the external advantages and disadvantages of family, possession, cloaths, nation and climate. There is not one of these objects, but what by its different qualities may produce love and esteem, or hatred and contempt. From the view of these causes we may derive a new distinction betwixt the quality that operates, and the subject on which it is plac'd. A prince, that is possess'd of a stately palace, commands the esteem of the people upon that account; and that first, by the beauty of the palace, and secondly, by the relation of property, which connects it with him. The removal of either of these destroys the passion; which evidently proves that the cause is a compounded one.

Twou'd be tedious to trace the passions of love and hatred, thro' all the observations which we have form'd concerning pride and humility, and which are equally applicable to both sets of passions.

It will be sufficient to remark in general, that the object of love and hatred is evidently some thinking person; and that the sensation of the former passion is always agreeable, and of the latter uneasy. We may also suppose with some shew of probability, that the cause of both these passions is always related to a thinking being, and that the cause of the former produce a separate pleasure, and of the latter a separate uneasiness.

One of these suppositions, viz. that the cause of love and hatred must be related to a person or thinking being, in order to produce these passions, is not only probable, but too evident to be contested. Virtue and vice, when consider'd in the abstract; beauty and deformity, when plac'd on inanimate objects; poverty and riches when belonging to a third person, excite no degree of love or hatred, esteem or contempt towards those, who have no relation to them.

A person looking out at a window, sees me in the street, and beyond me a beautiful palace, with which I have no concern: I believe none will pretend, that this person will pay me the same respect, as if

I were owner of the palace.

'Tis not so evident at first sight, that a relation of impressions is requisite to these passions, and that because in the transition the one impression is so much confounded with the other, that they become in a manner undistinguishable. But as in pride and humility, we have easily been able to make the separation, and to prove, that every cause of these passions, produces a separate pain or pleasure, I might here observe the same method with the same success, in examining particularly the several causes of love and hatred. But as I hasten a full and decisive proof of these systems, I delay this examination for a moment: And in the mean time shall endeavour to convert to my present purpose all my reasonings concerning pride and humility, by an argument that is founded on unquestionable experience.

There are few persons, that are satisfy'd with their own character, or genius, or fortune, who are nor desirous of shewing themselves to the world, and of acquiring the love and approbation of mankind. Now 'tis evident, that the very same qualities and circumstances, which are the causes of pride or self-esteem, are also the causes of vanity or the desire of reputation; and that we always put to view those particulars with which in ourselves we are best satisfy'd. But if love and esteem were not produc'd by the same qualities as pride, according as these qualities are related to ourselves or others, this method of proceeding wou'd be very absurd, nor cou'd men expect a correspondence in the sentiments of every other person, with those themselves have entertain'd. 'Tis true, few can form exact systems of the passions, or make reflections on their general nature and resemblances. But without such a progress in philosophy, we are not subject to many mistakes in this particular, but are sufficiently guided by common experience, as well as by a kind of presentation; which tells us what will operate on others, by what we feel immediately in ourselves. Since then the same qualities that produce pride or humility, cause love or hatred; all the arguments that have been employ'd to prove, that the causes of the former passions excite a pain or pleasure independent of the passion, will be applicable with equal evidence to the causes of the latter.

SECT. II

Experiments [2] to confirm this system

Upon duly weighing these arguments, no one will make any scruple to assent to that conclusion I draw from them, concerning the transition along related impressions and ideas, especially as 'tis a principle, in itself, so easy and natural. But that we may place this system beyond doubt both with regard to love and hatred, pride and humility, 'twill be proper to make some new experiments upon all these passions, as well as to recal a few of these observations, which I have formerly touch'd upon. In order to make these experiments, let us suppose I am in company with a person, whom I formerly regarded without any sentiments either of friendship or enmity. Here I have the natural and ultimate object of all these four passions plac'd before me.

Myself am the proper object of pride or humility; the other person of love or hatred. Regard now with attention the nature of these passions, and their situation with respect to each other. 'Tis evident here are four affections, plac'd, as it were, in a square or regular connexion with, and distance from each other. The passions of pride and humility, as well as those of love and hatred, are connected together by the identity of their object, which to the first set of passions is self, to the second some other person. These two lines of communication or connexion form two opposite sides of the square. Again, pride and love are agreeable passions; hatred and humility uneasy. This similitude of sensation betwixt pride and love, and that betwixt humility and hatred form a new connexion, and may be consider'd as the other two sides of the square. Upon the whole, pride is connected with humility, love with hatred, by their objects or ideas: Pride with love, humility with hatred, by their sensations or impressions.

I say then, that nothing can produce any of these passions without bearing it a double relation, viz, of ideas to the object of the passion, and of sensation to the passion itself. This we must prove by our experiments. First Experiment. To proceed with the greater order in these experiments, let us first suppose, that being plac'd in the situation above-mentioned, viz, in company with some other person, there is an object presented, that has no relation either of impressions or ideas to any of these passions. Thus suppose we regard together an ordinary stone, or other common object, belonging to neither of us, and causing of itself no emotion, or independent pain and pleasure: 'Tis evident such an object will produce none of these four passions.

Let us try it upon each of them successively. Let us apply it to love, to hatred, to humility, to pride; none of them ever arises in the smallest degree imaginable. Let us change the object, as oft as we please; provided still we choose one, that has neither of these two relations. Let us repeat the experiment in all the dispositions, of which the mind is susceptible. No object, in the vast variety of nature, will, in any disposition, produce any passion without these relations.

Second Experiment. Since an object, that wants both these relations can never produce any passion, let us bestow on it only one of these relations; and see what will follow. Thus suppose, I regard a stone or any common object, that belongs either to me or my companion, and by that means acquires a relation of ideas to the object of the passions: 'Tis plain, that to consider the matter a priori, no emotion of any kind can reasonably be expected.

For besides, that a relation of ideas operates secretly and calmly on the mind, it bestows an equal impulse towards the opposite passions of pride and humility, love and hatred, according as the object belongs to ourselves or others; which opposition of the passions must destroy both, and leave the mind perfectly free from any affection or emotion. This reasoning a priori is confirm'd by experience. No trivial or vulgar object, that causes not a pain or pleasure, independent of the passion, will ever, by its property or other relations either to ourselves or others, be able to produce the affections of pride or humility, love or hatred.

Third Experiment. 'Tis evident, therefore, that a relation of ideas is not able alone to give rise to these affections. Let us now remove this relation, and in its stead place a relation of impressions, by presenting an object, which is agreeable or disagreeable, but has no relation either to ourself or companion; and let us observe the consequences. To consider the matter first a priori, as in the preceding experiment; we may conclude, that the object will have a small, but an uncertain connexion with these passions. For besides, that this relation is not a cold and imperceptible one, it has not the inconvenience of the relation of ideas, nor directs us with equal force to two contrary passions, which by their opposition destroy each other. But if we consider, on the other hand, that this transition from the sensation to the affection is not forwarded by any principle, that produces a transition of ideas; but, on the contrary, that tho' the one

impression be easily transfus'd into the other, yet the change of objects is suppos'd contrary to all the principles, that cause a transition of that kind; we may from thence infer, that nothing will ever be a steady or durable cause of any passion, that is connected with the passion merely by a relation of impressions.

What our reason wou'd conclude from analogy, after balancing these arguments, wou'd be, that an object, which produces pleasure or uneasiness, but has no manner of connexion either with ourselves or others, may give such a turn to the disposition, as that may naturally fall into pride or love, humility or hatred, and search for other objects, upon which by a double relation, it can found these affections; but that an object, which has only one of these relations, tho' the most advantageous one, can never give rise to any constant and establish'd passion.

Most fortunately all this reasoning is found to be exactly conformable^[3] to experience, and the phaenomena of the passions. Suppose I were travelling with a companion thro' a country, to which we are both utter strangers; 'tis evident, that if the prospects be beautiful, the roads agreeable, and the inns commodious, this may put me into good humour both with myself and fellow-traveller.

But as we suppose, that this country has no relation either to myself or friend. it can never be the immediate cause of pride or love; and therefore if I found not the passion on some other object, that bears either of us a closer relation, my emotions are rather to be considerd as the overflowings of an elevate or humane disposition, than as an establish'd passion. The case is the same where the object produces uneasiness.

Fourth Experiment. Having found, that neither an object without any relation of ideas or impressions, nor an object, that has only one relation, can ever cause pride or humility, love or hatred; reason alone may convince us, without any farther experiment, that whatever has a double relation must necessarily excite these passions; since 'tis evident they must have some cause. But to leave as little room for doubt as possible, let us renew our experiments, and see whether the event in this case answers our expectation. I choose an object, such as virtue, that causes a separate satisfaction: On this object I bestow a relation to self; and find, that from this disposition of affairs, there immediately arises a passion. But what passion? That very one of

pride, to which this object bears a double relation. Its idea is related to that of self, the object of the passion: The sensation it causes resembles the sensation of the passion. That I may be sure I am not mistaken in this experiment, I remove first one relation; then another; and find, that each removal destroys the passion, and leaves the object perfectly indifferent. But I am not content with this. I make a still farther trial; and instead of removing the relation, I only change it for one of a different kind. I suppose the virtue to belong to my companion, not to myself; and observe what follows from this alteration. I immediately perceive the affections wheel to about, and leaving pride, where there is only one relation, viz, of impressions, fall to the side of love, where they are attracted by a double relation of impressions and ideas. By repeating the same experiment, in changing anew the relation of ideas, I bring the affections back to pride; and by a new repetition I again place them at love or kindness.

Being fully convinc'd of the influence of this relation, I try the effects of the other; and by changing virtue for vice, convert the pleasant impression, which arises from the former, into the disagreeable one, which proceeds from the latter. The effect still answers expectation. Vice, when plac'd on another, excites, by means of its double relations, the passion of hatred, instead of love, which for the same reason arises from virtue. To continue the experiment, I change anew the relation of ideas, and suppose the vice to belong to myself.

What follows? What is usual. A subsequent change of the passion from hatred to humility. This humility I convert into pride by a new change of the impression; and find after all that I have compleated the round, and have by these changes brought back the passion to that very situation, in which I first found it.

But to make the matter still more certain, I alter the object; and instead of vice and virtue, make the trial upon beauty and deformity, riches and poverty, power and servitude. Each of these objects runs the circle of the passions in the same manner, by a change of their relations: And in whatever order we proceed, whether thro' pride, love, hatred, humility, or thro' humility, hatred, love, pride, the experiment is not in the least diversify'd. Esteem and contempt, indeed, arise on some occasions instead of love and hatred; but these are at the bottom the same passions, only diversify'd by

some causes, which we shall explain afterwards.

Fifth Experiment. To give greater authority to these experiments, let us change the situation of affairs as much as possible, and place the passions and objects in all the different positions, of which they are susceptible. Let us suppose, beside the relations above-mention'd, that the person, along with whom I make all these experiments, is closely connected with me either by blood or friendship. He is, we shall suppose, my son or brother, or is united to me by a long and familiar acquaintance. Let us next suppose, that the cause of the passion acquires a double relation of impressions and ideas to this person; and let us see what the effects are of all these complicated attractions and relations.

Before we consider what they are in fact, let us determine what they ought to be, conformable to my hypothesis[4]. 'Tis plain, that, according as the impression is either pleasant or uneasy, the passion of love or hatred must arise towards the person, who is thus connected to the cause of the impression by these double relations, which I have all along requir'd. The virtue of a brother must make me love him; as his vice or infamy must excite the contrary passion.

But to judge only from the situation of affairs, I shou'd not expect, that the affections wou'd rest there, and never transfuse themselves into any other impression. As there is here a person, who by means of a double relation is the object of my passion, the very same reasoning leads me to think the passion will be carry'd farther. The person has a relation of ideas to myself, according to the supposition; the passion, of which he is the object, by being either agreeable or uneasy, has a relation of impressions to pride or humility. 'Tis evident, then, that one of these passions must arise from the love or hatred.

This is the reasoning I form in conformity to my hypothesis; and am pleas'd to find upon trial that every thing answers exactly to my expectation. The virtue or vice of a son or brother not only excites love or hatred, but by a new transition, from similar causes, gives rise to pride or humility. Nothing causes greater vanity than any shining quality in our relations; as nothing mortifies us more than their vice or infamy. This exact conformity of experience to our reasoning is a convincing proof of the solidity of that hypothesis, upon which we

reason.

Sixth Experiment. This evidence will be still augmented, if we reverse the experiment, and preserving still the same relations, begin only with a different passion. Suppose, that instead of the virtue or vice of a son or brother, which causes first love or hatred, and afterwards pride or humility, we place these good or bad qualities on ourselves, without any immediate connexion with the person, who is related to us: Experience shews us, that by this change of situation the whole chain is broke, and that the mind is not convey'd from one passion to another, as in the preceding instance. We never love or hate a son or brother for the virtue or vice we discern in ourselves; tho' 'tis evident the same qualities in him give us a very sensible pride or humility. The transition from pride or humility to love or hatred is not so natural as from love or hatred to pride or humility.

This may at first sight be esteem'd contrary to my hypothesis; since the relations of impressions and ideas are in both cases precisely the same. Pride and humility are impressions related to love and hatred.

Myself am related to the person. It shou'd, therefore, be expected, that like causes must produce like effects, and a perfect transition arise from the double relation, as in all other cases. This difficulty we may easily solve by the following reflections.

'Tis evident, that as we are at all times intimately conscious of ourselves, our sentiments and passions, their ideas must strike upon us with greater vivacity than the ideas of the sentiments and passions of any other person. But every thing, that strikes upon us with vivacity, and appears in a full and strong light, forces itself, in a manner, into our consideration, and becomes present to the mind on the smallest hint and most trivial relation. For the same reason, when it is once present, it engages the attention, and keeps it from wandering to other objects, however strong may be their relation to our first object. The imagination passes easily from obscure to lively ideas, but with difficulty from lively to obscure. In the one case the relation is aided by another principle: In the other case, 'tis oppos'd by it.

Now I have observ'd, that those two faculties of the mind, the imagination and passions, assist each other in their operations when their propensities[5] are similar, and when they act upon the same

object. The mind has always a propensity to pass from a passion to any other related to it; and this propensity is forwarded when the object of the one passion is related to that of the other. The two impulses concur with each other, and render the whole transition more smooth and easy. But if it shou'd happen, that while the relation of ideas, strictly speaking, continues the same, its influence, in causing a transition of the imagination, shou'd no longer take place, 'tis evident its influence on the passions must also cease, as being dependent entirely on that transition. This is the reason why pride or humility is not transfus'd into love or hatred with the same ease, that the latter passions are chang'd into the former. If a person be my brother I am his likewise: but tho' the relations be reciprocal they have very different effects on the imagination. The passage is smooth and open from the consideration of any person related to us to that of ourself, of whom we are every moment conscious. But when the affections are once directed to ourself. the fancy passes not with the same facility from that object to any other person, how closely so ever connected with us. This easy or difficult transition of the imagination operates upon the passions, and facilitates or retards their transition, which is a clear proof, that these two faculties of the passions and imagination are connected together, and that the relations of ideas have an influence upon the affections. Besides innumerable experiments that prove this, we here find, that even when the relation remains; if by any particular circumstance its usual effect upon the fancy in producing an association or transition of ideas, is prevented; its usual effect upon the passions, in conveying us from one to another, is in like manner prevented.

Some may, perhaps, find a contradiction betwixt this phaenomenon and that of sympathy, where the mind passes easily from the idea of ourselves to that of any other object related to us.

But this difficulty will vanish, if we consider that in sympathy our own person is not the object of any passion, nor is there any thing, that fixes our attention on ourselves; as in the present case, where we are suppos'd to be actuated with pride or humility. Ourself, independent of the perception of every other object, is in reality nothing: For which reason we must turn our view to external objects; and 'tis natural for us to consider with most attention such as lie contiguous to us, or resemble us. But when self is the object of a passion, 'tis not natural to quit the consideration of it, till the passion be exhausted: in which case

the double relations of impressions and ideas can no longer operate.

Seventh Experiment. To put this whole reasoning to a farther trial, let us make a new experiment; and as we have already seen the effects of related passions and ideas, let us here suppose an identity of passions 'along with a relation of ideas; and let us consider the effects of this new situation. 'Tis evident a transition of the passions from the one object to the other is here in all reason to be expected; since the relation of ideas is suppos'd still to continue, and identity of impressions must produce a stronger connexion, than the most perfect resemblance, that can be imagin'd. If a double relation, therefore, of impressions and ideas is able to produce a transition from one to the other, much more an identity of impressions with a relation of ideas. Accordingly we find, that when we either love or hate any person, the passions seldom continue within their first bounds; but extend themselves towards all the contiguous objects, and comprehend the friends and relations of him we love or hate.

Nothing is more natural than to bear a kindness to one brother on account of our friendship for another, without any farther examination of his character. A quarrel with one person gives us a hatred for the whole family, tho' entirely innocent of that, which displeases us. Instances of this kind are every where to be met with.

There is only one difficulty in this experiment, which it will be necessary to account for, before we proceed any farther. 'Tis evident, that tho' all passions pass easily from one object to another related to it, yet this transition is made with greater facility, where the more considerable object is first presented, and the lesser follows it, than where this order is revers'd, and the lesser takes the precedence.

Thus 'tis more natural for us to love the son upon account of the father, than the father upon account of the son; the servant for the master, than the master for the servant; the subject for the prince, than the prince for the subject. In like manner we more readily contract a hatred against a whole family, where our first quarrel is with the head of it, than where we are displeas'd with a son, or servant, or some inferior member. In short, our passions, like other objects, descend with greater facility than they ascend.

That we may comprehend, wherein consists the difficulty of explaining this phaenomenon, we must consider, that the very same

reason, which determines the imagination to pass from remote to contiguous objects, with more facility than from contiguous to remote, causes it likewise to change with more ease, the less for the greater, than the greater for the less. Whatever has the greatest influence is most taken notice of; and whatever is most taken notice of, presents itself most readily to the imagination.

We are more apt to over-look in any subject, what is trivial, than what appears of considerable moment; but especially if the latter takes the precedence, and first engages our attention. Thus if any accident makes us consider the Satellites of Jupiter[6], our fancy is naturally determin'd to form the idea of that planet; but if we first reflect on the principal planet, 'tis more natural for us to overlook its attendants. The mention of the provinces of any empire conveys our thought to the seat of the empire; but the fancy returns not with the same facility to the consideration of the provinces. The idea of the servant makes us think of the master; that of the subject carries our view to the prince. But the same relation has not an equal influence in conveying us back again. And on this is founded that reproach of Cornelia to her sons, that they ought to be ashamed she should be more known by the title of the daughter of Scipio than by that of the mother of the Gracchi[7]. This was, in other words, exhorting them to render themselves as illustrious and famous as their grandfather, otherwise the imagination of the people, passing from her who was intermediate, and plac'd in an equal relation to both, would always leave them, and denominate her by what was more considerable and of greater moment. On the same principle is founded that common custom of making wives bear the name of their husbands, rather than husbands that of their wives; as also the ceremony of giving the precedency to those, whom we honour and respect. We might find many other instances to confirm this principle, were it not already sufficiently evident.

Now since the fancy finds the same facility in passing from the lesser to the greater, as from remote to contiguous, why does not this easy transition of ideas assist the transition of passions in the former case, as well as in the latter? The virtues of a friend or brother produce first love, and then pride; because in that case the imagination passes from remote to contiguous, according to its propensity. Our own virtues produce not first pride, and then love to a friend or brother; because the passage in that case would be from contiguous to remote, contrary to its propensity. But the love or

hatred of an inferior causes not readily any passion to the superior, tho' that be the natural propensity of the imagination: While the love or hatred of a superior, causes a passion to the inferior, contrary to its propensity. In short, the same facility of transition operates not in the same manner upon superior and inferior as upon contiguous and remote. These two phaenomena appear contradictory, and require some attention to be reconcil'd. As the transition of ideas is here made contrary to the natural propensity of the imagination, that faculty must be overpower'd by some stronger principle of another kind; and as there is nothing ever present to the mind but impressions and ideas, this principle must necessarily lie in the impressions. Now it has been observ'd, that impressions or passions are connected only by their resemblance, and that where any two passions place the mind in the same or in similar dispositions, it very naturally passes from the one to the other: As on the contrary, a repugnance in the dispositions produces a difficulty in the transition of the passions. But 'tis observable, that this repugnance may arise from a difference of degree as well as of kind; nor do we experience a greater difficulty in passing suddenly from a small degree of love to a small degree of hatred, than from a small to a great degree of either of these affections. A man, when calm or only moderately agitated, is so different, in every respect, from himself, when disturbed with a violent passion, that no two persons can be more unlike; nor is it easy to pass from the one extreme to the other, without a considerable interval betwixt them.

The difficulty is not less, if it be not rather greater, in passing from the strong passion to the weak, than in passing from the weak to the strong, provided the one passion upon its appearance destroys the other, and they do not both of them exist at once. But the case is entirely alter'd, when the passions unite together, and actuate the mind at the same time. A weak passion, when added to a strong, makes not so considerable a change in the disposition, as a strong when added to a weak; for which reason there is a closer connexion betwixt the great degree and the small, than betwixt the small degree and the great.

The degree of any passion depends upon the nature of its object; and an affection directed to a person, who is considerable in our eyes, fills and possesses the mind much more than one, which has for its object a person we esteem of less consequence. Here then the

contradiction betwixt the propensities of the imagination and passion displays itself. When we turn our thought to a great and a small object, the imagination finds more facility in passing from the small to the great, than from the great to the small; but the affections find a greater difficulty: And as the affections are a more powerful principle than the imagination, no wonder they prevail over it, and draw the mind to their side. In spite of the difficulty of passing from the idea of great to that of little, a passion directed to the former, produces always a similar passion towards the latter; when the great and little are related together. The idea of the servant conveys our thought most readily to the master; but the hatred or love of the master produces with greater facility anger or good-will to the servant. The strongest passion in this case takes the precedence; and the addition of the weaker making no considerable change on the disposition, the passage is by that means render'd more easy and natural betwixt them.

As in the foregoing experiment we found, that a relation of ideas, which, by any particular circumstance, ceases to produce its usual effect of facilitating the transition of ideas, ceases likewise to operate on the passions; so in the present experiment we find the same property of the impressions. Two different degrees of the same passion are surely related together; but if the smaller be first present, it has little or no tendency to introduce the greater; and that because the addition of the great to the little, produces a more sensible alteration on the temper, than the addition of the little to the great. These phaenomena, when duly weigh'd, will be found convincing proofs of this hypothesis.

And these proofs will be confirm'd, if we consider the manner in which the mind here reconciles the contradiction, I have observ'd betwixt the passions and the imagination. The fancy passes with more facility from the less to the greater, than from the greater to the less: But on the contrary a violent passion produces more easily a the contradiction betwixt the propensities of the imagination and passion displays itself. When we turn our thought to a great and a small object, the imagination finds more facility in passing from the small to the great, than from the great to the small; but the affections find a greater difficulty: And as the affections are a more powerful principle than the imagination, no wonder they prevail over it, and draw the mind to their side. In spite of the difficulty of passing from the idea of great to that of little, a passion directed to the

former, produces always a similar passion towards the latter; when the great and little are related together. The idea of the servant conveys our thought most readily to the master; but the hatred or love of the master produces with greater facility anger or good-will to the servant. The strongest passion in this case takes the precedence; and the addition of the weaker making no considerable change on the disposition, the passage is by that means render'd more easy and natural betwixt them.

As in the foregoing experiment we found, that a relation of ideas, which, by any particular circumstance, ceases to produce its usual effect of facilitating the transition of ideas, ceases likewise to operate on the passions; so in the present experiment we find the same property of the impressions. Two different degrees of the same passion are surely related together; but if the smaller be first present, it has little or no tendency to introduce the greater; and that because the addition of the great to the little, produces a more sensible alteration on the temper, than the addition of the little to the great. These phaenomena, when duly weigh'd, will be found convincing proofs of this hypothesis.

And these proofs will be confirm'd, if we consider the manner in which the mind here reconciles the contradiction, I have observ'd betwixt the passions and the imagination. The fancy passes with more facility from the less to the greater, than from the greater to the less: But on the contrary a violent passion produces more easily a feeble, than that does a violent. In this opposition the passion in the end prevails over the imagination; but 'tis commonly by complying with it, and by seeking another quality, which may counter-balance that principle, from whence the opposition arises. When we love the father or master of a family, we little think of his children or servants. But when these are present with us, or when it lies any ways in our power to serve them, the nearness and contiguity in this case encreases their magnitude, or at least removes that opposition, which the fancy makes to the transition of the affections. If the imagination finds a difficulty in passing from greater to less, it finds an equal facility in passing from remote to contiguous, which brings the matter to an equality, and leaves the way open from the one passion to the other.

Eighth Experiment. I have observ'd that the transition from love

or hatred to pride or humility, is more easy than from pride or humility to love or hatred; and that the difficulty, which the imagination finds in passing from contiguous to remote, is the cause why we scarce have any instance of the latter transition of the affections. I must, however, make one exception, viz, when the very cause of the pride and humility is plac'd in some other person. For in that case the imagination is necessitated to consider the person, nor can it possibly confine its view to ourselves. Thus nothing more readily produces kindness and affection to any person, than his approbation of our conduct and character: As on the other hand, nothing inspires us with a stronger hatred, than his blame or contempt. Here 'tis evident, that the original passion is pride or humility, whose object is self; and that this passion is transfus'd into love or hatred, whose object is some other person, notwithstanding the rule I have already establish'd, that the imagination passes with difficulty from contiguous to remote[8]. But the transition in this case is not made merely on account of the relation betwixt ourselves and the person; but because that very person is the real cause of our first passion, and of consequence is intimately connected with it. 'Tis his approbation that produces pride; and disapprobation, humility.

No wonder, then, the imagination returns back again attended with the related passions of love and hatred. This is not a contradiction, but an exception to the rule; and an exception that arises from the same reason with the rule itself.

Such an exception as this is, therefore, rather a confirmation of the rule. And indeed, if we consider all the eight experiments I have explain'd, we shall find that the same principle appears in all of them, and that 'tis by means of a transition arising from a double relation of impressions and ideas, pride and humility, love and hatred are produc'd. An object without⁷ a relation, or⁸ with but one, never produces either of these passions; and 'tis⁹ found that the passion always varies in conformity to the relation. Nay we may observe, that where the relation, by any particular circumstance, has not its usual effect of producing a transition either of¹⁰ ideas or of impressions, it ceases to operate upon the passions, and gives rise neither to pride nor love, humility nor hatred. This rule we find still to hold good¹¹ even under the appearance of its contrary; and as relation is frequently experienc'd to have no effect; which upon examination is found to proceed from some particular circumstance, that prevents the

transition; so even in instances, where that circumstance, tho' present, prevents not the transition, 'tis found to arise from some other circumstance, which counter-balances it. Thus not only the variations resolve themselves into the general principle, but even the variations of these variations.

SECT. III

Difficulties solv'd

After so many and such undeniable proofs drawn from daily experience and observation, it may seem superfluous to enter into a particular examination of all the causes of love and hatred. I shall, therefore, employ the sequel of this part, First, In removing some difficulties, concerning particular causes of these passions. Secondly, In examining the compound affections, which arise from the mixture of love and hatred with other emotions.

Nothing is more evident, than that any person acquires our kindness, or is expos'd to our ill-will, in proportion to the pleasure or uneasiness we receive from him, and that the passions keep pace exactly with the sensations in all their changes and variations.

Whoever can find the means either by his services, his beauty, or his flattery, to render himself useful or agreeable to us, is sure of our affections: As on the other hand, whoever harms or displeases us never fails to excite our anger or hatred. When our own nation is at war with any other, we detest them under the character of cruel, perfidious, unjust and violent: But always esteem ourselves and allies equitable, moderate, and merciful. If the general of our enemies be successful, 'tis with difficulty we allow him the figure and character of a man. He is a sorcerer: He has a communication with daemons; as is reported of Oliver Cromwell[9], and the Duke of Luxembourg[10]: He is bloody-minded, and takes a pleasure in death and destruction.

But if the success be on our side, our commander has all the opposite good qualities, and is a pattern of virtue, as well as of courage and conduct. His treachery we call policy: His cruelty is an evil inseparable from war. In short, every one of his faults we either endeavour to extenuate, or dignify it with the name of that virtue, which approaches it. 'Tis evident the same method of thinking

runs thro' common life.

There are some, who add another condition, and require not only that the pain and pleasure arise from the person, but likewise that it arise knowingly, and with a particular design and intention. A man, who wounds and harms us by accident, becomes not our enemy upon that account, nor do we think ourselves bound by any ties of gratitude to one, who does us any service after the same manner. By the intention we judge of the actions, and according as that is good or bad, they become causes of love or hatred.

But here we must make a distinction. If that quality in another, which pleases or displeases, be constant and inherent in his person and character, it will cause love or hatred independent of the intention: But otherwise a knowledge and design is requisite, in order to give rise to these passions. One that is disagreeable by his deformity or folly is the object of our aversion, tho' nothing be more certain, than that he has not the least intention of displeasing us by these qualities. But if the uneasiness proceed not from a quality, but an action, which is produc'd and annihilated in a moment, 'tis necessary, in order to produce some relation, and connect this action sufficiently with the person. that it be deriv'd from a particular forethought and design. 'Tis not enough, that the action arise from the person, and have him for its immediate cause and author. This relation alone is too feeble and inconstant to be a foundation for these passions. It reaches not the sensible and thinking part, and neither proceeds from any thing durable in him, nor leaves any thing behind it; but passes in a moment, and is as if it had never been.

On the other hand, an intention shews certain qualities, which remaining after the action is perform'd, connect it with the person, and facilitate the transition of ideas from one to the other. We can never think of him without reflecting on these qualities; unless repentance and a change of life have produc'd an alteration in that respect: In which case the passion is likewise alter'd. This therefore is one reason, why an intention is requisite to excite either love or hatred.

But we must farther consider, that an intention, besides its strengthening the relation of ideas, is often necessary to produce a relation of impressions, and give rise to pleasure and uneasiness. For 'tis observable, that the principal part of an injury is the contempt and hatred, which it shews in the person, that injures us; and without that,

the mere harm gives us a less sensible uneasiness. In like manner, a good office is agreeable, chiefly because it flatters our vanity, and is a proof of the kindness and esteem of the person, who performs it. The removal of the intention, removes the mortification in the one case, and vanity in the other, and must of course cause a remarkable diminution in the passions of love and hatred.

I grant, that these effects of the removal of design, in diminishing the relations of impressions and ideas, are not entire, nor able to remove every degree of these relations. But then I ask, if the removal of design be able entirely to remove the passion of love and hatred? Experience, I am sure, informs us of the contrary, nor is there any thing more certain, than that men often fall into a violent anger for injuries, which they themselves must own to be entirely involuntary and accidental. This emotion, indeed, cannot be of long continuance; but still is sufficient to shew, that there is a natural connexion betwixt uneasiness and anger, and that the relation of impressions will operate upon a very small relation of ideas. But when the violence of the impression is once a little abated, the defect of the relation begins to be better felt; and as the character of a person is no wise interested in such injuries as are casual and involuntary, it seldom happens that on their account, we entertain a lasting enmity.

To illustrate this doctrine by a parallel instance, we may observe, that not only the uneasiness, which proceeds from another by accident, has but little force to excite our passion, but also that which arises from an acknowledg'd necessity and duty. One that has a real design of harming us, proceeding not from hatred and ill-will, but from justice^[11] and equity, draws not upon him our anger, if we be in any degree reasonable; notwithstanding he is both the cause, and the knowing cause of our sufferings. Let us examine a little this phaenomenon.

'Tis evident in the first place, that this circumstance is not decisive; and tho' it may be able to diminish the passions, 'tis seldom it can entirely remove them. How few criminals are there, who have no ill-will to the person, that accuses them, or to the judge, that condemns them, even tho' they be conscious of their own deserts?

In like manner our antagonist in a law-suit, and our competitor for any office, are commonly regarded as our enemies; tho' we must acknowledge, if we wou'd but reflect a moment, that their motive is

entirely as justifiable as our own.

Besides we may consider, that when we receive harm from any person, we are apt to imagine him criminal, and 'tis with extreme difficulty we allow of his justice and innocence. This is a clear proof, that, independent of the opinion of iniquity, any harm or uneasiness has a natural tendency to excite our hatred, and that afterwards we seek for reasons upon which we may justify and establish the passion.

Here the idea of injury produces not the passion, but arises from it.

Nor is it any wonder that passion shou'd produce the opinion of injury; since otherwise it must suffer a considerable diminution, which all the passions avoid as much as possible. The removal of injury may remove the anger, without proving that the anger arises only from the injury. The harm and the justice are two contrary objects, of which the one has a tendency to produce hatred, and the other love; and 'tis according to their different degrees, and our particular turn of thinking, that either of the objects prevails, and

SECT. IV

Of the love of relations [12]

Having given a reason, why several actions, that cause a real pleasure or uneasiness, excite not any degree, or but a small one, of the passion of love or hatred towards the actors; 'twill be necessary to shew, wherein consists the pleasure or uneasiness of many objects, which we find by experience to produce these passions.

According to the preceding system there is always requir'd a double relation of impressions and ideas betwixt the cause and effect, in order to produce either love or hatred. But tho' this be universally true, 'tis remarkable that the passion of love may be excited by only one relation of a different kind, viz, betwixt ourselves and the object; or more properly speaking, that this relation is always attended with both the others. Whoever is united to us by any connexion is always sure of a share of our love, proportion'd to the connexion, without enquiring into his other qualities. Thus the relation of blood produces the strongest tie the mind is capable of in the love of parents to their children, and a lesser degree of the same affection, as the relation lessens. Nor has consanguinity alone this

effect, but any other relation without exception. We love our countrymen, our neighbours, those of the same trade, profession, and even name with ourselves. Every one of these relations is esteem'd some tie, and gives a title to a share of our affection.

There is another phaenomenon, which is parallel to this, viz. that acquaintance, without any kind of relation, gives rise to love and kindness. When we have contracted a habitude and intimacy with any person; tho' in frequenting his company we have not been able to discover any very valuable quality, of which he is possess'd; yet we cannot forebear preferring him to strangers, of whose superior merit we are fully convinc'd. These two phaenomena of the effects of relation and acquaintance will give mutual light to each other, and may be both explain'd from the same principle.

Those, who take a pleasure in declaiming against human nature, have observ'd, that man is altogether insufficient to support himself; and that when you loosen all the holds, which he has of external objects, he immediately drops down into the deepest melancholy and despair. From this, say they, proceeds that continual search after amusement in gaming, in hunting, in business; by which we endeavour to forget ourselves, and excite our spirits from the languid state, into which they fall, when not sustain'd by some brisk and lively emotion. To this method of thinking I so far agree, that I own the mind to be insufficient, of itself, to its own entertainment, and that it naturally seeks after foreign objects, which may produce a lively sensation, and agitate the spirits. On the appearance of such an object it awakes, as it were, from a dream: The blood flows with a new tide: The heart is elevated: And the whole man acquires a vigour, which he cannot command in his solitary and calm moments.

Hence company is naturally so rejoicing, as presenting the liveliest of all objects, viz, a rational and thinking Being like ourselves, who communicates to us all the actions of his mind; makes us privy to his inmost sentiments and affections; and lets us see, in the very instant of their production, all the emotions, which are caus'd by any object. Every lively idea is agreeable, but especially that of a passion, because such an idea becomes a kind of passion, and gives a more sensible agitation to the mind, than any other image or conception.

This being once admitted, all the rest is easy. For as the company

of strangers is agreeable to us for a short time, by inlivening our thought; so the company of our relations and acquaintance must be peculiarly agreeable, because it has this effect in a greater degree, and is of more durable influence. Whatever is related to us is conceiv'd in a lively manner by the easy transition from ourselves to the related object. Custom also, or acquaintance facilitates the entrance, and strengthens the conception of any object. The first case is parallel to our reasonings from cause and effect; the second to education. And as reasoning and education concur only in producing a lively and strong idea of any object; so is this the only particular, which is common to relation and acquaintance. This must, therefore, be the influencing quality, by which they produce all their common effects; and love or kindness being one of these effects, it must be from the force and liveliness of conception, that the passion is deriv'd. Such a conception is peculiarly agreeable, and makes us have an affectionate regard for every thing, that produces it, when the proper object of kindness and goodwill.

'Tis obvious, that people associate together according to their particular tempers and dispositions, and that men of gay tempers naturally love the gay; as the serious bear an affection to the serious. This not only happens, where they remark this resemblance betwixt themselves and others, but also by the natural course of the disposition, and by a certain sympathy, which always arises betwixt similar characters. Where they remark the resemblance, it operates after the manner of a relation, by producing a connexion of ideas.

Where they do not remark it, it operates by some other principle; and if this latter principle be similar to the former, it must be receiv'd as a confirmation of the foregoing reasoning.

The idea of ourselves is always intimately present to us, and conveys a sensible degree of vivacity to the idea of any other object, to which we are related. This lively idea changes by degrees into a real impression; these two kinds of perception being in a great measure the same, and differing only in their degrees of force and vivacity. But this change must be produc'd with the greater ease, that our natural temper gives us a propensity to the same impression, which we observe in others, and makes it arise upon any slight occasion. In that case resemblance converts the idea into an impression, not only by means of the relation, and by transfusing the original vivacity into the

related idea; but also by presenting such materials as take fire from the least spark. And as in both cases a love or affection arises from the resemblance, we may learn that a sympathy with others is agreeable only by giving an emotion to the spirits, since an easy sympathy and correspondent emotions are alone common to relation, acquaintance, and resemblance[13].

The great propensity men have to pride may be consider'd as another similar phaenomenon. It often happens, that after we have liv'd a considerable time in any city; however at first it might be disagreeable to us; yet as we become familiar with the objects, and contact an acquaintance, tho' merely with the streets and buildings, the aversion diminishes by degrees, and at last changes into the opposite passion. The mind finds a satisfaction and ease in the view of objects, to which it is accustom'd, and naturally prefers them to others, which, tho', perhaps, in themselves more valuable, are less known to it. By the same quality of the mind we are seduc'd into a good opinion of ourselves, and of all objects, that belong to us. They appear in a stronger light; are more agreeable; and consequently fitter subjects of pride and vanity, than any other.

It may not be amiss, in treating of the affection we bear our acquaintance and relations, to observe some pretty curious phaenomena, which attend it. 'Tis easy to remark in common life, that children esteem their relation to their mother to be weaken'd, in a great measure, by her second marriage, and no longer regard her with the same eye, as if she had continu'd in her state of widow-hood. Nor does this happen only, when they have felt any inconveniences from her second marriage, or when her husband is much her inferior; but even without any of these considerations, and merely because she has become part of another family. This also takes place with regard to the second marriage of a father; but in a much less degree: And 'tis certain the ties of blood are not so much loosen'd in the latter case as by the marriage of a mother. These two phaenomena are remarkable in themselves, but much more so when compared.

In order to produce a perfect relation betwixt two objects, 'tis requisite, not only that the imagination be convey'd from one to the other by resemblance, contiguity or causation, but also that it return back from the second to the first with the same ease and facility. At first sight this may seem a necessary and unavoidable consequence. If

one object resemble another, the latter object must necessarily resemble the former. If one object be the cause of another, the second object is effect to its cause. 'Tis the same case with contiguity: And therefore the relation being always reciprocal, it may be thought, that the return of the imagination from the second to the first must also, in every case, be equally natural as its passage from the first to the second. But upon farther examination we shall easily discover our mistake. For supposing the second object, beside its reciprocal relation to the first, to have also a strong relation to a third object; in that case the thought, passing from the first object to the second, returns not back with the same facility, tho' the relation continues the same; but is readily carry'd on to the third object, by means of the new relation, which presents itself, and gives a new impulse to the imagination. This new relation, therefore, weakens the tie betwixt the first and second objects. The fancy is by its very nature wavering and inconstant; and considers always two objects as more strongly related together, where it finds the passage equally easy both in going and returning, than where the transition is easy only in one of these motions. The double motion is a kind of a double tie, and binds the objects together in the closest and most intimate manner.

The second marriage of a mother breaks not the relation of child and parent; and that relation suffices to convey my imagination from myself to her with the greatest ease and facility. But after the imagination is arriv'd at this point of view, it finds its object to be surrounded with so many other relations, which challenge its regard, that it knows not which to prefer, and is at a loss what new object to pitch upon. The ties of interest and duty bind her to another family, and prevent that return of the fancy from her to myself, which is necessary to support the union. The thought has no longer the vibration, requisite to set it perfectly at ease, and indulge its inclination to change. It goes with facility, but returns with difficulty; and by that interruption finds the relation much weaken'd from what it wou'd be were the passage open and easy on both sides.

Now to give a reason, why this effect follows not in the same degree upon the second marriage of a father: we may reflect on what has been prov'd already, that tho' the imagination goes easily from the view of a lesser object to that of a greater, yet it returns not with the same facility from the greater to the less. When my imagination goes from myself to my father, it passes not so readily from him to his

second wife, nor considers him as entering into a different family, but as continuing the head of that family, of which I am myself a part. His superiority prevents the easy transition of the thought from him to his spouse, but keeps the passage still open for a return to myself along the same relation of child and parent. He is not sunk in the new relation he acquires; so that the double motion or vibration of thought is still easy and natural. By this indulgence of the fancy in its inconstancy, the tie of child and parent still preserves its full force and influence. A mother thinks not her tie to a son weaken'd, because 'tis shar'd with her husband: Nor a son his with a parent, because 'tis shar'd with a brother. The third object is here related to the first, as well as to the second; so that the imagination goes and comes along all of them with the greatest facility.

SECT. V

Of our esteem for the rich and powerful

Nothing has a greater tendency to give us an esteem for any person, than his power and riches; or a contempt, than his poverty and meanness: And as esteem and contempt are to be consider'd as species of love and hatred, 'twill be proper in this place to explain these phaenomena.

Here it happens most fortunately, that the greatest difficulty is not to discover a principle capable of producing such an effect, but to choose the chief and predominant among several, that present themselves. The satisfaction we take in the riches of others, and the esteem we have for the possessors may be ascrib'd to three different causes. First, To the objects they possess; such as houses, gardens, equipages; which, being agreeable in themselves, necessarily produce a sentiment of pleasure in every one; that either considers or surveys them. Secondly, To the expectation of advantage from the rich and powerful by our sharing their possessions. Thirdly, To sympathy, which makes us partake of the satisfaction of every one, that approaches us. All these principles may concur in producing the present phaenomenon. The question is, to which of them we ought principally to ascribe it,

'Tis certain, that the first principle, viz, the reflection on agreeable objects, has a greater influence, than what, at first sight, we may be apt to imagine. We seldom reflect on what is beautiful or ugly,

agreeable or disagreeable, without an emotion of pleasure or uneasiness; and tho' these sensations appear not much in our common indolent way of thinking, 'tis easy, either in reading or conversation, to discover them. Men of wit always turn the discourse on subjects that are entertaining to the imagination; and poets never present any objects but such as are of the same nature. Mr Philips[14] has chosen Cyder[15] for the subject of an excellent poem. Beer wou'd not have been so proper, as being neither so agreeable to the taste nor eye. But he wou'd certainly have preferr'd wine to either of them, cou'd his native country have afforded him so agreeable a liquor. We may learn from thence, that every thing, which is agreeable to the senses, is also in some measure agreeable to the fancy, and conveys to the thought an image of that satisfaction, which it gives by its real application to the bodily organs.

But tho' these reasons may induce us to comprehend this delicacy of the imagination among the causes of the respect, which we pay the rich and powerful, there are many other reasons, that may keep us from regarding it as the sole or principal. For as the ideas of pleasure can have an influence only by means of their vivacity, which makes them approach impressions, 'tis most natural those ideas shou'd have that influence, which are favour'd by most circumstances, and have a natural tendency to become strong and lively; such as our ideas of the passions and sensations of any human creature. Every human creature resembles ourselves, and by that means has an advantage above any other object, in operating on the imagination.

Besides, if we consider the nature of that faculty, and the great influence which all relations have upon it, we shall easily be persuaded, that however the ideas of the pleasant wines, music, or gardens, which the rich man enjoys, may become lively and agreeable, the fancy will not confine itself to them, but will carry its view to the related objects; and in particular, to the person, who possesses them. And this is the more natural, that the pleasant idea or image produces here a passion towards the person, by means of his relation to the object; so that 'tis unavoidable but he must enter into the original conception, since he makes the object of the derivative passion: But if he enters into the original conception, and is consider'd as enjoying these agreeable objects, 'tis sympathy, which is properly the cause of the affection; and the third principle is more powerful and universal than the first.

Add to this, that riches and power alone, even tho' unemploy'd, naturally cause esteem and respect: And consequently these passions arise not from the idea of any beautiful or agreeable objects. 'Tis true; money implies a kind of representation of such objects, by the power it affords of obtaining them; and for that reason may still be esteem'd proper to convey those agreeable images, which may give rise to the passion. But as this prospect is very distant, 'tis more natural for us to take a contiguous object, viz, the satisfaction, which this power affords the person, who is possess'd of it. And of this we shall be farther satisfy'd, if we consider, that riches represent the goods of life, only by means of the will; which employs them; and therefore imply in their very nature an idea of the person, and cannot be consider'd without a kind of sympathy with his sensations and enjoyments.

This we may confirm by a reflection, which to some will, perhaps, appear too subtle and refin'd. I have already observ'd, that power, as distinguish'd from its exercise, has either no meaning at all, or is nothing but a possibility or probability of existence; by which any object approaches to reality, and has a sensible influence on the mind. I have also observ'd, that this approach, by an illusion of the fancy, appears much greater, when we ourselves are possess'd of the power, than when it is enjoy'd by another; and that in the former case the objects seem to touch upon the very verge of reality, and convey almost an equal satisfaction, as if actually in our possession.

Now I assert, that where we esteem a person upon account of his riches, we must enter into this sentiment of the proprietor, and that without such a sympathy the idea of the agreeable objects, which they give him the power to produce, wou'd have but a feeble influence upon us. An avaritious man is respected for his money, tho' he scarce is possess'd of a power; that is, there scarce is a probability or even possibility of his employing it in the acquisition of the pleasures and conveniences of life. To himself alone this power seems perfect and entire; and therefore we must receive his sentiments by sympathy, before we can have a strong intense idea of these enjoyments, or esteem him upon account of them.

Thus we have found, that the first principle, viz, the agreeable idea of those objects, which riches afford the enjoyment of; resolves itself in a great measure into the third, and becomes a sympathy with

the person we esteem or love. Let us now examine the second principle, viz, the agreeable expectation of advantage, and see what force we may justly attribute to it.

'Tis obvious, that tho' riches and authority undoubtedly give their owner a power of doing us service, yet this power is not to be consider'd as on the same footing with that, which they afford him, of pleasing himself, and satisfying his own appetites. Self-love approaches the power and exercise very near each other in the latter case; but in order to produce a similar effect in the former, we must suppose a friendship and good-will to be conjoin'd with the riches.

Without that circumstance 'tis difficult to conceive on what we can found our hope of advantage from the riches of others, tho' there is nothing more certain, than that we naturally esteem and respect the rich, even before we discover in them any such favourable disposition towards us.

But I carry this farther, and observe, not only that we respect the rich and powerful, where they shew no inclination to serve us, but also when we lie so much out of the sphere of their activity, that they cannot even be suppos'd to be endow'd with that power.

Prisoners of war are always treated with a respect suitable to their condition; and 'tis certain riches go very far towards fixing the condition of any person. If birth and quality enter for a share, this still affords us an argument of the same kind. For what is it we call a man of birth, but one who is descended from a long succession of rich and powerful ancestors, and who acquires our esteem by his relation to persons whom we esteem? His ancestors, therefore, tho' dead, are respected, in some measure, on account of their riches, and consequently without any kind of expectation.

But not to go so far as prisoners of war and the dead to find instances of this disinterested esteem for riches, let us observe with a little attention those phaenomena that occur to us in common life and conversation. A man, who is himself of a competent fortune, upon coming into a company of strangers, naturally treats them with different degrees of respect and deference, as he is inform'd of their different fortunes and conditions; tho' 'tis impossible he can ever propose, and perhaps wou'd not accept of any advantage from them.

A traveller is always admitted into company, and meets with civility, in proportion as his train and equipage speak him a man of great or moderate fortune. In short, the different ranks of men are, in a great measure, regulated by riches, and that with regard to superiors as well as inferiors, strangers as well as acquaintance.

There is, indeed, an answer to these arguments, drawn from the influence of general rules. It may be pretended, that being accustom'd to expect succour and protection from the rich and powerful, and to esteem them upon that account, we extend the same sentiments to those, who resemble them in their fortune, but from whom we can never hope for any advantage. The general rule still prevails, and by giving a bent to the imagination draws along the passion, in the same manner as if its proper object were real and existent.

But that this principle does not here take place, will easily appear, if we consider, that in order to establish a general rule, and extend it beyond its proper bounds, there is requir'd a certain uniformity in our experience, and a great superiority of those instances, which are conformable to the rule, above the contrary. But here the case is quite otherwise. Of a hundred men of credit and fortune I meet with, there is not, perhaps, one from whom I can expect advantage; so that 'tis impossible any custom can ever prevail in the present case.

Upon the whole, there remains nothing, which can give us an esteem for power and riches, and a contempt for meanness and poverty, except the principle of sympathy, by which we enter into the sentiments of the rich and poor, and partake of their pleasure and uneasiness. Riches give satisfaction to their possessor; and this satisfaction is convey'd to the beholder by the imagination, which produces an idea resembling the original impression in force and vivacity. This agreeable idea or impression is connected with love, which is an agreeable passion. It proceeds from a thinking conscious being, which is the very object of love. From this relation of impressions, and identity of ideas, the passion arises, according to my hypothesis.

The best method of reconciling us to this opinion is to take a general survey of the universe, and observe the force of sympathy thro' the whole animal creation, and the easy communication of sentiments from one thinking being to another. In all creatures, that

prey not upon others, and are not agitated with violent passions, there appears a remarkable desire of company, which associates them together, without any advantages they can ever propose to reap from their union. This is still more conspicuous in man, as being the creature of the universe, who has the most ardent desire of society, and is fitted for it by the most advantages. We can form no wish, which has not a reference to society. A perfect solitude is, perhaps, the greatest punishment we can suffer. Every pleasure languishes when enjoy'd apart from company, and every pain becomes more cruel and intolerable. Whatever other passions we may be actuated by; pride, ambition, avarice, curiosity, revenge or lust; the soul or animating principle of them all is sympathy; nor wou'd they have any force, were we to abstract entirely from the thoughts and sentiments of others. Let all the powers and elements of nature conspire to serve and obey one man: Let the sun rise and set at his command: The sea and rivers roll as he pleases, and the earth furnish spontaneously whatever may be useful or agreeable to him: He will still be miserable, till you give him some one person at least, with whom he may share his happiness, and whose esteem and friendship he may enjoy.

This conclusion from a general view of human nature, we may confirm by particular instances, wherein the force of sympathy is very remarkable. Most kinds of beauty are deriv'd from this origin; and tho' our first object be some senseless inanimate piece of matter, 'tis seldom we rest there, and carry not our view to its influence on sensible and rational creatures. A man, who shews us any house or building, takes particular care among other things to point out the convenience of the apartments, the advantages of their situation, and the little room lost in the stairs, antichambers and passages; and indeed 'tis evident, the chief part of the beauty consists in these particulars. The observation of convenience gives pleasure, since convenience is a beauty. But after what manner does it give pleasure? 'Tis certain our own interest is not in the least concern'd; and as this is a beauty of interest, not of form, so to speak, it must delight us merely by communication, and by our sympathizing with the proprietor of the lodging. We enter into his interest by the force of imagination, and feel the same satisfaction, that the objects naturally occasion in him.

This observation extends to tables, chairs, scritoires, chimneys, coaches, saddles, ploughs, and indeed to every work of art; it being an universal rule, that their beauty is chiefly deriv'd from their

utility, and from their fitness for that purpose, to which they are destined.

But this is an advantage, that concerns only the owner, nor is there any thing but sympathy, which can interest the spectator. 'Tis evident, that nothing renders a field more agreeable than its fertility, and that scarce any advantages of ornament or situation will be able to equal this beauty. 'Tis the same case with particular trees and plants, as with the field on which they grow. I know not but a plain, overgrown with furze and broom, may be, in itself, as beautiful as a hill cover'd with vines or olive-trees; tho' it will never appear so to one, who is acquainted with the value of each. But this is a beauty merely of imagination, and has no foundation in what appears to the senses. Fertility and value have a plain reference to use; and that to riches, joy, and plenty; in which tho' we have no hope of partaking, yet we enter into them by the vivacity of the fancy, and share them, in some measure, with the proprietor.

There is no rule in painting more reasonable than that of ballancing the figures, and placing them with the greatest exactness on their proper centers of gravity. A figure, which is not justly ballanc'd, is disagreeable; and that because it conveys the ideas of its fall, of harm, and of pain: Which ideas are painful, when by sympathy they acquire any degree of force and vivacity.

Add to this, that the principal part of personal beauty is an air of health and vigour, and such a construction of members as promises strength and activity. This idea of beauty cannot be accounted for but by sympathy.

In general we may remark, that the minds of men are mirrors to one another, not only because they reflect each others emotions, but also because those rays of passions, sentiments and opinions may be often reverberated, and may decay away by insensible degrees. Thus the pleasure, which a rich man receives from his possessions, being thrown upon the beholder, causes a pleasure and esteem; which sentiments again, being perceiv'd and sympathiz'd with, encrease the pleasure of the possessor; and being once more reflected, become a new foundation for pleasure and esteem in the beholder. There is certainly an original satisfaction in riches deriv'd from that power, which they bestow, of enjoying all the pleasures of life; and as this is their very nature and essence, it must be the first source of all

the passions, which arise from them. One of the most considerable of these passions is that of love or esteem in others, which therefore proceeds from a sympathy with the pleasure of the possessor. But the possessor has also a secondary satisfaction in riches arising from the love and esteem he acquires by them, and this satisfaction is nothing but a second reflexion of that original pleasure, which proceeded from himself. This secondary satisfaction or vanity becomes one of the principal recommendations of riches, and is the chief reason, why we either desire them for ourselves, or esteem them in others.

Here then is a third rebound of the original pleasure; after which 'tis difficult to distinguish the images and reflexions, by reason of their faintness and confusion.

SECT. VI

Of benevolence and anger

Ideas may be compar'd to the extension and solidity of matter, and impressions, especially reflective ones, to colours, tastes, smells and other sensible qualities. Ideas never admit of a total union, but are endow'd with a kind of impenetrability, by which they exclude each other, and are capable of forming a compound by their conjunction, not by their mixture. On the other hand, impressions and passions are susceptible of an entire union; and like colours, may be blended so perfectly together, that each of them may lose itself, and contribute only to vary that uniform impression, which arises from the whole. Some of the most curious phaenomena of the human mind are deriv'd from this property of the passions.

In examining those ingredients, which are capable of uniting with love and hatred, I begin to be sensible, in some measure, of a misfortune, that has attended every system of philosophy, with which the world has been yet acquainted. 'Tis commonly found, that in accounting for the operations of nature by any particular hypothesis; among a number of experiments, that quadrate exactly with the principles we wou'd endeavour to establish; there is always some phaenomenon, which is more stubborn, and will not so easily bend to our purpose. We need not be surpriz'd, that this shou'd happen in natural philosophy. The essence and composition of external bodies are so obscure, that we must necessarily, in our reasonings, or rather conjectures concerning them, involve ourselves in contradictions and

absurdities. But as the perceptions of the mind are perfectly known, and I have us'd all imaginable caution in forming conclusions concerning them, I have always hop'd to keep clear of those contradictions, which have attended every other system. Accordingly the difficulty, which I have at present in my eye, is nowise contrary to my system; but only departs a little from that simplicity, which has been hitherto its principal force and beauty.

The passions of love and hatred are always follow'd by, or rather conjoin'd with benevolence and anger. 'Tis this conjunction, which chiefly distinguishes these affections from pride and humility.

For pride and humility are pure emotions in the soul, unattended with any desire, and not immediately exciting us to action. But love and hatred are not compleated within themselves, nor rest in that emotion, which they produce, but carry the mind to something farther. Love is always follow'd by a desire of the happiness of the person belov'd, and an aversion to his misery: As hatred produces a desire of the misery and an aversion to the happiness of the person hated. So remarkable a difference betwixt these two sets of passions of pride and humility, love and hatred, which in so many other particulars correspond to each other, merits our attention.

The conjunction of this desire and aversion [16] with love and hatred may be accounted for by two different hypotheses. The first is, that love and hatred have not only a cause, which excites them, viz. pleasure and pain; and an object, to which they are directed, viz. a person or thinking being; but likewise an end, which they endeavour to attain, viz. the happiness or misery of the person belov'd or hated; all which views, mixing together, make only one passion. According to this system, love is nothing but the desire of happiness to another person, and hatred that of misery. The desire and aversion constitute the very nature of love and hatred. They are not only inseparable but the same.

But this is evidently contrary to experience. For tho' 'tis certain we never love any person without desiring his happiness, nor hate any without wishing his misery, yet these desires arise only upon the ideas of the happiness or misery of our friend or enemy being presented by the imagination, and are not absolutely essential to love and hatred. They are the most obvious and natural sentiments of these affections, but not the only ones. The passions may express themselves in a

hundred ways, and may subsist a considerable time, without our reflecting on the happiness or misery of their objects; which clearly proves, that these desires are not the same with love and hatred, nor make any essential part of them.

We may, therefore, infer, that benevolence and anger are passions different from love and hatred, and only conjoin'd with them, by the original constitution of the mind. As nature has given to the body certain appetites and inclinations, which she encreases, diminishes, or changes according to the situation of the fluids or solids; she has proceeded in the same manner with the mind.

According as we are possess'd with love or hatred, the correspondent desire of the happiness or misery of the person, who is the object of these passions, arises in the mind, and varies with each variation of these opposite passions. This order of things, abstractedly consider'd, is not necessary. Love and hatred might have been unattended with any such desires, or their particular connexion might have been entirely revers'd. If nature had so pleas'd, love might have had the same effect as hatred, and hatred as love. I see no contradiction in supposing a desire of producing misery annex'd to love, and of happiness to hatred. If the sensation of the passion and desire be opposite, nature cou'd have alter'd the sensation without altering the tendency of the desire, and by that means made them compatible with each other.

SECT. VII

Of compassion

But tho' the desire of the happiness or misery of others, according to the love or hatred we bear them, be an arbitrary and original instinct implanted in our nature, we find it may be counterfeited on many occasions, and may arise from secondary principles. Pity is a concern for, and malice a joy in the misery of others, without any friendship or enmity to occasion this concern or joy. We pity even strangers, and such as are perfectly indifferent to us: And if our ill-will to another proceed from any harm or injury, it is not, properly speaking, malice, but revenge. But if we examine these affections of pity and malice we shall find them to be secondary ones, arising from original affections, which are varied by some particular turn of thought and imagination.

'Twill be easy to explain the passion of pity, from the precedent reasoning concerning sympathy. We have a lively idea of every thing related to us. All human creatures are related to us by resemblance.

Their persons, therefore, their interests, their passions, their pains and pleasures must strike upon us in a lively manner, and produce an emotion similar to the original one; since a lively idea is easily converted into an impression. If this be true in general, it must be more so of affliction and sorrow. These have always a stronger and more lasting influence than any pleasure or enjoyment. A spectator of a tragedy[17] passes thro' a long train of grief, terror, indignation, and other affections, which the poet represents in the persons he introduces. As many tragedies end happily, and no excellent one can be compos'd without some reverses of fortune, the spectator must sympathize with all these changes, and receive the fictitious joy as well as every other passion. Unless, therefore, it be asserted, that every distinct passion is communicated by a distinct original quality, and is not deriv'd from the general principle of sympathy above-explain'd, it must be allow'd, that all of them arise from that principle. To except any one in particular must appear highly unreasonable. As they are all first present in the mind of one person, and afterwards appear in the mind of another; and as the manner of their appearance, first as an idea, then as an impression, is in every case the same, the transition must arise from the same principle. I am at least sure, that this method of reasoning wou'd be consider'd as certain, either in natural philosophy or common life.

Add to this, that pity depends, in a great measure, on the contiguity, and even sight of the object; which is a proof, that 'tis deriv'd from the imagination. Not to mention that women and children are most subject to pity, as being most guided by that faculty. The same infirmity, which makes them faint at the sight of a naked sword, tho' in the hands of their best friend, makes them pity extremely those, whom they find in any grief or affliction. Those philosophers, who derive this passion from I know not what subtle reflections on the instability of fortune, and our being liable to the same miseries we behold, will find this observation contrary to them among a great many others, which it were easy to produce.

There remains only to take notice of a pretty remarkable phaenomenon of this passion; which is, that the communicated

passion of sympathy sometimes acquires strength from the weakness of its original, and even arises by a transition from affections, which have no existence. Thus when a person obtains any honourable office, or inherits a great fortune, we are always the more rejoic'd for his prosperity, the less sense he seems to have of it, and the greater equanimity and indifference he shews in its enjoyment. In like manner a man, who is not dejected by misfortunes, is the more lamented on account of his patience; and if that virtue extends so far as utterly to remove all sense of uneasiness, it still farther encreases our compassion. When a person of merit falls into what is vulgarly esteem'd a great misfortune, we form a notion of his condition; and carrying our fancy from the cause to the usual effect, first conceive a lively idea of his sorrow, and then feel an impression of it, entirely over-looking that greatness of mind, which elevates him above such emotions, or only considering it so far as to encrease our admiration, love and tenderness for him. We find from experience, that such a degree of passion is usually connected with such a misfortune; and tho' there be an exception in the present case, yet the imagination is affected by the general rule, and makes us conceive a lively idea of the passion, or rather feel the passion itself, in the same manner, as if the person were really actuated by it. From the same principles we blush for the conduct of those, who behave themselves foolishly before us; and that tho' they shew no sense of shame, nor seem in the least conscious of their folly. All this proceeds from sympathy; but 'tis of a partial kind, and views its objects only on one side, without considering the other, which has a contrary effect, and wou'd entirely destroy that emotion, which arises from the first appearance.

We have also instances, wherein an indifference and insensibility under misfortune encreases our concern for the misfortunate, even tho' the indifference proceed not from any virtue and magnanimity. 'Tis an aggravation of a murder, that it was committed upon persons asleep and in perfect security; as historians readily observe of any infant prince, who is captive in the hands of his enemies, that he is the more worthy of compassion the less sensible he is of his miserable condition. As we ourselves are here acquainted with the wretched situation of the person, it gives us a lively idea and sensation of sorrow, which is the passion that generally attends it; and this idea becomes still more lively, and the sensation more violent by a contrast with that security and indifference, which we observe in the person himself. A contrast of any kind never fails to affect the imagination,

especially when presented by the subject; and 'tis on the imagination that pity entirely depends.¹²

SECT. VIII

Of malice and envy

We must now proceed to account for the passion of malice, which imitates the effects of hatred, as pity does those of love; and gives us a joy in the sufferings and miseries of others, without any offence or injury on their part.

So little are men govern'd by reason in their sentiments and opinions, that they always judge more of objects by comparison than from their intrinsic worth and value. When the mind considers, or is accustom'd to, any degree of. perfection, whatever falls short of it, tho' really esteemable, has notwithstanding the same effect upon the passions; as what is defective and ill. This is an original quality of the soul, and similar to what we have every day experience of in our bodies. Let a man heat one hand and cool the other; the same water will, at the same time, seem both hot and cold, according to the disposition of the different organs. A small degree of any quality, succeeding a greater, produces the same sensation, as if less than it really is, and even sometimes as the opposite quality. Any gentle pain, that follows a violent one, seems as nothing, or rather becomes a pleasure; as on the other hand a violent pain, succeeding a gentle one, is doubly grievous and uneasy.

This no one can doubt of with regard to our passions and sensations. But there may arise some difficulty with regard to our ideas and objects. When an object augments or diminishes to the eye or imagination from a comparison with others, the image and idea of the object are still the same, and are equally extended in the retina^[18], and in the brain or organ of perception. The eyes refract the rays of light, and the optic nerves convey the images to the brain in the very same manner, whether a great or small object has preceded; nor does even the imagination alter the dimensions of its object on account of a comparison with others. The question then is, how from the same impression and the same idea we can form such different judgments concerning the same object, and at one time admire its bulk, and at another despise its littleness. This variation in our judgments must certainly proceed from a variation in some

perception; but as the variation lies not in the immediate impression or idea of the object, it must lie in some other impression, 'that accompanies it.

In order to explain this matter, I shall just touch upon two principles, one of which shall be more fully explain'd in the progress of this treatise; the other has been already accounted for. I believe it may safely be establish'd for a general maxim, that no object is presented to the senses, nor image form'd in the fancy, but what is accompany'd with some emotion or movement of spirits proportion'd to it; and however custom may make us insensible of this sensation and cause us to confound it with the object or idea, 'twill be easy, by careful and exact experiments, to separate and distinguish them. For to instance only in the cases of extension and number; 'tis evident, that any very bulky object, such as the ocean, an extended plain, a vast chain of mountains, a wide forest: or any very numerous collection of objects, such as an army, a fleet, a crowd, excite in the mind a sensible emotion; and that the admiration, which arises on the appearance of such objects, is one of the most lively pleasures, which human nature is capable of enjoying. Now as this admiration encreases or diminishes by the encrease or diminution of the objects, we may conclude, according to our foregoing¹³ principles, that 'tis a compound effect, proceeding from the conjunction of the several effects, which arise from each part of the cause. Every part, then, of extension, and every unite of number has a separate emotion attending it; and tho' that emotion be not always agreeable, yet by its conjunction with others, and by its agitating the spirits to a just pitch, it contributes to the production of admiration, which is always agreeable. If this be allow'd with respect to extension and number, we can make no difficulty with respect to virtue and vice, wit and folly, riches and poverty, happiness and misery, and other objects of that kind, which are always attended with an evident emotion.

The second principle I shall take notice of is that of our adherence to general rules; which has such a mighty influence on the actions and understanding, and is able to impose on the very senses.

When an object is found by-experience to be always accompany'd with another; whenever the first object appears, tho' chang'd in very material circumstances; we naturally fly to the conception of the second, and form an idea of it in as lively and strong

a manner, as if we had infer'd its existence by the justest and most authentic conclusion of our understanding. Nothing can undeceive us, not even our senses, which, instead of correcting this false judgment, are often perverted by it, and seem to authorize its errors.

The conclusion I draw from these two principles, join'd to the influence of comparison above-mention'd, is very short and decisive. Every object is attended with some emotion proportion'd to it; a great object with a great emotion, a small object with a small emotion. A great object, therefore, succeeding a small one makes a great emotion succeed a small one. Now a great emotion succeeding a small one becomes still greater, and rises beyond its ordinary proportion. But as there is a certain degree of an emotion, which commonly attends every magnitude of an object; when the emotion encreases, we naturally imagine that the object has likewise encreas'd. The effect conveys our view to its usual cause, a certain degree of emotion to a certain magnitude of the object; nor do we consider, that comparison may change the emotion without changing anything in the object. Those who are acquainted with the metaphysical part of optics^[19] and know how we transfer the judgments and conclusions of the understanding to the senses, will easily conceive this whole operation.

But leaving this new discovery of an impression, that secretly attends every idea; we must at least allow of that principle, from whence the discovery arose, that objects appear greater or less by a comparison with others. We have so many instances of this, that it is impossible we can dispute its veracity; and 'tis from this principle I derive the passions of malice and envy.

'Tis evident we must receive a greater or less satisfaction or uneasiness from reflecting on our own condition and circumstances, in proportion as they appear more or less fortunate or unhappy, in proportion to the degrees of riches, and power, and merit, and reputation, which we think ourselves possess of. Now as we seldom judge of objects from their intrinsic value, but form our notions of them from a comparison with other objects; it follows, that according as we observe a greater or less share of happiness or misery in others, we must make an estimate of our own, and feel a consequent pain or pleasure. The misery of another gives us a more lively idea of our happiness, and his happiness of our misery. The former, therefore, produces delight; and the latter uneasiness.

Here then is a kind of pity reverst, or contrary sensations arising in the beholder, from those which are felt by the person, whom he considers. In general we may observe, that in all kinds of comparison an object makes us always receive from another, to which it is compar'd, a sensation contrary to what arises from itself in its direct and immediate survey. A small object makes a great one appear still greater. A great object makes a little one appear less. Deformity of itself produces uneasiness; but makes us receive new pleasure by its contrast with a beautiful object, whose beauty is augmented by it; as on the other hand, beauty, which of itself produces pleasure, makes us receive a new pain by the contrast with any thing ugly, whose deformity it augments. The case, therefore, must be the same with happiness and misery. The direct survey of another's pleasure naturally gives us pleasure, and therefore produces pain when compar'd with our own. His pain, consider'd in itself, is painful to us, but augments the idea of our own happiness, and gives us pleasure.

Nor will it appear strange, that we may feel a reverst sensation from the happiness and misery of others; since we find the same comparison may give us a kind of malice against ourselves, and make us rejoice for our pains, and grieve for our pleasures. Thus the prospect of past pain is agreeable, when we are satisfy'd with our present condition; as on the other hand our past pleasures give us uneasiness, when we enjoy nothing at present equal to them. The comparison being the same, as when we reflect on the sentiments of others, must be attended with the same effects.

Nay a person may extend this malice against himself, even to his present fortune, and carry it so far as designedly to seek affliction, and increase his pains and sorrows. This may happen upon two occasions. First, Upon the distress and misfortune of a friend, or person dear to him. Secondly, Upon the feeling any remorse for a crime, of which he has been guilty. 'Tis from the principle of comparison that both these irregular appetites for evil arise. A person, who indulges himself in any pleasure, while his friend lies under affliction, feels the reflected uneasiness from his friend more sensibly by a comparison with the original pleasure, which he himself enjoys. This contrast, indeed, ought also to inliven the present pleasure. But as grief is here suppos'd to be the predominant passion, every addition falls to that side, and is swallow'd up in it, without operating in the least upon the contrary affection. 'Tis the same case with those penances, which men inflict on

themselves for their past sins and failings. When a criminal reflects on the punishment he deserves, the idea of it is magnify'd by a comparison with his present ease and satisfaction; which forces him, in a manner, to seek uneasiness, in order to avoid so disagreeable a contrast.

This reasoning will account for the origin of envy as well as of malice. The only difference betwixt these passions lies in this, that envy is excited by some present enjoyment of another, which by comparison diminishes our idea of our own: Whereas malice is the unprovok'd desire of producing evil to another, in order to reap a pleasure from the comparison. The enjoyment, which is the object of envy, is commonly superior to our own. A superiority naturally seems to overshadow us, and presents a disagreeable comparison. But even in the case of an inferiority, we still desire a greater distance, in order to augment, still more the idea of ourself. When this distance diminishes, the comparison is less to our advantage; and consequently gives us less pleasure, and is even disagreeable. Hence arises that species of envy, which men feel, when they perceive their inferiors approaching or overtaking them in the pursuits of glory or happiness. In this envy we may see the effects of comparison twice repeated. A man, who compares himself to his inferior, receives a pleasure from the comparison: And when the inferiority decreases by the elevation of the inferior, what shou'd only have been a decrease of pleasure, becomes a real pain, by a new comparison with its preceding condition.

'Tis worthy of observation concerning that envy, which arises from a superiority in others, that 'tis not the great disproportion betwixt ourself and another, which produces it; but on the contrary, our proximity. A common soldier bears no such envy to his general as to his sergeant or corporal; nor does an eminent writer meet with so great jealousy in common hackney scriblers, as in authors, that more nearly approach him. It may, indeed, be thought, that the greater the disproportion is, the greater must be the uneasiness from the comparison. But we may consider on the other hand, that the great disproportion cuts off the relation, and either keeps us from comparing ourselves with what is remote from us, or diminishes the effects of the comparison. Resemblance and proximity always produce a relation of ideas; and where you destroy these ties, however other accidents may bring two ideas together; as they

have no bond or connecting quality to join them in the imagination; 'tis impossible they can remain long united, or have any considerable influence on each other.

I have observ'd in considering the nature of ambition, that the great feel a double pleasure in authority from the comparison of their own condition with that of their slaves; and that this comparison has a double influence, because 'tis natural, and presented by the subject. When the fancy, in the comparison of objects, passes not easily from the one object to the other, the action of the mind is, in a great measure, broke, and the fancy, in considering the second object, begins, as it were, upon a new footing. The impression, which attends every object, seems not greater in that case by succeeding a less of the same kind; but these two impressions are distinct, and produce their distinct effects, without any communication together. The want of relation in the ideas breaks the relation of the impressions, and by such a separation prevents their mutual operation and influence.

To confirm this we may observe, that the proximity in the degree of merit is not alone sufficient to give rise to envy, but must be assisted by other relations. A poet is not apt to envy a philosopher, or a poet of a different kind, of a different nation, or of a different age. All these differences prevent or weaken the comparison, and consequently the passion.

This too is the reason, why all objects appear great or little, merely by a comparison with those of the same species. A mountain neither magnifies nor diminishes a horse in our eyes; but when a Flemish and a Welsh horse are seen together, the one appears greater and the other less, than when view'd apart.

From the same principle we may account for that remark of historians, that any party in a civil war always choose to call in a foreign enemy at any hazard rather than submit to their fellowcitizens.

Guicciardin[20] applies this remark to the wars in Italy, where the relations betwixt the different states are, properly speaking, nothing but of name, language, and contiguity. Yet even these relations, when join'd with superiority, by making the comparison more natural, make it likewise more grievous, and cause men to search for some other superiority, which may be attended with

no relation, and by that means may have a less sensible influence on the imagination. The mind quickly perceives its several advantages and disadvantages; and finding its situation to be most uneasy, where superiority is conjoin'd with other relations, seeks its repose as much as possible, by their separation, and by breaking that association of ideas, which renders the comparison so much more natural and efficacious. When it cannot break the association[21], it feels a stronger desire to remove the superiority; and this is the reason why travellers are commonly so lavish of their praises to the Chinese and Persians, at the same time, that they depreciate those neighbouring nations, which may stand upon a foot of rivalry with their native country.

These examples from history and common experience are rich and curious; but we may find parallel ones in the arts, which are no less remarkable. Shou'd an author compose a treatise, of which one part was serious and profound, another light and humorous, every one wou'd condemn so strange a mixture, and wou'd accuse him of the neglect of all rules of art and criticism. These rules of art are founded on the qualities of human nature; and the quality of human nature, which requires a consistency in every performance. is that which renders the mind incapable of passing in a moment from one passion and disposition to a quite different one. Yet this makes us not blame Mr Prior[22] for joining his *Alma* and his *Solomon* in the same volume; tho' that admirable poet has succeeded perfectly well in the gaiety of the one, as well as in the melancholy of the other. Even supposing the reader shou'd peruse these two compositions without any interval, he wou'd feel little or no difficulty in the change of passions: Why, but because he considers these performances as entirely different, and by this break in the ideas, breaks the progress of the affections, and hinders the one from influencing or contradicting the other?

An heroic and burlesque design, united in one picture, wou'd be monstrous; tho' we place two pictures of so opposite a character in the same chamber, and even close by each other, without any scruple or difficulty.

In a word, no ideas can affect each other, either by comparison, or by the passions they separately produce, unless they be united together by some relation, which may cause an easy transition of the

ideas, and consequently of the emotions or impressions, attending the ideas; and may preserve the one impression in the passage of the imagination to the object of the other. This principle is very remarkable, because it is analogous to what we have observ'd both concerning the understanding and the passions. Suppose two objects to be presented to me, which are not connected by any kind of relation. Suppose that each of these objects separately produces a passion; and that these two passions are in themselves contrary: We find from experience, that the want of relation in the objects or ideas hinders the natural contrariety of the passions, and that the break in the transition of the thought removes the affections from each other, and prevents their opposition. 'Tis the same case with comparison; and from both these phaenomena we may safely conclude, that the relation of ideas must forward the transition of impressions; since its absence alone is able to prevent it, and to separate what naturally shou'd have operated upon each other. When the absence of an object or quality removes any usual or natural effect, we may certainly conclude that its presence contributes to the production of the effect.

SECT. IX

Of the mixture of benevolence and anger with compassion and malice

Thus we have endeavour'd to account for pity and malice. Both these affections arise from the imagination, according to the light, in which it places its object. When our fancy considers directly the sentiments of others, and enters deep into them, it makes us sensible of all the passions it surveys, but in a particular manner of grief or sorrow. On the contrary, when we compare the sentiments of others to our own, we feel a sensation directly opposite to the original one, viz. a joy from the grief of others, and a grief from their joy.

But these are only the first foundations of the affections of pity and malice. Other passions are afterwards confounded with them. There is always a mixture of love or tenderness with pity, and of hatred or anger with malice. But it must be confess'd, that this mixture seems at first sight to be contradictory to my system. For as pity is an uneasiness, and malice a joy, arising from the misery of others, pity shou'd naturally, as in all other cases, produce hatred; and malice, love. This contradiction I endeavour to reconcile, after the

following manner.

In order to cause a transition of passions, there is requir'd a double relation of impressions and ideas, nor is one relation sufficient to produce this effect. But that we may understand the full force of this double relation, we must consider, that 'tis not the present sensation alone or momentary pain or pleasure, which determines the character of any passion, but the whole bent or tendency of it from the beginning to the end. One impression may be related to another, not only when their sensations are resembling, as we have all along suppos'd in the preceding cases; but also when their im pulses or directions are similar and correspondent. This cannot take place with regard to pride and humility; because these are only pure sensations, without any direction or tendency to action.

We are, therefore, to look for instances of this peculiar relation of impressions only in such affections, as are attended with a certain appetite or desire; such as those of love and hatred, Benevolence or the appetite, which attends love, is a desire of the happiness of the person belov'd, and an aversion to his misery; as anger or the appetite, which attends hatred, is a desire of the misery of the person hated, and an aversion to his happiness. A desire, therefore, of the happiness of another, and aversion to his misery, are similar to benevolence; and a desire of his misery and aversion to his happiness are correspondent to anger. Now pity is a desire of happiness to another, and aversion to his misery; as malice is the contrary appetite. Pity, then, is related to benevolence; and malice to anger: And as benevolence has been already found to be connected with love, by a natural and original quality, and anger with hatred; 'tis by this chain the passions of pity and malice are connected with love and hatred.

This hypothesis is founded on sufficient [\[23\]](#) experience. A man, who from any motives has entertain'd a resolution of performing an action, naturally runs into every other view or motive, which may fortify that resolution, and give it authority and influence on the mind. To confirm us in any design, we search for motives drawn from interest, from honour, from duty. What wonder, then, that pity and benevolence, malice, and anger, being the same desires arising from different principles, shou'd so totally mix together as to be undistinguishable? As to the connexion betwixt benevolence and love, anger and hatred, being original and primary, it admits of no

difficulty.

We may add to this another experiment, viz, that benevolence and anger, and consequently love and hatred, arise when our happiness or misery have any dependance on the happiness or misery of another person, without any farther relation. I doubt not but this experiment will appear so singular as to excuse us for stopping a moment to consider it.

Suppose, that two persons of the same trade shou'd seek employment in a town, that is not able to maintain both, 'tis plain the success of one is perfectly incompatible with that of the other, and that whatever is for the interest of either is contrary to that of his rival, and so vice versa. Suppose again, that two merchants, tho' living in different parts of the world, shou'd enter into co-partnership together, the advantage or loss of one becomes immediately the advantage or loss of his partner, and the same fortune necessarily attends both. Now 'tis evident, that in the first case, hatred always follows upon the contrariety of interests; as in the second, love arises from their union. Let us consider to what principle we can ascribe these passions.

'Tis plain they arise not from the double relations of impressions and ideas, if we regard only the present sensation. For takeing the first case of rivalship; tho' the pleasure and advantage of an antagonist necessarily causes my pain and loss, yet to counterballance this, his pain and loss causes my pleasure and advantage; and supposing him to be unsuccessful, I may by this means receive from him a superior degree of satisfaction. In the same manner the success of a partner rejoices me, but then his misfortunes afflict me in an equal proportion; and 'tis easy to imagine, that the latter sentiment may in many cases preponderate. But whether the fortune of a rival or partner be good or bad, I always hate the former and love the latter.

This love of a partner cannot proceed from the relation or connexion betwixt us; in the same manner as I love a brother or countryman. A rival has almost as close a relation to me as a partner.

For as the pleasure of the latter causes my pleasure, and his pain my pain; so the pleasure of the former causes my pain, and his pain my pleasure. The connexion, then, of cause and effect is the same in both cases; and if in the one case, the cause and effect have a farther relation of resemblance, they have that of contrariety in the other;

which, being also a species of resemblance, leaves the matter pretty equal.

The only explication, then, we can give of this phaenomenon is deriv'd from that principle of a parallel direction above-mention'd.

Our concern for our own interest gives us a pleasure in the pleasure, and a pain in the pain of a partner, after the same manner as by sympathy we feel a sensation correspondent to those, which appear in any person, who is present with us. On the other hand, the same concern for our interest makes us feel a pain in the pleasure, and a pleasure in the pain of a rival; and in short the same contrariety of sentiments as arises from comparison and malice. Since, therefore, a parallel direction of the affections, proceeding from interest, can give rise to benevolence or anger, no wonder the same parallel direction, deriv'd from sympathy and from comparison, shou'd have the same effect.

In general we may observe, that 'tis impossible to do good to others, from whatever motive, without feeling some touches of kindness and good-will towards 'em; as the injuries we do, not only cause hatred in the person, who suffers them, but even in ourselves.

These phaenomena, indeed, may in part be accounted for from other principles. But here there occurs a considerable objection, which 'twill be necessary to examine before we proceed any farther. I have endeavour'd to prove, that power and riches, or poverty and meanness; which give rise to love or hatred, without producing any original pleasure or uneasiness; operate upon us by means of a secondary sensation deriv'd from a sympathy with that pain or satisfaction, which they produce in the person, who possesses them.

From a sympathy with his pleasure there arises love; from that with his uneasiness, hatred. But 'tis a maxim, which I have just now establish'd, and which is absolutely necessary to the explication of the phaenomena of pity and malice, 'That 'tis not the present sensation or momentary pain or pleasure, which determines the character of any passion, but the general bent or tendency of it from the beginning to the end.' For this reason, pity or a sympathy with pain produces love, and that because it interests us in the fortunes of others, good or bad, and gives us a secondary sensation correspondent to the primary; in which it has the same influence with love and benevolence. Since then

this rule holds good in one case, why does it not prevail throughout, and why does sympathy in uneasiness ever produce any passion beside good-will and kindness?

Is it becoming a philosopher to alter his method of reasoning, and run from one principle to its contrary, according to the particular phaenomenon, which he wou'd explain?

I have mention'd two different causes, from which a transition of passion may arise, viz, a double relation of ideas and impressions, and what is similar to it, a conformity in the tendency and direction of any two desires, which arise from different principles. Now I assert, that when a sympathy with uneasiness is weak, it produces hatred or contempt by the former cause; when strong, it produces love or tenderness by the latter. This is the solution of the foregoing difficulty, which seems so urgent; and this is a principle founded on such evident arguments, that we ought to have establish'd it, even tho' it were not necessary to the explication of any phaenomenon.

'Tis certain, that sympathy is not always limited to the present moment, but that we often feel by communication the pains and pleasures of others, which are not in being, and which we only anticipate by the force of imagination. For supposing I saw a person perfectly unknown to me, who, while asleep in the fields, was in danger of being trod under foot by horses, I shou'd immediately run to his assistance; and in this I shou'd be actuated by the same principle of sympathy, which makes me concern'd for the present sorrows of a stranger. The bare mention of this is sufficient. Sympathy being nothing but a lively idea converted into an impression, 'tis evident, that, in considering the future possible or probable condition of any person, we may enter into it with so vivid a conception as to make it our own concern; and by that means be sensible. of pains and pleasures, which neither belong to ourselves, nor at the present instant have any real existence.

But however we may look forward to the future in sympathizing with any person, the extending of our sympathy depends in a great measure upon our sense of his present condition. 'Tis a great effort of imagination, to form such lively ideas even of the present sentiments of others as to feel these very sentiments; but 'tis impossible we cou'd extend this sympathy to the future, without being aided by some circumstance in the present, which strikes upon us in a lively manner.

When the present misery of another has any strong influence upon me, the vivacity of the conception is not confin'd merely to its immediate object, but diffuses its influence over all the related ideas, and gives me a lively notion of all the circumstances of that person, whether past, present, or future; possible, probable or certain. By means of this lively notion I am interested in them; take part with them; and feel a sympathetic motion in my breast, conformable to whatever I imagine in his. If I diminish the vivacity of the first conception, I diminish that of the related ideas; as pipes can convey no more water than what arises at the fountain. By this diminution I destroy the future prospect, which is necessary to interest me perfectly in the fortune of another. I may feel the present impression, but carry my sympathy no farther, and never transfuse the force of the first conception into my ideas of the related objects.

If it be another's misery, which is presented in this feeble manner, I receive it by communication, and am affected with all the passions related to it: But as I am not so much interested as to concern myself in his good fortune, as well as his bad, I never feel the extensive sympathy, nor the passions related to it.

Now in order to know what passions are related to these different kinds of sympathy, we must consider, that benevolence is an original pleasure arising from the pleasure of the person belov'd, and a pain proceeding from his pain: From which correspondence of impressions there arises a subsequent desire of his pleasure, and aversion to his pain. In order, then, to make a passion run parallel^[24] with benevolence, 'tis requisite we shou'd feel these double impressions, correspondent to those of the person, whom we consider; nor is any one of them alone sufficient for that purpose.

When we sympathize only with one impression, and that a painful one, this sympathy is related to anger and to hatred, upon account of the uneasiness it conveys to us. But as the extensive or limited sympathy depends upon the force of the first sympathy; it follows, that the passion of love or hatred depends upon the same principle. A strong impression, when communicated, gives a double tendency of the passions; which is related to benevolence and love by a similarity of direction; however painful the first impression might have been.

A weak impression, that is painful, is related to anger and hatred by the resemblance of sensations. Benevolence, therefore, arises from

a great degree of misery, or any degree strongly sympathiz'd with: Hatred or contempt from a small degree, or one weakly sympathiz'd with; which is the principle I intended to prove and explain.

Nor have we only our reason to trust to for this principle, but also experience. A certain degree of poverty produces contempt; but a degree beyond causes compassion and good-will. We may under-value a peasant or servant; but when the misery of a beggar appears very great, or is painted in very lively colours, we sympathize with him in his afflictions; and feel in our heart evident touches of pity and benevolence. The same object causes contrary passions according to its different degrees. The passions, therefore, must depend upon principles, that operate in such certain degrees, according to my hypothesis. The encrease of the sympathy has evidently the same effect as the encrease of the misery.

A barren or desolate country always seems ugly and disagreeable, and commonly inspires us with contempt for the inhabitants. This deformity, however, proceeds in a great measure from a sympathy with the inhabitants, as has been already observ'd; but it is only a weak one, and reaches no farther than the immediate sensation, which is disagreeable. The view of a city in ashes conveys benevolent sentiments; because we there enter so deep into the interests of the miserable inhabitants, as to wish for their prosperity, as well as feel their adversity.

But tho' the force of the impression generally produces pity and benevolence, 'tis certain, that by being carry'd too far it ceases to have that effect. This, perhaps, may be worth our notice. When the uneasiness is either small in itself, or remote from us, it engages not the imagination, nor is able to convey an equal concern for the future and contingent good, as for the present and real evil. Upon its acquiring greater force, we become so interested in the concerns of the person, as to be sensible both of his good and had fortune; and from that compleat sympathy there arises pity and benevolence.

But 'twill easily be imagin'd, that where the present evil strikes with more than ordinary force, it may entirely engage our attention, and prevent that double sympathy, above-mention'd. Thus we find, that tho' every one, but especially women, are apt to contract a kindness for criminals, who go to the scaffold, and readily imagine them to be uncommonly handsome and wellshaped; yet one, who is

present at the cruel execution of the rack, feels no such tender emotions; but is in a manner overcome with horror, and has no leisure to temper this uneasy sensation by any opposite sympathy.

But the instance, which makes the most clearly for my hypothesis, is that wherein by a change of the objects we separate the double sympathy even from a midling degree of the passion; in which case we find, that pity, instead of producing love and tenderness as usual, always gives rise to the contrary affection. When we observe a person in misfortunes, we are affected with pity and love; but the author of that misfortune becomes the object of our strongest hatred, and is the more detested in proportion to the degree of our compassion. Now for what reason shou'd the same passion of pity produce love to the person, who suffers the misfortune, and hatred to the person, who causes it; unless it be because in the latter case the author bears a relation only to the misfortune; whereas in considering the sufferer we carry our view on every side, and wish for his prosperity, as well as are sensible of his affliction?

I shall just observe, before I leave the present subject, that this phaenomenon of the double sympathy, and its tendency to cause love, may contribute to the production of the kindness, which we naturally bear our relations and acquaintance. Custom and relation make us enter deeply into the sentiments of others; and whatever fortune we suppose to attend them, is render'd present to us by the imagination, and operates as if originally our own. We rejoice in their pleasures, and grieve for their sorrows, merely from the force of sympathy. Nothing that concerns them is indifferent to us; and as this correspondence of sentiments is the natural attendant of love, it readily produces that affection.

SECT. X

Of respect and contempt[25]

There now remains only to explain the passion of respect and contempt, along with the amorous affection, in. order to understand all the passions which have any mixture of love or hatred. Let us begin with respect and contempt.

In considering the qualities and circumstances of others, we may either regard them as they really are in themselves; or may make a

comparison betwixt them and our own qualities and circumstances; or may join these two methods of consideration. The good qualities of others, from the first point of view, produce love; from the second, humility; and from the third, respect; which is a mixture of these two passions. Their bad qualities, after the same manner, cause either hatred, or pride, or contempt, according to the light in which we survey them.

That there is a mixture of pride in contempt, and of humility in respect, is, I think, too evident, from their very feeling or appearance, to require any particular proof. That this mixture arises from a tacit comparison of the person contemn'd or respected with ourselves is no less evident. The same man may cause either respect, love, or contempt by his condition and talents, according as the person, who considers him, from his inferior becomes his equal or superior. In changing the point of view, tho' the object may remain the same, its proportion to ourselves entirely alters; which is the cause of an alteration in the passions. These passions, therefore, arise from our observing the proportion; that is, from a comparison.

I have already observ'd, that the mind has a much stronger propensity [\[26\]](#) pride than to humility, and have endeavour'd, from the principles of human nature, to assign a cause for this phaenomenon. Whether my reasoning be receiv'd or not, the phaenomenon is undisputed, and appears in many instances. Among the rest, 'tis the reason why there is a much greater mixture of pride in contempt, than of humility in respect, and why we are more elevated with the view of one below us, than mortify'd with the presence of one above us. Contempt or scorn has so strong a tincture of pride, that there scarce is any other passion discernable: Whereas in esteem or respect, love makes a more considerable ingredient than humility. The passion of vanity is so prompt, that it rouzes at the least call; while humility requires a stronger impulse to make it exert itself.

But here it may reasonably be ask'd, why this mixture takes place only in some cases, and appears not on every occasion. All those objects, which cause love, when plac'd on another person, are the causes of pride, when transfer'd to ourselves; and consequently ought to be causes of humility, as well as love, while they belong to others, and are only compar'd to those, which we ourselves possess.

In like manner every quality, which, by being directly

consider'd, produces hatred, ought always to give rise to pride by comparison, and by a mixture of these passions of hatred and pride ought to excite contempt or scorn. The difficulty then is, why any objects ever cause pure love or hatred, and produce not always the mixt passions of respect and contempt.

I have suppos'd all along, that the passions of love and pride, and those of humility and hatred are similar in their sensations, and that the two former are always agreeable, and the two latter painful. But tho' this be universally true, 'tis observable, that the two agreeable, as well as the two painful passions, have some difference, and even contrarieties, which distinguish them. Nothing invigorates and exalts the mind equally with pride and vanity; tho' at the same time love or tenderness is rather found to weaken and infeeble it.

The same difference is observable betwixt the uneasy passions. Anger and hatred bestow a new force on all our thoughts and actions; while humility and shame deject and discourage us. Of these qualities of the passions, 'twill be necessary to form a distinct idea. Let us remember, that pride and hatred invigorate the soul; and love and humility infeeble it.

From this it follows, that tho' the conformity betwixt love and hatred in the agreeableness of their sensation makes them always be excited by the same objects, yet this other contrariety is the reason, why they are excited in very different degrees. Genius and learning are pleasant and magnificent objects, and by both these circumstances are adapted to pride and vanity; but have a relation to love by their pleasure only. Ignorance and simplicity are disagreeable and mean, which in the same manner gives them a double connexion with humility, and a single one with hatred.

We may, therefore, consider it as certain, that tho' the same object always produces love and pride, humility and hatred, according to its different situations, yet it seldom produces either the two former or the two latter passions, in the same proportion.

'Tis here we must seek for a solution of the difficulty abovemention'd, why any object ever excites pure love or hatred, and does not always produce respect or contempt, by a mixture of humility or pride. No quality in another gives rise to humility by comparison, unless it wou'd have produc'd pride by being plac'd in

ourselves; and vice versa no object excites pride by comparison, unless it wou'd have produc'd humility by the direct survey. This is evident, objects always produce by comparison a sensation directly contrary to their original one. Suppose, therefore, an object to be presented, which is peculiarly fitted to produce love, but imperfectly to excite pride; this object, belonging to another, gives rise directly to a great degree of love, but to a small one of humility by comparison; and consequently that latter passion is scarce felt in the compound, nor is able to convert the love into respect. This is the case with good nature, good humour, facility, generosity, beauty, and many other qualities.

These have a peculiar aptitude to produce love in others; but not so great a tendency to excite pride in ourselves: For which reason the view of them, as belonging to another person, produces pure love, with but a small mixture of humility and respect. 'Tis easy to extend the same reasoning to the opposite passions.

Before we leave this subject, it may not be amiss to account for a pretty curious phaenomenon, viz, why we commonly keep at a distance such as we contemn, and allow not our inferiors to approach too near even in place and situation. It has already been observ'd, that almost every kind of idea is attended with some emotion, even the ideas of number and extension, much more those of such objects as are esteem'd of consequence in life, and fix our attention. 'Tis not with entire indifference we can survey either a rich man or a poor one, but must feel some faint touches at least, of respect in the former case, and of contempt in the latter. These two passions are contrary to each other; but in order to make this contrariety be felt, the objects must be someway related; otherwise the affections are totally separate and distinct, and never encounter. The relation takes place wherever the persons become contiguous; which is a general reason why we are uneasy at seeing such disproportion'd objects, as a rich man and a poor one, a nobleman and a porter, in that situation.

This uneasiness, which is common to every spectator, must be more sensible to the superior [27]; and that because the near approach of the inferior is regarded as a piece of illbreeding, and shews that he is not sensible of the disproportion, and is no way affected by it.

A sense of superiority in another breeds in all men an inclination to keep themselves at a distance from him, and determines them to

redouble the marks of respect and reverence, when they are oblig'd to approach him; and where they do not observe that conduct, 'tis a proof they are not sensible of his superiority. From hence too it proceeds, that any great difference in the degrees of any quality is call'd a distance by a common metaphor, which, however trivial it may appear, is founded on natural principles of the imagination.

A great difference inclines us to produce a distance. The ideas of distance and difference are, therefore, connected together.

Connected ideas are readily taken for each other; and this is in general the source of the metaphor, as we shall have occasion to observe afterwards.

SECT. XI

Of the amorous passion, or love betwixt the sexes

Of all the compound passions, which proceed from a mixture of love and hatred with other affections, no one better deserves our attention, than that love, which arises betwixt the sexes, as well on account of its force and violence, as those curious principles of philosophy, for which it affords us an uncontestable argument. 'Tis plain, that this affection, in its most natural state, is deriv'd from the conjunction of three different impressions or passions, viz. The pleasing sensation arising from beauty; the bodily appetite for generation; and a generous kindness or good-will. The origin of kindness from beauty may be explain'd from the foregoing reasoning.

The question is how the bodily appetite is excited by it.

The appetite of generation, when confin'd to a certain degree, is evidently of the pleasant kind, and has a strong connexion with all the agreeable emotions. Joy, mirth, vanity, and kindness are all incentives to this desire; as well as music, dancing, wine, and good cheer. On the other hand, sorrow, melancholy, poverty, humility are destructive of it. From this quality 'tis easily conceiv'd why it shou'd be connected with the sense of beauty.

But there is another principle that contributes to the same effect. I have observ'd that the parallel direction of the desires is a real relation, and no less than a resemblance in their sensation, produces a connexion among them. That we may fully comprehend the extent of

this relation, we must consider, that any principal desire may be attended with subordinate ones, which are connected with it, and to which if other desires are parallel, they are by that means related to the principal one. Thus hunger may oft be consider'd as the primary inclination of the soul, and the desire of approaching the meat as the secondary one; since 'tis absolutely necessary to the satisfying that appetite. If an object, therefore, by any separate qualities, inclines us to approach the meat, it naturally encreases our appetite; as on the contrary, whatever inclines us to set our victuals at a distance, is contradictory to hunger, and diminishes our inclination to them. Now 'tis plain that beauty has the first effect, and deformity the second: Which is the reason why the former gives us a keener appetite for our victuals, and the latter is sufficient to disgust us at the most savoury dish. that cookery has invented. All this is easily applicable to the appetite for generation.

From these two relations, viz, resemblance and a parallel desire, there arises such a connexion betwixt the sense of beauty, the bodily appetite, and benevolence, that they become in a manner inseparable: And we find from experience that 'tis indifferent which of them advances first; since any of them is almost sure to be attended with the related affections. One, who is inflam'd with lust, feels at least a momentary kindness towards the object of it, and at the same time fancies her more beautiful than ordinary; as there are many, who begin with kindness and esteem for the wit and merit of the person, and advance from that to the other passions. But the most common species of love is that which first arises from beauty, and afterwards diffuses itself into kindness and into the bodily appetite. Kindness or esteem, and the appetite to generation, are too remote to unite easily together. The one is, perhaps, the most refin'd passion of the soul; the other the most gross and vulgar. The love of beauty is plac'd in a just medium betwixt them, and partakes of both their natures: From whence it proceeds, that 'tis so singularly fitted to produce both.

This account of love is not peculiar to my system, but is unavoidable on any hypothesis. The three affections, which compose this passion, are evidently distinct, and has each of them its distinct object. Tis certain, therefore, that 'tis only by their relation they produce each other. But the relation of passions is not alone sufficient. Tis likewise necessary, there shou'd be a relation of ideas.

The beauty of one person never inspires us with love for another.

This then is a sensible proof of the double relation of impressions and ideas. From one instance so evident as this we may form a judgment of the rest.

This may also serve in another view to illustrate what I have insisted on concerning the origin of pride and humility, love and hatred. I have observ'd, that tho' self be the object of the first set of passions, and some other person of the second, yet these objects cannot alone be the causes of the passions; as having each of them a relation to two contrary affections, which must from the very first moment destroy each other. Here then is the situation of the mind, as I have already describ'd it. It has certain organs naturally fitted to produce a passion; that passion, when produc'd, naturally turns the view to a certain object. But this not being sufficient to produce the passion, there is requir'd some other emotion, which by a double relation of impressions and ideas may set these principles in action, and bestow on them their first impulse. This situation is still more remarkable with regard to the appetite of generation. Sex is not only the object, but also the cause of the appetite. We not only turn our view to it, when actuated by that appetite; but the reflecting on it suffices to excite the appetite. But as this cause loses its force by too great frequency, 'tis necessary it shou'd be quicken'd by some new impulse; and that impulse we find to arise from the beauty of the person; that is, from a double relation of impressions and ideas.

Since this double relation is necessary where an affection has both a distinct cause, and object, how much more so, where it has only a distinct object, without any determinate cause?

SECT. XII

Of the love and hatred of animals

But to pass from the passions of love and hatred, and from their mixtures and compositions, as they appear in man, to the same affections, as they display themselves in brutes; we may observe, not only that love and hatred are common to the whole sensitive creation, but likewise that their causes, as above-explain'd, are of so simple a nature, that they may easily be suppos'd to operate on mere animals. There is no force of reflection or penetration requir'd. Every thing is

conducted by springs and principles, which are not peculiar to man, or any one species of animals. The conclusion from this is obvious in favour of the foregoing system.

Love in animals, has not for its only object animals of the same species, but extends itself farther, and comprehends almost every sensible and thinking being. A dog naturally loves a man above his own species, and very commonly meets with a return of affection.

As animals are but little susceptible either of the pleasures or pains of the imagination, they can judge of objects only by the sensible good or evil, which they produce, and from that must regulate their affections towards them. Accordingly we find, that by benefits or injuries we produce their love or hatred; and that by feeding and cherishing any animal, we quickly acquire his affections; as by beating and abusing him we never fail to draw on us his enmity and ill-will.

Love in beasts is not caus'd so much by relation, as in our species; and that because their thoughts are not so active as to trace relations, except in very obvious instances. Yet 'tis easy to remark, that on some occasions it has a considerable influence upon them.

Thus acquaintance, which has the same effect as relation, always produces love in animals either to men or to each other. For the same reason any likeness among them is the source of affection. An ox confin'd to a park with horses, will naturally join their company, if I may so speak, but always leaves it to enjoy that of his own species, where he has the choice of both.

The affection of parents to their young proceeds from a peculiar instinct in animals, as well as in our species.

'Tis evident, that sympathy, or the communication of passions, takes place among animals, no less than among men. Fear[28], anger, courage, and other affections are frequently communicated from one animal to another, without their knowledge of that cause, which produc'd the original passion. Grief likewise is receiv'd by sympathy; and produces almost all the same consequences, and excites the same emotions as in our species. The howlings and lamentations of a dog produce a sensible concern in his fellows. And 'tis remarkable, that tho' almost all animals use in play the same

member, and nearly the same action as in fighting; a lion, a tyger, a cat their paws; an ox his horns; a dog his teeth; a horse his heels: Yet they most carefully avoid harming their companion, even tho' they have nothing to fear from his resentment; which is an evident proof of the sense brutes have of each other's pain and pleasure.

Every one has observ'd how much more dogs are animated when they hunt in a pack, than when they pursue their game apart; and 'tis evident this can proceed from nothing but from sympathy.

Tis also well known to hunters, that this effect follows in a greater degree, and even in too great a degree, where two packs, that are strangers to each other, are join'd together. We might, perhaps, be at a loss to explain this phaenomenon, if we had not experience of a similar in ourselves. Envy and malice are passions very remarkable in animals. They are perhaps more common than pity; as requiring less effort of thought and imagination.

Anthony Ashley Cooper, 3rd Earl of Shaftesbury (1671—1713)

[1] 自爱。

[2] 实验，在推测将来时，过去每一个实验显然都有同样的分量，而只有较多数的实验才能加重某一方面。

[3] 符合。

[4] 假说。

[5] 倾向。

Part III OF THE WILL AND DIRECT PASSIONS

SECT. I

Of liberty and necessity [1]

We come now to explain the direct passions, or the impressions, which arise immediately from good or evil, from pain or pleasure. Of this kind are, desire and aversion, grief and joy, hope and fear.

Of all the immediate effects of pain and pleasure, there is none more remarkable than the WILL[2]; and tho' properly speaking, it be not comprehended among the passions, yet as the full understanding of its nature and properties, is necessary to the explanation of them, we shall here make it the subject of our enquiry. I desire it may be observ'd, that by the will, I mean nothing but the internal impression we feel and are conscious of, when we knowingly give rise to any new motion of our body, or new perception of our mind.

This impression, like the preceding ones of pride and humility, love and hatred, 'tis impossible to define, and needless to describe any farther; for which reason we shall cut off all those definitions and distinctions, with which philosophers are wont to perplex rather than clear up this question; and entering at first upon the subject, shall examine that long disputed question concerning liberty and necessity; which occurs so naturally in treating of the will.

'Tis universally acknowledg'd, that the operations of external bodies are necessary, and that in the communication of their motion, in their attraction, and mutual cohesion, there are nor the least traces of indifference or liberty. Every object is determin'd by an absolute fate to a certain degree and direction of its motion, and can no more depart from that precise line, in which it moves, than it can convert itself into an angel, or spirit, or any superior substance.

The actions, therefore, of matter are to be regarded as instances of necessary actions; and whatever is in this respect on the same footing with matter, must be acknowledg'd to be necessary. That we

may know whether this be the case with the actions of the mind, we shall begin with examining matter, and considering on what the idea of a necessity in its operations are founded, and why we conclude one body or action to be the infallible cause of another.

It has been observ'd already, that in no single instance the ultimate connexion of any objects is discoverable, either by our senses or reason, and that we can never penetrate so far into the essence and construction of bodies, as to perceive the principle, on which their mutual influence depends. 'Tis their constant union alone, with which we are acquainted; and 'tis from the constant union the necessity arises. If objects had nor an uniform and regular conjunction with each other, we shou'd never arrive at any idea of cause and effect; and even after all, the necessity, which enters into that idea, is nothing but a determination of the mind to pass from one object to its usual attendant, and infer the existence of one from that of the other. Here then are two particulars, which we are to consider as essential to necessity, viz, the constant union and the inference of the mind; and wherever we discover these we must acknowledge a necessity. As the actions of matter have no necessity, but what is deriv'd from these circumstances, and it is not by any insight into the essence of bodies we discover their connexion, the absence of this insight, while the union and inference remain, will never, in any case, remove the necessity. 'Tis the observation of the union, which produces the inference; for which reason it might be thought sufficient, if we prove a constant union in the actions of the mind, in order to establish the inference, along with the necessity of these actions. But that I may bestow a greater force on my reasoning, I shall examine these particulars apart, and shall first prove from experience that our actions have a constant union with our motives, tempers, and circumstances, before I consider the inferences we draw from it.

To this end a very slight and general view of the common course of human affairs will be sufficient. There is no light, in which we can take them, that does nor confirm this principle.

Whether we consider mankind according to the difference of sexes, ages, governments, conditions, or methods of education; the same uniformity and regular operation of natural principles are discernible.

Uke causes still produce like effects; in the same manner as in the

mutual action of the elements and powers of nature.

There are different trees, which regularly produce fruit, whose relish is different from each other; and this regularity will be admitted as an instance of necessity and causes in external bodies.

But are the products of Guienne and of Champagne more regularly different than the sentiments, actions, and passions of the two sexes, of which the one are distinguish'd by their force and maturity, the other by their delicacy and softness?

Are the changes of our body from infancy to old age more regular and certain than those of our mind and conduct? And wou'd a man be more ridiculous, who wou'd expect that an infant of four years old will raise a weight of three hundred pound, than one, who from a person of the same age. wou'd look for a philosophical reasoning, or a prudent and well-concerted action?

We must certainly allow, that the cohesion of the parts of matter arises from natural and necessary principles, whatever difficulty we may find in explaining them: And for a reason we must allow, that human society is founded on like principles; and our reason in the latter case, is better than even that in the former; because we not only observe, that men always seek society, but can also explain the principles, on which this universal propensity is founded. For is it more certain, that two flat pieces of marble will unite together, than that two young savages of different sexes will copulate? Do the children arise from this copulation more uniformly, than does the parents care for their safety and preservation? And after they have arriv'd at years of discretion by the care of their parents, are the inconveniencies attending their separation more certain than their foresight of these inconveniencies and their care of avoiding them by a close union and confederacy?

The skin, pores, muscles, and nerves of a day-labourer are different from those of a man of quality: So are his sentiments, actions and manners. The different stations of life influence the whole fabric, external and internal; and different stations arise necessarily, because uniformly, from the necessary and uniform principles of human nature. Men cannot live without society, and cannot be associated without government. Government makes a distinction of property, and establishes the different ranks of men.

This produces industry, traffic, manufactures, law-suits, war, leagues, alliances, voyages, travels, cities, fleets, ports, and all those other actions and objects, which cause such a diversity, and at the same time maintain such an uniformity in human life.

Shou'd a traveller, returning from a far country, tell us, that he had seen a climate in the fiftieth degree of northern latitude, where all the fruits ripen and come to perfection in the winter, and decay in the summer, after the same manner as in England they are produc'd and decay in the contrary seasons, he wou'd find few so credulous as to believe him. I am apt to think a traveller wou'd meet with as little credit, who shou'd inform us of people exactly of the same character with those in Plato's[3] republic[4] on the one hand, or those in Hobbes's[5] Leviathan[6] on the other. There is a general course of nature in human actions, as well as in the operations of the sun and the climate. There are also characters peculiar to different nations and particular persons, as well as common to mankind. The knowledge of these characters is founded on the observation of an uniformity in the actions, that flow from them; and this uniformity forms the very essence of necessity.

I can imagine only one way of eluding this argument, which is by denying that uniformity of human actions, on which it is founded.

As long as actions have a constant union and connexion with the situation and temper of the agent, however we may in words refuse to acknowledge the necessity, we really allow the thing. Now some may, perhaps, find a pretext to deny this regular union and connexion. For what is more capricious than human actions? What more inconstant than the desires of man? And what creature departs more widely, not only from right reason, but from his own character and disposition? An hour, a moment is sufficient to make him change from one extreme to another, and overturn what cost the greatest pain and labour to establish. Necessity is regular and certain. Human conduct is irregular and uncertain. The one, therefore, proceeds not from the other.

To this I reply, that in judging of the actions of men we must proceed upon the same maxims, as when we reason concerning external objects. When any phaenomena are constantly and invariably conjoin'd together, they acquire such a connexion in the imagination, that it passes from one to the other, without any doubt or hesitation. But below this there are many inferior degrees of evidence and

probability, nor does one single contrariety of experiment entirely destroy all our reasoning. The mind ballances the contrary experiments, and deducting the inferior from the superior, proceeds with that degree of assurance or evidence, which remains. Even when these contrary experiments are entirely equal, we remove not the notion of causes and necessity; but supposing that the usual contrariety proceeds from the operation of contrary and conceal'd causes, we conclude, that the chance[7] or indifference lies only in our judgment on account of our imperfect knowledge, not in the things themselves, which are in every case equally necessary, tho' to appearance not equally constant or certain. No union can be more constant and certain, than that of some actions with some motives and characters; and if in other cases the union is uncertain, 'tis no more than what happens in the operations of body, nor can we conclude any thing from the one irregularity, which will not follow equally from the other.

Tis commonly allow'd that mad-men have no liberty. But were we to judge by their actions, these have less regularity and constancy than the actions of wise-men, and consequently are farther remov'd from necessity. Our way of thinking in this particular is, therefore, absolutely inconsistent; but is a natural consequence of these confus'd ideas and undefin'd terms, which we so commonly make use of in our reasonings, especially on the present subject. We must now shew, that as the union betwixt motives and actions has the same constancy, as that in any natural operations, so its influence on the understanding is also the same, in determining us to infer the existence of one from that of another. If this shall appear, there is no known circumstance, that enters into the connexion and production of the actions of matter, that is not to be found in all the operations of the mind; and consequently we cannot, without a manifest absurdity, attribute necessity to the one, and refuse into the other.

There is no philosopher, whose judgment is so riveted to this fantastical system of liberty, as not to acknowledge the force of moral evidence, and both in speculation and practice proceed upon it, as upon a reasonable foundation. Now moral evidence is nothing but a conclusion concerning the actions of men, deriv'd from the consideration of their motives, temper and situation. Thus when we see certain characters or figures describ'd upon paper, we infer that the person, who produc'd them, wou'd affirm such facts, the death of

Caesar[8], the success of Augustus[9], the cruelty of Nero[10];and remembering many other concurrent testimonies we conclude,that those facts were once really existant, and that so many men,without any interest, wou'd never conspire to deceive us; especially since they must, in the attempt, expose themselves to the derision of all their contemporaries, when these facts were asserted to be recent and universally known. The same kind of reasoning runs thro'politics, war, commerce, economy, and indeed mixes itself so entirely in human life, that 'tis impossible to act or subsist a moment without having recourse to it. A prince, who imposes a tax upon his subjects,expects their compliance. A general, who conducts an army, makes account of a certain degree of courage. A merchant looks for fidelity and skill in his factor or super-cargo. A man, who gives orders for his dinner, doubts not of the obedience of his servants. In short, as nothing more nearly interests us than our own actions and those of others, the greatest part of our reasonings is employ'd in judgments concerning them. Now I assert, that whoever reasons after this manner, does ipso facto believe the actions of the will to arise from necessity, and that he knows not what he means, when he denies it.

All those objects, of which we call the one cause and the other effect, consider'd in themselves, are as distinct and separate from each other, as any two things in nature, nor can we ever, by the most accurate survey of them, infer the existence of the one from that of the other. 'Tis only from experience and the observation of their constant union, that we are able to form this inference; and even after all, the inference is nothing but the effects of custom on the imagination. We must not here be content with saying, that the idea of cause and effect arises from objects constantly united; but must affirm, that 'tis the very same with the idea of those objects, and that the necessary connexion is not discover'd by a conclusion of the understanding, but is merely a perception of the mind. Wherever,therefore, we observe the same union, and wherever the union operates in the same manner upon the belief and opinion, we have the idea of causes and necessity, tho' perhaps we may avoid those expressions. Motion in one body in all past instances, that have fallen under our observation, is follow'd upon impulse by motion in another. 'Tis impossible for the mind to penetrate farther. From this constant union it forms the idea of cause and effect, and by its influence feels the necessity. As there is the same constancy, and the same influence in what we call moral evidence, I ask no more. What remains can only be a dispute of words.

And indeed, when we consider how aptly natural and moral evidence cement together, and form only one chain of argument betwixt them, we shall make no scruple to allow, that they are of the same nature, and deriv'd from the same principles. A prisoner, who has neither money nor interest, discovers the impossibility of his escape, as well from the obstinacy of the goaler, as from the walls and bars with which he is surrounded; and in all attempts for his freedom chuses rather to work upon the stone and iron of the one, than upon the inflexible nature of the other. The same prisoner, when conducted to the scaffold, foresees his death as certainly from the constancy and fidelity of his guards as from the operation of the ax or wheel. His mind runs along a certain train of ideas: The refusal of the soldiers to consent to his escape, the action of the executioner; the separation of the head and body; bleeding, convulsive motions, and death. Here is a connected chain of natural causes and voluntary actions; but the mind feels no difference betwixt them in passing from one link to another; nor is less certain of the future event than if it were connected with the present impressions of the memory and senses by a train of causes cemented together by what we are pleas'd to call a physical necessity. The same experienc'd union has the same effect on the mind, whether the united objects be motives, volitions and actions; or figure and motion. We may change the names of things; but their nature and their operation on the understanding never change.

I dare be positive no one will ever endeavour to refute these reasonings otherwise than by altering my definitions, and assigning a different meaning to the terms of cause, and effect, and necessity, and liberty, and chance. According to my definitions, necessity makes an essential part of causation; and consequently liberty, by removing necessity, removes also causes, and is the very same thing with chance. As chance is commonly thought to imply a contradiction, and is at least directly contrary to experience, there are always the same arguments against liberty or free-will. If any one alters the definitions, I cannot pretend to argue with him, 'till I know the meaning he assigns to these terms.

SECT. II

The same subject continu'd

I believe we may assign the three following reasons for the prevalence of the doctrine of liberty, however absurd it may be in one

sense, and unintelligible in any other. First, After we have perform'd any action; tho' we confess we were influenc'd by particular views and motives; 'tis difficult for us to persuade ourselves we were govern'd by necessity, and that 'twas utterly impossible for us to have acted otherwise; the idea of necessity seeming to imply something of force, and violence, and constraint, of which we are not sensible.

Few are capable of distinguishing betwixt the liberty of spontaniety, as it is call'd in the schools, and the liberty of indifference; betwixt that which is oppos'd to violence, and that which means a negation of necessity and causes. The first is even the most common sense of the word; and as 'tis only that species of liberty, which it concerns us to preserve, our thoughts have been principally turn'd towards it, and have almost universally confounded it with the other.

Secondly, There is a false sensation or experience even of the liberty of indifference; which is regarded as an argument for its real existence. The necessity of any action, whether of matter or of the mind, is not properly a quality in the agent, but in any thinking or intelligent being, who may consider the action, and consists in the determination of his thought to infer its existence from some preceding objects: As liberty or chance, on the other hand, is nothing but the want of that determination, and a certain looseness, which we feel in passing or not passing from the idea of one to that of the other. Now we may observe, that tho' in reflecting on human actions we seldom feel such a looseness or indifference, yet it very commonly happens, that in performing the actions themselves we are sensible of something like it: And as all related or resembling objects are readily taken for each other, this has been employ'd as a demonstrative or even an intuitive proof of human liberty. We feel that our actions are subject to our will on most occasions, and imagine we feel that the will itself is subject to nothing; because when by a denial of it we are provok'd to try, we feel that it moves easily every way, and produces an image of itself even on that side, on which it did not settle. This image or faint motion, we persuade ourselves, cou'd have been compleated into the thing itself; because, shou'd that be deny'd, we find, upon a second trial, that it can. But these efforts are all in vain; and whatever capricious and irregular actions we may perform; as the desire of showing our liberty is the sole motive of our actions; we can never free ourselves from the bonds of necessity. We may imagine we feel a liberty within ourselves; but a spectator can commonly infer our

actions from our motives and character; and even where he cannot, he concludes in general, that he might, were he perfectly acquainted with every circumstance of our situation and temper, and the most secret springs of our complexion and disposition. Now this is the very essence of necessity, according to the foregoing doctrine.

A third reason why the doctrine of liberty has generally been better receiv'd in the world, than its antagonist, proceeds from religion, which has been very unnecessarily interested in this question. There is no method of reasoning more common, and yet none more blameable, than in philosophical debates to endeavour to refute any hypothesis by a pretext of its dangerous consequences to religion and morality. When any opinion leads us into absurdities, 'tis certainly false; but 'tis not certain an opinion is false, because 'tis of dangerous consequence. Such topics, therefore, ought entirely to be foreborn, as serving nothing to the discovery of truth, but only to make the person of an antagonist odious. This I observe in general, without pretending to draw any advantage from it. I submit myself frankly to an examination of this kind, and dare venture to affirm, that the doctrine of necessity, according to my explication of it, is not only innocent, but even advantageous to religion and morality.

I define necessity two ways, conformable to the two definitions of cause, of which it makes an essential part. I place it either in the constant union and conjunction of like objects, or in the inference of the mind from the one to the other. Now necessity, in both these senses, has universally, tho' tacitely, in the schools, in the pulpit, and in common life, been allow'd to belong to the will of man, and no one has ever pretended to deny, that we can draw inferences concerning human actions, and that those inferences are founded on the experienc'd union of like actions with like motives and circumstances. The only particular in which any one can differ from me, is either, that perhaps he will refuse to call this necessity. But as long as the meaning is understood, I hope the word can do no harm.

Or that he will maintain there is something else in the operations of matter. Now whether it be so or not is of no consequence to religion, whatever it may be to natural philosophy. I may be mistaken in asserting, that we have no idea of any other connexion in the actions of body, and shall be glad to be farther instructed on that head: But sure I am, I ascribe nothing to the actions of the mind, but

what must readily be allow'd of. Let no one, therefore, put an invidious construction on my words, by saying simply, that I assert the necessity of human actions, and place them on the same footing with the operations of senseless matter. I do not ascribe to the will that unintelligible necessity, which is suppos'd to lie in matter. But I ascribe to matter, that intelligible quality, call it necessity or not, which the most rigorous orthodoxy does or must allow to belong to the will. I change, therefore, nothing in the receiv'd systems, with regard to the will, but only with regard to material objects.

Nay I shall go farther, and assert, that this kind of necessity is so essential to religion and morality, that without it there must ensue an absolute subversion of both, and that every other supposition is entirely destructive to all laws both divine and human. 'Tis indeed certain, that as all human laws are founded on rewards and punishments, 'tis suppos'd as a fundamental principle, that these motives have an influence on the mind, and both produce the good and prevent the evil actions. We may give to this influence what name we please; but as 'tis usually conjoin'd with the action, common sense requires it shou'd be esteem'd a cause, and be book'd upon as an instance of that necessity, which I wou'd establish.

This reasoning is equally solid, when apply'd to divine laws, so far as the deity is consider'd as a legislator, and is suppos'd to inflict punishment and bestow rewards with a design to produce obedience.

But I also maintain, that even where he acts not in his magisterial capacity, but is regarded as the avenger of crimes merely on account of their odiousness and deformity, not only 'tis impossible, without the necessary connexion of cause and effect in human actions, that punishments cou'd be inflicted compatible with justice and moral equity; but also that it cou'd ever enter into the thoughts of any reasonable being to inflict them. The constant and universal object of hatred or anger is a person or creature endow'd with thought and consciousness; and when any criminal or injurious actions excite that passion, 'tis only by their relation to the person or connexion with him. But according to the doctrine of liberty or chance, this connexion is reduc'd to nothing, nor are men more accountable for those actions, which are design'd and premeditated, than for such as are the most casual and accidental. Actions are by their very nature temporary and perishing; and where they proceed not from some cause in the

characters and disposition of the person, who perform'd them, they infix not themselves upon him, and can neither redound to his honour, if good, nor infamy, if evil. The action itself may be blameable; it may be contrary to all the rules of morality and religion: But the person is not responsible for it; and as it proceeded from nothing in him, that is durable or constant, and leaves nothing of that nature behind it, 'tis impossible he can, upon its account, become the object of punishment or vengeance. According to the hypothesis of liberty, therefore, a man is as pure and untainted, after having committed the most horrid crimes, as at the first moment of his birth, nor is his character any way concern'd in his actions; since they are not deriv'd from it, and the wickedness of the one can never be us'd as a proof of the depravity of the other. 'Tis only upon the principles of necessity, that a person acquires any merit or demerit from his actions, however the common opinion may incline to the contrary.

But so inconsistent are men with themselves, that tho' they often assert, that necessity utterly destroys all merit and demerit either towards mankind or superior powers, yet they continue still to reason upon these very principles of necessity in all their judgments concerning this matter. Men are not blam'd for such evil actions as they perform ignorantly and casually, whatever may be their consequences. Why? but because the causes of these actions are only momentary, and terminate in them alone. Men are less blam'd for such evil actions, as they perform hastily and unpremeditatedly, than for such as proceed from thought and deliberation. For what reason?

but because a hasty temper, tho' a constant cause in the mind, operates only by intervals, and infects not the whole character.

Again, repentance wipes off every crime, especially if attended with an evident reformation of life and manners. How is this to be accounted for? But by asserting that actions render a person criminal, merely as they are proofs of criminal passions or principles in the mind; and when by any alteration of these principles they cease to be just proofs, they likewise cease to be criminal. But according to the doctrine of liberty or chance they never were just proofs, and consequently never were criminal.

Here then I turn to my adversary, and desire him to free his own system from these odious consequences before he charge them upon others. Or if he rather chuses, that this question shou'd be decided by

fair arguments before philosophers, than by declamations before the people, let him return to what I have advanc'd to prove that liberty and chance are synonymous; and concerning the nature of moral evidence and the regularity of human actions. Upon a review of these reasonings, I cannot doubt of an entire victory; and therefore having prov'd, that all actions of the will have particular causes, I proceed to explain what these causes are, and how they operate.

SECT. III

Of the influencing motives of the will

Nothing is more usual in philosophy, and even in common life, than to talk of the combat of passion and reason, to give the preference to reason, and assert that men are only so far virtuous as they conform themselves to its dictates. Every rational creature, 'tis said, is oblig'd to regulate his actions by reason; and if any other motive or principle challenge the direction of his conduct, he ought to oppose it, till it be entirely subdu'd, or at least brought to a conformity with that superior principle. On this method of thinking the greatest part of moral philosophy, antient and modern, seems to be founded; nor is there an ampler field, as well for metaphysical arguments, as popular declamations, than this suppos'd pre-eminence of reason above passion. The eternity, invariableness, and divine origin of the former have been display'd to the best advantage: The blindness, unconstancy, and deceitfulness of the latter have been as strongly insisted on. In order to shew the fallacy of all this philosophy, I shall endeavour to prove first, that reason alone can never be a motive to any action of the will; and secondly, that it can never oppose passion in the direction of the will.

The understanding exerts itself after two different ways, as it judges from demonstration or probability; as it regards the abstract relations of our ideas, or those relations of objects, of which experience only gives us information. I believe it scarce will be asserted, that the first species of reasoning alone is ever the cause of any action. As its proper province is the world of ideas, and as the will always places us in that of realities, demonstration and volition seem, upon that account, to be totally remov'd, from each other. Mathematics, indeed, are useful in all mechanical operations, and arithmetic in almost every art and profession: But 'tis not of themselves they have any influence: Mechanics[11] are the art of

regulating the motions of bodies to some design'd end or purpose; and the reason why we employ arithmetic in fixing the proportions of numbers, is only that we may discover the proportions of their influence and operation. A merchant is desirous of knowing the sum total of his accounts with any person: Why? but that he may learn what sum will have the same effects in paying his debt, and going to market, as all the particular articles taken together. Abstract or demonstrative reasoning, therefore, never influences any of our actions, but only as it directs our judgment concerning causes and effects; which leads us to the second operation of the understanding.

'Tis obvious, that when we have the prospect of pain or pleasure from any object, we feel a consequent emotion of aversion or propensity, and are carry'd to avoid or embrace what will give us this uneasiness or satisfaction. 'Tis also obvious, that this emotion rests not here, but making us cast our view on every side, comprehends whatever objects are connected with its original one by the relation of cause and effect. Here then reasoning takes place to discover this relation; and according as our reasoning varies, our actions receive a subsequent variation. But 'tis evident in this case that the impulse arises not from reason, but is only directed by it. 'Tis from the prospect of pain or pleasure that the aversion or propensity arises towards any object: And these emotions extend themselves to the causes and effects of that object, as they are pointed out to us by reason and experience. It can never in the least concern us to know, that such objects are causes, and such others effects, if both the causes and effects be indifferent to us. Where the objects themselves do not affect us, their connexion can never give them any influence; and 'tis plain, that as reason is nothing but the discovery of this connexion, it cannot be by its means that the objects are able to affect us.

Since reason alone can never produce any action, or give rise to volition, I infer, that the same faculty is as incapable of preventing volition, or of disputing the preference with any passion or emotion.

This consequence is necessary. 'Tis impossible reason cou'd have the latter effect of preventing volition, but by giving an impulse in a contrary direction to our passion; and that impulse, had it operated alone, wou'd have been able to produce volition. Nothing can oppose or retard the impulse of passion, but a contrary impulse; and if this contrary impulse ever arises from reason, that latter faculty must have

an original influence on the will, and must be able to cause, as well as hinder any act of volition. But if reason has no original influence, 'tis impossible it can withstand any principle, which has such an efficacy, or ever keep the mind in suspense a moment. Thus it appears, that the principle, which opposes our passion, cannot be the same with reason, and is only call'd so in an improper sense. We speak not strictly and philosophically when we talk of the combat of passion and of reason. Reason is, and ought only to be the slave of the passions, and can never pretend to any other office than to serve and obey them. As this opinion may appear somewhat extraordinary, it may not be improper to confirm it by some other considerations.

A passion is an original existence, or, if you will, modification of existence, and contains not any representative quality, which renders it a copy of any other existence or modification. When I am angry, I am actually possess'd with the passion, and in that emotion have no more a reference to any other object, than when I am thirsty, or sick, or more than five foot high. 'Tis impossible, therefore, that this passion can be opposed by, or be contradictory to truth and reason; since this contradiction consists in the disagreement of ideas, consider'd as copies, with those objects, which they represent. What may at first occur on this head, is, that as nothing can be contrary to truth or reason, except what has a reference to it, and as the judgments of our understanding only have this reference, it must follow, that passions can be contrary to reason only so far as they are accompany'd with some judgment or opinion. According to this principle, which is so obvious and natural, 'tis only in two senses, that any affection can be call'd unreasonable. First, When a passion, such as hope or fear, grief or joy, despair or security, is founded on the supposition or the existence of objects, which really do not exist. Secondly, When in exerting any passion in action, we chuse means insufficient for the design'd end, and deceive ourselves in our judgment of causes and effects. Where a passion is neither founded on false suppositions, nor chuses means insufficient for the end, the understanding can neither justify nor condemn it. 'Tis not contrary to reason to prefer the destruction of the whole world to the scratching of my finger. 'Tis not contrary to reason for me to chuse my total ruin, to prevent the least uneasiness of an Indian [\[12\]](#) or person wholly unknown to me. 'Tis as little contrary to reason to prefer even my own acknowledge'd lesser good to my greater, and have a more ardent affection for the former than the latter. A trivial good may, from

certain circumstances, produce a desire superior to what arises from the greatest and most valuable enjoyment; nor is there any thing more extraordinary in this, than in mechanics to see one pound weight raise up a hundred by the advantage of its situation. In short, a passion must be accompany'd with some false judgment. in order to its being unreasonable; and even then 'tis not the passion, properly speaking, which is unreasonable, but the judgment.

The consequences are evident. Since a passion can never, in any sense, be call'd unreasonable, but when founded on a false supposition. or when it chuses means insufficient for the design'd-end, 'tis impossible, that reason and passion can ever oppose each other, or dispute for the government of the will and actions.

The moment we perceive the falshood of any supposition, or the insufficiency of any means our passions yield to our reason without any opposition. I may desire any fruit as of an excellent relish; but whenever you convince me of my mistake, my longing ceases. I may will the performance of certain actions as means of obtaining any desir'd good; but as my willing of these actions is only secondary, and founded on the supposition, that they are causes of the propos'd-effect; as soon as I discover the falshood of that supposition, they must become indifferent to me.

'Tis natural for one, that does not examine objects with a strict philosophic eye, to imagine, that those actions of the mind are entirely the same, which produce not a different sensation, and are not immediately distinguishable to the feeling and perception.

Reason, for instance, exerts itself without producing any sensible emotion; and except in the more sublime disquisitions of philosophy, or in the frivolous subtilties of the school, scarce ever conveys any pleasure or uneasiness. Hence it proceeds, that every action of the mind, which operates with the same calmness and tranquillity, is confounded with reason by all those, who judge of things from the first view and appearance. Now 'tis certain, there are certain calm desires and tendencies, which, tho' they be real passions, produce little emotion in the mind, and are more known by their effects than by the immediate feeling or sensation. These desires are of two kinds; either certain instincts originally implanted in our natures, such as benevolence and resentment, the love of life, and kindness to children; or the general appetite to good, and aversion to

evil, consider'd merely as such. When any of these passions are calm, and cause no disorder in the soul, they are very readily taken for the determinations of reason, and are suppos'd to proceed from the same faculty, with that, which judges of truth and falshood. Their nature and principles have been suppos'd the same, because their sensations are not evidently different.

Beside these calm passions, which often determine the will, there are certain violent emotions of the same kind, which have likewise a great influence on that faculty. When I receive any injury from another, I often feel a violent passion of resentment, which makes me desire his evil and punishment, independent of all considerations of pleasure and advantage to myself. When I am immediately threaten'd with any grievous ill, my fears, apprehensions, and aversions rise to a great height, and produce a sensible emotion.

The common error of metaphysicians has lain in ascribing the direction of the will entirely to one of these principles, and supposing the other to have no influence. Men often act knowingly against their interest: For which reason the view of the greatest possible good does not always influence them. Men often counteract a violent passion in prosecution of their interests and designs: 'Tis not therefore the present uneasiness alone, which determines them. In general we may observe, that both these principles operate on the will; and where they are contrary, that either of them prevails, according to the general character or present disposition of the person. What we call strength of mind, implies the prevalence of the calm passions above the violent; tho' we may easily observe, there is no man so constantly possess'd of this virtue, as never on any occasion to yield to the solicitations of passion and desire. From these variations of temper proceeds the great difficulty of deciding concerning the actions and resolutions of men, where there is any contrariety of motives and passions.

SECT. IV

Of the causes of the violent passions

There is not in philosophy a subject of more nice speculation than this of the different causes and effects of the calm and violent passions. 'Tis evident passions influence not the will in proportion to their violence, or the disorder they occasion in the temper; but on the

contrary, that when a passion has once become a settled principle of action, and is the predominant inclination of the soul, it commonly produces no longer any sensible agitation. As repeated custom and its own force have made every thing yield to it, it directs the actions and conduct without that opposition and emotion, which so naturally attend every momentary gust of passion. We must, therefore, distinguish betwixt a calm and a weak passion; betwixt a violent and a strong one. But notwithstanding this, 'tis certain, that when we would govern a man, and push him to any action, 'twill commonly be better policy to work upon the violent than the calm passions, and rather take him by his inclination, than what is vulgarly call'd his reason. We ought to place the object in such particular situations as are proper to encrease the violence of the passion. For we may observe, that all depends upon the situation of the object, and that a variation in this particular will be able to change the calm and the violent passions into each other. Both these kinds of passions pursue good, and avoid evil; and both of them are encreas'd or diminish'd by the encrease or diminution of the good or evil. But herein lies the difference betwixt them: The same good, when near, will cause a violent passion, which, when remote, produces only a calm one. As this subject belongs very properly to the present question concerning the will, we shall here examine it to the bottom, and shall consider some of those circumstances and situations of objects, which render a passion either calm or violent.

'Tis a remarkable property of human nature, that any emotion, which attends a passion, is easily converted into it, tho' in their natures they be originally different from, and even contrary to each other. 'Tis true; in order to make a perfect union among passions, there is always requir'd a double relation of impressions and ideas; nor is one relation sufficient for that purpose. But tho' this be confirmed by undoubted experience, we must understand it with its proper limitations, and must regard the double relation, as requisite only to make one passion produce another. When two passions are already produc'd by their separate causes, and are both present in the mind, they readily mingle and unite, tho' they have but one relation, and sometimes without any. The predominant passion swallows up the inferior, and converts it into itself. The spirits, when once excited, easily receive a change in their direction; and 'tis natural to imagine this change will come from the prevailing affection. The connexion is in many respects closer betwixt any two

passions, than betwixt any passion and indifference.

When a person is once heartily in love, the little faults and caprices of his mistress, the jealousies and quarrels, to which that commerce is so subject; however unpleasant and related to anger and hatred; are yet found to give additional force to the prevailing passion. 'Tis a common artifice of politicians, when they wou'd affect any person very much by a matter of fact, of which they intend to inform him, first to excite his curiosity; delay as long as possible the satisfying it; and by that means raise his anxiety and impatience to the utmost, before they give him a full insight into the business.

They know that his curiosity will precipitate him into the passion they design to raise, and assist the object in its influence on the mind. A soldier advancing to the battle, is naturally inspir'd with courage and confidence, when he thinks on his friends and fellowsoldiers;and is struck with fear and terror, when he reflects on the enemy. Whatever new emotion, therefore, proceeds from the former naturally encreases the courage; as the same emotion, proceeding from the latter, augments the fear; by the relation of ideas, and the conversion of the inferior emotion into the predominant.

Hence it is that in martial discipline, the uniformity[13] and lustre of our habit, the regularity of our figures and motions, with all the pomp and majesty of war, encourage ourselves and allies; while the same objects in the enemy strike terror into us, tho' agreeable and beautiful in themselves.

Since passions, however independent, are naturally transfus'd into each other, if they are both present at the same time; it follows,that when good or evil is placed in such a situation, as to cause any particular emotion, beside its direct passion of desire or aversion,that latter passion must acquire new force and violence.

This happens, among other cases, whenever any object excites contrary passions. For 'tis observable that an opposition of passions commonly causes a new emotion in the spirits, and produces more disorder, than the concurrence of any two affections of equal force.

This new emotion is easily converted into the predominant passion,and encreases its violence, beyond the pitch it wou'd have arriv'd-at had it met with no opposition. Hence we naturally desire

what is forbid, and take a pleasure in performing actions, merely because they are unlawful. The notion of duty, when opposite to the passions, is seldom able to overcome them; and when it fails of that effect, is apt rather to encrease them, by producing an opposition in our motives and principles. The same effect follows whether the opposition arises from internal motives or external obstacles. The passion commonly acquires new force and violence in both cases.

The efforts, which the mind makes to surmount the obstacle, excite the spirits and invigorate the passion.

Uncertainty has the same influence as opposition. The agitation of the thought; the quick turns it makes from one view to another; the variety of passions, which succeed each other, according to the different views; All these produce an agitation in the mind, and transfuse themselves into the predominant passion.

There is not in my opinion any other natural cause, why security diminishes the passions, than because it removes that uncertainty, which encreases them. The mind, when left to itself, immediately languishes; and in order to preserve its ardour, must be every moment supported by a new flow of passion. For the same reason, despair, tho' contrary to security, has a like influence.

'Tis certain nothing more powerfully animates any affection, than to conceal some part of its object by throwing it into a kind of shade, which at the same time that it charms enough to pre-possess us in favour of the object, leaves still some work for the imagination.

Besides that obscurity is always attended with a kind of uncertainty; the effort, which the fancy makes to compleat the idea, rouses the spirits, and gives an additional force to the passion.

As despair and security, tho' contrary to each other, produce the same effects; so absence is observ'd to have contrary effects, and in different circumstances either encreases or diminishes our affections. The Duc de La Rochefoucault [\[14\]](#) has very well observ'd, that absence destroys weak passions, but encreases strong; as the wind extinguishes a candle, but blows up a fire. Long absence naturally weakens our idea, and diminishes the passion: But where the idea is so strong and lively as to support itself, the uneasiness, arising from absence, encreases the passion and gives it new force and violence.

Of the effects of custom

But nothing has a greater effect both to encrease and diminish our passions, to convert pleasure into pain, and pain into pleasure, than custom and repetition. Custom has two original effects upon the mind, in bestowing a facility in the performance of any action or the conception of any object; and afterwards a tendency or inclination towards it; and from these we may account for all its other effects, however extraordinary.

When the soul applies itself to the performance of any action, or the conception of any object, to which it is not accustom'd, there is a certain unpliableness in the faculties, and a difficulty of the spirit's moving in their new direction. As this difficulty excites the spirits, 'tis the source of wonder, surprize, and of all the emotions, which arise from novelty; and is in itself very agreeable, like every thing, which inlivens the mind to a moderate degree. But tho' surprize be agreeable in itself, yet as it puts the spirits in agitation, it not only augments our agreeable affections, but also our painful, according to the foregoing principle, that every emotion, which precedes or attends a passion, is easily converted into it. Hence every thing, that is new, is most affecting, and gives us either more pleasure or pain, than what, strictly speaking, naturally belongs to it. When it often returns upon us, the novelty wears off; the passions subside; the hurry of the spirits is over; and we survey the objects with greater tranquillity.

By degrees the repetition produces a facility of the human mind, and an infallible source of pleasure, where the facility goes not beyond a certain degree. And here 'tis remarkable that the pleasure, which arises from a moderate facility, has not the same tendency with that which arises from novelty, to augment the painful, as well as the agreeable affections. The pleasure of facility does not so much consist in any ferment of the spirits, as in their orderly motion; which will sometimes be so powerful as even to convert pain into pleasure, and give us a relish in time what at first was most harsh and disagreeable. But again, as facility converts pain into pleasure, so it often converts pleasure into pain, when it is too great, and renders the actions of the mind so faint and languid, that they are no longer able to interest and support it. And indeed, scarce any other objects become disagreeable thro' custom; but such as are naturally attended

with some emotion or affection, which is destroy'd by the too frequent repetition. One can consider the clouds, and heavens, and trees, and stones, however frequently repeated, without ever feeling any aversion. But when the fair sex, or music, or good cheer, or any thing, that naturally ought to be agreeable, becomes indifferent, it easily produces the opposite affection.

But custom not only gives a facility to perform any action, but likewise an inclination and tendency towards it, where it is not entirely disagreeable, and can never be the object of inclination.

And this is the reason why custom encreases all active habits, but diminishes passive, according to the observation of a late eminent philosopher. The facility takes off from the force of the passive habits by rendering the motion of the spirits faint and languid. But as in the active, the spirits are sufficiently supported of themselves, the tendency of the mind gives them new force, and bends them more strongly to the action.

SECT. VI

Of the influence of the imagination on the passions

'Tis remarkable, that the imagination and affections have close union together, and that nothing, which affects the former, can be entirely indifferent to the latter. Wherever our ideas of good or evil acquire a new vivacity, the passions become more violent; and keep pace with the imagination in all its variations. Whether this proceeds from the principle above-mention'd, that any attendant emotion is easily converted into the predominant, I shall not determine. 'Tis sufficient for my present purpose, that we have many instances to confirm this influence of the imagination upon the passions.

Any pleasure, with which we are acquainted, affects us more than any other, which we own to be superior, but of whose nature we are wholly ignorant. Of the one we can form a particular and determinate idea: The other we conceive under the general notion of pleasure; and 'tis certain, that the more general and universal any of our ideas are, the less influence they have upon the imagination.

A general idea, tho' it be nothing but a particular one consider'd in a certain view, is commonly more obscure; and that because no

particular idea, by which we represent a general one, is ever fix'd or determinate, but may easily be chang'd for other particular ones, which will serve equally in the representation.

There is a noted passage in the history of Greece, which may serve for our present purpose. Themistocles told the Athenians, that he had form'd a design, which wou'd be highly useful to the public, but which 'twas impossible for him to communicate to them without ruining the execution, since its success depended entirely on the secrecy with which it shou'd be conducted. The Athenians, instead of granting him full power to act as he thought fitting, order'd him to communicate his design to Aristides, in whose prudence they had an entire confidence, and whose opinion they were resolv'd blindly to submit to. The design of Themistocles[15] was secretly to set fire to the fleet of all the Grecian commonwealths, which was assembled in a neighbouring port, and which being once destroy'd wou'd give the Athenians the empire of the sea without any rival. Aristides return'd to the assembly, and told them, that nothing cou'd be more advantageous than the design of Themistocles but at the same time that nothing cou'd be more unjust: Upon which the people unanimously rejected the project.

A late celebrated¹⁴ historian admires this passage of antient history, as one of the most singular that is any where to be met.

'Here,' says he, 'they are not philosophers, to whom 'tis easy in their schools to establish the finest maxims and most sublime rules of morality, who decide that interest ought never to prevail above justice. 'Tis a whole people interested in the proposal. which is made to them, who consider it as of importance to the public good, and who notwithstanding reject it unanimously, and without hesitation, merely because it is contrary to justice.' For my part I see nothing so extraordinary in this proceeding of the Athenians. The same reasons, which render it so easy for philosophers to establish these sublime maxims, tend, in part, to diminish the merit of such a conduct in that people. Philosophers never ballance betwixt profit and honesty, because their decisions are general, and neither their passions nor imaginations are interested in the objects. And tho' in the present case the advantage was immediate to the Athenians, yet as it was known only under the general notion of advantage, without being conceiv'd by any particular idea, it must have had a less considerable influence

on their imaginations, and have been a less violent temptation, than if they had been acquainted with all its circumstances: Otherwise 'tis difficult to conceive, that a whole people, unjust and violent as men commonly are, shou'd so unanimously have adher'd to justice, and rejected any considerable advantage.

Any satisfaction, which we lately enjoy'd, and of which the memory is fresh and recent, operates on the will with more violence, than another of which the traces are decay'd, and almost obliterated.

From whence does this proceed, but that the memory in the first case assists the fancy. and gives an additional force and vigour to its conceptions? The image of the past pleasure being strong and violent, bestows these qualities on the idea of the future pleasure, which is connected with it by the relation of resemblance.

A pleasure, which is suitable to the way of life, in which we are engag'd, excites more our desires and appetites than another, which is foreign to it. This phaenomenon may be explain'd from the same principle.

Nothing is more capable of infusing any passion into the mind, than eloquence, by which objects are represented in their strongest and most lively colours. We may of ourselves acknowledge, that such an object is valuable, and such another odious; but 'till an orator excites the imagination, and gives force to these ideas, they may have but a feeble influence either on the will or the affections.

But eloquence[16] is not always necessary. The bare opinion of another, especially when inforc'd with passion, will cause an idea of good or evil to have an influence upon us, which wou'd otherwise have been entirely neglected. This proceeds from the principle of sympathy or communication; and sympathy, as I have already observ'd, is nothing but the conversion of an idea into an impression by the force of imagination.

'Tis remarkable, that lively passions commonly attend a lively imagination. In this respect, as well as others, the force of the passion depends as much on the temper of the person, as the nature or situation of the object.

I have already observ'd, that belief is nothing but a lively idea related to a present impression. This vivacity is a requisite circumstance to the exciting all our passions, the calm as well as the violent; nor has a mere fiction of the imagination any considerable influence upon either of them. 'Tis too weak to take hold of the mind, or be attended with emotion.

SECT. VII

Of contiguity and distance in space and time

There is an easy reason, why every thing contiguous to us, either in space or time, shou'd be conceiv'd with a peculiar force and vivacity, and excel every other object, in its influence on the imagination. Ourselves is intimately present to us, and whatever is related to self must partake of that quality. But where an object is so far remov'd as to have lost the advantage of this relation, why, as it is farther remov'd, its idea becomes still fainter and more obscure, wou'd, perhaps, require a more particular examination.

'Tis obvious, that the imagination can never totally forget the points of space and time, in which we are existent; but receives such frequent advertisements of them from the passions and senses, that however it may turn its attention to foreign and remote objects, it is necessitated every moment to reflect on the present. 'Tis also remarkable, that in the conception of those objects, which we regard as real and existent, we take them in their proper order and situation, and never leap from one object to another, which is distant from it, without running over, at least in a cursory manner, all those objects, which are interpos'd betwixt them. When we reflect, therefore, on any object distant from ourselves, we are oblig'd not only to reach it at first by passing thro' all the intermediate space betwixt ourselves and the object, but also to renew our progress every moment; being every moment recall'd to the consideration of ourselves and our present situation. 'Tis easily conceiv'd, that this interruption must weaken the idea by breaking the action of the mind, and hindering the conception from being so intense and continu'd, as when we reflect on a nearer object. The fewer steps we make to arrive at the object, and the smoother the road is, this diminution of vivacity is less sensibly felt, but still may be observ'd more or less in proportion to the degrees of distance and difficulty.

Here then we are to consider two kinds of objects, the contiguous and remote; of which the former, by means of their relation to ourselves, approach an impression in force and vivacity; the latter by reason of the interruption in our manner of conceiving them, appear in a weaker and more imperfect light. This is their effect on the imagination. If my reasoning be just, they must have a proportionable effect on the will and passions. Contiguous objects must have an influence much superior to the distant and remote.

Accordingly we find in common life, that men are principally concern'd about those objects, which are not much remov'd either in space or time, enjoying the present, and leaving what is afar off to the care of chance and fortune. Talk to a man of his condition thirty years hence, and he will not regard you. Speak of what is to happen tomorrow, and he will lend you attention. The breaking of a mirror gives us more concern when at home, than the burning of a house, when abroad, and some hundred leagues distant.

But farther; tho' distance both in space and time has a considerable effect on the imagination, and by that means on the will and passions, yet the consequence of a removal in space are much inferior to those of a removal in time. Twenty years are certainly but a small distance of time in comparison of what history and even the memory of some may inform them of, and yet I doubt if a thousand leagues, or even the greatest distance of place this globe can admit of, will so remarkably weaken our ideas, and diminish our passions. A West-Indian merchant will tell you, that he is not without concern about what passes in Jamaica[17]; tho' few extend their views so far into futurity, as to dread very remote accidents.

The cause of this phaenomenon must evidently lie in the different properties of space and time. Without having recourse to metaphysics, any one may easily observe, that space or extension consists of a number of co-existent parts dispos'd in a certain order, and capable of being at once present to the sight or feeling. On the contrary, time or succession, tho' it consists likewise of parts, never presents to us more than one at once; nor is it possible for any two of them ever to be co-existent. These qualities of the objects have a suitable effect on the imagination. The parts of extension being susceptible of an union to the senses, acquire an union in the fancy; and as the appearance of one part excludes not another, the transition or passage of the thought

thro' the contiguous parts is by that means render'd more smooth and easy. On the other hand, the incompatibility of the parts of time in their real existence separates them in the imagination, and makes it more difficult for that faculty to trace any long succession or series of events. Every part must appear single and alone, nor can regularly have entrance into the fancy without banishing what is suppos'd to have been immediately precedent. By this means any distance in time causes a greater interruption in the thought than an equal distance in space, and consequently weakens more considerably the idea, and consequently the passions; which depend in a great measure, on the imagination, according to my system.

There is another phaenomenon of a like nature with the foregoing, viz, the superior effects of the same distance in futurity above that in the past. This difference with respect to the will is easily accounted for. As none of our actions can alter the past, 'tic not strange it shou'd never determine the will. But with respect to the passions the question is yet entire, and well worth the examining.

Besides the propensity to a gradual progression thro' the points of space and time, we have another peculiarity in our method of thinking, which concurs in producing this phaenomenon. We always follow the succession of time in placing our ideas, and from the consideration of any object pass more easily to that, which follows immediately after it, than to that which went before it. We may learn this, among other instances, from the order, which is always observ'd in historical narrations. Nothing but an absolute necessity can oblige an historian to break the order of time, and in his narration give the precedence to an event, which was in reality posterior to another.

This will easily be apply'd to the question in hand, if we reflect on what I have before observ'd, that the present situation of the person is always that of the imagination, and that 'tic from thence we proceed to the conception of any distant object. When the object is past, the progression of the thought in passing to it from the present is contrary to nature, as proceeding from one point of time to that which is preceding, and from that to another preceding, in opposition to the natural course of the succession. On the other hand, when we turn our thought to a future object, our fancy flows along the stream of time, and arrives at the object by an order, which seems most natural, passing always from one point of time to that which is immediately

posterior to it. This easy progression of ideas favours the imagination, and makes it conceive its object in a stronger and fuller light, than when we are continually oppos'd in our passage, and are oblig'd to overcome the difficulties arising from the natural propensity of the fancy. A small degree of distance in the past has, therefore, a greater effect, in interrupting and weakening the conception, than a much greater in the future. From this effect of it on the imagination is deriv'd its influence on the will and passions.

There is another cause, which both contributes to the same effect, and proceeds from the same quality of the fancy, by which we are determin'd to trace the succession of time by a similar succession of ideas. When from the present instant we consider two points of time equally distant in the future and in the past, 'tis evident, that, abstractedly consider'd, their relation to the present is almost equal. For as the future will sometime be present, so the past was once present. If we cou'd, therefore, remove this quality of the imagination, an equal distance in the past and in the future, wou'd have a similar influence. Nor is this only true, when the fancy remains fix'd, and from the present instant surveys the future and the past; but also when it changes its situation, and places us in different periods of time. For as on the one hand, in supposing ourselves existent in a point of time interpos'd betwixt the present instant and the future object, we find the future object approach to us, and the past retire, and become more distant: so on the other hand, in supposing ourselves existent in a point of time interpos'd betwixt the present and the past, the past approaches to us, and the future becomes more distant. But from the property of the fancy above-mention'd we rather chuse to fix our thought on the point of time interposed betwixt the present and the future, than on that betwixt the present and the past. We advance, rather than retard our existence; and following what seems the natural succession of time, proceed from past to present, and from present to future. By which means we conceive the future as flowing every moment nearer us, and the past as retiring. An equal distance, therefore, in the past and in the future, has not the same effect on the imagination; and that because we consider the one as continually encreasing, and the other as continually diminishing. The fancy anticipates the course of things, and surveys the object in that condition, to which it tends, as well as in that, which is regarded as the present.

The same subject continu'd

Thus we have accounted for three phaenomena, which seem pretty remarkable. Why distance weakens the conception and passion: Why distance in time has a greater effect than that in space: And why distance in past time has still a greater effect than that in future. We must now consider three phaenomena, which seem to be, in a manner, the reverse of these: Why a very great distance encreases our esteem and admiration for an object; Why such a distance in time encreases it more than that in space: And a distance in past time more than that in future. The curiousness of the subject will, I hope, excuse my dwelling on it for some time.

To begin with the first phaenomenon, why a great distance encreases our esteem and admiration for an object; 'tis evident that the mere view and contemplation of any greatness, whether successive or extended, enlarges the soul, and give it a sensible delight and pleasure. A wide plain, the ocean, eternity, a succession of several ages; all these are entertaining objects, and excel every thing, however beautiful, which accompanies not its beauty with a suitable greatness. Now when any very distant object is presented to the imagination, we naturally reflect on the interpos'd distance, and by that means, conceiving something great and magnificent, receive the usual satisfaction. But as the fancy passes easily from one idea to another related to it, 'and transports to the second all the passions excited by the first, the admiration, which is directed to the distance, naturally diffuses itself over the distant object. Accordingly we find, that 'tis not necessary the object shou'd be actually distant from us, in order to cause our admiration; but that 'tis sufficient, if, by the natural association of ideas, it conveys our view to any considerable distance. A great traveller, tho' in the same chamber, will pass for a very extraordinary person; as a Greek medal, even in our cabinet, is always esteem'd a valuable curiosity. Here the object, by a natural transition, conveys our views to the distance; and the admiration, which arises from that distance, by another natural transition, returns back to the object.

But tho' every great distance produces an admiration for the distant object, a distance in time has a more considerable effect than that in space. Antient busts and inscriptions are more valu'd than

Japan tables: And not to mention the Greeks and Romans, 'tis certain we regard with more veneration the old Chaldeans[18] and Egyptians, than the modern Chinese and Persians, and bestow more fruitless pains to dear up the history and chronology of the former, than it would cost us to make a voyage, and be certainly inform'd of the character, learning and government of the latter. I shall be oblig'd to make a digression in order to explain this phaenomenon.

'Tis a quality very observable in human nature, that any opposition, which does not entirely discourage and intimidate us, has rather a contrary effect, and inspires us with a more than ordinary grandeur and magnanimity. In collecting our force to overcome the opposition, we invigorate the soul, and give it an elevation with which otherwise it would never have been acquainted. Compliance, by rendering our strength useless, makes us insensible of it: but opposition awakens and employs it.

This is also true in the universe. Opposition not only enlarges the soul; but the soul, when full of courage and magnanimity, in a manner seeks opposition.

Spumantemque dari pecora inter inertia votis Optat aprum, aut fulvum descendere monte leonem[19].

[And, among the tamer beasts, [he] longs to be granted, in answer to his prayers, a slaving boar, or to have a tawny lion come down from the mountain.]

Whatever supports and fills the passions is agreeable to us; as on the contrary, what weakens and infeebls them is uneasy. As opposition has the first effect, and facility the second, no wonder the mind, in certain dispositions, desires the former, and is averse to the latter.

These principles have an effect on the imagination as well as on the passions. To be convinc'd of this we need only consider the influence of heights and depths on that faculty. Any great elevation of place communicates a kind of pride or sublimity of imagination, and gives a fancy'd superiority over those that lie below; and, vice versa, a sublime and strong imagination conveys the idea of ascent and elevation. Hence it proceeds, that we associate, in a manner, the idea of whatever is good with that of height, and evil with low.

ness. Heaven is suppos'd to be above, and hell below. A noble genius is call'd an elevate and sublime one. Atque udam spernit humum fugiente penna[20]. [Spurns the dank soil in winged flight.] On the contrary, a vulgar and trivial conception is stil'd indifferently low or mean. Prosperity is denominated ascent, and adversity descent.

Kings and princes are suppos'd to be plac'd at the top of human affairs; as peasants and day-labourers are said to be in the lowest stations. These methods of thinking, and of expressing ourselves, are not of so little consequence as they may appear at first sight.

Tis evident to common sense, as well as philosophy, that there is no natural nor essential difference betwixt high and low, and that this distinction arises only from the gravitation of matter, which produces a motion from the one to the other. The very same direction, which in this part of the globe is call'd ascent, is denominated descent in our antipodes; which can proceed from nothing but the contrary tendency of bodies. Now 'tis certain, that the tendency of bodies, continually operating upon our senses, must produce, from custom, a like tendency in the fancy, and that when we consider any object situated in an ascent, the idea of its weight gives us a propensity to transport it from the place, in which it is situated, to the place immediately below it, and so on, 'till we come to the ground, which equally stops the body and our imagination.

For a like reason we feel a difficulty in mounting, and pass not without a kind of reluctance from the inferior to that which is situated above it; as if our ideas acquir'd a kind of gravity from their objects. As a proof of this, do we not find, that the facility, which is so much study'd in music and poetry, is call'd the fail or cadency of the harmony or period; the idea of facility communicating to us that of descent, in the same manner as descent produces a facility?

Since the imagination, therefore, in running from low to high, finds an opposition in its internal qualities and principles, and since the soul, when elevated with joy and courage, in a manner seeks opposition, and throws itself with alacrity into any scene of thought or action, where its courage meets with matter to nourish and employ it; it follows, that everything, which invigorates and inlivens the soul, whether by touching the passions or imagination. naturally conveys to the fancy this inclination for ascent, and determines it to run against the natural stream of its thoughts and conceptions. This aspiring

progress of the imagination suits the present disposition of the mind; and the difficulty, instead of extinguishing its vigour and alacrity, has the contrary affect, of sustaining and encreasing it.

Virtue, genius, power, and riches are for this reason associated with height and sublimity; as poverty, slavery, and folly are conjoin'd with descent and lowness. Were the case the same with us as Milton[21] represents it to be with the angels, to whom descent is adverse, and who cannot sink without labour and compulsion, this order of things wou'd be entirely inverted; as appears hence, that the very nature of ascent and descent is deriv'd from the difficulty and propensity, and consequently every one of their effects proceeds from that origin.

All this is easily apply'd to the present question, why a considerable distance in time produces a greater veneration for the distant objects than a like removal in space. The imagination moves with more difficulty in passing from one portion of time to another, than in a transition thro' the parts of space; and that because space or extension appears united to our senses, while time or succession is always broken and divided. This difficulty, when join'd with a small distance, interrupts and weakens the fancy: But has a contrary effect in a great removal. The mind, elevated by the vastness of its object, is still farther elevated by the difficulty of the conception; and being oblig'd every moment to renew its efforts in the transition from one part of time to another, feels a more vigorous and sublime disposition, than in a transition thro' the parts of space, where the ideas flow along with easiness and facility. In this disposition, the imagination, passing, as is usual, from the consideration of the distance to the view of the distant objects, gives us a proportionable veneration for it; and this is the reason why all the relicts of antiquity are so precious in our eyes, and appear more valuable than what is brought even from the remotest parts of the world.

The third phaenomenon I have remark'd will be a full confirmation of this. 'Tis not every removal in time, which has the effect of producing veneration and esteem. We are not apt to imagine our posterity will excel us, or equal our ancestors. This phaenomenon is the more remarkable, because any distance in futurity weakens not our ideas so much as an equal removal in the past. Tho' a removal in the past, when very great, encreases our passions beyond a like

removal in the future, yet a small removal has a greater influence in diminishing them.

In our common way of thinking we are plac'd in a kind of middle station betwixt the past and future; and as our imagination finds a kind of difficulty in running along the former, and a facility in following the course of the latter, the difficulty conveys the notion of ascent, and the facility of the contrary. Hence we imagine our ancestors to be, in a manner, mounted above us, and our posterity to lie below us. Our fancy arrives not at the one without effort, but easily reaches the other: Which effort weakens the conception, where the distance is small; but enlarges and elevates the imagination, when attended with a suitable object. As on the other hand, the facility assists the fancy in a small removal, but takes off from its force when it contemplates any considerable distance. It may not be improper, before we leave this subject of the will, to resume, in a few words, all that has been said concerning it, in order to set the whole more distinctly before the eyes of the reader.

What we commonly understand by passion is a violent and sensible emotion of mind, when any good or evil is presented, or any object, which, by the original formation of our faculties, is fitted to excite an appetite. By reason we mean affections of the very same kind with the former; but such as operate more calmly, and cause no disorder in the temper: Which tranquillity leads us into a mistake concerning them, and causes us to regard them as conclusions only of our intellectual faculties. Both the causes and effects of these violent and calm passions are pretty variable, and depend, in a great measure, on the peculiar temper and disposition of every individual.

Generally speaking, the violent passions have a more powerful influence on the will; tho' 'tis often found, that the calm ones, when corroborated by reflection, and seconded by resolution, are able to controul them in their most furious movements. What makes this whole affair more uncertain, is, that a calm passion may easily be chang'd into a violent one, either by a change of temper, or of the circumstances and situation of the object, as by the borrowing of force from any attendant passion, by custom, or by exciting the imagination. Upon the whole, this struggle of passion and of reason, as it is call'd, diversifies human life, and makes men so different not only from each other, but also from themselves in different times.

Philosophy can only account for a few of the greater and more sensible events of this war; but must leave all the smaller and more delicate revolutions, as dependent on principles too fine and minute for her comprehension.

SECT. IX

Of the direct passions

'Tis easy to observe, that the passions, both direct and indirect, are founded on pain and pleasure, and that in order to produce an affection of any kind, 'tis only requisite to present some good or evil.

Upon the removal of pain and pleasure there immediately follows a removal of love and hatred, pride and humility, desire and aversion, and of most of our reflective or secondary impressions.

The impressions, which arise from good and evil most naturally, and with the least preparation are the direct passions of desire and aversion, grief and joy, hope and fear, along with volition. The mind by an original instinct tends to unite itself with the good, and to avoid the evil, tho' they be conceiv'd merely in idea, and be consider'd as to exist in any future period of time.

But supposing that there is an immediate impression of pain or pleasure, and that arising from an object related to ourselves or others, this does not prevent the propensity or aversion, with the consequent emotions, but by concurring with certain dormant principles of the human mind, excites the new impressions of pride or humility, love or hatred. That propensity, which unites us to the object, or separates us from it, still continues to operate, but in conjunction with the indirect passions, which arise from a double relation of impressions and ideas.

These indirect passions, being always agreeable or uneasy, give in their turn additional force to the direct passions, and encrease our desire and aversion to the object. Thus a suit of fine cloaths produces pleasure from their beauty; and this pleasure produces the direct passions, or the impressions of volition and desire. Again, when these cloaths are consider'd as belonging to ourself, the double relation conveys to us the sentiment of pride, which is an indirect passion; and the pleasure, which attends that passion, returns back to the direct

affections, and gives new force to our desire or volition, joy or hope.

When good is certain or probable, it produces joy. When evil is in the same situation there arises GRIEF or SORROW. When either good or evil is uncertain, it gives rise to FEAR or HOPE, according to the degrees of uncertainty on the one side or the other.

DESIRE arises from good consider'd simply, and AVERSION is deriv'd from evil. The WILL exerts itself, when either the good or the absence of the evil may be attain'd by any action of the mind or body.

Beside good and evil, or in other words, pain and pleasure, the direct passions frequently arise from a natural impulse or instinct, which is perfectly unaccountable. Of this kind is the desire of punishment to our enemies, and of happiness to our friends; hunger, lust, and a few other bodily appetites. These passions, properly speaking, produce good and evil, and proceed not from them, like the other affections.

None of the direct affections seem to merit [\[22\]](#) our particular attention, except hope and fear, which we shall here endeavour to account for. 'Tis evident that the very same event, which by its certainty wou'd produce grief or joy, gives always rise to fear or hope, when only probable and uncertain. In order, therefore, to understand the reason why this circumstance makes such a considerable difference, we must reflect on what I have already advanc'd in the preceding book concerning the nature of probability.

Probability arises from an opposition of contrary chances or causes, by which the mind is not allow'd to fix on either side, but is incessantly tost from one to another, and at one moment is determin'd to consider an object as existent, and at another moment as the contrary. The imagination or understanding, call it which you please, fluctuates betwixt the opposite views; and tho' perhaps it may be oftener turn'd to the one side than the other, 'tis impossible for it, by reason of the opposition of causes or chances, to rest on either. The pro and con of the question alternately prevail; and the mind, surveying the object in its opposite principles, finds such a contrariety as utterly destroys all certainty and establish'd opinion.

Suppose, then, that the object, concerning whose reality we are doubtful, is an object either of desire or aversion, 'tis evident, that,

according as the mind turns itself either to the one side or the other, it must feel a momentary impression of joy or sorrow. An object, whose existence we desire, gives satisfaction, when we reflect on those causes, which produce it; and for the same reason excites grief or uneasiness from the opposite consideration: So that as the understanding, in all probable questions, is divided betwixt the contrary points of view, the affections must in the same manner be divided betwixt opposite emotions.

Now if we consider the human mind, we shall find, that with regard to the passions, 'tis not the nature of a wind-instrument of music, which in running over all the notes immediately loses the sound after the breath ceases; but rather resembles a stringinstrument, where after each stroke the vibrations still retain some sound, which gradually and insensibly decays. The imagination is extreme quick and agile; but the passions are slow and restive: For which reason, when any object is presented, that affords a variety of views to the one, and emotions to the other; tho' the fancy may change its views with great celerity; each stroke will not produce a clear and distinct note of passion, but the one passion will always be mixt and confounded with the other. According as the probability inclines to good or evil, the passion of joy or sorrow predominates in the composition: Because the nature of probability is to cast a superior number of views or chances on one side; or, which is the same thing, a superior number of returns of one passion; or since the dispers'd passions are collected into one, a superior degree of that passion. That is, in other words, the grief and joy being intermingled with each other,. by means of the contrary views of the imagination, produce by their union the passions of hope and fear. Upon this head there may be started a very curious question concerning that contrariety of passions, which is our present subject.

Tis observable, that where the objects of contrary passions are presented at once, beside the encrease of the predominant passion (which has been already explain'd, and commonly arises at their first shock or rencounter) it sometimes happens, that both the passions exist successively, and by short intervals; sometimes, that they destroy each other, and neither of them takes place; and sometimes that both of them remain united in the mind. It may, therefore, be ask'd, by what theory we can explain these variations, and to what general principle we can reduce them.

When the contrary passions arise from objects entirely different, they take place alternately, the want of relation in the ideas separating the impressions from each other, and preventing their opposition. Thus when a man is afflicted for the loss of a lawsuit, and joyful for the birth of a son, the mind running from the agreeable to the calamitous object, with whatever celerity it may perform this motion, can scarcely temper the one affection with the other, and remain betwixt them in a state of indifference.

It more easily attains that calm situation, when the same event is of a mixt nature, and contains something adverse and something prosperous in its different circumstances. For in that case, both the passions, mingling with each other by means of the relation, become mutually destructive, and leave the mind in perfect tranquility.

But suppose, in the third place, that the object is not a compound of good or evil, but is consider'd as probable or improbable in any degree; in that case I assert, that the contrary passions will both of them be present at once in the soul, and instead of destroying and tempering each other, will subsist together, and produce a third impression or affection by their union. Contrary passions are not capable of destroying each other, except when their contrary movements exactly rencounter, and are opposite in their direction, as well as in the sensation they produce. This exact rencounter depends upon the relations of those ideas, from which they are deriv'd, and is more or less perfect, according to the degrees of the relation. In the case of probability the contrary chances are so far related, that they determine concerning the existence or non-existence of the same object. But this relation is far from being perfect; since some of the chances lie on the side of existence, and others on that of non-existence; which are objects altogether incompatible. 'Tis impossible by one steady view to survey the opposite chances, and the events dependent on them; but 'tis necessary, that the imagination shou'd run alternately from the one to the other. Each view of the imagination produces its peculiar passion, which decays away by degrees, and is follow'd by a sensible vibration after the stroke. The incompatibility of the views keeps the passions from shocking in a direct line, if that expression may be allow'd; and yet their relation is sufficient to mingle their fainter emotions. Tis after this manner that hope and fear arise from the different mixture of these opposite passions of grief and joy, and from their imperfect union and conjunction.

Upon the whole, contrary passions succeed each other alternately, when they arise from different objects: They mutually destroy each other, when they proceed from different parts of the same: And they subsist both of them. and mingle together, when they are deriv'd from the contrary and incompatible chances or possibilities, on which any one object depends. The influence of the relations of ideas is plainly seen in this whole affair. If the objects of the contrary passions be totally different, the passions are like two opposite liquors in different bottles, which have no influence on each other. If the objects be intimately connected, the passions are like an alcali and an acid, which, being mingled, destroy each other.

If the relation be more imperfect, and consists in the contradictory views of the same object, the passions are like oil and vinegar, which, however mingled, never perfectly unite and incorporate.

As the hypothesis concerning hope and fear carries its own evidence along with it, we shall be the more concise in our proofs. A few strong arguments are better than many weak ones.

The passions of fear and hope may arise when the chances are equal on both sides, and no superiority can be discover'd in the one above the other. Nay, in this situation the passions are rather the strongest, as the mind has then the least foundation to rest upon, and is toss'd with the greatest uncertainty. Throw in a superior degree of probability to the side of grief, you immediately see that passion diffuse itself over the composition, and tincture it into fear. Encrease the probability, and by that means the grief, the fear prevails still more and more, till at last it runs insensibly, as the joy continually diminishes, into pure grief. After you have brought it to this situation, diminish the grief, after the same manner that you encreas'd it; by diminishing the probability on that side, and you'll see the passion clear every moment, 'till it changes insensibly into hope; which again runs, after the same manner, by slow degrees, into joy, as you encrease that part of the composition by the encrease of the probability. Are not these as plain proofs, that the passions of fear and hope are mixtures of grief and joy, as in optics 'tis a proof, that a colour'd ray of the sun passing thro' a prism, is a composition of two others, when, as you diminish or encrease the quantity of either, you find it prevail proportionably more or less in the composition? I am

sure neither natural nor moral philosophy admits of stronger proofs.

Probability is of two kinds, either when the object is really in itself uncertain, and to be determin'd by chance; or when, tho' the object be already certain, yet 'tis uncertain to our judgment, which finds a number of proofs on each side of the question. Both these kinds of probabilities cause fear and hope; which can only proceed from that property, in which they agree, viz, the uncertainty and fluctuation they bestow on the imagination by that contrariety of views, which is common to both.

'Tis a probable good or evil, that commonly produces hope or fear; because probability, being a wavering and unconstant method of surveying an object, causes naturally a like mixture and uncertainty of passion. But we may observe, that wherever from other causes this mixture can be produc'd, the passions of fear and hope will arise, even tho' there be no probability; which must be allow'd to be a convincing proof of the present hypothesis. We find that an evil, barely conceiv'd as possible, does sometimes produce fear; especially if the evil be very great. A man cannot think of excessive pains and tortures without trembling, if he be in the least danger of suffering them. The smallness of the probability is compensated by the greatness of the evil; and the sensation is equally lively, as if the evil were more probable. One view or glimpse of the former, has the same effect as several of the latter.

But they are not only possible evils, that cause fear, but even some allow'd to be impossible; as when we tremble on the brink of a precipice, tho' we know ourselves to be in perfect security, and have it in our choice whether we will advance a step farther. This proceeds from the immediate presence of the evil, which influences the imagination in the same manner as the certainty of it wou'd-do; but being encounter'd by the reflection on our security, is immediately retracted, and causes the same kind of passion, as when from a contrariety of chances contrary passions are produc'd.

Evils, that are certain, have sometimes the same effect in producing fear, as the possible or impossible. Thus a man in a strong prison well-guarded, without the least means of escape, trembles at the thought of the rack, to which he is sentenc'd. This happens only when the certain evil is terrible and confounding; in which case the mind continually rejects it with horror, while it continually presses in upon the thought. The evil is there flx'd and establish'd, but the mind

cannot endure to fix upon it; from which fluctuation and uncertainty there arises a passion of much the same appearance with fear.

But 'tis not only where good or evil is uncertain, as to its existence, but also as to its kind, that fear or hope arises. Let one be told by a person, whose veracity he cannot doubt of, that one of his sons is suddenly kill'd, 'tis evident the passion this event wou'd occasion, wou'd not settle into pure grief, till he got certain information, which of his sons he had lost. Here there is an evil certain, but the kind of it uncertain. Consequently the fear we feel on this occasion is without the least mixture of joy, and arises merely from the fluctuation of the fancy betwixt its objects. And tho' each side of the question produces here the same passion, yet that passion cannot settle, but receives from the imagination a tremulous and unsteady motion, resembling in its cause, as well as in its sensation, the mixture and contention of grief and joy.

From these principles we may account for a phaenomenon in the passions, which at first sight seems very extraordinary, viz. that surprize is apt to change into fear, and every thing that is unexpected affrights us. The most obvious conclusion from this is, that human nature is in general pusillanimous; since upon the sudden appearance of any object. we immediately conclude it to be an evil, and without waiting till we can examine its nature, whether it be good or bad, are at first affected with fear. This I say is the most obvious conclusion; but upon farther examination we shall find that the phaenomenon is otherwise to be accounted for. The suddenness and strangeness of an appearance naturally excite a commotion in the mind, like every thing for which we are not prepar'd, and to which we are not accusom'd. This commotion, again, naturally produces a curiosity or inquisitiveness, which being very violent, from the strong and sudden impulse of the object, becomes uneasy, and resembles in its fluctuation and uncertainty, the sensation of fear or the mix'd passions of grief and joy. This image of fear naturally converts into the thing itself, and gives us a real apprehension of evil, as the mind always forms its judgments more from its present disposition than from the nature of its objects.

Thus all kinds of uncertainty have a strong connexion with fear, even tho' they do not cause any opposition of passions by the opposite views and considerations they present to us. A person, who has left his

friend in any malady, will feel more anxiety upon his account, than if he were present, tho' perhaps he is not only incapable of giving him assistance, but likewise of judging of the event of his sickness. In this case, tho' the principal object of the passion, viz, the life or death of his friend, be to him equally uncertain when present as when absent; yet there are a thousand little circumstances of his friend's situation and condition, the knowledge of which fixes the idea, and prevents that fluctuation and uncertainty so near ally'd to fear. Uncertainty is, indeed, in one respect as near ally'd to hope as to fear, since it makes an essential part in the composition of the former passion; but the reason, why it inclines not to that side, is, that uncertainty alone is uneasy, and has a reladon of impressions to the uneasy passions.

'Tis thus our uncertainty concerning any minute circumstance relating to a person encreases our apprehensions of his death or misfortune. Horace[23] has remark'd this phaenomenon.

Ut assidens implumi bus pullus avis

Serpentium allapsus tirnet,

Magis relictis; non, ut adsit, auxili Latura plus presentibus.

[As a bird, watching over her fledgelings, is more afraid of their being attacked by snakes if she were to leave them even though, were she to stay, she would not be any more capable of helping them, when they were with her.] But this principle of the connexion of fear with uncertainty I carry farther, and observe that any doubt produces that passion, even tho' it presents nothing to us on any side but what is good and desireable. A virgin, on her bridalnight goes to bed full of fears and apprehensions, tho' she expects nothing but pleasure of the highest kind, and what she has long wish'd for. The newness and greatness of the event, the confusion of wishes and joys so embarrass the mind, that it knows not on what passion to fix itself; from whence arises a fluttering or unsettledness of the spirits. which being, in some degree, uneasy, very naturally degenerates into fear.

Thus we still find, that whatever causes any fluctuation or mixture of passions, with any degree of uneasiness, always produces fear, or at least a passion so like it, that they are scarcely to be distinguish'd.

I have here confin'd myself to the examination of hope and fear in their most simple and natural situation, without considering all the variations they may receive from the mixture of different views and reflections. Terror, consternation, astonishment, anxiety, and other passions of that kind, are nothing but different species and degrees of fear. 'Tis easy to imagine how a different situation of the object, or a different turn of thought, may change even the sensation of a passion; and this may in general account for all the particular sub-divisions of the other affections, as well as of fear. Love may shew itself in the shape of tenderness, friendship, intimacy, esteem, good-will, and in many other appearances; which at the bottom are the same affections; and arise from the same causes, tho' with a small variation, which it is not necessary to give any particular account of.

'Tis for this reason I have all along confin'd myself to the principal passion.

The same care of avoiding prolixity is the reason why I wave the examination of the will and direct passions, as they appear in animals; since nothing is more evident, than that they are of the same nature, and excited by the same causes as in human creatures. I leave this to the reader's own observation; desiring him at the same time to consider the additional force this bestows on the present system.

SECT. X

Of curiosity [24] , or the love of truth

But methinks we have been not a little inattentive to run over so many different parts of the human mind, and examine so many passions, without taking once into the consideration that love of truth, which was the first source of all our enquiries. Twill therefore be proper, before we leave this subject, to bestow a few reflections on that passion, and shew its origin in human nature. 'Tis an affection of so peculiar a kind, that 'twould have been impossible to have treated of it under any of those heads, which we have examin'd, without danger of obscurity and confusion.

Truth is of two kinds, consisting either in the discovery of the proportions of ideas, consider'd as such, or in the conformity of our ideas of objects to their real existence. 'Tis certain, that the former species of truth, is not desir'd merely as truth, and that 'tis not the

justness of our conclusions, which alone gives the pleasure. For these conclusions are equally just, when we discover the equality of two bodies by a pair of compasses, as when we learn it by a mathematical demonstration; and tho' in the one case the proofs be demonstrative, and in the other only sensible, yet generally speaking, the mind acquiesces with equal assurance in the one as in the other. And in an arithmetical operation, where both the truth and the assurance are of the same nature, as in the most profound algebraical problem, the pleasure is very inconsiderable, if rather it does not degenerate into pain: Which is an evident proof, that the satisfaction, which we sometimes receive from the discovery of truth, proceeds not from it, merely as such, but only as endow'd with certain qualities. The first and most considerable circumstance requisite to render truth agreeable, is the genius and capacity, which is employ'd in its invention and discovery. What is easy and obvious is never valu'd; and even what is in itself difficult, if we come to the knowledge of it without difficulty, and without any stretch of thought or judgment, is but little regarded. We love to trace the demonstrations of mathematicians; but shou'd receive small entertainment from a person, who shou'd barely inform us of the proportions of lines and angles, tho' we repos'd the utmost confidence both in his judgment and veracity. In this case 'tis sufficient to have ears to learn the truth. We never are oblig'd to fix our attention or exert our genius; which of all other exercises of the mind is the most pleasant and agreeable.

But tho' the exercise of genius be the principal source of that satisfaction we receive from the sciences, yet I doubt, if it be alone sufficient to give us any considerable enjoyment. The truth we discover must also be of some importance. 'Tis easy to multiply algebraical problems to infinity, nor is there any end in the discovery of the proportions of conic sections; tho' few mathematicians take any pleasure in these researches, but turn their thoughts to what is more useful and important. Now the question is, after what manner this utility and importance operate upon us? The difficulty on this head arises from hence, that many philosophers have consum'd their time, have destroy'd their health, and neglected their fortune, in the search of such truths, as they esteem'd important and useful to the world, tho' it appear'd from their whole conduct and behaviour, that they were not endow'd with any share of public spirit, nor had any concern for the interests of mankind. Were they convinc'd, that their discoveries were of no consequence, they wou'd entirely lose all relish

for their studies, and that tho' the consequences be entirely indifferent to them; which seems to be a contradiction.

To remove this contradiction, we must consider, that there are certain desires and inclinations, which go no farther than the imagination, and are rather the faint shadows and images of passions, than any real affections. Thus, suppose a man, who takes a survey of the fortifications of any city; considers their strength and advantages, natural or acquir'd; observes the disposition and contrivance of the bastions, ramparts, mines, and other military works; 'tis plain, that in proportion as all these are fitted to attain their ends he will receive a suitable pleasure and satisfaction. This pleasure, as it arises from the utility, not the form of the objects, can be no other than a sympathy with the inhabitants, for whose security all this art is employ'd; tho'tis possible, that this person, as a stranger or an enemy, may in his heart have no kindness for them, or may even entertain a hatred against them.

It may indeed be objected, that such a remote sympathy is a very slight foundation for a passion, and that so much industry and application, as we frequently observe in philosophers, can never be deriv'd from so inconsiderable an original. But here I return to what I have already remark'd, that the pleasure of study conflicts chiefly in the action of the mind, and the exercise of the genius and understanding in the discovery or comprehension of any truth. If the importance of the truth be requisite to compleat the pleasure, 'tis not on account of any considerable addition, which of itself it brings to our enjoyment, but only because 'tis, in some measure, requisite to fix our attention. When we are careless and inattentive, the same action of the understanding has no effect upon us, nor is able to convey any of that satisfaction, which arises from it, when we are in another disposition.

But beside the action of the mind, which is the principal foundation of the pleasure, there is likewise requir'd a degree of success in the attainment of the end, or the discovery of that truth we examine. Upon this head I shall make a general remark, which may be useful on many occasions, viz, that where the mind pursues any end with passion; tho' that passion be not deriv'd originally from the end, but merely from the action and pursuit; yet by the natural course of the affections, we acquire a concern for the end itself, and are uneasy

under any disappointment we meet with in the pursuit of it. This proceeds from the relation and parallel direction of the passions above-mention'd.

To illustrate all this by a similar instance, I shall observe, that there cannot be two passions more nearly resembling each other, than those of hunting and philosophy, whatever disproportion may at first sight appear betwixt them. 'Tis evident, that the pleasure of hunting conflicts in the action of the mind and body; the motion, the attention, the difficulty, and the uncertainty. 'Tis evident likewise, that these actions must be attended with an idea of utility, in order to their having any effect upon us. A man of the greatest fortune, and the farthest remov'd from avarice, tho' he takes a pleasure in hunting after partridges and pheasants, feels no satisfaction in shooting crows and magpies; and that because he considers the first as fit for the table, and the other as entirely useless. Here 'tis certain, that the utility or importance of itself causes no real passion, but is only requisite to support the imagination; and the same person, who overlooks a ten times greater profit in any other subject, is pleas'd to bring home half a dozen woodcocks or plovers, after having employ'd several hours in hunting after them. To make the parallel betwixt hunting and philosophy more compleat, we may observe, that tho' in both cases the end of our action may in itself be despis'd, yet in the heat of the action we acquire such an attention to this end, that we are very uneasy under any disappointments, and are sorry when we either miss our game, or fall into any error in our reasoning.

If we want another parallel to these affections, we may consider the passion of gaming, which affords a pleasure from the same principles as hunting and philosophy. It has been remark'd, that the pleasure of gaming arises not from interest alone; since many leave a sure gain for this entertainment: Neither is it deriv'd from the game alone; since the same persons have no satisfaction, when they play for nothing: But proceeds from both these causes united, tho' separately they have no effect. 'Tis here, as in certain chymical preparations, where the mixture of two clear and transparent liquids produces a third, which is opaque and colour'd..

The interest, which we have in any game, engages our attention, without which we can have no enjoyment, either in that or in any other action. Our attention being once engag'd, the difficulty, variety,

and sudden reverses of fortune, still farther interest us; and 'tis from that concern our satisfaction arises. Human life is so tiresome a scene, and men generally are of such indolent dispositions, that whatever amuses them, tho' by a passion mixt with pain, does in the main give them a sensible pleasure. And this pleasure is here encreas'd by the nature of the objects, which being sensible, and of a narrow compass, are enter'd into with facility, and are agreeable to the imagination.

The same theory, that accounts for the love of truth in mathematics and algebra. may be extended to morals, politics, natural philosophy, and other studies, where we consider not the other abstract relations of ideas, but their real connexions and existence. But beside the love of knowledge, which displays itself in the sciences, there is a certain curiosity implanted in human nature, which is a passion deriv'd from a quite different principle.

Some people have an insatiable desire of knowing the actions and circumstances of their neighbours, tho' their interest be no way concern'd in them, and they must entirely depend on others for their information; in which case there is no room for study or application. Let us search for the reason of this phaenomenon.

It has been prov'd at large, that the influence of belief is at once to invigilate and infix any idea in the imagination, and prevent all kind of hesitation and uncertainty about it. Both these circumstances are advantageous. By the vivacity of the idea we interest the fancy, and produce, tho' in a lesser degree, the same pleasure, which arises from a moderate passion. As the vivacity of the idea gives pleasure, so its certainty prevents uneasiness, by fixing one particular idea in the mind, and keeping it from wavering in the choice of its objects.

'Tis a quality of human nature, which is conspicuous on many occasions, and is common both to the mind and body, that too sudden and violent a change is unpleasant to us, and that however any objects may in themselves be indifferent, yet their alteration gives uneasiness. As 'tis the nature of doubt to cause a variation in the thought, and transport us suddenly from one idea to another, it must of consequence be the occasion of pain. This pain chiefly takes place, where interest, relation, or the greatness and novelty of any event interests us in it. 'Tis not every matter of fact, of which we have a curiosity to be inform'd; neither are they such only as we have an interest to know. 'Tis sufficient if the idea strikes on us with such force, and concerns us

so nearly, as to give us an uneasiness in its instability and inconstancy. A stranger, when he arrives first at any town, may be entirely indifferent about knowing the history and adventures of the inhabitants; but as he becomes farther acquainted with them, and has liv'd any considerable time among them, he acquires the same curiosity as the natives. When we are reading the history of a nation, we may have an ardent desire of clearing up any doubt or difficulty, that occurs in it; but become careless in such researches, when the ideas of these events are, in a great measure, obliterated.

12. To prevent all ambiguity, I must observe, that where I oppose the imagination to the memory, I mean in general the faculty that presents our fainter ideas. In all other places, and particularly when it is oppos'd to the understanding, I understand the same faculty, excluding only our demonstrative and probable reasonings.

ADVERTISEMENT

I think it proper to inform the public, that tho' this be a third volume of the Treatise of Human Nature, yet 'tis in some measure independent of the other two, and requires not that the reader shou'd enter into all the abstract reasonings contain'd in them.

I am hopeful it may be understood by ordinary readers, with as little attention as is usually given to any books of reasoning. It must only be observ'd, that I continue to make use of the terms, impressions and ideas, in the same sense as formerly; and that by impressions I mean our stronger perceptions, such as our sensations, affections and sentiments; and by ideas the fainter perceptions, or the copies of these in the memory and imagination.

PART I Of VIRTUE AND VICE IN GENERAL

SECT. I

Moral distinctions not deriv'd from reason

There is an inconvenience which attends all abstruse reasoning , that it may silence, without convincing an antagonist, and requires the same intense study to make us sensible of its force, that was at first requisite for its invention. When we leave our closet, and engage in the common affairs of life, its conclusions seem to vanish, like the phantoms of the night on the appearance of the morning; and 'tis difficult for us to retain even that conviction, which we had attain'd with difficulty. This is still more conspicuous in a long chain of reasoning, where we must preserve to the end the evidence of the first propositions, and where we often lose sight of ail the most receiv'd maxims, either of philosophy or common life. I am not, however, without hopes, that the present system of philosophy will acquire new force as it advances; and that our reasonings concerning morals will corroborate whatever has been said concerning the understanding and the passions. Morality is a subject that interests us above all others: We fancy the peace of society to be at stake in every decision concerning it; and 'tis evident, that this concern must make our speculations appear more real and solid, than where the subject is, in a great measure, indifferent to us. What affects us, we conclude can never be a chimera; and as our passion is engag'd on the one side or the other, we naturally think that the question lies within human comprehension; which, in other cases of this nature, we are apt to entertain some donever should have ventur'd upon a third volume of such abstruse philosophy, in an age, wherein the greatest part of men seem agreed to convert reading into an amusement, and to reject every thing that requires any considerable degree of attention to be comprehended.

It has been observ'd, that nothing is ever present to the mind but its perceptions; and that all the actions of seeing, hearing, judging, loving, hating, and thinking, fall under this denomination.

The mind can never exert itself in any action, which we may not comprehend under the term of perception; and consequently that term is no less applicable to those judgments, by which we distinguish moral good and evil, than to every other operation of the mind. To approve of one character, to condemn another, are only so many different perceptions.

Now as perceptions resolve themselves into two kinds, viz , impressions and ideas, this distinction gives rise to a question, with which we shall open up our present enquiry concerning morals.

Whether 'tis by means of our ideas or impressions we distinguish betwixt vice and virtue, and pronounce an action blameable or praiseworthy? This will immediately cut off all loose discourses and declamations, and reduce us to something precise and exact on the present subject.

Those who affirm that virtue is nothing but a conformity to reason; that there are eternal fitnesses and unfitnesses of things, which are the same to every rational being that considers them; that the immutable measures of right and wrong impose an obligation, not only on human creatures, but also on the Deity himself: All these systems concur in the opinion, that morality, like truth, is discern'd merely by ideas, and by their juxta-position and comparison. In order, therefore, to judge of these systems, we need only consider, whether it be possible, from reason alone, to distinguish betwixt moral good and evil, or whether there must concur some other principles to enable us to make that distinction, ubt of. Without this advantage I If morality had naturally no influence on human passions and actions, 'twere in vain to take such pains to inculcate it; and nothing wou'd be more fruitless than that multitude of rules and precepts, with which all moralists abound. Philosophy is commonly divided into speculative and practical; and as morality is always comprehended under the latter division, 'tis supposed to influence our passions and actions, and to go beyond the calm and indolent judgments of the understanding. And this is confirm'd by common experience, which informs us, that men are often govern'd by their duties, and are deter'd from some actions by the opinion of injustice, and impell'd to others by that of obligation.

Since morals, therefore, have an influence on the actions and affections, it follows, that they cannot be deriv'd from reason; and that

because reason alone, as we have already prov'd, can never have any such influence. Morals excite passions, and produce or prevent actions. Reason of itself is utterly impotent in this particular. The rules of morality. therefore, are not conclusions of our reason.

No one, I believe, will deny the justness of this inference; nor is there any other means of evading it, than by denying that principle, on which it is founded. As long as it is allow'd, that reason has no influence on our passions and action., 'tis in vain to pretend, that morality is discover'd only by a deduction of reason. An active principle can never be founded on an inactive; and if reason be inactive in itself, it must remain so in all its shapes and appearances, whether it exerts itself in natural or moral subjects, whether it considers the powers of external bodies, or the actions of rational beings.

It would be tedious to repeat all the arguments, by which I have prov'd,¹ that reason is perfectly inert, and can never either prevent or produce any action or affection. 'Twill be easy to recollect what has been said upon that subject. I shall only recal on this occasion one of these arguments, which I shall endeavour to render still more conclusive, and more applicable to the present subject.

Reason is the discovery of truth or falshood. Truth or falshood consists in an agreement or disagreement either to the real relations of ideas, or to real existence and matter of fact. Whatever, therefore, is not susceptible of this agreement or disagreement, is incapable of being true or false, and can never be an object of our reason. Now 'tis evident our passions, volitions, and actions, are not susceptible of any such agreement or disagreement; being original facts and realities, compleat in themselves, and implying no reference to other passions, volitions, and actions. 'Tis impossible, therefore, they can be pronounced either true or false, and be either contrary or conformable to reason. This argument is of double advantage to our present purpose.

For it proves directly, that actions do not derive their merit from a conformity to reason, nor their blame from a contrariety to it; and it proves the same truth more indirectly, by shewing us, that as reason can never immediately prevent or produce any action by contradicting or approving of it, it cannot be the source of moral good and evil, which are found to have that influence. Actions may be laudable or

blameable; but they cannot be reasonable: Laudable or blameable, therefore, are not the same with reasonable or unreasonable. The merit and demerit of actions frequently contradict, and sometimes controul our natural propensities. But reason has no such influence. Moral distinctions, therefore, are not the offspring of reason. Reason is wholly inactive, and can never be the source of so active a principle as conscience, or a sense of morals.

But perhaps it may be said, that tho' no will or action can be immediately contradictory to reason, yet we may find such a contradiction in some of the attendants of the action, that is, in its causes or effects. The action may cause a judgment, or may be obliquely caus'd by one, when the judgment concurs with a passion; and by an abusive way of speaking, which philosophy will scarce allow of, the same contrariety may, upon that account, be ascrib'd to the action. How far this truth or faishood may be the source of morals, 'twill now be proper to consider.

It has been observ'd, that reason, in a strict and philosophical sense, can have influence on our conduct only after two ways: Either when it excites a passion by informing us of the existence of something which is a proper object of it; or when it discovers the connexion of causes and effects, so as to afford us means of exerting any passion. These are the only kinds of judgment, which can accompany our actions, or can be said to produce them in any manner; and it must be allow'd, that these judgments may often be false and erroneous. A person may be affected with passion, by supposing a pain or pleasure to lie in an object, which has no tendency to produce either of these sensations, or which produces the contrary to what is imagin'd. A person may also take false measures for the attaining his end, and may retard, by his foolish conduct, instead of forwarding the execution of any project. These false judgments may be thought to affect the passions and actions, which are connected with them, and may be said to render them unreasonable, in a figurative and improper way of speaking. But tho' this be acknowledg'd, 'tis easy to observe, that these errors are so far from being the source of all immorality, that they are commonly very innocent, and draw no manner of guilt upon the person who is so unfortunate as to fall into them. They extend not beyond a mistake of fact, which moralists have not generally suppos'd criminal, as being perfectly involuntary. I am more to be lamented than blam'd, if I am

mistaken with regard to the influence of objects in producing pain or pleasure, or if I know not the proper means of satisfying my desires. No one can ever regard such errors as a defect in my moral character. A fruit, for instance, that is really disagreeable, appears to me at a distance, and thro' mistake I fancy it to be pleasant and delicious. Here is one error. I choose certain means of reaching this fruit, which are not proper for my end. Here is a second error; nor is there any third one, which can ever possibly enter into our reasonings concerning actions. I ask, therefore, if a man, in this situation, and guilty of these two errors, is to be regarded as vicious and criminal, however unavoidable they might have been? Or if it be possible to imagine, that such errors are the sources of all immorality?

And here it may be proper to observe, that if moral distinctions be deriv'd from the truth or falshood of those judgments, they must take place wherever we form the judgments; nor will there be any difference, whether the question be concerning an apple or a kingdom, or whether the error be avoidable or unavoidable. For as the very essence of morality is suppos'd to consist in an agreement or disagreement to reason, the other circumstances are entirely arbitrary, and can never either bestow on any action the character of virtuous or vicious, or deprive it of that character. To which we may add, that this agreement or disagreement, not admitting of degrees, all virtues and vices wou'd of course be equal.

Shou'd it be pretended, that tho' a mistake of fact be not criminal, yet a mistake of right often is; and that this may be the source of immorality: I would answer, that 'tis impossible such a mistake can ever be the original source of immorality, since it supposes a real right and wrong; that is, a real distinction in morals, independent of these judgments. A mistake, therefore, of right may become a species of immorality; but 'tis only a secondary one, and is founded on some other, antecedent to it.

As to those judgments which are the effects of our actions, and which, when false, give occasion to pronounce the actions contrary to truth and reason; we may observe, that our actions never cause any judgment, either true or false, in ourselves, and that 'tis only on others they have such an influence. 'Tis certain, that an action, on many occasions, may give rise to false conclusions in others; and that a person, who thro' a window sees any lewd behaviour of mine with my

neighbour's wife, may be so simple as to imagine she is certainly my own. In this respect my action resembles somewhat a lye or falshood; only with this difference, which is material, that I perform not the action with any intention of giving rise to a false judgment in another, but merely to satisfy my lust and passion. It causes, however, a mistake and false judgment by accident; and the falshood of its effects may be ascribed, by some odd figurative way of speaking, to the action itself. But still I can see no pretext of reason for asserting, that the tendency to cause such an error is the first spring or original source of all immorality.² Thus upon the whole, 'tis impossible, that the distinction betwixt moral good and evil, can be made to reason; since that distinction has an influence upon our actions, of which reason alone is incapable. Reason and judgment may, indeed, be the mediate cause of an action, by prompting, or by directing a passion: But it is not pretended, that a judgment of this kind, either in its truth or falshood, is attended with virtue or vice. And as to the judgments, which are caused by our judgments, they can still less bestow those moral qualities on the actions, which are their causes.

But to be more particular, and to shew, that those eternal immutable fitnesses and unfitnesses of things cannot be defended by sound philosophy, we may weigh the following considerations. If the thought and understanding were alone capable of fixing the boundaries of right and wrong, the character of virtuous and vicious either must lie in some relations of objects, or must be a matter of fact, which is discovered by our reasoning. This consequence is evident. As the operations of human understanding divide themselves into two kinds, the comparing of ideas, and the inferring of matter of fact; were virtue discover'd by the understanding; it must be an object of one of these operations, nor is there any third operation of the understanding. which can discover it. There has been an opinion very industriously propagated by certain philosophers, that morality is susceptible of demonstration; and tho' no one has ever been able to advance a single step in those demonstrations; yet 'tis taken for granted, that this science may be brought to an equal certainty with geometry or algebra. Upon this supposition. vice and virtue must consist in some relations; since 'tis allow'd on all hands, that no matter of fact is capable of being demonstrated. Let us, therefore, begin with examining this hypothesis, and endeavour, if possible, to fix those moral qualities, which have been so long the objects of our fruitless researches. Point out distinctly the relations, which constitute

morality[1] or obligation, that we may know wherein they consist, and after what manner we must judge of them.

If you assert, that vice and virtue consist in relations susceptible of certainty and demonstration, you must confine yourself to those four relations, which alone admit of that degree of evidence; and in that case you run into absurdities, from which you will never be able to extricate yourself. For as you make the very essence of morality to lie in the relations, and as there is no one of these relations but what is applicable, not only to an irrational, but also to an inanimate object; it follows, that even such objects must be susceptible of merit or demerit. Resemblance, contrariety, degrees in quality, and proportions in quantity and number[2]; all these relations belong as properly to matter, as to our actions, passions, and volitions. Tis unquestionable, therefore, that morality lies not in any of these relations, nor the sense of it in their discovery.3Shou'd it be asserted, that the sense of morality consists in the discovery of some relation, distinct from these, and that our enumeration was not compleat, when we comprehended all demonstrable relations under four general heads: To this I know not what to reply, till some one be so good as to point out to me this new relation. 'Tis impossible to refute a system, which has never yet been explain'd. In such a manner of fighting in the dark, a man loses his blows in the air, and often places them where the enemy is not present.

I must, therefore, on this occasion, rest contented with requiring the two following conditions of any one that wou'd undertake to clear up this system. First, As moral good and evil belong only to the actions of the mind, and are deriv'd from our situation with regard to external objects, the relations, from which these moral distinctions arise, must lie only betwixt internal actions, and external objects, and must not be applicable either to internal actions, compared among themselves, or to external objects, when placed in opposition to other external objects. For as morality is supposed to attend certain relations, if these relations cou'd belong to internal actions consider'd singly, it wou'd follow, that we might be guilty of crimes in ourselves, and independent of our situation, with respect to the universe: And in like manner, if these moral relations cou'd be apply'd to external objects, it wou'd follow, that even inanimate beings wou'd be susceptible of moral beauty and deformity. Now it seems difficult to imagine, that any relation can be discover'd betwixt our passions,

volitions and actions, compared to external objects, which relation might not belong either to these passions and volitions, or to these external objects, compar'd among themselves. But it will be still more difficult to fulfil the second condition, requisite to justify this system. According to the principles of those who maintain an abstract rational difference betwixt moral good and evil, and a natural fitness and unfitness of things, 'tis not only suppos'd, that these relations, being eternal and immutable, are the same, when consider'd by every rational creature, but their effects are also suppos'd to be necessarily the same; and 'tis concluded they have no less, or rather a greater, influence in directing the will of the deity, than in governing the rational and virtuous of our own species. These two particulars are evidently distinct. 'Tis one thing to know virtue, and another to conform the will to it. In order, therefore, to prove, that the measures of right and wrong are eternal laws, obligatory on every rational[3] mind, 'tis not sufficient to shew the relations upon which they are founded: We must also point out the connexion betwixt the relation and the will; and must prove that this connexion is so necessary, that in every well-disposed mind, it must take place and have its influence; tho' the difference betwixt these minds be in other respects immense and infinite. Now besides what I have already prov'd, that even in human nature no relation can ever alone produce any action: besides this, I say, it has been shewn, in treating of the understanding, that there is no connexion of cause and effect, such as this is suppos'd to be, which is discoverable otherwise than by experience, and of which we can pretend to have any security by the simple consideration of the objects. All beings in the universe, consider'd in themselves, appear entirely loose and independent of each other. 'Tis only by experience we learn their influence and connexion; and this influence we ought never to extend beyond experience.

Thus it will be impossible to fulfil the first condition required to the system of eternal measures of right and wrong; because it is impossible to shew those relations, upon which such a distinction may be founded: And 'tis as impossible to fulfil the second condition; because we cannot prove a priori[4], that these relations, if they really existed and were perceiv'd, wou'd be universally forcible and obligatory.

But to make these general reflections more dear and convincing, we may illustrate them by some particular instances,

wherein this character of moral good or evil is the most universally acknowledged. Of all crimes that human creatures are capable of committing, the most horrid and unnatural is ingratitude, especially when it is committed against parents, and appears in the more flagrant instances of wounds and death. This is acknowledg'd by all mankind, philosophers as well as the people; the question only arises among philosophers, whether the guilt or moral deformity of this action be discover'd by demonstrative reasoning, or be felt by an internal sense, and by means of some sentiment, which the reflecting on such an action naturally occasions. This question will soon be decided against the former opinion, if we can shew the same relations in other objects, without the notion of any guilt or iniquity attending them. Reason or science is nothing but the comparing of ideas, and the discovery of their relations; and if the same relations have different characters, it must evidently follow, that those characters are not discover'd merely by reason. To put the affair, therefore, to this trial, let us chuse any inanimate object, such as an oak or elm; and let us suppose, that by the dropping of its seed, it produces a sapling below it, which springing up by degrees, at last overtops and destroys the parent tree: I ask, if in this instance there be wanting any relation, which is discoverable in parricide or ingratitude? Is not the one tree the cause of the other's existence; and the latter the cause of the destruction of the former, in the same manner as when a child murders his parent? 'Tis not sufficient to reply, that a choice or will is wanting. For in the case of parricide, a will does not give rise to any different relations, but is only the cause from which the action is deriv'd; and consequently produces the same relations, that in the oak or elm arise from some other principles. 'Tis a will or choice, that determines a man to kill his parent; and they are the laws of matter and motion, that determine a sapling to destroy the oak, from which it sprung. Here then the same relations have different causes; but still the relations are the same: And as their discovery is not in both cases attended with a notion of immorality, it follows, that that notion does not arise from such a discovery.

But to chuse an instance, still more resembling; I would fain ask any one, why incest in the human species is criminal, and why the very same action, and the same relations in animals have not the smallest moral turpitude and deformity? If it be answer'd, that this action is innocent in animals, because they have not reason sufficient to discover its turpitude; but that man, being endow'd with that

faculty which ought to restrain him to his duty, the same action instantly becomes criminal to him; should this be said, I would reply, that this is evidently arguing in a circle. For before reason can perceive this turpitude, the turpitude must exist; and consequently is independent of the decisions of our reason, and is their object more properly than their effect. According to this system, then, every animal, that has sense, and appetite, and will; that is, every animal must be susceptible of all the same virtues and vices, for which we ascribe praise and blame to human creatures. All the difference is, that our superior reason may serve to discover the vice or virtue, and by that means may augment the blame or praise: But still this discovery supposes a separate being in these moral distinctions, and a being, which depends only on the will and appetite, and which, both in thought and reality, may be distinguish'd from the reason.

Animals are susceptible of the same relations, with respect to each other, as the human species, and therefore wou'd also be susceptible of the same morality, if the essence of morality consisted in these relations. Their want of a sufficient degree of reason may hinder them from perceiving the duties and obligations of morality, but can never hinder these duties from existing; since they must antecedently exist, in order to their being perceiv'd. Reason must find them, and can never produce them. This argument deserves to be weigh'd, as being, in my opinion, entirely decisive.

Nor does this reasoning only prove, that morality consists not in any relations, that are the objects of science; but if examin'd, will prove with equal certainty, that it consists not in any matter of fact, which can be discover'd by the understanding. This is the second part of our argument; and if it can be made evident, we may conclude, that morality is not an object of reason. But can there be any difficulty in proving, that vice and virtue are not matters of fact, whose existence we can infer by reason? Take any action allow'd to be vicious: Wilful murder, for instance. Examine it in all lights, and see if you can find that matter of fact, or real existence, which you call vice. In whichever way you take it, you find only certain passions, motives, volitions and thoughts. There is no other matter of fact in the case. The vice entirely escapes you, as long as you consider the object. You never can find it, till you turn your reflection into your own breast, and find a sentiment of disapprobation, which arises in you, towards this action. Here is a matter of fact; but 'tis the object of feeling, not of reason. It

lies in yourself, not in the object. So that when you pronounce any action or character to be vicious, you mean nothing, but that from the constitution of your nature you have a feeling or sentiment of blame from the contemplation of it. Vice and virtue, therefore, may be compar'd to sounds, colours, heat and cold, which, according to modern philosophy, are not qualities in objects, but perceptions in the mind: And this discovery in morals, like that other in physics, is to be regarded as a considerable advancement of the speculative sciences; tho', like that too, it has little or no influence on practice.

Nothing can be more real, or concern us more, than our own sentiments of pleasure and uneasiness; and if these be favourable to virtue, and unfavourable to vice, no more can be requisite to the regulation of our conduct and behaviour.

I cannot forbear adding to these reasonings an observation, which may, perhaps, be found of some importance. In every system of morality, which I have hitherto met with, I have always remark'd, that the author proceeds for some time in the ordinary way of reasoning, and establishes the being of a God, or makes observations concerning human affairs; when of a sudden I am surpriz'd to find, that instead of the usual copulations of propositions, *is*, and *is not*, I meet with no proposition that is not connected with an *ought*, or an *ought not*. This change is imperceptible; but is, however, of the last consequence. For as this *ought*, or *ought not*, expresses some new relation or affirmation, 'tis necessary that it shou'd be observ'd and explain'd; and at the same time that a reason should be given, for what seems altogether inconceivable, how this new relation can be a deduction from others, which are entirely different from it. But as authors do not commonly use this precaution, I shall presume to recommend it to the readers; and am persuaded, that this small attention wou'd subvert all the vulgar systems of morality, and let us see, that the distinction of vice and virtue is not founded merely on the relations of objects, nor is perceiv'd by reason.

SECT. II

Moral distinctions deriv'd from a moral sense

Thus the course of the argument leads us to conclude, that since vice and virtue are not discoverable merely by reason, or the comparison of ideas, it must be by means of some impression or

sentiment they occasion, that we are able to mark the difference betwixt them. Our decisions concerning moral rectitude and depravity are evidently perceptions; and as all perceptions are either impressions or ideas, the exclusion of the one is a convincing argument for the other. Morality, therefore, is more properly felt than judg'd of; tho' this feeling or sentiment is commonly so soft and gentle, that we are apt to confound it with an idea, according to our common custom of taking all things for the same, which have any near resemblance to each other.

The next question is, Of what nature are these impressions, and after what manner do they operate upon us? Here we cannot remain long in suspense, but must pronounce the impression arising from virtue, to be agreeable, and that proceeding from vice to be uneasy. Every moments experience must convince us of this. There is no spectacle so fair and beautiful as a noble and generous action; nor any which gives us more abhorrence than one that is cruel and treacherous. No enjoyment. equals the satisfaction we receive from the company of those we love and esteem; as the greatest of all punishments is to be oblig'd to pass our lives with those we hate or condemn. A very play or romance may afford us instances of this pleasure, which virtue conveys to us; and pain, which arises from vice.

Now since the distinguishing impressions, by which moral good or evil is known, are nothing but particular pains or pleasures; it follows, that in all enquiries concerning these moral distinctions, it will be sufficient to shew the principles, which make us feel a satisfaction or uneasiness from the survey of any character, in order to satisfy us why the character is laudable or blameable. An action, or sentiment, or character is virtuous or vicious; why? because its view causes a pleasure or uneasiness of a particular kind. In giving a reason, therefore, for the pleasure or uneasiness, we sufficiently explain the vice or virtue. To have the sense of virtue, is nothing but to feel a satisfaction of a particular kind from the contemplation of a character. The very feeling constitutes our praise or admiration. We go no farther; nor do we enquire into the cause of the satisfaction.

We do not infer a character to be virtuous, because it pleases: But in feeling that it pleases after such a particular manner, we in effect feel that it is virtuous. The case is the same as in our judgments concerning all kinds of beauty, and tastes, and sensations. Our

approbation is imply'd in the immediate pleasure they convey to us.

I have objected to the system, which establishes eternal rational measures of right and wrong, that 'tis impossible to shew, in the actions of reasonable creatures, any relations, which are not found in external objects; and therefore, if morality always attended these relations, 'twere possible for inanimate matter to become virtuous or vicious. Now it may, in like manner, be objected to the present system, that if virtue and vice be determin'd by pleasure and pain, these qualities must, in every case, arise from the sensations; and consequently any object, whether animate or inanimate, rational or irrational, might become morally good or evil, provided it can excite a satisfaction or uneasiness. But tho' this objection seems to be the very same, it has by no means the same force, in the one case as in the other. For, first, tis evident, that under the term pleasure, we comprehend sensations, which are very different from each other, and which have only such a distant resemblance, as is requisite to make them be express'd by the same abstract term.

A good composition of music and a bottle of good wine equally produce pleasure; and what is more, their goodness is determin'd merely by the pleasure. But shall we say upon that account, that the wine is harmonious, or the music of a good flavour? In like manner an inanimate object, and the character or sentiments of any person may, both of them, give satisfaction; but as the satisfaction is different, this keeps our sentiments concerning them from being confounded, and makes us ascribe virtue to the one, and not to the other. Nor is every sentiment of pleasure or pain, which arises from characters and actions, of that peculiar kind, which makes us praise or condemn. The good qualities of an enemy are hurtful to us; but may still command our esteem and respect. 'Tis only when a character is considered in general, without reference to our particular interest, that it causes such a feeling or sentiment, as denominates it morally good or evil. 'Tis true, those sentiments, from interest and morals, are apt to be confounded, and naturally run into one another. It seldom happens, that we do not think an enemy vicious, and can distinguish betwixt his opposition to our interest and real villainy or baseness. But this hinders not, but that the sentiments are, in themselves, distinct; and a man of temper and judgment may preserve himself from these illusions. In like manner, tho' 'tis certain a musical voice is nothing but one that naturally gives a particular kind of pleasure; yet 'tis

difficult for a man to be sensible, that the voice of an enemy is agreeable, or to allow it to be musical. But a person of a fine ear, who has the command of himself, can separate these feelings, and give praise to what deserves it.

Secondly, We may call to remembrance the preceding system of the passions, in order to remark a still more considerable difference among our pains and pleasures. Pride and humility, love and hatred are excited, when there is any thing presented to us, that both bears a relation to the object of the passion, and produces a separate sensation related to the sensation of the passion. Now virtue and vice are attended with these circumstances. They must necessarily be plac'd either in ourselves or others, and excite either pleasure or uneasiness; and therefore must give rise to one of these four passions; which clearly distinguishes them from the pleasure and pain arising from inanimate objects, that often bear no relation to us: And this is, perhaps, the most considerable effect that virtue and vice have upon the human mind.

It may now be ask'd in general, concerning this pain or pleasure, that distinguishes moral good and evil, From what principles is it derived, and whence does it arise in the human mind? To this I reply, first, that 'tis absurd to imagine, that in every particular instance, these sentiments are produc'd by an original quality and primary constitution. For as the number of our duties is, in a manner, infinite, 'tis impossible that our original instincts should extend to each of them, and from our very first infancy impress on the human mind all that multitude of precepts, which are contain'd in the completest system of ethics. Such a method of proceeding is not conformable to the usual maxims, by which nature is conducted, where a few principles produce all that variety we observe in the universe, and every thing is carry'd on in the easiest and most simple manner. 'Tis necessary, therefore, to abridge these primary impulses, and find some more general principles, upon which all our notions of morals are founded.

But in the second place, should it be ask'd, Whether we ought to search for these principles in nature, or whether we must look for them in some other origin? I wou'd reply, that our answer to this question depends upon the definition of the word, Nature, than which there is none more ambiguous and equivocal. If nature be oppos'd to

miracles[5], not only the distinction betwixt vice and virtue is natural, but also every event, which has ever happen'd in the world, excepting those miracles, on which our religion is founded. In saying, then, that the sentiments of vice and virtue are natural in this sense, we make no very extraordinary discovery.

But nature may also be opposed to rare and unusual; and in this sense of the word, which is the common one, there may often arise disputes concerning what is natural or unnatural; and one may in general affirm, that we are not possess'd of any very precise standard, by which these disputes can be decided. Frequent and rare depend upon the number of examples we have observ'd; and as this number may gradually encrease or diminish, 'twill be impossible to fix any exact boundaries betwixt them. We may only affirm on this head, that if ever there was any thing, which cou'd be call'd natural in this sense, the sentiments of morality certainly may; since there never was any nation of the world, nor any single person in any nation, who was utterly depriv'd of them, and who never, in any instance, shew'd the least approbation or dislike of manners. These sentiments are so rooted in our constitution and temper, that without entirely confounding the human mind by disease or madness, 'tis impossible to extirpate and destroy them.

But nature may also be opposed to artifice, as well as to what is rare and unusual; and in this sense it may be disputed, whether the notions of virtue be natural or not. We readily forget, that the designs, and projects, and views of men are principles as necessary in their operation as heat and cold, moist and dry: But taking them to be free and entirely our own, 'tis usual for us to set them in opposition to the other principles of nature. Shou'd it, therefore, be demanded, whether the sense of virtue be natural or artificial, I am of opinion, that 'tis impossible for me at present to give any precise answer to this question. Perhaps it will appear afterwards, that our sense of some virtues is artificial, and that of others natural. The discussion of this question will be more proper, when we enter upon an exact detail of each particular vice and virtue.⁴ Mean while it may not be amiss to observe from these definitions of natural and unnatural, that nothing can be more unphilosophical than those systems, which assert, that virtue is the same with what is natural, and vice with what is unnatural.

For in the first sense of the word, Nature, as opposed to miracles, both vice and virtue are equally natural; and in the second sense, as oppos'd to what is unusual, perhaps virtue will be found to be the most unnatural. At least it must be own'd, that heroic virtue, being as unusual, is as little natural as the most brutal barbarity.

As to the third sense of the word, 'tis certain, that both vice and virtue are equally artificial, and out of nature. For however it may be disputed, whether the notion of a merit or demerit in certain actions be natural or artificial, 'tis evident, that the actions themselves are artificial, and are perform'd with a certain design and intention; otherwise they cou'd never be rank'd under any of these denominations. 'Tis impossible, therefore, that the character of natural and unnatural can ever, in any sense, mark the boundaries of vice and virtue. Thus we are still brought back to our first position, that virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment or character gives us by the mere view and contemplation.

This decision is very commodious; because it reduces us to this simple question, Why any action or sentiment upon the general view or survey, gives a certain satisfaction or uneasiness, in order to shew the origin of its moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a state of the question, which appears to me so free from ambiguity and obscurity.

Adam Smith (1723—1790)

[1] 道德，品性，美德。

[2] 相似关系、相反关系、性质的程度和数量与数目的比例。

[3] 理性的。

[4] 先验的。

[5] 神迹，神迹或者奇迹来自于希腊语，字面意思是“力量”，也有能力，异能的意思，是指无法用人们的常识所解释的而归于神的作为的一些现象，也就是来自超然力量的作为。在许多宗教典籍中，都有各种各样神迹的记载，这些记载或者用来显示神的能力，或者用来保护某一个或者某一群特定的人。

PART II Of JUSTICE AND INJUSTICE

SECT. I

Justice, whether a natural or artificial^[1] virtue?

I have already hinted, that our sense of every kind of virtue is not natural; but that there are some virtues, that produce pleasure and approbation by means of an artifice or contrivance, which arises from the circumstances and necessity of mankind. Of this kind I assert justice to be; and shall endeavour to defend this opinion by a short, and, I hope, convincing argument, before I examine the nature of the artifice, from which the sense of that virtue is derived.

'Tis evident, that when we praise any actions, we regard only the motives that produced them, and consider the actions as signs or indications of certain principles in the mind and temper. The external performance has no merit. We must look within to find the moral quality. This we cannot do directly; and therefore fix our attention on actions, as on external signs. But these actions are still considered as signs; and the ultimate object of our praise and approbation is the motive, that produc'd them.

After the same manner, when we require any action, or blame a person for not performing it, we always suppose, that one in that situation shou'd be influenc'd by the proper motive of that action, and we esteem it vicious in him to be regardless of it. If we find, upon enquiry, that the virtuous motive was still powerful over his breast, tho' check'd in its operation by some circumstances unknown to us, we retract our blame, and have the same esteem for him, as if he had actually perform'd the action, which we require of him.

It appears, therefore, that all virtuous actions derive their merit only from virtuous motives, and are consider'd merely as signs of those motives. From this principle I conclude, that the first virtuous motive, which bestows a merit on any action, can never be a regard to the virtue of that action. but must be some other natural motive or principle. To suppose, that the mere regard to the virtue of the action. may be the first motive, which produc'd the action, and render'd it virtuous, is to reason in a circle. Before we can have such a regard, the

action must be really virtuous; and this virtue must be deriv'd from some virtuous motive: And consequently the virtuous motive must be different from the regard to the virtue of the action.

A virtuous motive is requisite to render an action virtuous. An action must be virtuous, before we can have a regard to its virtue.

Some virtuous motive, therefore, must be antecedent to that regard.

Nor is this merely a metaphysical subtilty; but enters into all our reasonings in common life, tho' perhaps we may not be able to place it in such distinct philosophical terms. We blame a father for neglecting his child. Why? because it shews a want of natural affection, which is the duty of every parent. Were not natural affection a duty, the care of children cou'd not be a duty; and 'twere impossible we cou'd have the duty in our eye in the attention we give to our offspring. In this case, therefore, all men suppose a motive to the action distinct from a sense of duty.

Here is a man, that does many benevolent actions; relieves the distress'd, comforts the afflicted, and extends his bounty even to the greatest strangers. No character can be more amiable and virtuous. We regard these actions as proofs of the greatest humanity.

This humanity bestows a merit on the actions. A regard to this merit is, therefore, a secondary consideration, and deriv'd from the antecedent principle of humanity, which is meritorious and laudable.

In short, it may be establish'd as an undoubted maxim, that no action can be virtuous, or morally good, unless there be in human nature some motive to produce it, distinct from the sense of its morality.

But may not the sense of morality or duty produce an action, without any other motive? I answer, It may: But this is no objection to the present doctrine. When any virtuous motive or principle is common in human nature, a person, who feels his heart devoid of that motive, may hate himself upon that account, and may perform the action without the motive, from a certain sense of duty, in order to acquire by practice, that virtuous principle, or at least, to disguise to himself, as much as possible, his want of it. A man that

really feels no gratitude in his temper, is still pleas'd to perform grateful actions, and thinks he has, by that means, fulfill'd his duty. Actions are at first only consider'd as signs of motives: But 'tis usual, in this case, as in all others, to fix our attention on the signs, and neglect, in some measure, the thing signify'd. But tho', on some occasions, a person may perform an action merely out of regard to its moral obligation[2], yet still this supposes in human nature some distinct principles, which are capable of producing the action, and whose moral beauty renders the action meritorious.

Now to apply all this to the present case; I suppose a person to have lent me a sum of money, on condition that it be restor'd in a few days; and also suppose, that after the expiration of the term agreed on, he demands the sum: I ask, What reason or motive have I to restore the money? It will, perhaps, be said, that my regard to justice, and abhorrence of villainy and knavery, are sufficient reasons for me, if I have the least grain of honesty, or sense of duty and obligation. And this answer, no doubt, is just and satisfactory to man in his civiliz'd state, and when train'd up according to a certain discipline and education. But in his rude and more natural condition, if you are pleas'd to call such a condition natural, this answer wou'd be rejected as perfectly unintelligible and sophistical.

For one in that situation wou'd immediately ask you, Wherein consists this honesty and justice, which you find in restoring a loan, and abstaining from the property of others? It does not surely lie in the external action. It must, therefore be plac'd in the motive, from which the external action is deriv'd. This motive can never be a regard to the honesty of the action. For 'tis a plain fallacy to say, that a virtuous motive is requisite to render an action honest, and at the same time that a regard to the honesty is the motive of the action. We can never have a regard to the virtue of an action, unless the action be antecedently virtuous. No action can be virtuous, but so far as it proceeds from a virtuous motive. A virtuous motive, therefore, must precede the regard to the virtue, and 'tis impossible, that the virtuous motive and the regard to the virtue can be the same.

'Tis requisite, then, to find some motive to acts of justice and honesty, distinct from our regard to the honesty; and in this lies the great difficulty. For shou'd we say, that a concern for our private interest or reputation is the legitimate motive to all honest actions; it

wou'd follow, that wherever that concern ceases, honesty can no longer have place. But 'tis certain, that self-love, when it acts at its liberty, instead of engaging us to honest actions, is the source of all injustice and violence; nor can a man ever correct those vices, without correcting and restraining the natural movements of that appetite.

But shou'd it be affirm'd, that the reason or motive of such actions is the regard to publick interest, to which nothing is more contrary than examples of injustice and dishonesty; shou'd this be said, I wou'd propose the three following considerations, as worthy of our attention. First, public interest is not naturally attach'd to the observation of the rules of justice; but is only connected with it, after an artificial convention[3] for the establishment of these rules, as shall be shewn more at large hereafter. Secondly, if we suppose, that the loan was secret, and that it is necessary for the interest of the person, that the money be restor'd in the same manner (as when the lender wou'd conceal his riches) in that case the example ceases, and the public is no longer interested in the actions of the borrower; tho' I suppose there is no moralist, who will affirm, that the duty and obligation ceases. Thirdly, experience sufficiently proves, that men, in the ordinary conduct of life, look not so far as the public interest, when they pay their creditors, perform their promises, and abstain from theft, and robbery, and injustice of every kind. That is a motive too remote and too sublime to affect the generality of mankind, and operate with any force in actions so contrary to private interest as are frequently those of justice and common honesty.

In general, it may be affirm'd, that there is no such passion in human minds, as the love of mankind, merely as such, independent of personal qualities, of services, or of relation to ourself. 'Tis true, there is no human, and indeed no sensible, creature, whose happiness or misery does not, in some measure, affect us when brought near to us, and represented in lively colours: But this proceeds merely from sympathy, and is no proof of such an universal affection to mankind, since this concern extends itself beyond our own species. An affection betwixt the sexes is a passion evidently implanted in human nature; and this passion not only appears in its peculiar symptoms, but also in inflaming every other principle of affection, and raising a stronger love from beauty, wit, kindness, than what wou'd otherwise flow from them. Were there an universal love among all human creatures, it wou'd appear after the same manner.

Any degree of a good quality wou'd cause a stronger affection than the same degree of a bad quality wou'd cause hatred; contrary to what we find by experience. Men's tempers are different, and some have a propensity to the tender, and others to the rougher, affections: But in the main, we may affirm, that man in general, or human nature, is nothing but the object both of love and hatred, and requires some other cause, which by a double relation of impressions and ideas, may excite these passions. In vain wou'd we endeavour to elude this hypothesis. There are no phaenomena that point out any such kind affection to men, independent of their merit, and every other circumstance. We love company in general; but 'tis as we love any other amusement. An Englishman in Italy is a friend: A Euro paeian in China; and perhaps a man wou'd be belov'd as such, were we to meet him in the moon. But this proceeds only from the relation to ourselves; which in these cases gathers force by being confined to a few persons.

If public benevolence, therefore, or a regard to the interests of mankind, cannot be the original motive to justice, much less can private benevolence, or a regard to the interests of the party concern'd, be this motive. For what if he be my enemy, and has given me just cause to hate him? What if he be a vicious man, and deserves the hatred of all mankind? What if he be a miser, and can make no use of what I wou'd deprive him of? What if he be a profligate debauchee, and wou'd rather receive harm than benefit from large possessions? What if I be in necessity, and have urgent motives to acquire something to my family? In all these cases, the original motive to justice wou'd fail; and consequently the justice itself, and along with it all property, tight, and obligation.

A rich man lies under a moral obligation to communicate to those in necessity a share of his superfluities. Were private benevolence the original motive to justice, a man wou'd not be oblig'd to leave others in the possession of more than he is oblig'd to give them. At least the difference wou'd be very inconsiderable.

Men generally fix their affections more on what they are possess'd of, than on what they never enjoy'd: For this reason, it wou'd be greater cruelty to dispossess a man of any thing, than not to give it him. But who will assert, that this is the only foundation of justice? Besides, we must consider, that the chief reason, why men attach

themselves so much to their possessions is, that they consider them as their property, and as secur'd to them inviolably by the laws of society. But this is a secondary consideration, and dependent on the preceding notions of justice and property.

A man's property is suppos'd to be fenc'd against every mortal, in every possible case. But private benevolence is, and ought to be, weaker in some persons, than in others: And in many, or indeed in most persons, must absolutely fail. Private benevolence, therefore, is not the original motive of justice.

From all this it follows, that we have no real or universal motive for observing the laws of equity, but the very equity and merit of that observance; and as no action can be equitable or meritorious, where it cannot arise from some separate motive, there is here an evident sophistry and reasoning in a circle. Unless, therefore, we will allow, that nature has establish'd a sophistry, and render'd it necessary and unavoidable, we must allow, that the sense of justice and injustice is not deriv'd from nature, but arises artificially, tho' necessarily from education, and human conventions.

I shall add, as a corollary to this reasoning, that since no action can be laudable or blameable, without some motives or impelling passions, distinct from the sense of morals, these distinct passions must have a great influence on that sense. 'Tis according to their general force in human nature, that we blame or praise.

In judging of the beauty of animal bodies, we always carry in our eye the oeconomy of a certain species; and where the limbs and features observe that proportion, which is common to the species, we pronounce them handsome and beautiful. In like manner we always consider the natural and usual force of the passions, when we determine concerning vice and virtue; and if the passions depart very much from the common measures on either side, they are always disapprov'd as vicious. A man naturally loves his children better than his nephews, his nephews better than his cousins, his cousins better than strangers, where every thing else is equal. Hence arise our common measures of duty, in preferring the one to the other.

Our sense of duty always follows the common and natural course of our passions.

To avoid giving offence, I must here observe, that when I deny justice to be a natural virtue, I make use of the word, natural, only as oppos'd to artificial. In another sense of the word; as no principle of the human mind is more natural than a sense of virtue; so no virtue is more natural than justice. Mankind is an inventive species; and where an invention is obvious and absolutely necessary, it may as properly be said to be natural as any thing that proceeds immediately from original principles, without the intervention of thought or reflection. Tho' the rules of justice be artificial, they are not arbitrary. Nor is the expression improper to call them Laws of Nature; if by natural we understand what is common to any species, or even if we confine it to mean what is inseparable from the species.

SECT. II

Of the origin of justice and property

We now proceed to examine two questions, viz, concerning the manner, in which the rules of justice are establish'd by the artifice of men; and concerning the reasons, which determine us to attribute to the observance or neglect of these rules a moral beauty and deformity. These questions will appear afterwards to be distinct. We shall begin with the former.

Of all the animals, with which this globe is peopled, there is none towards whom nature seems, at first sight, to have exercis'd more cruelty than towards man, in the numberless wants and necessities, with which she has loaded him, and in the slender means, which she affords to the relieving these necessities. In other creatures these two particulars generally compensate each other. If we consider the lion as a voracious and carnivorous animal, we shall easily discover him to be very necessitous; but if we turn our eye to his make and temper, his agility, his courage, his arms, and his force, we shall find, that his advantages hold proportion with his wants.

The sheep and ox are depriv'd of all these advantages; but their appetites are moderate, and their food is of easy purchase. In man alone, this unnatural conjunction of infirmity, and of necessity, may be observ'd in its greatest perfection. Not only the food, which is requir'd for his sustenance, flies his search and approach, or at least requires his labour to be produc'd, but he must be possess'd of cloaths and lodging, to defend him against the injuries of the weather; tho'to

consider him only in himself, he is provided neither with arms, nor force, nor other natural abilities[4], which are in any degree answerable to so many necessities.

'Tis by society alone he is able to supply his defects, and raise himself up to an equality with his fellow-creatures, and even acquire a superiority above them. By society all his infirmities are compensated; and tho' in that situation his wants multiply every moment upon him, yet his abilities are still more augmented, and leave him in every respect more satisfied and happy, than 'tis possible for him, in his savage and solitary condition, ever to become. When every individual person labours a-part, and only for himself, his force is too small to execute any considerable work; his labour being employ'd in supplying all his different necessities, he never attains a perfection in any particular art; and as his force and success are not at all times equal, the least failure in either of these particulars must be attended with inevitable ruin and misery. Society provides a remedy for these three inconveniences. By the conjunction of forces, our power is augmented: By the partition of employments, our ability encreases: And by mutual succour we are less expos'd to fortune and accidents. 'Tis by this additional force, ability, and security, that society becomes advantageous.

But in order to form society, 'tis requisite not only that it be advantageous, but also that men be sensible of these advantages; and 'tis impossible, in their wild uncultivated state, that by study and reflection alone, they should ever be able to attain this knowledge.

Most fortunately, therefore, there is conjoin'd to those necessities, whose remedies are remote and obscure, another necessity, which having a present and more obvious remedy, may justly be regarded as the first and original principle of human society. This necessity is no other than that natural appetite betwixt the sexes, which unites them together, and preserves their union, till a new tie takes place in their concern for their common offspring. This new concern becomes also a principle of union betwixt the parents and offspring, and forms a more numerous society; where the parents govern by the advantage of their superior strength and wisdom, and at the same time are restrain'd in the exercise of their authority by that natural affection, which they bear their children. In a little time, custom and habit operating on the tender minds of the children,

makes them sensible of the advantages, which they may reap from society, as well as fashions them by degrees for it, by rubbing off those rough corners and untoward affections, which prevent their coalition.

For it must be confest, that however the circumstances of human nature may render an union necessary, and however those passions of lust and natural affection may seem to render it unavoidable; yet there are other particulars in our natural temper, and in our outward circumstances, which are very incommodious, and are even contrary to the requisite conjunction. Among the former, we may justly esteem our selfishness^[5] to be the most considerable. I am sensible, that generally speaking, the representations of this quality have been carried much too far; and that the descriptions, which certain philosophers delight so much to form of mankind in this particular, are as wide of nature as any accounts of monsters, which we meet with in fables and romances.

So far from thinking, that men have no affection for any thing beyond themselves, I am of opinion, that tho' it be rare to meet with one, who loves any single person better than himself; yet 'tis as rare to meet with one, in whom all the kind affections, taken together, do not overbalance all the selfish. Consult common experience: Do you not see, that tho' the whole expence of the family be generally under the direction of the master of it, yet there are few that do not bestow the largest part of their fortunes on the pleasures of their wives, and the education of their children, reserving the smallest portion for their own proper use and entertainment. This is what we may observe concerning such as have those endearing ties; and may presume, that the case would be the same with others, were they plac'd in a like situation.

But tho' this generosity must be acknowledg'd to the honour of human nature, we may at the same time remark, that so noble an affection, instead of fitting men for large societies, is almost as contrary to them, as the most narrow selfishness. For while each person loves himself better than any other single person, and in his love to others bears the greatest affection to his relations and acquaintance, this must necessarily produce an oppositon of passions, and a consequent opposition of actions; which cannot but be dangerous to the new-establish'd union.

'Tis however worth while to remark, that this contrariety of

passions wou'd be attended with but small danger, did it not concur with a peculiarity in our outward circumstances, which affords it an opportunity of exerting itself. There are different species of goods, which we are possess'd of; the internal satisfaction of our minds, the external advantages of our body, and the enjoyment of such possessions as we have acquir'd by our industry and good fortune. We are perfectly secure in the enjoyment of the first. The second may be ravish'd from us, but can be of no advantage to him who deprives us of them. The last only are both expos'd to the violence of others, and may be transferr'd without suffering any loss or alteration; while at the same time, there is not a sufficient quantity of them to supply every one's desires and necessities. As the improvement, therefore, of these goods is the chief advantage of society, so the instability of their possession, along with their scarcity, is the chief impediment.

In vain shou'd we expect to find, in uncultivated nature, a remedy to this inconvenience; or hope for any inartificial principle of the human mind, which might controul those are remote and obscure, another necessity, which having a present and more obvious remedy, may justly be regarded as the first and original principle of human society. This necessity is no other than that natural appetite betwixt the sexes, which unites them together, and preserves their union, till a new tie takes place in their concern for their common offspring. This new concern becomes also a principle of union betwixt the parents and offspring, and forms a more numerous society; where the parents govern by the advantage of their superior strength and wisdom, and at the same time are restrain'd in the exercise of their authority by that natural affection, which they bear their children. In a little time, custom and habit operating on the tender minds of the children, makes them sensible of the advantages, which they may reap from society, as well as fashions them by degrees for it, by rubbing off those rough corners and untoward affections, which prevent their coalition.

For it must be confest, that however the circumstances of human nature may render an union necessary, and however those passions of lust and natural affection may seem to render it unavoidable; yet there are other particulars in our natural temper, and in our outward circumstances, which are very incommodious, and are even contrary to the requisite conjunction.

Among the former, we may justly esteem our selfishness to be the

most considerable. I am sensible, that generally speaking, the representations of this quality have been carried much too far; and that the descriptions, which certain philosophers delight so much to form of mankind in this particular, are as wide of nature as any accounts of monsters, which we meet with in fables and romances.

So far from thinking, that men have no affection for any thing beyond themselves, I am of opinion, that tho' it be rare to meet with one, who loves any single person better than himself; yet 'tis as rare to meet with one, in whom all the kind affections, taken together, do not overbalance all the selfish. Consult common experience: Do you not see, that tho' the whole expence of the family be generally under the direction of the master of it, yet there are few that do not bestow the largest part of their fortunes on the pleasures of their wives, and the education of their children, reserving the smallest portion for their own proper use and entertainment This is what we may observe concerning such as have those endearing ties; and may presume, that the case would be the same with others, were they plac'd in a like situation.

But tho' this generosity must be acknowledg'd to the honour of human nature, we may at the same time remark, that so noble an affection, instead of fitting men for large societies, is almost as contrary to them, as the most narrow selfishness. For while each person loves himself better than any other single person, and in his love to others bears the greatest affection to his relations and acquaintance, this must necessarily produce an oppositon of passions, and a consequent opposition of actions; which cannot but be dangerous to the new-establish'd union.

'Tis however worth while to remark, that this contrariety of passions wou'd be attended with but small danger, did it not concur with a peculiarity in our outward circumstances, which affords it an opportunity of exerting itself. There are different species of goods, which we are possess'd of; the internal satisfaction of our minds, the external advantages of our body, and the enjoyment of such possessions as we have acquir'd by our industry and good fortune. We are perfectly secure in the enjoyment of the first. The second may be ravish'd from us, but can be of no advantage to him who deprives us of them. The last only are both expos'd to the violence of others, and may be transferr'd without suffering any loss or alteration; while at

the same time, there is not a sufficient quantity of them to supply every one's desires and necessities. As the improvement, therefore, of these goods is the chief advantage of society, so the instability of their possession, along with their scarcity, is the chief impediment.

In vain shou'd we expect to find, in uncultivated nature, a remedy to this inconvenience; or hope for any inartificial principle of the human mind, which might controul those partial affections, and make us overcome the temptations arising from our circumstances.

The idea of justice can never serve to this purpose, or be taken for a natural principle, capable of inspiring men with an equitable conduct towards each other. That virtue, as it is now understood.

wou'd never have been dream'd of among rude and savage men.

For the notion of injury or injustice implies an immorality or vice committed against some other person: And as every immorality is deriv'd from some defect or unsoundness of the passions, and as this defect must be judg'd of, in a great measure, from the ordinary course of nature in the constitution of the mind; 'twill be easy to know, whether we be guilty of any immorality, with regard to others, by considering the natural, and usual force of those several affections, which are directed towards them. Now it appears, that in the original frame of our mind, our strongest attention is confin'd to ourselves; our next is extended to our relations and acquaintance; and 'tis only the weakest which reaches to strangers and indifferent persons. This partiality, then, and unequal affection, must not only have an influence on our behaviour and conduct in society, but even on our ideas of vice and virtue; so as to make us regard any remarkable transgression of such a degree of partiality, either by too great an enlargement, or contraction of the affections, as vicious and immoral. This we may observe in our common judgments concerning actions, where we blame a person, who either centers all his affections in his family, or is so regardless of them, as, in any opposition of interest, to give the preference to a stranger, or mere chance acquaintance. From all which it follows, that our natural uncultivated ideas of morality, instead of providing a remedy for the partiality of our affections, do rather conform themselves to that partiality, and give it an additional force and influence.

The remedy, then, is not deriv'd from nature, but from artifice; or

more e properly speaking, nature provides a remedy in the judgment and understanding, for what is irregular and incommodious in the affections.

For when men, from their early education in society, have become sensible of the infinite advantages that result from it, and have besides acquir'd a new affection to company and conversation; and when they have observ'd, that the principal disturbance in society arises from those goods, which we call external, and from their looseness and easy transition from one person to another; they must seek for a remedy by putting these goods, as far as possible, on the same footing with the fix'd and constant advantages of the mind and body. This can be done after no other manner, than by a convention enter'd into by all the members of the society to bestow stability on the possession of those external goods, and leave every one in the peaceable enjoyment of what he may acquire by his fortune and industry. By this means, every one knows what he may safely possess; and the passions are restrain'd in their partial and contradictory motions. Nor is such a restraint contrary to these passions; for if so, it cou'd never be enter'd into, nor maintain'd; but it is only contrary to their heedless and impetuous movement. Instead of departing from our own interest, or from that of our nearest friends, by abstaining from the possessions of others, we cannot better consult both these interests, than by such a convention; because it is by that means we maintain society, which is so necessary to their well-being and subsistence, as well as to our own.

This convention is not of the nature of a promise^[6]: For even promises themselves, as we shall see afterwards, arise from human conventions. It is only a general sense of common interest; which sense all the members of the society express to one another, and which induces them to regulate their conduct by certain rules.

I observe, that it will be for my interest to leave another in the possession of his goods, provided he will act in the same manner with regard to me. He is sensible of a like interest in the regulation of his conduct. When this common sense of interest is mutually express'd, and is known to both, it produces a suitable resolution and behaviour. And this may properly enough be call'd a convention or agreement betwixt us, tho' without the interposition of a promise; since the actions of each of us have a reference to those of the other, and are

perform'd upon the supposition, that something is to be perform'd on the other part. Two men, who pull the oars of a boat, do it by an agreement or convention, tho' they have never given promises to each other. Nor is the rule concerning the stability of possession the less deriv'd from human conventions, that it arises gradually, and acquires force by a slow progression, and.

by our repeated experience of the inconveniences of transgressing it. On the contrary, this experience assures us still more, that the sense of interest has become common to all our fellows, and gives us a confidence of the future regularity of their conduct: And 'tis only on the expectation of this, that our moderation and abstinence are founded. In like manner are languages gradually establish'd by human conventions without any promise. In like manner do gold and silver become the common measures of exchange, and are esteem'd sufficient payment for what is of a hundred times their value.

After this convention, concerning abstinence from the possessions of others, is enter'd into, and every one has acquir'd a stability in his possessions, there immediately arise the ideas of justice and injustice; as also those of property[7], right, and obligation.

The latter are altogether unintelligible without first understanding the former. Our property is nothing but those goods, whose constant possession is establish'd by the laws of society; that is, by the laws of justice. Those, therefore, who make use of the words property, or right, or obligation, before they have explain'd the origin of justice, or even make use of them in that explication, are guilty of a very gross fallacy, and can never reason upon any solid foundation. A man's property is some object related to him. This relation is not natural, but moral, and founded on justice. 'Tis very preposterous, therefore, to imagine, that we can have any idea of property, without fully comprehending the nature of justice, and shewing its origin in the artifice and contrivance of man. The origin of justice explains that of property. The same artifice gives rise to both. As our first and most natural sentiment of morals is founded on the nature of our passions, and gives the preference to ourselves and friends, above strangers; 'tis impossible there can be naturally any such thing as a fix'd right or property, while the opposite passions of men impel them in contrary directions, and are not restrain'd by any convention or agreement.

No one can doubt, that the convention for the distinction of

property, and for the stability of possession, is of all circumstances the most necessary to the establishment of human society, and that after the agreement for the fixing and observing of this rule, there remains little or nothing to be done towards settling a perfect harmony and concord. All the other passions, besides this of interest, are either easily restrain'd, or are not of such pernicious consequence, when indulg'd. Vanity is rather to be esteem'd a social passion, and a bond of union among men. Pity and love are to be consider'd in the same light. And as to envy and revenge, tho' pernicious, they operate only by intervals, and are directed against particular persons, whom we consider as our superiors or enemies. This avidity alone, of acquiring goods and possessions for ourselves and our nearest friends, is insatiable, perpetual, universal, and directly destructive of society. There scarce is any one, who is not actuated by it; and there is no one, who has not reason to fear from it, when it acts without any restraint, and gives way to its first and most natural movements.

So that upon the whole, we are to esteem the difficulties in the establishment of society, to be greater or less, according to those we encounter in regulating and restraining this passion.

'Tis certain, that no affection of the human mind has. both a sufficient force, and a proper direction to counterbalance the love of gain, and render men fit members of society, by making them abstain from the possessions of others. Benevolence to strangers is too weak for this purpose; and as to the other passions, they rather inflame this avidity, when we observe, that the larger our possessions are, the more ability we have of gratifying all our appetites. There is no passion, therefore, capable of controlling the interested affection, but the very affection itself, by an alteration of its direction. Now this alteration must necessarily take place upon the least reflection; since 'tis evident, that the passion is much better satisfy'd by its restraint, than by its liberty, and that in preserving society, we make much greater advances in the acquiring possessions, than in the solitary and forlorn condition, which must follow upon violence and an universal licence. The question, therefore, concerning the wickedness or goodness of human nature, enters not in the least into that other question concerning the origin of society; nor is there any thing to be consider'd but the degrees of men's sagacity or folly. For whether the passion of selfinterest be esteemed vicious or virtuous, 'tis all a case; since itself alone restrains it: So that if it be virtuous, men become

social by their virtue; if vicious, their vice has the same effect.

Now as 'tis by establishing the rule for the stability of possession, that this passion restrains itself; if that rule be very abstruse, and of difficult invention; society must be esteem'd, in a manner, accidental, and the effect of many ages. But if it be found, that nothing can be more simple and obvious than that rule; that every parent, in order to preserve peace among his children, must establish it; and that these first rudiments of justice must every day be improv'd, as the society enlarges: If all this appear evident, as it certainly must, we may conclude, that 'tis utterly impossible for men to remain any considerable time in that savage condition, which precedes society; but that his very first state and situation may justly be esteem'd social. This, however, hinders not, but that philosophers may, if they please, extend their reasoning to the suppos'd state of nature; provided they allow it to be a mere philosophical fiction, which never had, and never cou'd have any reality. Human nature being compos'd of two principal parts, which are requisite in all its actions, the affections and understanding; 'tis certain, that the blind motions of the former, without the direction of the latter, incapacitate men for society: And it may be allow'd us to consider separately the effects, that result from the separate operations of these two component parts of the mind. The same liberty may be permitted to moral, which is allow'd to natural philosophers; and 'tis very usual with the latter to consider any motion as compounded and consisting of two parts separate from each other, tho' at the same time they acknowledge it to be in itself uncompounded and inseparable.

This state of nature, therefore, is to be regarded as a mere fiction, not unlike that of the golden age^[8], which poets have invented; only with this difference, that the former is describ'd as full of war, violence and injustice; whereas the latter is pointed out to us, as the most charming and most peaceable condition, that can possibly be imagin'd. The seasons, in that first age of nature, were so temperate, if we may believe the poets, that there was no necessity for men to provide themselves with cloaths and houses as a security against the violence of heat and cold. The rivers flow'd with wine and milk: The oaks yielded honey; and nature spontaneously produc'd her greatest delicacies. Nor were these the chief advantages of that happy age. The storms and tempests were not alone remov'd from nature; but those more furious tempests were unknown to human breasts, which now

cause such uproar, and engender such confusion.

Avarice, ambition, cruelty, selfishness, were never heard of: Cordial affection, compassion, sympathy, were the only movements, with which the human mind was yet acquainted. Even the distinction of mine and thine was banish'd from that happy race of mortals, and carry'd with them the very notions of property and obligation, justice and injustice.

This, no doubt, is to be regarded as an idle fiction; but yet deserves our attention, because nothing can more evidently shew the origin of those virtues, which are the subjects of our present enquiry.

I have already observ'd, that justice takes its rise from human conventions; and that these are intended as a remedy to some inconveniences, which proceed from the concurrence of certain qualities of the human mind with the situation of external objects.

The qualities of the mind are selfishness and limited generosity: And the situation of external objects is their easy change, join'd to their scarcity in comparison of the wants and desires of men. But however philosophers may have been bewilder'd in those speculations, poets have been guided more infallibly, by a certain taste or common instinct, which in most kinds of reasoning goes farther than any of that art and philosophy, with which we have been yet acquainted.

They easily perceiv'd, if every man had a tender regard for another, or if nature supplied abundantly all our wants and desires, that the jealousy of interest, which justice supposes, could no longer have place; nor would there be any occasion for those distinctions and limits of property and possession, which at present are in use among mankind. Encrease to a sufficient degree the benevolence of men, or the bounty of nature, and you render justice useless, by supplying its place with much nobler virtues, and more valuable blessings. The selfishness of men is animated by the few possessions we have, in proportion to our wants; and 'tis to restrain this selfishness, that men have been oblig'd to separate themselves from the community, and to distinguish betwixt their own goods and those of others.

Nor need we have recourse to the fictions of poets to learn this; but beside the reason of the thing, may discover the same truth by

common experience and observation. 'Tis easy to remark, that a cordial affection renders all things common among friends; and that married people in particular mutually lose their property, and are unacquainted with the mine and thine, which are so necessary, and yet cause such disturbance in human society. The same effect arises from any alteration in the circumstances of mankind; as when there is such a plenty of any thing as satisfies all the desires of men: In which case the distinction of property is entirely lost, and every thing remains in common. This we may observe with regard to air and water, tho' the most valuable of all external objects; and may easily conclude, that if men were supplied with every thing in the same abundance, or if every one had the same affection and tender regard for every one as for himself; justice and injustice would be equally unknown among mankind.

Here then is a proposition, which, I think, may be regarded as certain, that 'tis only from the selfishness and confin'd generosity of men, along with the scanty provision nature has made for his wants, that justice derives its origin. If we look backward we shall find, that this proposition bestows an additional force on some of those observations, which we have already made on this subject.

First, we may conclude from it, that a regard to public interest, or a strong extensive benevolence, is not our first and original motive for the observation of the rules of justice; since 'tis allow'd, that if men were endow'd with such a benevolence, these rules would never have been dreamt of.

Secondly, we may conclude from the same principle, that the sense of justice is not founded on reason, or on the discovery of certain connexions and relations of ideas, which are eternal, immutable, and universally obligatory. For since it is confest, that such an alteration as that above-mention'd, in the temper and circumstances of mankind, wou'd entirely alter our duties and obligations, 'tis necessary upon the common system, that the sense of virtue is deriv'd from reason, to shew the change which this must produce in the relations and ideas. But 'tis evident, that the only cause, why the extensive generosity of man, and the perfect abundance of every thing, wou'd destroy the very idea of justice, is because they render it useless; and that, on the other hand, his confin'd benevolence, and his necessitous condition, give rise to that

virtue, only by making it requisite to the publick interest, and to that of every individual. Twas therefore a concern for our own, and the publick interest, which made us establish the laws of justice; and nothing can be more certain, than that it is not any relation of ideas, which gives us this concern, but our impressions and sentiments, without which every thing in nature is perfectly indifferent to us, and can never in the least affect us. The sense of justice, therefore, is not founded on our ideas, but on our impressions.

Thirdly, we may farther confirm the foregoing proposition, that those impressions, which give rise to this sense of justice, are not natural to the mind of man, but arise from artifice and human conventions. For since any considerable alteration of temper and circumstances destroys equally justice and injustice; and since such an alteration has an effect only by changing our own and the publick interest; it follows, that the first establishment of the rules of justice depends on these different interests. But if men pursu'd the publick interest naturally, and with a hearty affection, they wou'd never have dream'd of restraining each other by these rules; and if they pursu'd their own interest, without any precaution, they wou'd run headlong into every kind of injustice and violence. These rules, therefore, are artificial, and seek their end in an oblique and indirect [9] manner; nor is the interest, which gives rise to them, of a kind that cou'd be pursu'd by the natural and inartificial passions of men.

To make this more evident, consider, that tho' the rules of justice are establish'd merely by interest, their connexion with interest is somewhat singular, and is different from what may be observ'd on other occasions. A single act of justice is frequently contrary to public interest; and were it to stand alone, without being follow'd by other acts, may, in itself, be very prejudicial to society. When a man of merit, of a beneficent disposition, restores a great fortune to a miser, or a seditious bigot, he has acted justly and laudably, but the public is a real sufferer. Nor is every single act of justice, consider'd apart, more conducive to private interest, than to public; and 'tis easily conceiv'd how a man may impoverish himself by a signal instance of integrity, and have reason to wish, that with regard to that single act, the laws of justice were for a moment suspended in the universe. But however single acts of justice may be contrary, either to public or private interest, 'tis certain, that the whole plan or scheme is highly

conducive, or indeed absolutely requisite, both to the support of society, and the well-being of every individual. Tis impossible to separate the good from the ill. Property must be stable, and must be fix'd by general rules. Tho' in one instance the public be a sufferer, this momentary ill is amply compensated by the steady prosecution of the rule, and by the peace and order, which it establishes in society. And even every individual person must find himself a gainer, on ballancing the account; since, without justice, society must immediately dissolve, and every one must fall into that savage and solitary condition, which is infinitely worse than the worst situation that can possibly be suppos'd in society. When therefore men have had experience enough to observe, that whatever may be the consequence of any single act of justice, perform'd by a single person, yet the whole system of actions, concurr'd in by the whole society, is infinitely advantageous to the whole, and to every part; it is not long before justice and property take place. Every member of society is sensible of this interest: Every one expresses this sense to his fellows, along with the resolution he has taken of squaring his actions by it, on condition that others will do the same. No more is requisite to induce any one of them to perform an act of justice, who has the first opportunity. This becomes an example to others. And thus justice establishes itself by a kind of convention or agreement; that is, by a sense of interest, suppos'd to be common to all, and where every single act is perform'd in expectation that others are to perform the like. Without such a convention, no one wou'd ever have dream'd, that there was such a virtue as justice, or have been induc'd to conform his actions to it.

Taking any single act, my justice may be pernicious in every respect; and 'tis only upon the supposition, that others are to imitate my example, that I can be induc'd to embrace that virtue; since nothing but this combination can render justice advantageous, or afford me any motives to conform my self to its rules.

We come now to the second question we propos'd, viz. Why we annex the idea of virtue to justice, and of vice to injustice. This question will not detain us long after the principles, which we have already establish'd, All we can say of it at present will be dispatch'd in a few words: And for farther satisfaction, the reader must wait till we come to the third part of this book. The natural obligation to justice, viz, interest, has been fully explain'd; but as to the moral obligation,

or the sentiment of right and wrong, 'twill first be requisite to examine the natural virtues, before we can give a full and satisfactory account of it. After men have found by experience, that their selfishness and confin'd generosity, acting at their liberty, totally incapacitate them for society; and at the same time have observ'd, that society is necessary to the satisfaction of those very passions, they are naturally induc'd to lay themselves under the restraint of such rules, as may render their commerce more safe and commodious. To the imposition then, and observance of these rules, both in general, and in every particular instance, they are at first induc'd only by a regard to interest; and this motive, on the first formation of society, is sufficiently strong and forcible. But when society has become numerous, and has encreas'd to a tribe or nation, this interest is more remote; nor do men so readily perceive, that disorder and confusion follow upon every breach of these rules, as in a more narrow and contracted society. But tho' in our own actions we may frequently lose sight of that interest, which we have in maintaining order, and may follow a lesser and more present interest, we never fail to observe the prejudice we receive, either mediately or immediately, from the injustice of others; as not being in that case either blinded by passion, or byass'd by any contrary temptation.

Nay when the injustice is so distant from us, as no way to affect our interest, it still displeases us; because we consider it as prejudicial to human society, and pernicious to every one that approaches the person guilty of it. We partake' of their uneasiness by sympathy; and as every thing, which gives uneasiness in human actions, upon the general survey, is call'd Vice, and whatever produces satisfaction, in the same manner, is denominated Virtue; this is the reason why the sense of moral good and evil follows upon justice and injustice.

And tho' this sense, in the present case, be deriv'd only from contemplating the actions of others, yet we fail not to extend it even to our own actions. The general rule reaches beyond those instances, from which it arose; while at the same time we naturally sympathize with others in the sentiments they entertain of us. Thus self-interest is the original motive to the establishment of justice: but a sympathy with public interest is the source of the moral approbation, which attends that virtue.

Tho' this progress of the sentiments be natural, and even

necessary, 'tis certain, that it is here forwarded by the artifice of politicians, who, in order to govern men more easily, and preserve peace in human society, have endeavour'd to produce an esteem for justice, and an abhorrence of injustice. This, no doubt, must have its effect; but nothing can be more evident, than that the matter has been carry'd too far by certain writers on morals, who seem to have employ'd their utmost efforts to extirpate all sense of virtue from among mankind. Any artifice of politicians may assist nature in the producing of those sentiments, which she suggests to us, and may even on some occasions, produce alone an approbation or esteem for any particular action; but 'tis impossible it should be the sole cause of the distinction we make betwixt vice and virtue. For if nature did not aid us in this particular, 'twou'd be in vain for politicians to talk of honourable or dishonourable, praiseworthy or blameable. These words wou'd be perfectly unintelligible, and wou'd no more have any idea annex'd to them, than if they were of a tongue perfectly unknown to us. The utmost politicians can perform, is, to extend the natural sentiments beyond their original bounds; but still nature must furnish the materials, and give us some notion of moral distinctions.

As publick praise and blame encrease our esteem for justice; so private education and instruction contribute to the same effect. For as parents easily observe, that a man is the more useful, both to himself and others, the greater degree of probity and honour he is endow'd with; and that those principles have greater force, when custom and education assist interest and reflection: For these reasons they are induc'd to inculcate on their children, from their earliest infancy, the principles of probity, and teach them to regard the observance of those rules, by which society is maintain'd, as worthy and honourable, and their violation as base and infamous. By this means the sentiments of honour may take root in their tender minds, and acquire such firmness and solidity, that they may fall little short of those principles, which are the most essential to our natures, and the most deeply radicated in our internal[10] constitution.

What farther contributes to encrease their solidity, is the interest of our reputation, after the opinion, that a merit or demerit attends justice or injustice, is once firmly establish'd among mankind. There is nothing, which touches us more nearly than our reputation, and nothing on which our reputation more depends than our conduct, with relation to the property of others. For this reason, every one, who

has any regard to his character, or who intends to live on good terms with mankind, must fix an inviolable law to himself, never, by any temptation, to be induc'd to violate those principles, which are essential to a man of probity and honour.

I shall make only one observation before I leave this subject, viz, that tho' I assert, that in the state of nature, or that imaginary state, which preceded society, there be neither justice nor injustice, yet I assert not, that it was allowable, in such a state, to violate the property of others. I only maintain, that there was no such thing as property; and consequently cou'd be no such thing as justice or injustice. I shall have occasion to make a similar reflection with regard to promises, when I come to treat of them; and I hope this reflection, when duly weigh'd, will suffice to remove all odium from the foregoing opinions, with regard to justice and injustice.

SECT. III

Of the rules, which determine property

Tho' the establishment of the rule, concerning the stability of possession, be not only useful, but even absolutely necessary to human society, it can never serve to any purpose, while it remains in such general terms. Some method must be shewn, by which we may distinguish what particular goods are to be assign'd to each particular person, while the rest of mankind are excluded from their possession and enjoyment. Our next business, then, must be to discover the reasons which modify this general rule, and fit it to the common use and practice of the world.

'Tis obvious, that those reasons are not deriv'd from any utility or advantage, which either the particular person or the public may reap from his enjoyment of any particular goods, beyond what wou'd result from the possession of them by any other person. Twere better, no doubt, that every one were possess'd of what is most suitable to him, and proper for his use: But besides, that this relation of fitness may be common to several at once, 'tis liable to so many controversies, and men are so partial and passionate in judging of these controversies, that such a loose and uncertain rule wou'd be absolutely incompatible with the peace of human society. The convention concerning the stability of possession is enter'd into, in order to cut off all occasions of discord and contention; and this end wou'd never be attain'd, were

we allow'd to apply this rule differently in every particular case, according to every particular utility, which might be discover'd in such an application. Justice, in her decisions, never regards the fitness or unfitness of objects to particular persons, but conducts herself by more extensive views. Whether a man be generous, or a miser, he is equally well receiv'd by her, and obtains with the same facility a decision in his favours, even for what is entirely useless to him.

It follows therefore, that the general rule, that possession must be stable[11], is not apply'd by particular judgments, but by other general rules, which must extend to the whole society, and be inflexible either by spite or favour. To illustrate this, I propose the following instance. I first consider men in their savage and solitary condition; and suppose, that being sensible of the misery of that state, and foreseeing the advantages that wou'd result from society, they seek each other's company, and make an offer of mutual protection and assistance. I also suppose, that they are endow'd with such sagacity as immediately to perceive, that the chief impediment to this project of society and partnership lies in the avidity and selfishness of their natural temper; to remedy which, they enter into a convention for the stability of possession, and for mutual restraint and forbearance. I am sensible, that this method of proceeding is not altogether natural; but besides that I here only suppose those reflections to be form'd at once, which in fact arise insensibly and by degrees; besides this, I say, 'tis very possible, that several persons, being by different accidents separated from the societies, to which they formerly belong'd, may be oblig'd to form a new society among themselves; in which case they are entirely in the situation abovemention'd.

'Tis evident, then, that their first difficulty, in this situation, after the general convention for the establishment of society, and for the constancy of possession, is, how to separate their possessions, and assign to each his particular portion, which he must for the future inalterably enjoy. This difficulty will not detain them long; but it must immediately occur to them, as the most natural expedient, that every one continue to enjoy what he is at present master of, and that property or constant possession be conjoin'd to the immediate possession. Such is the effect of custom, that it not only reconciles us to any thing we have long enjoy'd. but even gives us an affection for it, and makes us prefer it to other objects, which may be more valuable, but are less known to us. What has long lain under our eye,

and has often been employ'd to our advantage, that we are always the most unwilling to part with; but can easily live without possessions, which we never have enjoy'd, and are not accustom'd to. Tis evident, therefore, that men wou'd easily acquiesce in this expedient, that every one continue to enjoy what he is at present possessed of; and this is the reason, why they wou'd so naturally agree in preferring it.⁵

But we may observe, that tho' the rule of the assignment of property to the present possessor be natural, and by that means useful, yet its utility extends not beyond the first formation of society; nor wou'd any thing be more pernicious, than the constant observance of it; by which restitution wou'd be excluded, and every injustice wou'd be authoriz'd and rewarded. We must, therefore, seek for some other circumstance, that may give rise to property after society is once establish'd; and of this kind, I find four most considerable, viz. Occupation, Prescription, Accession, and Succession^[12]. We shall briefly examine each of these, beginning with Occupation.

The possession of all external goods is changeable and uncertain; which is one of the most considerable impediments to the establishment of society, and is the reason why, by universal agreement, express or tacite, men restrain themselves by what we now call the rules of justice and equity. The misery of the condition, which precedes this restraint, is the cause why we submit to that remedy as quickly as possible; and this affords us an easy reason, why we annex the idea of property to the first possession, or to occupation. Men are unwilling to leave property in suspense, even for the shortest time, or open the least door to violence and disorder. To which we may add, that the first possession always engages the attention most; and did we neglect it, there wou'd be no colour of reason for assigning property to any succeeding possession.⁶ There remains nothing, but to determine exactly, what is meant by possession; and this is not so easy as may at first sight be imagin'd. We are said to be in possession of any thing, not only when we immediately touch it, but also when we are so situated with respect to it, as to have it in our power to use it; and may move, alter, or destroy it, according to our present pleasure or advantage.

This relation, then, is a species of cause and effect; and as property is nothing but a stable possession, deriv'd from the rules of justice, or the conventions of men, 'tis to be consider'd as the same

species of relation. But here we may observe, that as the power of using any object becomes more or less certain, according as the interruptions we may meet with are more or less probable; and as this probability may increase by insensible degrees; 'tis in many cases impossible to determine when possession begins or ends; nor is there any certain standard, by which we can decide such controversies. A wild boar, that falls into our snares, is deem'd to be in our possession, if it be impossible for him to escape. But what do we mean by impossible?

How do we separate this impossibility from an improbability? And how distinguish that exactly from a probability? Mark the precise limits of the one and the other, and shew the standard, by which we may decide all disputes that may arise, and, as we find by experience, frequently do arise upon this subject.⁷ But such disputes may not only arise concerning the real existence of property and possession, but also concerning their extent; and these disputes are often susceptible of no decision, or can be decided by no other faculty than the imagination. A person who lands on the shore of a small island, that is desert and uncultivated, is deem'd its possessor from the very first moment, and acquires the property of the whole; because the object is there bounded and circumscrib'd in the fancy, and at the same time is proportion'd to the new possessor. The same person landing on a desert island, as large as Great Britain, extends his property no farther than his immediate possession; tho' a numerous colony are esteem'd the proprietors of the whole from the instant of their debarkment.

But it often happens, that the title of first possession becomes obscure thro' time; and that 'tis impossible to determine many controversies, which may arise concerning it. In that case long possession or prescription naturally takes place, and gives a person a sufficient property in any thing he enjoys. The nature of human society admits not of any great accuracy; nor can we always remount to the first origin of things, in order to determine their present condition. Any considerable space of time sets objects at such a distance, that they seem, in a manner, to lose their reality, and have as little influence on the mind, as if they never had been in being. A man's title, that is clear and certain at present, will seem obscure and doubtful fifty years hence, even tho' the facts, on which it is founded, shou'd be prov'd with the greatest evidence and certainty.

The same facts have not the same influence after so long an interval of time.

And this may be receiv'd as a convincing argument for our preceding doctrine with regard to property and justice. Possession during a long tract of time conveys a title to any object. But as 'tis certain, that, however every thing be produc'd in time, there is nothing real that is produced by time; it follows, that property being produc'd by time, is not any thing real in the objects, but is the off-spring of the sentiments, on which alone time is found to have any influence.⁸ We acquire the property of objects by accession, when they are connected in an intimate manner with objects that are already our property, and at the same time are inferior to them. Thus the fruits of our garden, the offspring of our cattle, and the work of our slaves, are all of them esteem'd our property, even before possession. Where objects are connected together in the imagination, they are apt to be put on the same footing, and are commonly suppos'd to be endow'd with the same qualities. We readily pass from one to the other, and make no difference in our judgments concerning them; especially if the latter be inferior to the former.⁹ The right of succession is a very natural one, from the presum'd consent of the parent or near relation, and from the general interest of mankind, which requires, that men's possessions shou'd pass to those, who are dearest to them, in order to render them more industrious and frugal. Perhaps these causes are seconded by the influence of relation, or the association of ideas, by which we are naturally directed to consider the son after the parent's decease, and ascribe to him a title to his father's possessions. Those goods must become the property of some body: But of whom is the question.

Here 'tis evident the persons children naturally present themselves to the mind; and being already connected to those possessions by means of their deceas'd parent, we are apt to connect them still farther by the relation of property. Of this there are many parallel instances.¹⁰

SECT. IV

Of the transference of property by consent^[13]

However useful, or even necessary, the stability of possession may be to human society, 'tis attended with very considerable

inconveniences. The relation of fitness or suitableness ought never to enter into consideration, in distributing the properties of mankind; but we must govern ourselves by rules, which are more general in their application, and more free from doubt and uncertainty. Of this kind is present possession upon the first establishment of society; and afterwards occupation, prescription, accession, and succession.

As these depend very much on chance, they must frequently prove contradictory both to men's wants and desires; and persons and possessions must often be very ill adjusted. This is a grand inconvenience, which calls for a remedy. To apply one directly, and allow every man to seize by violence what he judges to be fit for him, would destroy society; and therefore the rules of justice seek some medium betwixt a rigid stability, and this changeable and uncertain adjustment. But there is no medium better than that obvious one, that possession and property should always be stable, except when the proprietor consents to bestow them on some other person.

This rule can have no ill consequence, in occasioning wars and dissensions; since the proprietor's consent, who alone is concern'd, is taken along in the alienation: And it may serve to many good purposes in adjusting property to persons. Different parts of the earth produce different commodities; and not only so, but different men both are by nature fitted for different employments, and attain to greater perfection in any one, when they confine themselves to it alone. All this requires a mutual exchange and commerce; for which reason the translation of property by consent is founded on a law of nature, as well as its stability without such a consent.

So far is determin'd by a plain utility and interest. But perhaps 'tis from more trivial reasons, that delivery, or a sensible transference of the object is commonly requir'd by civil laws, and also by the laws of nature, according to most authors, as a requisite circumstance in the translation of property. The property of an object, when taken for something real, without any reference to morality, or the sentiments of the mind, is a quality perfectly insensible, and even inconceivable; nor can we form any distinct notion, either of its stability or translation. This imperfection of our ideas is less sensibly felt with regard to its stability, as it engages less our attention, and is easily past over by the mind, without any scrupulous examination.

But as the translation of property from one person to another is a

more remarkable event, the defect of our ideas becomes more sensible on that occasion, and obliges us to turn ourselves on every side in search of some remedy. Now as nothing more enlivens any idea than a present impression, and a relation betwixt that impression and the idea; 'tis natural for us to seek some false light from this quarter. In order to aid the imagination in conceiving the transference of property, we take the sensible object, and actually transfer its possession to the person, on whom we wou'd bestow the property. The suppos'd resemblance of the actions, and the presence of this sensible delivery, deceive the mind, and make it fancy, that it conceives the mysterious transition of the property.

And that this explication of the matter is just, appears hence, that men have invented a symbolical delivery, to satisfy the fancy, where the real one is impracticable. Thus the giving the keys of a granary is understood to be the delivery of the corn contain'd in it: The giving of stone and earth represents the delivery of a mannor. This is a kind of superstitious practice in civil laws, and in the laws of nature, resembling the Roman catholic superstitions[14] in religion. As the Roman catholics represent the inconceivable mysteries of the Christian religion, and render them more present to the mind, by a taper, or habit[15], or grimace, which is suppos'd to resemble them;so lawyers and moralists have run into like inventions for the same reason, and have endeavour'd by those means to satisfy themselves concerning the transference of property by consent.

SECT. V

Of the obligation of promises

That the rule of morality, which enjoins the performance of promises, is not natural, will sufficiently appear from these two propositions, which I proceed to prove, viz, that a promise wou'd not be intelligible, before human conventions had establish'd it; and that even if it were intelligible, it wou'd not be attended with any moral obligation.

I say, first, that a promise is not intelligible naturally, nor antecedent to human conventions; and that a man, unacquainted with society, could never enter into any engagements with another, even tho'they could perceive each other's thoughts by intuition[16]. If promises be natural and intelligible, there must be some act of the

mind attending these words, I promise; and on this act of the mind must the obligation depend. Let us, therefore, run over all the faculties of the soul, and see which of them is exerted in our promises.

The act of the mind, express'd by a promise, is not a resolution to perform any thing: For that alone never imposes any obligation.

Nor is it a desire of such a performance: For we may bind ourselves without such a desire, or even with an aversion, declar'd and avow'd. Neither is it the willing of that action, which we promise to perform: For a promise always regards some future time, and the will has an influence only on present actions. It follows, therefore, that since the act of the mind, which enters into a promise, and produces its obligation, is neither the resolving, desiring, nor willing any particular performance, it must necessarily be the willing of that obligation, which arises from the promise. Nor is this only a conclusion of philosophy; but is entirely conformable to our common ways of thinking and of expressing ourselves, when we say that we are bound by our own consent, and that the obligation arises from our mere will and pleasure. The only question then is, whether there be not a manifest absurdity in supposing this act of the mind, and such an absurdity as no man cou'd fall into, whose ideas are not confounded with prejudice and the fallacious use of language.

All morality depends upon our sentiments; and when any action, or quality of the mind, pleases us after a certain manner, we say it is virtuous; and when the neglect, or nonperformance of it, displeases us after a like manner, we say that we lie under an obligation to perform it. A change of the obligation supposes a change of the sentiment; and a creation of a new obligation supposes some new sentiment to arise. But 'tis certain we can naturally no more change our own sentiments, than the motions of the heavens; nor by a single act of our will, that is, by a promise, render any action agreeable or disagreeable, moral or immoral; which, without that act, wou'd have produc'd contrary impressions, or have been endow'd with different qualities. It wou'd be absurd, therefore, to will any new obligation, that is, any new sentiment of pain or pleasure; nor is it possible, that men cou'd naturally fall into so gross an absurdity. A promise, therefore, is naturally something altogether unintelligible, nor is there any act of the mind belonging to it.¹¹ But, secondly, if there was any act of the mind belonging to it, it could not naturally produce any obligation.

This appears evidently from the foregoing reasoning. A promise creates a new obligation.

A new obligation supposes new sentiments to arise. The will never creates new sentiments. There could not naturally, therefore, arise any obligation from a promise, even supposing the mind could fall into the absurdity of willing that obligation.

The same truth may be prov'd still more evidently by that reasoning, which prov'd justice in general to be an artificial virtue.

No action can be requir'd of us as our duty, unless there be implanted in human nature some actuating passion or motive, capable of producing the action. This motive cannot be the sense of duty. A sense of duty supposes an antecedent obligation: And where an action is not requir'd by any natural passion, it cannot be requir'd by any natural obligation; since it may be omitted without proving any defect or imperfection in the mind and temper, and consequently without any vice. Now 'tis evident we have no motive leading us to the performance of promises, distinct from a sense of duty. If we thought, that promises had no moral obligation, we never shou'd feel any inclination to observe them. This is not the case with the natural virtues. Tho' there was no obligation to relieve the miserable, our humanity wou'd lead us to it; and when we omit that duty, the immorality of the omission arises from its being a proof, that we want the natural sentiments of humanity. A father knows it to be his duty to take care of his children: But he has also a natural inclination to it. And if no human creature had that indination, no one cou'd lie under any such obligation. But as there is naturally no inclination to observe promises, distinct from a sense of their obligation; it follows, that fidelity is no natural virtue, and that promises have no force, antecedent to human conventions. If any one dissent from this, he must give a regular proof of these two propositions, viz. that there is a peculiar act of the mind, annex't to promises; and that consequent to this act of the mind, there arises an inclination to perform, distinct from a sense of duty. I presume, that it is impossible to prove either of these two points; and therefore I venture to conclude that promises are human inventions, founded on the necessities and interests of society.

In order to discover these necessities and interests, we must consider the same qualities of human nature, which we have already

found to give rise to the preceding laws of society. Men being naturally selfish, or endow'd only with a confin'd generosity, they are not easily induc'd to perform any action for the interest of strangers, except with a view to some reciprocal advantage, which they had no hope of obtaining but by such a performance. Now as it frequently happens, that these mutual performances cannot be finish'd at the same instant, 'tis necessary, that one party be contented to remain in uncertainty, and depend upon the gratitude of the other for a return of kindness. But so much corruption is there among men, that, generally speaking, this becomes but a slender security; and as the benefactor is here suppos'd to bestow his favours with a view to self-interest, this both takes off from the obligation, and sets an example to selfishness, which is the true mother of ingratitude.

Were we, therefore, to follow the natural course of our passions and inclinations, we shou'd perform but few actions for the advantage of others, from distinterested views; because we are naturally very limited in our kindness and affection: And we shou'd perform as few of that kind, out of a regard to interest; because we cannot depend upon their gratitude. Here then is the mutual commerce of good offices in a manner lost among mankind, and every one reduc'd to his own skill and industry for his well-being and subsistence.

The invention of the law of nature, concerning the stability of possession, has already render'd men tolerable to each other; that of the transference of property and possession by consent has begun to render them mutually advantageous: But still these laws of nature, however strictly observ'd, are not sufficient to render them so serviceable to each other, as by nature they are fitted to become.

Tho' possession be stable, men may often reap but small advantage from it, while they are possess'd of a greater quantity of any species of goods than they have occasion for, and at the same time suffer by the want of others. The transference of property, which is the proper remedy for this inconvenience, cannot remedy it entirely; because it can only take place with regard to such objects as are present and individual, but not to such as are absent or general. One cannot transfer the property of a particular house, twenty leagues distant; because the consent cannot be attended with delivery, which is a requisite circumstance. Neither can one transfer the property of ten bushels of corn, or five hogsheads of wine, by the mere expression and

consent; because these are only general terms, and have no direct relation to any particular heap of corn, or barrels of wine.

Besides, the commerce of mankind is not confin'd to the barter of commodities, but may extend to services and actions, which we may exchange to our mutual interest and advantage. Your corn is ripe today; mine will be so tomorrow. 'Tis profitable for us both, that I shou'd labour with you to-day, and that you shou'd aid me to-morrow. I have no kindness for you, and know you have as little for me. I will not, therefore, take any pains upon your account; and shou'd I labour with you upon my own account, in expectation^[17] of a return, I know I shou'd be disappointed, and that I shou'd in vain depend upon your gratitude. Here then I leave you to labour alone: You treat me in the same manner. The seasons change; and both of us lose our harvests for want of mutual confidence and security.

All this is the effect of the natural and inherent principles and passions of human nature; and as these passions and principles are inalterable, it may be thought, that our conduct, which depends on them, must be so too, and that 'twou'd be in vain, either for moralists or politicians, to tamper with us, or attempt to change the usual course of our actions, with a view to public interest. And indeed, did the success of their designs depend upon their success in correcting the selfishness and ingratitude of men, they wou'd never make any progress, unless aided by omnipotence, which is alone able to new-mould the human mind, and change its character in such fundamental articles. All they can pretend to, is, to give a new direction to those natural passions, and teach us that we can better satisfy our appetites in an oblique and artificial manner, than by their headlong and impetuous motion. Hence I learn to do a service to another, without bearing him any real kindness; because I foresee, that he will return my service, in expectation of another of the same kind, and in order to maintain the same correspondence of good offices with me or with others. And accordingly, after I have serv'd him, and he is in possession of the advantage arising from my action, he is induc'd to perform his part, as foreseeing the consequences of his refusal.

But tho' this self-interested commerce of man begins to take place, and to predominate in society, it does not entirely abolish the more generous and noble intercourse of friendship and good offices. I may still do services to such persons as I love, and am more

particularly acquainted with¹ without any prospect of advantage;and they may make me a return in the same manner, without any view but that of recompensing my past services. In order, therefore,to distinguish those two different sorts of commerce, the interested and the disinterested, there is a certain form of words invented for the former, by which we bind ourselves to the performance of any action. This form of words constitutes what we call a promise, which is the sanction of the interested commerce of mankind. When a man says he promises any thing, he in effect expresses a resolution of performing it; and along with that, by making use of this form of words, subjects himself to the penalty of never being trusted again in case of failure. A resolution is the natural act of the mind, which promises express: But were there no more than a resolution in the case, promises wou'd only declare our former motives, and wou'd not create any new motive or obligation. They are the conventions of men, which create a new motive, when experience has taught us, that human affairs wou'd be conducted much more for mutual advantage, were there certain symbols or signs instituted, by which we might give each, other security of our conduct in any particular incident, After these signs are instituted, whoever uses them is immediately bound by his interest to execute his engagements, and must never expect to be trusted any more, if he refuse to perform what he promis'd.

Nor is that knowledge, which is requisite to make mankind sensible of this interest in the institution and observance of promises,to be esteem'd superior to the capacity of human nature, however savage and uncultivated. There needs but a very little practice of the world, to make us perceive all these consequences and advantages.

The shortest experience of society discovers them to every mortal;and when each individual perceives the same sense of interest in all his fellows, he immediately performs his part of any contract, as being assur'd, that they will not be wanting in theirs. All of them,by concert, enter into a scheme of actions, calculated for common benefit, and agree to be true to their word; nor is there any thing requisite to form this concert or convention, but that every one have a sense of interest in the faithful fulfilling of engagements, and express that sense to other members of the society. This immediately causes that interest to operate upon them; and interest is the first obligation to the performance of promises.

Afterwards a sentiment of morals concurs with interest, and becomes a new obligation upon mankind. This sentiment of morality, in the performance of promises, arises from the same principles as that in the abstinence from the property of others.

Public interest, education, and the artifices of politicians, have the same effect in both cases. The difficulties, that occur to us, in supposing a moral obligation to attend promises, we either surmount or elude. For instance; the expression of a resolution is not commonly suppos'd to be obligatory; and we cannot readily conceive how the making use of a certain form of words shou'd be able to cause any material difference. Here, therefore, we feign a new act of the mind, which we call the willing an obligation; and on this we suppose the morality to depend. But we have prov'd already, that there is no such act of the mind, and consequently that promises impose no natural obligation.

To confirm this, we may subjoin some other reflections concerning that will, which is suppos'd to enter into a promise, and to cause its obligation. 'Tis evident, that the will alone is never suppos'd to cause the obligation, but must be express'd by words or signs, in order to impose a tie upon any man. The expression being once brought in as subservient to the will, soon becomes the principal part of the promise; nor will a man be less bound by his word, tho' he secretly give a different direction to his intention, and withhold himself both from a resolution, and from willing an obligation. But tho' the expression makes on most occasions the whole of the promise, yet it does not always so; and one, who shou'd make use of any expression, of which he knows not the meaning, and which he uses without any intention of binding himself, wou'd not certainly be bound by it. Nay, tho' he knows its meaning, yet if he uses it in jest only, and with such signs as shew evidently he has no serious intention of binding himself, he wou'd not lie under any obligation of performance; but 'tis necessary, that the words be a perfect expression of the will, without any contrary signs. Nay, even this we must not carry so far as to imagine, that one, whom, by our quickness of understanding, we conjecture, from certain signs, to have an intention of deceiving us, is not bound by his expression or verbal promise, if we accept of it; but must limit this conclusion to those cases, where the signs are of a different kind from those of deceit. All these contradictions are easily accounted for, if the obligation of promises

be merely a human invention for the convenience of society; but will never be explain'd, if it be something real and natural, arising from any action of the mind or body.

I shall farther observe, that since every new promise imposes a new obligation of morality on the person who promises, and since this new obligation arises from his will; 'tis one of the most mysterious and incomprehensible operations that can possibly be imagin'd, and may even be compar'd to transubstantiation, or holy orders,[18] where a certain form of words, along with a certain intention, changes entirely the nature of an external object, and even of a human nature. But tho' these mysteries be so far alike, 'tis very remarkable, that they differ widely in other particulars, and that this difference may be regarded as a strong proof of the difference of their origins. As the obligation of promises is an invention for the interest of society, 'tis warp'd into as many different forms as that interest requires, and even runs into direct contradictions, rather than lose sight of its object. But as those other monstrous doctrines are mere priestly inventions, and have no public interest in view, they are less disturb'd in their progress by new obstacles; and it must be own'd, that, after the first absurdity, they follow more directly the current of reason and good sense. Theologians clearly perceiv'd, that the external form of words, being mere sound, require an intention to make them have any efficacy; and that this intention being once consider'd as a requisite circumstance, its absence must equally prevent the effect, whether avow'd or conceal'd, whether sincere or deceitful. Accordingly they have commonly determin'd, that the intention of the priest makes the sacrament, and that when he secretly withdraws his intention, he is highly criminal in himself; but still destroys the baptism, or communion, or holy orders. The terrible consequences of this doctrine were not able to hinder its taking place; as the inconvenience of a similar doctrine, with regard to promises, have prevented that doctrine from establishing itself. Men are always more concern'd about the present life than the future; and are apt to think the smallest evil, which regards the former, more important than the greatest, which regards the latter.

We may draw the same conclusion, concerning the origin of promises, from the force, which is suppos'd to invalidate all contracts, and to free us from their obligation. Such a principle is a proof, that promises have no natural obligation, and are mere artificial

contrivances for the convenience and advantage of society.

If we consider aright of the matter, force is not essentially different from any other motive of hope or fear, which may induce us to engage our word, and lay ourselves under any obligation. A man, dangerously wounded, who promises a competent sum to a surgeon to cure him, wou'd certainly be bound to performance; tho' the case be not so much different from that of one, who promises a sum to a robber, as to produce so great a difference in our sentiments of morality, if these sentiments were not built entirely on public interest and convenience.

SECT. VI

Some farther reflections concerning justice and injustice

We have now run over the three fundamental laws of nature, that of the stability of possession, of its transference by consent, and of the performance of promises. 'Tis on the strict observance of those three laws, that the peace and security of human society entirely depend; nor is there any possibility of establishing a good correspondence among men, where these are neglected. Society is absolutely necessary for the well-being of men; and these are as necessary to the support of society. Whatever restraint they may impose on the passions of men, they are the real offspring of those passions, and are only a more artful and more refin'd way of satisfying them. Nothing is more vigilant and inventive than our passions; and nothing is more obvious, than the convention for the observance of these rules. Nature has, therefore, trusted this affair entirely to the conduct of men, and has not plac'd in the mind any peculiar original principles, to determine us to a set of actions, into which the other principles of our frame and constitution were sufficient to lead us.

And to convince us the more fully of this truth, we may here stop a moment, and from a review of the preceding reasonings may draw some new arguments, to prove that those laws, however necessary, are entirely artificial, and of human invention; and consequently that justice is an artificial, and not a natural virtue.

(1) The first argument I shall make use of is deriv'd from the vulgar definition of justice. Justice is commonly defin'd to be a constant and perpetual will of giving every one his due. In this

definition 'tis suppos'd, that there are such things as right and property, independent of justice, and antecedent to it; and that they wou'd have subsisted, tho' men had never dreamt of practising such a virtue. I have already observ'd, in a cursory manner, the fallacy of this opinion, and shall here continue to open up a little more distinctly my sentiments on that subject.

I shall begin with observing, that this quality, which we shall call property, is like many of the imaginary qualities of the peripatetic[19] philosophy, and vanishes upon a more accurate inspection into the subject, when consider'd a-part from our moral sentiments. Tis evident property does not consist in any of the sensible qualities of the object. For these may continue invariably the same, while the property changes. Property, therefore, must consist in some relation of the object. But 'tis not in its relation with regard to other external and inanimate objects. For these may also continue invariably the same, while the property changes. This quality, therefore, consists in the relations of objects to intelligent and rational beings. But 'tis not the external and corporeal relation, which forms the essence of property. For that relation may be the same betwixt inanimate objects, or with regard to brute creatures; tho' in those cases it forms no property. Tis, therefore, in some internal relation, that the property consists; that is, in some influence, which the external relations of the object have on the mind and actions. Thus the external relation, which we call occupation or first possession, is not of itself imagin'd to be the property of the object, but only to cause its property. Now 'tis evident, this external relation causes nothing in external objects, and has only an influence on the mind, by giving us a sense of duty in abstaining from that object, and in restoring it to the first possessor. These actions are properly what we call justice; and consequently 'tis on that virtue that the nature of property depends, and not the virtue on the property.

If any one, therefore, wou'd assert, that justice is a natural virtue, and injustice a natural vice, he must assert, that abstracting from the notions of property, and right and obligation, a certain conduct and train of actions, in certain external relations of objects, has naturally a moral beauty or deformity, and causes an original pleasure or uneasiness. Thus the restoring a man's goods to him is consider'd as virtuous, not because nature has annex'd a certain sentiment of pleasure to such a conduct, with regard to the property of others, but

because she has annex'd that sentiment to such a conduct, with regard to those external objects, of which others have had the first or long possession, or which they have receiv'd by the consent of those, who have had first or long possession. If nature has given us no such sentiment, there is not, naturally, nor antecedent to human conventions, any such thing as property. Now, tho' it seems sufficiently evident, in this dry and accurate consideration of the present subject, that nature has annex'd no pleasure or sentiment of approbation to such a conduct; yet that I may leave as little room for doubt as possible, I shall subjoin a few more arguments to confirm my opinion.

First, If nature had given us a pleasure of this kind, it wou'd have been as evident and discernible as on every other occasion; nor shou'd we have found any difficulty to perceive, that the consideration of such actions, in such a situation, gives a certain pleasure and sentiment of approbation. We shou'd not have been oblig'd to have recourse to notions of property in the definition of justice, and at the same time make use of the notions of justice in the definition of property. This deceitful method of reasoning is a plain proof, that there are contain'd in the subject some obscurities and difficulties, which we are not able to surmount, and which we desire to evade by this artifice.

Secondly, Those rules, by which properties, rights, and obligations are determin'd, have in them no marks of a natural origin but many of artifice and contrivance. They are too numerous to have proceeded from nature: They are changeable by human laws: And have all of them a direct and evident tendency to public good, and the support, of civil society. This last circumstance is remarkable upon two accounts. First, because, tho' the cause of the establishment of these laws had been a regard for the public good, as much as the public good is their natural tendency, they wou'd still have been artificial, as being purposely contriv'd and directed to a certain end. Secondly, because, if men had been endow'd with such a strong regard for public good, they wou'd never have restrain'd themselves by these rules; so that the laws of justice arise from natural principles in a manner still more oblique and artificial. Tis self-love which is their real origin; and as the self-love of one person is naturally contrary to that of another, these several interested passions are oblig'd to adjust themselves after such a manner as to concur in some system of

conduct and behaviour. This system, therefore, comprehending the interest of each individual, is of course advantageous to the public; tho' it be not intended for that purpose by the inventors.

(2) In the second place we may observe, that all kinds of vice and virtue run insensibly into each other, and may approach by such imperceptible degrees as will make it very difficult, if not absolutely impossible, to determine when the one ends, and the other begins; and from this observation we may derive a new argument for the foregoing principle. For whatever may be the case, with regard to all kinds of vice and virtue, 'tis certain, that rights, and obligations, and property, admit of no such insensible gradation, but that a man either has a full and perfect property, or none at all; and is either entirely oblig'd to perform any action, or lies under no manner of obligation. However civil laws may talk of a perfect dominion[20], and of an imperfect, 'tis easy to observe, that this arises from a fiction, which has no foundation in reason, and can never enter into our notions of natural justice and equity. A man that hires a horse, tho' but for a day, has as full a right to make use of it for that time, as he whom we call its proprietor has to make use of it any other day; and 'was evident, that however the use may be bounded in time or degree, the right itself is not susceptible of any such gradation, but is absolute and entire, so far as it extends. Accordingly we may observe, that this right both arises and perishes in an instant; and that a man entirely acquires the property of any object by occupation, or the consent of the proprietor; and loses it by his own consent; without any of that insensible gradation, which is remarkable in other qualities and relations. Since, therefore, this is the case with regard to property, and rights, and obligations, I ask, how it stands with regard to justice and injustice? After whatever manner you answer this question, you run into inextricable difficulties. If you reply, that justice and injustice admit of degree, and run insensibly into each other, you expressly contradict the foregoing position, that obligation and property are not susceptible of such a gradation.

These depend entirely upon justice and injustice, and follow them in all their variations. Where the justice is entire, the property is also entire: Where the justice is imperfect, the property must also be imperfect. And vice versa, if the property admit of no such variations, they must also be incompatible with justice. If you assent, therefore, to this last proposition, and assert, that justice and injustice

are not susceptible of degrees, you in effect assert, that they are not naturally either vicious or virtuous; since vice and virtue, moral good and evil, and indeed all natural qualities, run insensibly into each other, and are, on many occasions, undistinguishable.

And here it may be worth while to observe, that tho' abstract reasoning, and the general maxims of philosophy and law establish this position, that property, and right, and obligation admit not of degrees, yet in our common and negligent way of thinking, we find great difficulty to entertain that opinion, and do even secretly embrace the contrary principle. An object must either be in the possession of one person or another. An action must either be perform'd or not. The necessity there is of choosing one side in these dilemmas, and the impossibility there often is of finding any just medium, oblige us, when we reflect on the matter, to acknowledge, that all property and obligations are entire. But on the other hand, when we consider the origin of property and obligation, and find that they depend on public utility, and sometimes on the propensities of the imagination, which are seldom entire on any side; we are naturally inclin'd to imagine, that these moral relations admit of an insensible gradation. Hence it is, that in references, where the consent of the parties leave the referees entire masters of the subject, they commonly discover so much equity and justice on both sides, as induces them to strike a medium, and divide the difference betwixt the parties. Civil judges, who have not this liberty, but are oblig'd to give a decisive sentence on some one side, are often at a loss how to determine, and are necessitated to proceed on the most frivolous reasons in the world. Half rights and obligations, which seem so natural in common life, are perfect absurdities in their tribunal; for which reason they are often oblig'd to take half arguments for whole ones, in order to terminate the affair one way or other.

(3) The third argument of this kind I shall make use of may be explain'd thus. If we consider the ordinary course of human actions, we shall find, that the mind restrains not itself by any general and universal rules; but acts on most occasions as it is determin'd by its present motives and inclination. As each action is a particular individual event, it must proceed from particular principles, and from our immediate situation within ourselves, and with respect to the rest of the universe. If on some occasions we extend our motives beyond

those very circumstances, which gave rise to them, and form something like general rules for our conduct, 'tis easy to observe, that these rules are not perfectly inflexible, but allow of many exceptions.

Since, therefore, this is the ordinary course of human actions, we may conclude, that the laws of justice, being universal and perfectly inflexible, can never be deriv'd from nature, nor be the immediate offspring of any natural motive or inclination. No action can be either morally good or evil, unless there be some natural passion or motive to impel us to it, or deter us from it; and 'tis evident, that die morality must be susceptible of all the same variations, which are natural to the passion. Here are two persons, who dispute for an estate; of whom one is rich, a fool, and a batchelor; the other poor, a man of sense, and has a numerous family: The first is my enemy; the second my friend. Whether I be actuated in this affair by a view to public or private interest, by friendship or enmity, I must be induc'd to do my utmost to procure the estate to the latter. Nor wou'd any consideration of the right and property of the persons be able to restrain me, were I actuated only by natural motives, without any combination or convention with others. For as all property depends on morality; and as all morality depends on the ordinary course of our passions and actions; and as these again are only directed by particular motives; 'tis evident, such a partial conduct must be suitable to the strictest morality, and cou'd never be a violation of property. Were men, therefore, to take the liberty of acting with regard to the laws of society, as they do in every other affair, they wou'd conduct themselves, on most occasions, by particular judgments, and wou'd take into consideration the characters and circumstances of the persons, as well as the general nature of the question. But 'tis easy to observe, that this wou'd produce an infinite confusion in human society, and that the avidity and partiality of men wou'd quickly bring disorder into the world, if not restrain'd by some general and inflexible principles. Twas, therefore, with a view to this inconvenience, that men have establish'd those principles, and have agreed to restrain themselves by general rules, which are unchangeable by spite and favour, and by particular views of private or public interest. These rules, then, are artificially invented for a certain purpose, and are contrary to the common principles of human nature, which accommodate themselves to circumstances, and have no stated invariable method of operation.

Nor do I perceive how I can easily be mistaken in this matter.

I see evidently, that when any man imposes on himself general inflexible rules in his conduct with others, he considers certain objects as their property, which he supposes to be sacred and inviolable. But no proposition can be more evident, than that property is perfectly unintelligible without first supposing justice and injustice; and that these virtues and vices are as unintelligible, unless we have motives, independent of the morality, to impel us to just actions, and deter us from unjust ones. Let those motives, therefore, be what they will, they must accommodate themselves to circumstances, and must admit of all the variations, which human affairs, in their incessant revolutions, are susceptible of. They are consequently a very improper foundation for such rigid inflexible rules as the laws of nature; and 'tis evident these laws can only be deriv'd from human conventions, when men have perceiv'd the disorders that result from following their natural and variable principles.

Upon the whole, then, we are to consider this distinction betwixt justice and injustice, as having two different foundations, viz, that of interest, when men observe, that 'tis impossible to live in society without restraining themselves by certain rules; and that of morality, when this interest is once observ'd and men receive a pleasure from the view of such actions as tend to the peace of society, and an uneasiness from such as are contrary to it. 'Tis the voluntary convention and artifice of men, which makes the first interest take place; and therefore those laws of justice are so far to be consider'd as artifrial. After that interest is once establish'd and acknowledg'd, the sense of morality in the observance of these rules follows naturally, and of itself; tho' 'tis certain, that it is also augmented by a new artifice[21], and that the public instructions of politicians, and the private education of parents, contribute to the giving us a sense of honour and duty in the strict regulation of our actions with regard to the properties of others.

SECT. VII

Of the origin of government

Nothing is more certain, than that men are, in a great measure, govern'd by interest, and that even when they extend their concern beyond themselves, 'us not to any great distance; nor is it

usual for them, in common life, to look farther than their nearest friends and acquaintance. 'Tis no less certain, that 'tis impossible for men to consult, their interest in so effectual a manner, as by an universal and inflexible observance of the rules of justice, by which alone they can preserve society, and keep themselves from falling into that wretched and savage condition, which is commonly represented as the state of nature. And as this interest, which all men have in the upholding of society, and the observation of the rules of justice, is great, so is it palpable and evident, even to the most rude and uncultivated of human race; and 'tis almost impossible for any one, who has had experience of society, to be mistaken in this particular.

Since, therefore, men are so sincerely attach'd to their interest, and their interest is so much concern'd in the observance of justice, and this interest is so certain and avow'd; it may be ask'd, how any disorder can ever arise in society, and what principle there is in human nature so powerful as to overcome so strong a passion, or so violent as to obscure so clear a knowledge?

It has been observ'd, in treating of the passions, that men are mightily govern'd by the imagination, and proportion their affections more to the light, under which any object appears to them, than to its real and intrinsic value. What strikes upon them with a strong and lively idea commonly prevails above what lies in a more obscure light; and it must be a great superiority of value, that is able to compensate this advantage. Now as every thing, that is contiguous to us, either in space or time, strikes upon us with such an idea, it has a proportional effect on the will and passions, and commonly operates with more force than any object, that lies in a more distant and obscure light. Tho' we may be fully convinc'd, that the latter object excels the former, we are not able to regulate our actions by this judgment; but yield to the solicitations of our passions, which always plead in favour of whatever is near and contiguous.

This is the reason why men so often act in contradiction to their known interest; and in particular why they prefer any trivial advantage, that is present, to the maintenance of order in society, which so much depends on the observance of justice. The consequences of every breach of equity seem to lie very remote, and are not able to counter-balance any immediate advantage, that may be

reap'd from it. They are, however, never the less real for being remote; and as all men are, in some degree, subject to the same weakness, it necessarily happens, that the violations of equity must become very frequent in society, and the commerce of men, by that means, be render'd very dangerous and uncertain. You have the same propension, that I have, in favour of what is contiguous above what is remote. You are, therefore, naturally carried to commit acts of injustice as well as me. Your example both pushes me forward in this way by imitation, and also affords me a new reason for any breach of equity, by shewing me, that I should be the cully of my integrity, if I alone shou'd impose on myself a severe restraint amidst the licentiousness of others.

This quality, therefore, of human nature, not only is very dangerous to society, but also seems, on a cursory view, to be incapable of any remedy. The remedy can only come from the consent of men; and if men be incapable of themselves to prefer remote to contiguous, they will never consent to any thing, which wou'd oblige them to such a choice, and contradict, in so sensible a manner, their natural principles and propensities. Whoever chuses the means, chuses also the end; and if it be impossible for us to prefer what is remote, 'tis equally impossible for us to submit to any necessity, which wou'd oblige us to such a method of acting.

But here 'tis observable, that this infirmity of human nature becomes a remedy to itself, and that we provide against our negligence about remote objects, merely because we are naturally inclin'd to that negligence. When we consider any objects at a distance, all their minute distinctions vanish, and we always give the preference to whatever is in itself preferable, without considering its situation and circumstances. This gives rise to what in an improper sense we call reason, which is a principle, that is often contradictory to those propensities that display themselves upon the approach of the object. In reflecting on any action, which I am to perform a twelve-month hence, I always resolve to prefer the greater good, whether at that time it will be more contiguous or remote; nor does any difference in that particular make a difference in my present intentions and resolutions. My distance from the final determination makes all those minute differences vanish, nor am I affected by any thing, but the general and more discernible qualities of good and evil. But on my nearer approach, those circumstances, which I at first over-

look'd, begin to appear, and have an influence on my conduct and affections. A new inclination to the present good springs up, and makes it difficult for me to adhere inflexibly to my first purpose and resolution. This natural infirmity I may very much regret, and I may endeavour, by all possible means, to free my self from it. I may have recourse to study and reflection within myself; to the advice of friends; to frequent meditation, and repeated resolution: And having experienc'd how ineffectual all these are, I may embrace with pleasure any other expedient, by which I may impose a restraint upon myself, and guard against this weakness.

The only difficulty, therefore, is to find out this expedient, by which men cure their natural weakness, and lay themselves under the necessity of observing the laws of justice and equity, notwithstanding their violent propensity to prefer contiguous to remote. 'Tis evident such a remedy can never be effectual without correcting this propensity; and as 'tis impossible to change or correct any thing material in our nature, the utmost we can do is to change our circumstances and situation, and render the observance of the laws of justice our nearest interest, and their violation our most remote. But this being impracticable with respect to all mankind, it can only take place with respect to a few, whom we thus immediately interest in the execution of justice. There are the persons, whom we call civil magistrates, kings and their ministers, our governors and rulers, who being indifferent persons to the greatest part of the state, have no interest, or but a remote one, in any act of injustice; and being satisfied with their present condition, and with their part in society, have an immediate interest in every execution of justice, which is so necessary to the upholding of society. Here then is the origin of civil government and society. Men are not able radically to cure, either in themselves or others, that narrowness of soul, which makes them prefer the present to the remote. They cannot change their natures. All they can do is to change their situation, and render the observance of justice the immediate interest of some particular persons, and its violation their more remote. These persons, then, are not only induc'd to observe those rules in their own conduct, but also to constrain others to a like regularity, and enforce the dictates of equity thro' the whole society. And if it be necessary, they may also interest others more immediately in the execution of justice, and create a number of officers, civil and military, to assist them in their government.

But this execution of justice, tho' the principal, is not the only advantage of government. As violent passion hinders men from seeing distinctly the interest they have in an equitable behaviour towards others; so it hinders them from seeing that equity itself, and gives them a remarkable partiality in their own favours. This inconvenience is corrected in the same manner as that abovemention'd.

The same persons, who execute the laws of justice, w^rn also decide all controversies concerning them; and being indifferent to the greatest part of the society, will decide them more equitably than every one wou'd in his own case.

By means of these two advantages, in the execution and decision of justice, men acquire a security against each others weakness and passion, as well as against their own, and under the shelter of their governors, begin to taste at ease the sweets of society and mutual assistance. But government extends farther its beneficial influence; and not contented to protect men in those conventions they make for their mutual interest, it often obliges them to make such conventions, and forces them to seek their own advantage, by a concurrence in some common end or purpose. There is no quality in human nature, which causes more fatal errors in our conduct, than that which leads us to prefer whatever is present to the distant and remote, and makes us desire objects more according to their situation than their intrinsic value. Two neighbours may agree to drain a meadow, which they possess in common; because 'tis easy for them to know each others mind; and each must perceive, that the immediate consequence of his failing in his part, is, the abandoning the whole project. But 'tis very difficult, and indeed impossible, that a thousand persons shou'd agree in any such action; it being difficult for them to concert so complicated a design, and still more difficult for them to execute it; while each seeks a pretext to free himself of the trouble and expence, and wou'd lay the whole burden on others. Political[22] society easily remedies both these inconveniences. Magistrates find an immediate interest in the interest of any considerable part of their subjects. They need consult no body but themselves to form any scheme for the promoting of that interest.

And as the failure of any one piece in the execution is connected, tho' not immediately, with the failure of the whole, they prevent that failure, because they find no interest in it, either

immediate or remote. Thus bridges are built; harbours open'd; ramparts rais'd; canals form'd; fleets equip'd; and armies disciplin'd every where, by the care of government, which, tho' compos'd of men subject to all human infirmities, becomes, by one of the finest and most subtle inventions imaginable, a composition, which is, in some measure, exempted from all these infirmities.

SECT. VIII

Of the source of allegiance

Though government be an invention very advantageous, and even in some circumstances absolutely necessary to mankind; it is not necessary in all circumstances, nor is it impossible for men to preserve society for some time, without having recourse to such an invention. Men, 'tis true, are always much inclin'd to prefer present interest to distant and remote; nor is it easy for them to resist the temptation of any advantage, that they may immediately enjoy, in apprehension of an evil that lies at a distance from them: But still this weakness is less conspicuous where the possessions, and the pleasures of life are few, and of little value, as they always are in the infancy of society. An Indian is but little tempted to dispossess another of his hut, or to steal his bow, as being already provided of the same advantages; and as to any superior fortune, which may attend one above another in hunting and fishing, 'tis only casual and temporary, and will have but small tendency to disturb society.

And so far am I from thinking with some philosophers, that men are utterly incapable of society without government, that I assert the first rudiments of government to arise from quarrels, not among men of the same society, but among those of different societies. A less degree of riches will suffice to this latter effect, than is requisite for the former. Men fear nothing from public war and violence but the resistance they meet with, which, because they share it in common, seems less terrible; and because it comes from strangers, seems less pernicious in its consequences, than when they are expos'd singly against one whose commerce is advantageous to them, and without whose society 'tis impossible they can subsist. Now foreign war to a society without government necessarily produces civil war. Throw any considerable goods among men, they instantly fall a quarrelling, while each strives to get possession of what pleases him, without regard to the consequences. In a foreign war the most

considerable of all goods, life and limbs, are at stake; and as every one shuns dangerous ports, seizes the best arms, seeks excuse for the slightest wounds, the laws, which may be well enough observ'd while men were calm, can now no longer take place, when they are in such commotion.

This we find verified in the American tribes, where men live in concord and amity among themselves without any establish'd government and never pay submission to any of their fellows, except in time of war, when their captain enjoys a shadow of authority, which he loses after their return from the field, and the establishment of peace with the neighbouring tribes. This authority, however, instructs them in the advantages of government, and teaches them to have recourse to it, when either by the pillage of war, by commerce, or by any fortuitous inventions, their riches and possessions have become so considerable as to make them forget, on every emergence, the interest they have in the preservation of peace and justice. Hence we may give a plausible reason, among others, why all governments are at first monarchical, without any mixture and variety; and why republics arise only from the abuses of monarchy and despotic power. Camps are the true mothers of cities; and as war cannot be administered, by reason of the suddenness of every exigency, without some authority in a single person, the same kind of authority naturally takes place in that civil government, which succeeds the military. And this reason I take to be more natural, than the common one deriv'd from patriarchal [\[23\]](#) government, or the authority of a father, which is said first to take place in one family, and to accustom the members of it to the government of a single person. The state of society without government is one of the most natural states of men, and must submit with the conjunction of many families, and long after the first generation. Nothing but an encrease of riches and possessions cou'd oblige men to quit it; and so barbarous and uninstructed are all societies on their first formation, that many years must elapse before these can encrease to such a degree, as to disturb men in the enjoyment of peace and concord. But tho' it be possible for men to maintain a small uncultivated society without government, 'tis impossible they shou'd maintain a society of any kind without justice, and the observance of those three fundamental laws concerning the stability of possession, its translation by consent, and the performance of promises. These are, therefore, antecedent to government, and are suppos'd to impose an obligation before the duty

of allegiance[24] to civil magistrates has once been thought of.

Nay, I shall go farther, and assert, that government, upon its first establishment, wou'd naturally be suppos'd. to derive its obligation from those laws of nature, and, in particular, from that concerning the performance of promises. When men have once perceiv'd the necessity of government to maintain peace, and execute justice, they wou'd naturally assemble together, wou'd chuse magistrates, determine power, and promise them obedience. As a promise is suppos'd to be a bond or security already in use, and attended with a moral obligation, 'tis to be consider'd as the original sanction of government, and as the source of the first obligation to obedience.

This reasoning appears so natural, that it has become the foundation of our fashionable system of politics, and is in a manner the creed of a party amongst us, who pride themselves, with reason, on the soundness of their philosophy, and their liberty of thought. All men, say they, are born free and equal: Government and superiority can only be establish'd by consent: The consent of men, in establishing government, imposes on them a new obligation, unknown to the laws of nature. Men, therefore, are bound to obey their magistrates, only because they promise it; and if they had not given their word, either expressly or tacitly, to preserve allegiance, it would never have become a part of their moral duty. This conclusion, however, when carried so far as to comprehend government in all its ages and situations, is entirely erroneous; and I maintain, that tho' the duty of allegiance be at first grafted on the obligation of promises, and be for some time supported by that obligation, yet it quickly takes root of itself, and has an original obligation and authority, independent of all contracts. This is a principle of moment, which we must examine with care and attention, before we proceed any farther.

'Tis reasonable for those philosophers, who assert justice to be a natural virtue, and antecedent to human conventions, to resolve all civil allegiance into the obligation of a promise, and assert that 'tis our own consent alone, which binds us to any submission to magistracy. For as all government is plainly an invention of men, and the origin of most governments is known in history, 'tis necessary to mount higher, in order to find the source of our political duties, if we wou'd assert them to have any natural obligation of morality. These philosophers, therefore, quickly observe, that society is as antient as the human

species, and those three fundamental laws of nature as antient as society: So that taking advantage of the antiquity, and obscure origin of these laws, they first deny them to be artificial and voluntary inventions of men, and then seek to ingraft on them those other duties, which are more plainly artificial. But being once undeceiv'd in this particular, and having found that natural, as well as civil justice, derives its origin from human conventions, we shall quickly perceive, how fruitless it is to resolve the one into the other, and seek, in the laws of nature, a stronger foundation for our political duties than interest, and human conventions; while these laws themselves are built on the very same foundation. On which ever side we turn this subject, we shall find, that these two kinds of duty are exactly on the same footing, and have the same source both of their first invention and moral obligation. They are contriv'd to remedy like inconveniences, and acquire their moral sanction in the same manner, from their remedying those inconveniences. These are two points, which we shall endeavour to prove as distinctly as possible.

We have already shewn, that men invented the three fundamental laws of nature, when they observ'd the necessity of society to their mutual subsistence, and found, that 'twas impossible to maintain any correspondence together, without some restraint on their natural appetites. The same self-love, therefore, which renders men so incommodious to each other, taking a new and more convenient direction, produces the rules of justice, and is the first motive of their observance. But when men have observ'd, that tho' the rules of justice be sufficient to maintain any society, yet 'tis impossible for them, of themselves, to observe those rules, in large and polish'd societies; they establish government, as a new invention to attain their ends, and preserve the old, or procure new advantages, by a more strict execution of justice. So far, therefore, our civil duties are connected with our natural, that the former are invented chiefly for the sake of the latter; and that the principal object of government is to constrain men to observe the laws of nature. In this respect, however, that law of nature, concerning the performance of promises, is only compriz'd along with the rest; and its exact observance is to be consider'd as an effect of the institution of government, and not the obedience to government as an effect of the obligation of a promise. Tho' the object of our civil duties be the enforcing of our natural, yet the first¹³ motive of the invention, as well as performance of both, is nothing but self-interest: And since there is a separate interest in the obedience to

government, from that in the performance of promises, we must also allow of a separate obligation. To obey the civil magistrate is requisite to preserve order and concord in society. To perform promises is requisite to beget mutual trust and confidence in the common offices of life. The ends, as well as the means, are perfectly distinct; nor is the one subordinate to the other.

To make this more evident, let us consider, that men w^{rn} often bind themselves by promises to the performance of what it wou^d have been their interest to perform, independent of these promises; as when they wou^d give others a fuller security, by superadding a new obligation of interest to that which they formerly lay under. The interest in the performance of promises, besides its moral obligation, is general, avow^d, and of the last consequence in life.

Other interests may be more particular and doubtful; and we are apt to entertain a greater suspicion, that men may indulge their humour, or passion, in acting contrary to them. Here, therefore, promises come naturally in play, and are often requir^d for fuller satisfaction and security. But supposing those other interests to be as general and avow^d as the interest in the performance of a promise, they will be regarded as on the same footing, and men will begin to repose the same confidence in them. Now this is exactly the case with regard to our civil duties, or obedience to the magistrate; without which no government cou^d subsist, nor any peace or order be maintain^d in large societies, where there are so many possessions on the one hand, and so many wants, real or imaginary, on the other. Our civil duties, therefore, must soon detach themselves from our promises, and acquire a separate force and influence. The interest in both is of the very same kind: 'Tis general, avow^d, and prevails in all times and places. There is, then, no pretext of reason for founding the one upon the other; while each of them has a foundation peculiar to itself. We might as well resolve the obligation to abstain from the possessions of others, into the obligation of a promise, as that of allegiance. The interests are not more distinct in the one case than the other. A regard to property is not more necessary to natural society, than obedience is to civil society or government; nor is the former society more necessary to the being of mankind, than the latter to their well-being and happiness. In short, if the performance of promises be advantageous, so is obedience to government: If the former interest be general, so is the latter: If the one interest be

obvious and avow'd, so is the other. And as these two rules are founded on like obligations of interest, each of them must have a peculiar authority, independent of the other.

But 'tis not only the natural obligations of interest, which are distinct in promises and allegiance; but also the moral obligations of honour and conscience: Nor does the merit or demerit of the one depend in the least upon that of the other. And indeed, if we consider the close connexion there is betwixt the natural and moral obligations, we shall find this conclusion to be entirely unavoidable.

Our interest is always engag'd on the side of obedience to magistracy; and there is nothing but a great present advantage, that can lead us to rebellion[25], by making us over-look the remote interest, which we have in the preserving of peace and order in society. But tho' a present interest may thus blind us with regard to our own actions, it takes not place with regard to those of others; nor hinders them from appearing in their true colours, as highly prejudicial to public interest, and to our own in particular. This naturally gives us an uneasiness, in considering such seditious and disloyal actions, and makes us attach to them the idea of vice and moral deformity. 'Tis the same principle, which causes us to disapprove of all kinds of private injustice, and in particular of the breach of promises. We blame all treachery and breach of faith; because we consider, that the freedom and extent of human commerce depend entirely on a fidelity with regard to promises. We blame all disloyalty to magistrates; because we perceive, that the execution of justice, in the stability of possession, its translation by consent, and the performance of promises, is impossible, without submission to government. As there are here two interests entirely distinct from each other, they must give rise to two moral obligations, equally separate and independent.

Tho' there was no such thing as a promise in the world, government wou'd still be necessary in all large and civiliz'd societies; and if promises had only their own proper obligation, without the separate sanction of government, they wou'd have but little efficacy in such societies. This separates the boundaries of our public and private duties, and shews that the latter are more dependant on the former, than the former on the latter. Education, and the artifice of politicians, concur to bestow a farther morality on loyalty, and to brand all

rebellion with a greater degree of guilt and infamy. Nor is it a wonder, that politicians shou'd be very industrious in inculcating such notions, where their interest is so particularly concern'd.

Lest those arguments shou'd not appear entirely conclusive (as I think they are) I shall have recourse to authority, and shall prove, from the universal consent of mankind, that the obligation of submission to government is not deriv'd from any promise of the subjects. Nor need any one wonder, that tho' I have all along endeavour'd to establish my system on pure reason, and have scarce ever cited the judgment even of philosophers or historians on any article, I shou'd now appeal to popular authority, and oppose the sentiments of the rabble to any philosophical reasoning. For it must be observ'd, that the opinions of men, in this case, carry with them a peculiar authority, and are, in a great measure, infallible. The distinction of moral good and evil is founded on the pleasure or pain, which results from the view of any sentiment, or character; and as that pleasure or pain cannot be unknown to the person who feels it, it follows,¹⁴ that there is just so much vice or virtue in any character, as every one places in it, and that 'tis impossible in this particular we can ever be mistaken. And tho' our judgments concerning the origin of any vice or virtue, be not so certain as those concerning their degrees; yet, since the question in this case regards not any philosophical origin of an obligation, but a plain matter of fact, 'tis not easily conceiv'd how we can fall into an error.

A man, who acknowledges himself to be bound to another, for a certain sum, must certainly know whether it be by his own bond, or that of his father; whether it be of his mere good-will, or for money lent him; and under what conditions, and for what purposes he has bound himself. In like manner, it being certain, that there is a moral obligation to submit to government, because every one thinks so; it must be as certain, that this obligation arises not from a promise; since no one, whose judgment has not been led astray by too strict adherence to a system of philosophy, has ever yet dreamt of ascribing it to that origin. Neither magistrates nor subjects have form'd this idea of our civil duties.

We find, that magistrates are so far from deriving their authority, and the obligation to obedience in their subjects, from the foundation of a promise or original contract, that they conceal, as far as possible,

from their people, especially from the vulgar, that they have their origin from thence. Were this the sanction of government, our rulers wou'd never receive it tacitly, which is the utmost that can be pretended; since what is given tacitly and insensibly can never have such influence on mankind, as what is perform'd expressly and openly. A tacit promise is, where the will is signified by other more diffuse signs than those of speech; but a will there must certainly be in the case, and that can never escape the person's notice, who exerted it, however silent or tacit. But were you to ask the far greatest part of the nation, whether they had ever consented to the authority of their rulers, or promis'd to obey them, they wou'd be inclin'd to think very strangely of you; and wou'd certainly reply, that the affair depended not on their consent, but that they were born to such an obedience. In consequence of this opinion, we frequently see them imagine such persons to be their natural rulers, as are at that time depriv'd of all power and authority, and whom no man, however foolish, wou'd voluntarily chuse; and this merely because they are in that line, which rul'd before, and in that degree of it, which us'd to succeed; tho' perhaps in so distant a period, that scarce any man alive cou'd ever have given any promise of obedience. Has a government, then, no authority over such as these, because they never consented to it, and wou'd esteem the very attempt of such a free choice a piece of arrogance and impiety?

We find by experience, that it punishes them very freely for what it calls treason and rebellion, which, it seems, according to this system, reduces itself to common injustice. If you say, that by dwelling in its dominions, they in effect consented to the establish'd government; I answer, that this can only be, where they think the affair depends on their choice, which few or none, beside those philosophers, have ever yet imagin'd. It never was pleaded as an excuse for a rebel, that the first act he perform'd, after he came to years of discretion, was to levy war against the sovereign of the state; and that while he was a child he cou'd not bind himself by his own consent, and having become a man, shou'd plainly, by the first act he perform'd, that he had no design to impose on himself any obligation to obedience. We find, on the contrary, that civil laws punish this crime at the same age as any other, which is criminal, of itself, without our consent; that is, when the person is come to the full use of reason: Whereas to this crime they ought in justice to allow some intermediate time, in which a tacit consent at least might be suppos'd.

To which we may add, that a man living under an absolute government, wou'd owe it no allegiance; since, by its very nature, it depends not on consent.

But as that is as natural and common a government as any, it must certainly occasion some obligation; and 'tis plain from experience, that men, who are subjected to it, do always think so. This is a clear proof, that we do not commonly esteem our allegiance to be deriv'd from our consent or promise; and a farther proof is, that when our promise is upon any account expressly engag'd, we always distinguish exactly betwixt the two obligations, and believe the one to add more force to the other, than in a repetition of the same promise. Where no promise is given, a man looks not on his faith as broken in private matters, upon account of rebellion; but keeps those two duties of honour and allegiance perfectly distinct and separate. As the uniting of them was thought by these philosophers a very subtle invention, this is a convincing proof, that 'tis not a true one; since no man can either give a promise, or be restrain'd by its sanction and obligation unknown to himself,

SECT. IX

Of the measures of allegiance

Those political writers, who have had recourse to a promise, or original contract^[26], as the source of our allegiance to government, intended to establish a principle, which is perfectly just and reasonable; tho' the reasoning, upon which they endeavour'd to establish it, was fallacious and sophistical. They wou'd prove, that our submission to government admits of exceptions, and that an egregious tyranny in the rulers is sufficient to free the subjects from all ties of allegiance. Since men enter into society, say they, and submit themselves to government, by their free and voluntary consent, they must have in view certain advantages, which they propose to reap from it, and for which they are contented to resign their native liberty. There is, therefore, something mutual engag'd on the part of the magistrate, viz, protection and security; and 'tis only by the hopes he affords of these advantages, that he can ever persuade men to submit to him. But when instead of protection and security, they meet with tyranny and oppression, they are free'd from their promises, (as happens in all conditional contracts) and return to that state of liberty, which preceded the institution of government. Men wou'd never be so

foolish as to enter into such engagements as shou'd turn entirely to the advantage of others, without any view of bettering their own condition. Whoever proposes to draw any profit from our submission, must engage himself, either expressly or tacitly, to make us reap some advantage from his authority; nor ought he to expect, that without the performance of his part we will ever continue in obedience.

I repeat it: This conclusion is just, tho' the principles be erroneous; and I flatter myself, that I can establish the same conclusion on more reasonable principles. I shall not take such a compass, in establishing our political duties, as to assert, that men perceive the advantages of government; that they institute government with a view to those advantages; that this institution requires a promise of obedience; which imposes a moral obligation to a certain degree, but being conditional, ceases to be binding, whenever the other contracting party performs not his part of the engagement. I perceive, that a promise itself arises entirely from human conventions, and is invented with a view to a certain interest. I seek, therefore, some such interest more immediately connected with government, and which may be at once the original motive to its institution, and the source of our obedience to it. This interest I find to consist in the security and protection, which we enjoy in political society, and which we can never attain, when perfectly free and independent. As interest, therefore, is the immediate sanction of government, the one can have no longer being than the other; and whenever the civil magistrate carries his oppression so far as to render his authority perfectly intolerable, we are no longer bound to submit to it. The cause ceases; the effect must cease also.

So far the conclusion is immediate and direct, concerning the natural obligation which we have to allegiance. As to the moral obligation, we may observe, that the maxim wou'd here be false, that when the cause ceases, the effect must cease also. For there is a principle of human nature, which we have frequently taken notice of, that men are mightily addicted to general rules, and that we often carry our maxims beyond those reasons, which first induc'd us to establish them. Where cases are similar in many circumstances, we are apt to put them on the same footing, without considering, that they differ in the most material circumstances, and that the resemblance[27] is more apparent than real. It may, therefore, be thought, that in the case of allegiance our moral obligation of duty

will not cease, even tho' the natural obligation of interest, which is its cause, has ceas'd; and that men may be bound by conscience to submit to a tyrannical government against their own and the public interest. And indeed, to the force of this argument I so far submit, as to acknowledge, that general rules commonly extend beyond the principles, on which they are founded; and that we seldom make any exception to them, unless that exception have the qualities of a general rule, and be founded on very numerous and common instances. Now this I assert to be entirely the present case. When men submit to the authority of others, 'tis to procure themselves some security against the wickedness and injustice of men, who are perpetually carried, by their unruly passions, and by their present and immediate interest, to the violation of all the laws of society.

But as this imperfection is inherent in human nature, we know that it must attend men in all their states and conditions; and that these, whom we chuse for rulers, do not immediately become of a superior nature to the rest of mankind, upon account of their superior power and authority. What we expect from them depends not on a change of their nature but of their situation, when they acquire a more immediate interest in the preservation of order and the execution of justice. But besides that this interest is only more immediate in the execution of justice among their subjects; besides this, I say, we may often expect, from the irregularity of human nature, that they will neglect even this immediate interest, and be transported by their passions into all the excesses of cruelty and ambition.. Our general knowledge of human nature, our observation of the past history of mankind, our experience of present times; all these causes must induce us to open the door to exceptions, and must make us conclude, that we may resist the more violent[28] effects of supreme power, without any crime or injustice.

Accordingly we may observe, that this is both the general practice and principle of mankind, and that no nation, that cou'd find any remedy, ever yet suffer'd the cruel ravages of a tyrant, or were blam'd for their resistance. Those who took up arms against Dionysius[29] or Nero[30], or Philip[31] the second, have the favour of every reader in the perusal of their history: and nothing but the most violent perversion of common sense can ever lead us to condemn them. 'Tis certain, therefore, that in all our notions of morals we never entertain such an absurdity as that of passive obedience, but make allowances

for resistance in the more flagrant instances of tyranny and oppression. The general opinion of mankind has some authority in all cases; but in this of morals 'tis perfectly infallible.

Nor is it less infallible, because men cannot distinctly explain the principles, on which it is founded. Few persons can carry on this train of reasoning:

Government is a mere human invention for the interest of society. Where the tyranny of the governor removes this interest, it also removes the natural obligation to obedience. The moral obligation is founded on the natural, and therefore must cease where that ceases; especially where the subject is such as makes us foresee very many occasions wherein the natural obligation may cease, and causes us to form a kind of general rule for the regulation of our conduct in such occurrences. 'But tho' this train of reasoning be too subtle for the vulgar, 'tis certain, that all men have an implicit notion of it, and are sensible, that they owe obedience to government merely on account of the public interest; and at the same time, that human nature is so subject to frailties and passions, as may easily pervert this institution, and change their governors into tyrants and public enemies. If the sense of common interest were not our original motive to obedience, I wou'd fain ask, what other principle is there in human nature capable of subduing the natural ambition of men, and forcing them to such a submission? Imitation and custom are not sufficient. For the question still recurs, what motive first produces those instances of submission, which we imitate, and that train of actions, which produces the custom? There evidently is no other principle than public interest; and if interest first produces obedience to government, the obligation to obedience must cease, whenever the interest ceases, in any great degree, and in a considerable number of instances.

SECT. X

Of the objects of allegiance

But tho', on some occasions, it may be justifiable, both in sound politics and morality, to resist supreme power, 'tis certain, that in the ordinary course of human affairs nothing can be more pernicious and criminal; and that besides the convulsions, which always attend revolutions, such a practice tends directly to the subversion of all government, and the causing an universal anarchy and confusion

among mankind. As numerous and civiliz'd societies cannot subsist without government, so government is entirely useless without an exact obedience. We ought always to weigh the advantages, which we reap from authority, against the disadvantages; and by this means we shall become more scrupulous of putting in practice the doctrine of resistance. The common rule requires submission; and 'tis only in cases of grievous tyranny and oppression, that the exception can take place.

Since then such a blind submission is commonly due to magistracy, the next question is, to whom it is due, and whom we are to regard as our lawful magistrates? In order to answer this question, let us recollect what we have already establish'd concerning the origin of government and political society. When men have once experienc'd the impossibility of preserving any steady order in society, while every one is his own master, and violates or observes the laws of society, according to his present interest or pleasure, they naturally run into the invention of government, and put it out of their own power, as far as possible, to transgress the laws of society.

Government, therefore, arises from the same voluntary conversation of men; and 'tis evident, that the same convention, which establishes government, will also determine the persons who are to govern, and will remove all doubt and ambiguity in this particular. And the voluntary consent of men must here have the greater efficacy, that the authority of the magistrate does at first stand upon the foundation of a promise of the subjects, by which they bind themselves to obedience; as in every other contract or engagement. The same promise, then, which binds them to obedience, ties them down to a particular person, and makes him the object of their allegiance.

But when government has been establish'd on this footing for some considerable time, and the separate interest, which we have in submission, has produc'd a separate sentiment of morality, the case is entirely alter'd, and a promise is no longer able to determine the particular magistrate since it is no longer consider'd as the foundation of government. We naturally suppose ourselves born to submission; and imagine, that such particular persons have a right to command, as we on our part are bound to obey. These notions of right and obligation are deriv'd from nothing but the advantage we reap from

government, which gives us a repugnance to practise resistance ourselves, and makes us displeas'd with any instance of it in others. But here 'tis remarkable, that in this new state of affairs, the original sanction of government, which is interest, is not admitted to determine the persons, whom we are to obey, as the original sanction did at first, when affairs were on the footing of a promise. A promise fixes and determines the persons, without any uncertainty: But 'tis evident, that if men were to regulate their conduct in this particular, by the view of a peculiar interest, either public or private, they wou'd involve themselves in endless confusion, and wou'd render all government, in a great measure, ineffectual. The private interest of every one is different; and tho' the public interest in itself be always one and the same, yet it becomes the source of as great dissensions, by reason of the different opinions of particular persons concerning it. The same interest, therefore, which causes us to submit to magistracy, makes us renounce itself in the choice of our magistrates, and binds us down to a certain form of government, and to particular persons, without allowing us to aspire to the utmost perfection in either. The case is here the same as in that law of nature concerning the stability of possession. 'Tis highly advantageous, and even absolutely necessary to society, that possession shou'd be stable; and this leads us to the establishment of such a rule: But we find, that were we to follow the same advantage, in assigning particular possessions to particular persons, we shou'd disappoint our end, and perpetuate the confusion, which that rule is intended to prevent. We must, therefore, proceed by general rules, and regulate ourselves by general interests, in modifying the law of nature concerning the stability of possession. Nor need we fear, that our attachment to this law will diminish upon account of the seeming frivolousness of those interests, by which it is determin'd.

The impulse of the mind is deriv'd from a very strong interest; and those other more minute interests serve only to direct the motion, without adding any thing to it, or diminishing from it. 'Tis the same case with government. Nothing is more advantageous to society than such an invention; and this interest is sufficient to make us embrace it with ardour and alacrity; tho' we are oblig'd afterwards to regulate and direct our devotion to government by several considerations, which are not of the same importance, and to chuse our magistrates without having in view any particular advantage from the choice.

The first of those principles I shall take notice of, as a foundation of the right of magistracy, is that which gives authority to all the most establish'd governments of the world without exception: I mean, long possession in any one form of government, or succession of princes. 'Tis certain, that if we remount to the first origin of every nation, we shall find, that there scarce is any race of kings, or form of a commonwealth, that is not primarily founded on usurpation and rebellion, and whose title is not at first worse than doubtful and uncertain. Time alone gives solidity to their right; and operating gradually on the minds of men, reconciles them to any authority, and makes it seem just and reasonable. Nothing causes any sentiment to have a greater influence upon us than custom, or turns our imagination more strongly to any object. When we have been long accustom'd to obey any set of men, that general instinct or tendency, which we have to suppose a moral obligation attending loyalty, takes easily this direction[32], and chuses that set of men for its objects. 'Tis interest which gives the general instinct; but 'tis custom which gives the particular direction.

And here 'tis observable, that the same length of time has a different influence on our sentiments of morality, according to its different influence on the mind. We naturally judge of every thing by comparison; and since in considering the fate of kingdoms and republics, we embrace a long extent of time, a small duration has not in this case a like influence on our sentiments, as when we consider any other object. One thinks he acquires a right to a horse, or a suit of cloaths, in a very short time; but a century is scarce sufficient to establish any new government, or remove all scruples in the minds of the subjects concerning it. Add to this, that a shorter period of time will suffice to give a prince a title to any additional power he may usurp, than will serve to fix his right, where the whole is an usurpation. The kings of France have not been possess'd of absolute power for above two reigns; and yet nothing will appear more extravagant to Frenchmen than to talk of their liberties. If we consider what has been said concerning accession, we shall easily account for this phaenomenon.

When there is no form of government establish'd by long possession, the present possession is sufficient to supply its place, and may be regarded as the second source of all public authority. Right to authority is nothing but the constant possession of

authority, maintain'd by the laws of society and the interests of mankind; and nothing can be more natural than to join this constant possession to the present one, according to the principles above-mention'd. If the same principles did not take place with regard to the property of private persons, 'twas because these principles were counter-ballanc'd by very strong considerations of interest; when we observ'd, that all restitution wou'd by that means be prevented, and every violence be authoriz'd and protected. And tho' the same motives may seem to have force, with regard to public authority, yet they are oppos'd by a contrary interest; which consists in the preservation of peace, and the avoiding of all changes, which, however they may be easily produc'd in private affairs, are unavoidably attended with bloodshed and confusion, where the public is interested.

Any one, who finding the impossibility of accounting for the right of the present possessor, by any receiv'd system of ethics, shou'd resolve to deny absolutely that right, and assert, that it is not authoriz'd by morality, wou'd be justly thought to maintain a very extravagant paradox, and to shock the common sense and judgment of mankind. No maxim is more conformable, both to prudence and morals, than to submit quietly to the government, which we find establish'd in the country where we happen to live, without enquiring too curiously into its origin and first establishment. Few governments will bear being examin'd so rigorously. How many kingdoms are there at present in the world, and how many more do we find in history, whose governors have no better foundation for their authority than that of present possession? To confine ourselves to the Roman and Grecian empire; is it not evident, that the long succession of emperors, from the dissolution of the Roman liberty, to the final extinction of that empire by the Turks, cou'd not so much as pretend to any other title to the empire? The election of the senate was a mere form, which always follow'd the choice of the legions; and these were almost always divided in the different provinces, and nothing but the sword was able to terminate the difference. 'Twas by the sword, therefore, that every emperor acquir'd, as well as defended his right; and we must either say, that all the known world, for so many ages, had no government, and ow'd no allegiance to any one, or must allow, that the right of the stronger, in public affairs, is to be receiv'd as legitimate, and authoriz'd by morality, when not oppos'd by any other title.

The right of conquest^[33] may be consider'd as a third source of the title of sovereigns. This right resembles very much that of present possession; but has rather a superior force, being seconded by the notions of glory and honour, which we ascribe to conquerors, instead of the sentiments of hatred and detestation, which attend usurpers. Men naturally favour those they love; and therefore are more apt to ascribe a right to successful violence, betwixt one sovereign and another, than to the successful rebellion of a subject against his sovereign.¹⁵

When neither long possession, nor present possession, nor conquest take place, as when the first sovereign, who founded any monarchy, dies; in that case, the right of succession naturally prevails in their stead, and men are commonly induc'd to place the son of their late monarch on the throne, and suppose him to inherit his father's authority. The presum'd consent of the father, the imitation of the succession to private families, the interest, which the state has in chusing the person, who is most powerful, and has the most numerous followers; all these reasons lead men to prefer the son of their late monarch to any other person.¹⁶ These reasons have some weight; but I am persuaded, that to one, who considers impartially of the matter, 'twill appear, that there concur some principles of the imagination, along with those views of interest. The royal authority seems to be connected with the young prince even in his father's life-time, by the natural transition of the thought; and still more after his death: So that nothing is more natural than to compleat this union by a new relation, and by putting him actually in possession of what seems so naturally to belong to him.

To confirm this we may weigh the following phaenomena, which are pretty curious in their kind. In elective monarchies the right of succession has no place by the laws and settled custom; and yet its influence is so natural, that 'tis impossible entirely to exclude it from the imagination, and render the subjects indifferent to the son of their deces'd monarch. Hence in some governments of this kind, the choice commonly falls on one or other of the royal family; and in some governments they are all excluded. Those contrary phaenomena proceed from the same principle. Where the royal family is excluded, 'tis from a refinement in politics, which makes people sensible of their propensity to chuse a sovereign in that family, and gives them a jealousy of their liberty, lest their new monarch, aided by this

propensity, shou'd establish his family, and destroy the freedom of elections for the future.

The history of Artaxerxes, and the younger Cyrus[34], may furnish us with some reflections to the same purpose. Cyrus pretended a right to the throne above his elder brother, because he was born after his father's accession. I do not pretend, that this reason was valid. I wou'd only infer from it, that he wou'd never have made use of such a pretext, were it not for the qualities of the imagination abovemention'd, by which we are naturally inclin'd to unite by a new relation whatever objects we find already united. Artaxerxes had an advantage above his brother, as being the eldest son, and the first in succession: But Cyrus was more closely related to the royal authority, as being begot after his father was invested with it.

Shou'd it here be pretended, that the view of convenience may be the source of all the right of succession, and that men gladly take advantage of any rule, by which they can fix the successor of their late sovereign, and prevent that anarchy and confusion, which attends all new elections: To this I wou'd answer, that I readily allow, that this motive may contribute something to the effect; but at the same time I assert, that without another principle, 'tis impossible such a motive shou'd take place. The interest of a nation requires, that the succession to the crown shou'd be fix'd one way or other; but 'tis the same thing to its interest in what way it be fix'd: So that if the relation of blood had not an effect independent of public interest, it wou'd never have been regarded, without a positive law; and 'twou'd have been impossible, that so many positive laws of different nations cou'd ever have concur'd precisely in the same views and intentions.

This leads us to consider the fifth source of authority, viz. positive laws; when the legislature establishes a certain form of government and succession of princes. At first sight it may be thought, that this must resolve into some of the preceding titles of authority. The legislative power, whence the positive law is deriv'd, must either be establish'd by original contract, long possession, present possession, conquest, or succession; and consequently the positive law must derive its force from some of those principles.

But here 'tis remarkable, that tho' a positive law can only derive its force from these principles, yet it acquires not all the force of the principle from whence it is deriv'd, but loses considerably in the

transition; as it is natural to imagine. For instance; a government is establish'd for many centuries on a certain system of laws, forms, and methods of succession. The legislative power, establish'd by this long succession, changes all on a sudden the whole system of government, and introduces a new constitution in its stead. I believe few of the subjects will think themselves bound to comply with this alteration, unless it have an evident tendency to the public good: But w^rn think themselves still at liberty to return to the antient government.

Hence the notion of fundamental laws; which are suppos'd to be inalterable by the will of the sovereign: And of this nature the Salic law[35] is understood to be in France. How far these fundamental laws extend is not determin'd in any government; nor is it possible it ever shou'd. There is such an indefensible gradation from the most material laws to the most trivial, and from the most antient laws to the most modem, that 'twill be impossible to set bounds to the legislative power, and determine how far it may innovate in the principles of government. That is the work more of imagination and passion than of reason.

Whoever considers the history of the several nations of the world; their revolutions, conquests, increase, and diminution; the manner in which their particular governments are establish'd, and the successive right transmitted from one person to another, will soon learn to treat very lightly all disputes concerning the rights of princes, and will be convinc'd, that a strict adherence to any general rules, and the rigid loyalty to particular persons and families, on which some people set so high a value, are virtues that hold less of reason, than of bigotry and superstition. In this particular, the study of history confirms the reasonings of true philosophy; which, shewing us the original qualities of human nature, teaches us to regard the controversies in politics as incapable of any decision in most cases, and as entirely subordinate to the interests of peace and liberty. Where the public good does not evidently demand a change; 'tis certain, that the concurrence of all those titles, original contract, long possession, present possession, succession, and positive laws, forms the strongest title to sovereignty, and is justly regarded as sacred and inviolable. But when these titles are mingled and oppos'd in different degrees, they often occasion perplexity; and are less capable of solution from the arguments of lawyers and philosophers, than from the swords of the soldiery. Who

shall tell me, for instance, whether Germanicus, or Drufus, ought to have succeeded Tiberius[36], had he died while they were both alive, without naming any of them for his successor? Ought the right of adoption to be receiv'd as equivalent to that of blood in a nation, where it had the same effect in private families, and had already, in two instances, taken place in the public? Ought Germanicus to be esteem'd the eldest son, because he was born before Drufus; or the younger, because he was adopted after the birth of his brother? Ought the right of the elder to be regarded in a nation, where the eldest brother had no advantage in the succession to private families? Ought the Roman empire at that time to be esteem'd hereditary, because of two examples; or ought it, even so early, to be regarded as belonging to the stronger, or the present possessor, as being founded on so recent an usurpation? Upon whatever principles we may pretend to answer these and such like questions, I am afraid we shall never be able to satisfy an impartial enquirer, who adopts no party in political controversies, and will be satisfied with nothing but sound reason and philosophy.

But here an English reader will be apt to enquire concerning that famous revolution, which has had such a happy influence on our constitution, and has been attended with such mighty consequences.

We have already remark'd, that in the case of enormous tyranny and oppression, 'tis lawful to take arms even against supreme power; and that as government is a mere human invention for mutual advantage and security, it no longer imposes any obligation, either natural or moral, when once it ceases to have that tendency. But tho' this general principle be authoriz'd by common sense, and the practice of all ages, 'tis certainly impossible for the laws, or even for philosophy, to establish any particular rules, by which we may know when resistance is lawful; and decide all controversies, which may arise on that subject. This may not only happen with regard to supreme power; but 'tis possible, even in some constitutions, where the legislative authority is not lodg'd in one person, that there may be a magistrate so eminent and powerful, as to oblige the laws to keep silence in this particular. Nor wou'd this silence be an effect only of their respect, but also of their prudence; since 'tis certain, that in the vast variety of circumstances, which occur in all governments, an exercise of power, in so great a magistrate, may at one time be beneficial to the public, which at another time wou'd be pernicious

and tyrannical. But notwithstanding this silence of the laws in limited monarchies, 'tis certain, that the people still retain the right of resistance; since 'tis impossible, even in the most despotic governments, to deprive them of it. The same necessity of self-preservation, and the same motive of public good, give them the same liberty in the one case as in the other. And we may farther observe, that in such mix'd governments, the cases, wherein resistance is lawful, must occur much oftener, and greater indulgence be given to the subjects to defend themselves by force of arms, than in arbitrary governments. Not only where the chief magistrate enters into measures, in themselves, extremely pernicious to the public, but even when he wou'd encroach on the other parts of the constitution, and extend his power beyond the legal bounds, it is allowable to resist and dethrone him; tho' such resistance and violence may, in the general tenor of the laws, be deem'd unlawful and rebellious. For besides that nothing is more essential to public interest, than the preservation of public liberty; 'tis evident, that if such a mix'd government be once suppos'd to be established, every part or member of the constitution must have a right of self-defence, and of maintaining its antient bounds against the enaoachment of every other authority. As matter wou'd have been created in vain, were it depriv'd of a power of resistance, without which no part of it cou'd preserve a distinct existence, and the whole might be crowded up into a single point: So 'tis a gross absurdity to suppose, in any government, a right without a remedy, or allow, that the supreme power is shar'd with the people, without allowing, that 'tis lawful for them to defend their share against every invader. Those, therefore, who wou'd seem to respect our free government, and yet deny the right of resistance, have renounc'd all pretensions to common sense, and do not merit a serious answer.

It does not belong to my present purpose to shew, that these general principles are applicable to the late revolution; and that all the rights and privileges, which ought to be sacred to a free nation, were at that time threaten'd with the utmost danger. I am better pleas'd to leave this controverted subject, if it really admits of controversy; and to indulge myself in some philosophical reflections, which naturally arise from that important event.

First, We may observe, that shou'd the lords and commons in our constitution, without any reason from public interest, either depose the king in being, or after his death exclude the prince, who, by laws

and settled custom, ought to succeed, no one wou'd esteem their proceedings legal, or think themselves bound to comply with them. But shou'd the king, by his unjust practices, or his attempts for a tyrannical and despotic power, justly forfeit his legal, it then not only becomes morally lawful and suitable to the nature of political society to dethrone him; but what is more, we are apt likewise to think, that the remaining members of the constitution acquire a right of excluding his next heir, and of chusing whom they please for his successor. This is founded on a very singular quality of our thought and imagination. When a king forfeits his authority, his heir ought naturally to remain in the same situation, as if the king were remov'd by death; unless by mixing himself in the tyranny, he forfeit it for himself. But tho' this may seem reasonable, we easily comply with the contrary opinion. The deposition of a king, in such a government as ours, is certainly an act beyond all common authority, and an illegal assuming a power for public good, which, in the ordinary course of government, can belong to no member of the constitution. When the public good is so great and so evident as to justify the action, the commendable use of this licence causes us naturally to attribute to the parliament a right of using farther licences; and the antient bounds of the laws being once transgressed with approbation, we are not apt to be so strict in confining ourselves precisely within their limits. The mind naturally runs on with any train of action, which it has begun; nor do we commonly make any scruple concerning our duty, after the first action of any kind, which we perform. Thus at the revolution, no one who thought the deposition of the father justifiable, esteem'd themselves to be confin'd to his infant son; tho' had that unhappy monarch died innocent at that time, and had his son, by any accident, been convey'd beyond seas, there is no doubt but a regency wou'd have been appointed till he shou'd come to age, and cou'd be restored to his dominions.

As the slightest properties of the imagination have an effect on the judgments of the people, it shews the wisdom of the laws and of the parliament to take advantage of such properties, and to chuse the magistrates either in or out of a line, according as the vulgar will most naturally attribute authority and right to them.

Secondly, Tho' the accession of the Prince of Orange [\[37\]](#) to the throne might at first give occasion to many disputes, and his title be contested, it ought not now to appear doubtful, but must have

acquir'd a sufficient authority from those three princes, who have succeeded him upon the same title. Nothing is more usual, tho' nothing may, at first sight, appear more unreasonable, than this way of thinking.

Princes often seem to acquire a right from their successors, as well as from their ancestors; and a king, who during his life-time might justly be deem'd an usurper, will be regarded by posterity as a lawful prince, because he has had the good fortune to settle his family on the throne, and entirely change the antient form of government.

Julius Caesar is regarded as the first Roman emperor; while Sylla[38] and Marius[39], whose titles were really the same as his, are treated as tyrants and usurpers. Time and custom give authority to all forms of government, and all successions of princes; and that power, which at first was founded only on injustice and violence, becomes in time legal and obligatory. Nor does the mind rest there; but returning back upon its footsteps, transfers to their predecessors and ancestors that right, which it naturally ascribes to the posterity, as being related together, and united in the imagination. The present king of France makes Hugh Capet[40] a more lawful prince than Cromwell; as the establish'd liberty of the Dutch is no inconsiderable apology for their obstinate resistance to Philip the second.

SECT. XI

Of the laws of nations[41]

When civil government has been established over the greatest part of mankind, and different societies have been form'd contiguous to each other, there arises a new set of duties among the neighbouring states, suitable to the nature of that commerce, which they carry on with each other. Political writers tell us, that in every kind of intercourse, a body politic is to be consider'd as one person; and indeed this assertion is so far just, that different nations, as well as private persons, require mutual assistance; at the same time that their selfishness and ambition are perpetual sources of war and discord. But tho' nations in this particular resemble individuals, yet as they are very different in other respects, no wonder they regulate themselves by different maxims, and give rise to a new set of rules, which we call the laws of nations. Under this head we may comprize the sacredness of the persons of ambassadors, the declaration of war, the abstaining

from poison'd arms, with other duties of that kind, which are evidently calculated for the commerce, that is peculiar to different societies.

But tho' these rules be super-added to the laws of nature, the former do not entirely abolish the latter; and one may safely affirm, that the three fundamental rules of justice, the stability of possession, its transference by consent, and the performance of promises [42], are duties of princes, as well as of subjects. The same interest produces the same effect in both cases. Where possession has no stability, there must be perpetual war. Where property is not transferr'd by consent, there can be no commerce. Where promises are not observ'd, there can be no leagues nor alliances. The advantages, therefore, of peace, commerce, and mutual succour, make us extend to different kingdoms the same notions of justice, which take place among individuals.

There is a maxim very current in the world, which few politicians are willing to avow, but which has been authoriz'd by the practice of all ages, that there is a system of morals cakulated for princes, much more free than that which ought to govern private parsons. Tis evident this is not to be understood of the lesser extent of public duties and obligations; nor will any one be so extravagant as to assert, that the most solemn treaties ought to have no force among princes. For as princes do actually form treaties among themselves, they must propose some advantage from the execution of them; and the prospect of such advantage for the future must engage them to perform their part, and must establish that law of nature. The meaning, therefore, of this political maxim is, that tho' the morality of princes has the same extent, yet it has not the same force as that of private persons, and may lawfully be trangress'd from a more trivial motive. However shocking such a proposition may appear to certain philosophers, 'twill be easy to defend it upon those principles, by which we have accounted for the origin of justice and equity.

When men have found by experience, that 'tis impossible to subsist without society, and that 'tis impossible to maintain society, while they give free course to their appetites; so urgent an interest quickly restrains their actions, and imposes an obligation to observe those rules, which we call the laws of justice. This obligation of interest rests nor here; but by the necessary course of the passions and sentiments, gives rise to the moral obligation of duty; while we approve of such actions as tend to the peace of society, and

disapprove of such as tend to its disturbance. The same natural obligation of interest takes place among independent kingdoms, and gives rise to the same morality; so that no one of ever so corrupt morals will approve of a prince, who voluntarily, and of his own accord, breaks his word, or violates any treaty. But here we may observe, that tho' the intercourse of different states be advantageous, and even sometimes necessary, yet it is nor so necessary nor advantageous as that among individuals, without which 'tis utterly impossible for human nature ever to subsist. Since, therefore, the natural obligation to justice, among different states, is not so strong as among individuals, the moral obligation, which arises from it, must partake of its weakness; and we must necessarily give a greater indulgence to a prince or minister, who deceives another; than to a private gentleman, who breaks his word of honour.

Shou'd it be ask'd, what proportion these two species of morality bear to each other? I wou'd answer, that this is a question, to which we can never give any precise answer; nor is it possible to reduce to numbers the proportion, which we ought to fix betwixt them. One may safely affirm, that this proportion finds itself, without any art or study of men; as we may observe on many other occasions. The practice of the world goes farther in teaching us the degrees of our duty, than the most subtile philosophy, which was ever yet invented. And this may serve as a convincing proof, that all men have an implicit notion of the foundation of those moral rules concerning natural and civil justice, and are sensible, that they arise merely from human conventions, and from the interest, which we have in the preservation of peace and order. For otherwise the diminution of the interest wou'd never produce a relaxation of the morality, and reconcile us more easily to any transgression of justice among princes and republics, than in the private commerce of one subject with another.

SECT. XII

Of chastity and modesty[\[43\]](#)

If any difficulty attend this system concerning the laws of nature and nations, 'twill be with regard to the universal approbation or blame, which follows their observance or transgression, and which some may not think sufficiently explain'd from the general interests of society. To remove, as far as possible, all scruples of this kind, I shall

here consider another set of duties, viz, the modesty and chastity which belong to the fair sex: And I doubt not but these virtues will be found to be still more conspicuous instances of the operation of those principles, which I have insisted on.

There are some philosophers, who attack the female virtues with great vehemence, and fancy they have gone very far in detecting popular errors, when they can show, that there is no foundation in nature for all that exterior modesty, which we require in the expressions, and dress, and behaviour of the fair sex. I believe I may spare myself the trouble of insisting on so obvious a subject, and may proceed, without farther preparation, to examine after what manner such notions arise from education, from the voluntary conventions of men, and from the interest of society.

Whoever considers the length and feebleness of human infancy, with the concern which both sexes naturally have for their offspring, will easily perceive, that there must be an union of male and female for the education of the young, and that this union must be of considerable duration. But in order to induce the men to impose on themselves this restraint, and undergo cheerfully all the fatigues and expences, to which it subjects them, they must believe, that the children are their own, and that their natural instinct is not directed to a wrong object, when they give a loose to love and tenderness.

Now if we examine the structure of the human body, we shall find, that this security is very difficult to be attain'd on our part; and that since, in the copulation of the sexes, the principle of generation goes from the man to the woman, an error may easily take place on the side of the former, tho' it be utterly impossible with regard to the latter. From this trivial and anatomical observation is deriv'd that vast difference betwixt the education and duties of the two sexes.

Were a philosopher to examine the matter a priori, he wou'd reason after the following manner. Men are induc'd to labour for the maintenance and education of their children, by the persuasion that they are really their own; and therefore 'tis reasonable, and even necessary, to give them some security in this particular. This security cannot consist entirely in the imposing of severe punishments on any transgressions of conjugal fidelity on the part of the wife; since these public punishments cannot be inflicted without legal proof, which 'tis difficult to meet with in this subject. What restraint, therefore, shall we

impose on women, in order to counter-balance so strong a temptation as they have to infidelity? There seems to be no restraint possible, but in the punishment of bad fame or reputation; a punishment, which has a mighty influence on the human mind, and at the same time is inflicted by the world upon surmizes, and conjectures, and proofs, that wou'd never be receiv'd in any court of judicature. In order, therefore, to impose a due restraint on the female sex, we must attach a peculiar degree of shame to their infidelity, above what arises merely from its injustice, and must bestow proportionable praises on their chastity.

But tho' this be a very strong motive to fidelity, our philosopher wou'd quickly discover, that it wou'd not alone be sufficient to that purpose. All human creatures, especially of the female sex, are apt to over-look remote motives in favour of any present temptation: The temptation is here the strongest imaginable: Its approaches are insensible and seducing: And a woman easily finds, or flatters herself she shall find, certain means of securing her reputation, and preventing all the pernicious consequences of her pleasures. 'Tis necessary, therefore, that, beside the infamy attending such licences, there shou'd be some preceding backwardness or dread, which may prevent their first approaches, and may give the female sex a repugnance to all expressions, and postures, and liberties, that have an immediate relation to that enjoyment.

Such wou'd be the reasonings of our speculative philosopher: But I am persuaded, that if he had not a perfect knowledge of human nature, he wou'd be apt to regard them as mere chimerical speculations, and wou'd consider the infamy attending infidelity, and backwardness to all its approaches, as principles that were rather to be wish'd than hop'd for in the world. For what means, wou'd he say, of persuading mankind, that the transgressions of conjugal duty are more infamous than any other kind of injustice, when 'tis evident they are more excusable, upon account of the greatness of the temptation? And what possibility of giving a backwardness to the approaches of a pleasure, to which nature has inspir'd so strong a propensity; and a propensity that 'tis absolutely necessary in the end to comply with, for the support of the species?

But speculative reasonings, which cost so much pains to philosophers, are often form'd by the world naturally, and without reflection: As difficulties, which seem unsurmountable in theory, are

easily got over in practice. Those, who have an interest in the fidelity of women, naturally disapprove of their infidelity, and all the approaches to it. Those, who have no interest, are carried along with the stream. Education takes possession of the ductile minds of the fair sex in their infancy. And when a general rule of this kind is once establish'd, men are apt to extend it beyond those principles, from which it first arose. Thus batchelors, however debauch'd, cannot chuse but be shock'd with any instance of lewdness or impudence in women. And tho' all these maxims have a plain reference to generation, yet women past child-bearing have no more privilege in this respect, than those who are in the flower of their youth and beauty. Men have undoubtedly an implicit notion, that all those ideas of modesty and decency have a regard to generation; since they impose not the same laws, with the same force, on the male sex, where that reason takes nor place. The exception is there obvious and extensive, and founded on a remarkable difference, which produces a clear separation and disjunction of ideas. But as the case is not the same with regard to the different ages of women, for this reason, tho' men know, that these notions are founded on the public interest, yet the general rule carries us beyond the original principle, and makes us extend the notions of modesty over the whole sex, from their earliest infancy to their extremest old-age and infirmity.

Courage, which is the point of honour among men, derives its merit, in a great measure, from artifice, as well as the chastity of women; tho' it has also some foundation in nature, as we shall see afterwards.

As to the obligations which the male sex lie under, with regard to chastity, we may observe, that according to the general notions of the world, they bear nearly the same proportion to the obligations of women, as the obligations of the law of nations do to those of the law of nature. 'Tis contrary to the interest of civil society, that men shou'd have an entire liberty of indulging their appetites in venereal enjoyment: But as this interest is weaker than in the case of the female sex, the moral obligation, arising from it, must be proportionably weaker. And to prove this we need only appeal to the practice and sentiments of all nations and ages.

John Locke (1632—1704)

[1] 人为。

[2] moral-obligation: 道德的义务（或约束力）。

[3] 协议，关于共同利益的一般意义，社会全体成员都互相表示这种意义；是政治正义也是自然正义的来源。

[4]abilities: 才能，自然的才能，与道德的德性有别，因为它们是不能借艺术或称赞来变化的，因而自然就被政治家所忽视。

[5] 自私性，的自私性，被人们估计得太高了，因为我们很少遇到一个人，他的仁厚的爱情总加起来不超过他的全部自私的温情；广泛的同情（这是我们道德情操的来源）和狭窄的慷慨（这是人类自然而有的）之间的矛盾，是正义的来源，这个矛盾被通则所消除了。

[6]许诺。

[7] 财产。所谓财产权不并不是对象的可感性质，也不是对于对象的一种关系。而是一种内心的关系，即对象的外界关系对心灵和行为所有的某种影响。

[8]黄金时代，关于黄金时代的诗意的虚构，包含着一种有价值的真理。

[9]间接的。

[10] 内在的，与外在的相对。

[11] 稳定。

[12] 占领、时效、添附和继承。

[13] 同意不是政府的基础；住在政府的领土以内并不是对一个政府的同意。

[14] 迷信。

[15] 习惯，自然原则之一。

[16] 直观，是知识和确信的一个来源，它觉察到四个可理证的关系中的三个，即类似，相反和任何程度的性质。

[17] 期待。

[18] 化体或圣职。

[19] 逍遥学派：亚里士多德学派。

[20] 支配权。

[21] 人为的，政治上的认为措施，不是我们区分恶与德的唯一原因。

[22] 政治的，政治的措施永远不能成为德与恶的区分的唯一原因；只能改变情感的方向。

[23] 父权的。

[24] 忠顺，忠顺与践约就各有各的基础，各有各的道德义务。忠顺的对象，即我们的合法的长官，在一起初是由社会习惯和一种特殊的许诺所确定的。

[25] 反叛。

[26] 原始契约。

[27] 类似，是观念联合的一个来源，哲学关系的一个来源。印象和观念的类似使得观念生动起来。类似不是信念的来源，因为它强制心灵。

[28] 猛烈的，反省印象分为平静的和猛烈的两种，感情是猛烈的。

[29] 迪昂尼修斯（405—367 年），叙拉古的暴君因对西西里岛迦太基人的战役而出名。

[30] 尼禄(54—68 年)，罗马皇帝，他早期的统治由其母阿格丽皮娜操纵，他谋杀了其母亲和妻子。64 年的罗马大火可能是他操纵的。他的残酷与渎职引发了广泛的暴动致使他自杀身亡。

[31] 菲利普二世，西班牙国王（1527—1598 年），他的执政时期是西班牙历史上最强盛的时代。

[32] 方向。

[33] 征服，对于政权的一种权利名义。

[34] 阿塔克薛西斯和小居鲁士，小居鲁士，波斯王子，为大流士二世所生，公元前401 年，小居鲁士从小亚细亚起兵叛乱，率领约一万一千七百名希腊雇佣兵东进位争夺王位，被其兄阿尔塔薛西斯二世所败，但他所雇的希腊雇佣兵却成功退却回希腊本土，这件事被色诺芬记录在他的《长征记》里。

[35] 撒利族法典：5 世纪时萨利克人的习惯法汇编。墨洛温王朝的创始人克洛维统治后期(约507 ~ 511)颁布的。它在克洛维的后继人统治时期曾两度被重新颁布，而在加洛林王朝统治时期又经反复修改和系统化。《萨利克法典》主要是一部刑法典和程序法典，列举了各种违法犯罪应科处的赔偿金。但它也包括一些民法的法令，其中有一章宣布女儿不得继承土地。16 世纪时，这一章被错误地引来作为妇女不能继承王位这一现行法律推定的权威依据。

[36] 提柏里斯，罗马皇帝，生于公元前42 年，公元13—37 年为皇帝。日耳曼尼格（Germanicus）是他的外甥，被他收养，因征战日耳曼，威望极高。提柏里斯对其有所忌惮，指使别人将其毒死。德鲁苏斯（Drusus）是提柏里斯的亲生儿子，因夭折未能继承王位。

[37] 奥伦治公（1650—1702 年），即詹姆斯二世女婿、其女儿玛丽之丈夫荷兰执政奥兰治亲王威廉。

[38] 苏拉（公元前138—前78），古罗马政治家，军事家，独裁官。苏拉长期在军队中担任统帅，公元前88 年他当选执政官，并被元老院选为东征统帅。此时另一位将军，之前的执政官马略透过政治运作，竟废除他东征军的统帅权。公元前88 年，他逃到意大利南部并率领效忠他的东征军，破天荒地也出乎马略意料地，开进了罗马城，赶走了马略和他的党羽，夺回他的东征军统帅权。这次事件，成为罗马人用武力夺取罗马的第一个先例。但是在苏拉远征之时，马略又重整旗鼓，夺得政权，并宣布放逐苏拉。苏拉仍然继续东征，在他取得完全胜利之后，班师回罗马，对付他的政敌。公元前82 年他逼迫元老院同意他成为终身独裁官。权力稳固后，他就展开恐怖统治，捕杀所有马略（此时已过世）

和背叛他的前执政官秦纳（Cinna）的余党，贵族中被杀的有1500人。他大幅限制了保民官的权力，又压抑人民大会的参政权力。公元前79年他宣布辞职并隐退。·苏拉在自己的墓志铭上写到“我的朋友并没有带给我多大的帮助，我的敌人也并没有带来多大的伤害，但是我都加倍奉还了他们。”

[39] 马略（前157年—前86年），古罗马著名的军事统帅和政治家。他在罗马战败于日尔曼人的危难之时当选执政官，进行军事改革。前86年，马略第七次当选为执政官后不久因病去世。从马略开始，罗马进入了第三个发展阶段：即军人共和时期。这时雇佣军的领袖们都想统治罗马，而马略作为平民领袖，一些贵族们对其执政也多有不满，于是争权夺利的战争开始了。与马略作对的，是贵族苏拉，其在北非时曾为马略的部下。这时的斗争环境异常恐怖及残忍，他们对于政敌动不动就大肆屠杀，被他们放逐或杀戮的人数以千计，而失败者的地产则被拍卖。

[40] 胡·加裴，法国王族名，由987年起，胡·加裴就被法兰克人选为国王，他们王族统治法国900年左右。休谟这里指的是路易十五。

[41] 国际法，遵守国际法的道德义务，不及在个体方面那样强劲。

[42] 许诺，确立正义的那个社会习惯不是一个许诺；在“自然状态”中没有许诺。

[43] chastity and modesty：贞操和淑德，它们的束缚力被通则所扩充的，对男子的贞操有较小的束缚力，因为利害较小。

PART III OF THE OTHER VIRTUES AND VICES

SECT. I

Of the origin of the natural virtues and vices

We come now to the examination of such virtues and vices as are entirely natural, and have no dependance on the artifice and contrivance of men. The examination of these will conclude this system of morals. The chief spring or actuating principle of the human mind is pleasure or pain; and when these sensations are remov'd, both from our thought and feeling^[1], we are, in a great measure, incapable of passion or action, of desire or volition. The most immediate effects of pleasure and pain are the propense and averse motions of the mind; which are diversified into volition, into desire and aversion, grief and joy, hope and fear, according as the pleasure or pain changes its situation, and becomes probable or improbable, certain or uncertain, or is consider'd as out of our power for the present moment. But when along with this, the objects, that cause pleasure or pain, acquire a relation to ourselves or others; they still continue to excite desire and aversion, grief and joy: But cause, at the same time, the indirect passions of pride or humility, love or hatred, which in this case have a double relation of impressions and ideas to the pain or pleasure.

We have already observ'd, that moral distinctions depend entirely on certain peculiar sentiments of pain and pleasure, and that whatever mental quality in ourselves or others gives us a satisfaction, by the survey or reflection, is of course virtuous; as every thing of this nature, that gives uneasiness, is vicious. Now since every quality in ourselves or others, which gives pleasure, always causes pride or love; as every one, that produces uneasiness, excites humility or hatred: It follows, that these two particulars are to be consider'd as equivalent, with regard to our mental qualities, virtue and the power of producing love or pride, vice and the power of producing humility or hatred. In every case, therefore, we must judge of the one by the other; and may pronounce any quality of the mind virtuous, which causes love or pride; and any one vicious, which causes hatred or humility.

If any action be either virtuous or vicious, 'tis only as a sign of some quality or character. It must depend upon durable principles of the mind, which extend over the whole conduct, and enter into the personal character. Actions themselves, not proceeding from any constant principle, have no influence on love or hatred, pride or humility; and consequently are never consider'd in morality.

This reflection is self-evident, and deserves to be attended to, as being of the utmost importance in the present subject. We are never to consider any single action in our enquiries concerning the origin of morals; but only the quality or character from which the action proceeded. These alone are durable enough to affect our sentiments concerning the person. Actions are, indeed, better indications of a character than words, or even wishes and sentiments; but 'tis only so far as they are such indications, that they are attended with love or hatred, praise or blame.

To discover the true origin of morals, and of that love or hatred, which arises from mental qualities, we must take the matter pretty deep, and compare some principles, which have been already examin'd and explain'd. We may begin with considering a-new the nature and force of sympathy. The minds of all men are similar in their feelings and operations; nor can any one be actuated by any affection, of which all others are not, in some degree, susceptible. As in strings equally wound up, the motion of one communicates itself to the rest; so all the affections readily pass from one person to another, and beget correspondent movements in every human creature. When I see the effects of passion in the voice and gesture of any person, my mind immediately passes from these effects to their causes, and forms such a lively idea of the passion, as is presently converted into the passion itself. In like manner, when I perceive the causes of any emotion, my mind is convey'd to the effects, and is actuated with a like emotion. Were I present at any of the more terrible operations of surgery, 'tis certain, that even before it begun, the preparation of the instruments, the laying of the bandages in order, the heating of the irons, with all the signs of anxiety and concern in the patient and assistants, wou'd have a great effect upon my mind, and excite the strongest sentiments of pity and terror. No passion of another discovers itself immediately to the mind. We are only sensible of its causes or effects. From these we infer the passion: And consequently these give rise to our sympathy.

Our sense of beauty depends very much on this principle; and where any object has atendency to produce pleasure in its possessor, it is always regarded as beautiful; as every object, that has a tendency to produce pain, is disagreeable and deform'd. Thus the conveniency of a house, the fertility of a field, the strength of a horse, the capacity, security, and swift-sailing of a vessel, form the principal beauty of these several objects. Here the object, which is denominated beautiful, pleases only by its tendency to produce a certain effect.

That effect is the pleasure or advantage of some other person. Now the pleasure of a stranger, for whom we have no friendship, pleases us only by sympathy. To this principle, therefore, is owing the beauty, which we find in every thing that is useful. How considerable a part this is of beauty wrrn easily appear upon reflection. Wherever an object has a tendency to produce pleasure in the possessor, or in other words, is the proper cause of pleasure, it is sure to please the spectator, by a delicate sympathy with the possessor. Most of the works of art are esteem'd beautiful, in proportion to their fitness for the use of man, and even many of the productions of nature derive their beauty from that source. Handsome and beautiful, on most occasions, is nor an absolute but a relative quality, and pleases us by nothing but its tendency to produce an end that is agreeable. The same principle produces, in many instances, our sentiments of morals, as well as those of beauty. No virtue is more esteem'd than justice, and no vice more detested than injustice; nor are there any qualities, which go farther to the fixing the character, either as amiable or odious. Now justice is a moral virtue, merely because it has that tendency to the good of mankind; and, indeed, is nothing but an artificial invention to that purpose. The same may be said of allegiance, of the laws of nations, of modesty, and of good-manners. All these are mere human contrivances for the interest of society. And since there is a very strong sentiment of morals, which in all nations, and all ages, has attended them, we must allow, that the reflecting on the tendency of characters and mental qualities, is sufficient to give us the sentiments of approbation and blame. Now as the means to an end can only be agreeable, where the end is agreeable; and as the good of society, where our own interest is not concern'd, or that of our friends, pleases only by sympathy: It follows, that sympathy is the source of the esteem, which we pay to all the artificial virtues.

Thus it appears, that sympathy is a very powerful principle in human nature, that it has a great influence on our taste of beauty, and that it produces our sentiment of morals in all the artificial virtues. From thence we may presume, that it also gives rise to many of the other virtues; and that qualities acquire our approbation, because of their tendency to the good of mankind. This presumption must become a certainty, when we find that most of those qualities, which we naturally approve of, have actually that tendency, and render a man a proper member of society: While the qualities, which we naturally disapprove of, have a contrary tendency, and render any intercourse with the person dangerous or disagreeable. For having found, that such tendencies have force enough to produce the strongest sentiment of morals, we can never reasonably, in these cases, look for any other cause of approbation or blame; it being an inviolable maxim in philosophy, that where any particular cause is sufficient for an effect, we ought to rest satisfied with it, and ought not to multiply causes without necessity. We have happily attain'd experiments in the artificial virtues, where the tendency of qualities to the good of society, is the sole cause of our approbation, without any suspicion of the concurrence of another principle. From thence we learn the force of that principle. And where that principle may take place, and the quality approv'd of is really beneficial to society, a true philosopher will never require any other principle to account for the strongest approbation and esteem.

That many of the natural virtues have this tendency to the good of society, no one can doubt of. Meekness, beneficence, charity, generosity, clemency, moderation, equity bear the greatest figure among the moral qualities, and are commonly denominated the social virtues, to mark their tendency to the good of society.

This goes so far, that some philosophers have represented all moral distinctions as the effect of artifice and education, when skilful politicians endeavour'd to restrain the turbulent passions of men, and make them operate to the public good, by the notions of honour and shame. This system, however, is nor consistent with experience.

For, first, there are other virtues and vices beside those which have this tendency to the public advantage and loss. Secondly, had not men a natural sentiment of approbation and blame, it cou'd never be excited by politicians; nor wou'd the words laudable and

praiseworthy, blameable and odious be any more intelligible, than if they were a language perfectly known to us, as we have already observ'd. But tho' this system be erroneous, it may teach us, that moral distinctions arise, in a great measure, from the tendency of qualities and characters to the interests of society, and that 'tis our concern for that interest, which makes us approve or disapprove of them. Now we have no such extensive concern for society but from sympathy; and consequently 'tis that principle, which takes us so far out of ourselves, as to give us the same pleasure or uneasiness in the characters of others, as if they had a tendency to our own advantage or loss.

The only difference betwixt the natural virtues and justice lies in this, that the good, which results from the former, arises from every single act, and is the object of some natural passion: Whereas a single act of justice, consider'd in itself, may often be contrary to the public good; and 'tis only the concurrence of mankind, in a general scheme or system of action, which is advantageous. When I relieve persons in distress, my natural humanity is my motive; and so far as my succour extends, so far have I promoted the happiness of my fellow-creatures. But if we examine all the questions, that come before any tribunal of justice, we shall find, that, considering each case apart, it wou'd as often be an instance of humanity to decide contrary to the laws of justice as conformable them. Judges take from a poor man to give to a rich; they bestow on the dissolute the labour of the industrious; and put into the hands of the vicious the means of harming both themselves and others. The whole scheme, however, of law and justice is advantageous to the society; and 'twas with a view to this advantage, that men, by their voluntary conventions, establish'd it. After it is once establish'd by these conventions, it is naturally attended with a strong sentiment of morals; which can proceed from nothing but our sympathy with the interests of society. We need no other explication of that esteem, which attends such of the natural virtues, as have a tendency to the public good. I must farther add, that there are several circumstances, which render this hypothesis much more probable with regard to the natural than the artificial [2] virtues. 'Tis certain that the imagination is more affected by what is particular, than by what is general; and that the sentiments are always mov'd with difficulty, where their objects are, in any degree, loose and undetermin'd: Now every particular act of justice is not beneficial to society, but the whole scheme or system: And it may not, perhaps, be

any individual person. for whom we are concern'd, who receives benefit from justice, but the whole society alike. On the contrary, every particular act of generosity, or relief of the industrious and indigent, is beneficial; and is beneficial to a particular person, who is not undeserving of it. 'Tis more natural, therefore, to think, that the tendencies of the latter virtue will affect our sentiments, and command our approbation, than those of the former; and therefore, since we find, that the approbation of the former arises from their tendencies, we may ascribe, with better reason, the same cause to the approbation of the latter. In any number of similar effects, if a cause can be discover'd for one, we ought to extend that cause to all the other effects, which can be accounted for by it: But much more, if these other effects be attended with peculiar circumstances, which facilitate the operation of that cause.

Before I proceed farther, I must observe two remarkable circumstances in this affair, which may seem objections to the present system. The first may be thus explain'd. When any quality, or character, has a tendency to the good of mankind, we are pleas'd with it, and approve of it; because it presents the lively idea of pleasure; which idea affects us by sympathy, and is itself a kind of pleasure. But as this sympathy is very variable, it may be thought, that our sentiments of morals must admit of all the same variations.

We sympathize more with persons contiguous to us, than with persons remote from us: With our acquaintance, than with strangers: With our countrymen, than with foreigners. But notwithstanding this variation of our sympathy, we give the same approbation to the same moral qualities in China as in England. They appear equally virtuous, and recommend themselves equally to the esteem of a judicious spectator. The sympathy varies without a variation in our esteem. Our esteem, therefore, proceeds not from sympathy.

To this I answer: The approbation of moral qualities most certainly is not deriv'd from reason, or any comparison of ideas; but proceeds entirely from a moral taste, and from certain sentiments of pleasure or disgust, which arise upon the contemplation and view of particular qualities or characters. Now 'tis evident, that those sentiments, whence-ever they are deriv'd, must vary according to the distance or contiguity of the objects; nor can I feel the same lively

pleasure from the virtues of a person, who liv'd in Greece two thousand years ago, that I feel from the virtues of a familiar friend and acquaintance. Yet I do not say, that I esteem the one more than the other: And therefore, if the variation of the sentiment, without a variation of the esteem, be an objection, it must have equal force against every other system, as against that of sympathy. But to consider the matter a-right, it has no force at all; and 'tis the easiest matter in the world to account for it. Our situation, with regard both to persons and things, is in continual fluctuation; and a man, that lies at a distance from us, may, in a little time, become a familiar acquaintance. Besides, every particular man has a peculiar position with regard to others; and 'tis impossible we cou'd ever converse together on any reasonable terms, were each of us to consider characters and persons, only as they appear from his peculiar point of view. In order, therefore, to prevent those continual contradictions, and arrive at a more stable judgment of things, we fix on some steady and general points of view; and always, in our thoughts, place ourselves in them, whatever may be our present situation. In like manner, external beauty is determin'd merely by pleasure; and 'tis evident, a beautiful countenance cannot give so much pleasure, when seen at the distance of twenty paces, as when it is brought nearer us. We say not, however, that it appears to us less beautiful: Because we know what effect it will have in such a position, and by that reflection we correct its momentary appearance.

In general, all sentiments of blame or praise are variable, according to our situation of nearness or remoteness, with regard to the person blam'd or prais'd, and according to the present disposition of our mind. But these variations we regard not in our general decision, but still apply the terms expressive of our liking or dislike, in the same manner, as if we remain'd in one point of view.

Experience soon teaches us this method of correcting our sentiments, or at least, of correcting our language, where the sentiments are more stubborn and inalterable. Our servant, if diligent and faithful, may excite stronger sentiments of love and kindness than Marcus Brutus[3], as represented in history; but we say not upon that account, that the former character is more laudable than the latter. We know, that were we to approach equally near to that renown'd patriot, he wou'd command a much higher degree of affection and admiration. Such corrections are common with regard to all the

senses; and indeed 'twere impossible we cou'd ever make use of language, or communicate our sentiments to one another, did we not correct the momentary appearances of things, and overlook our present situation.

'Tis therefore from the influence of characters and qualities, upon those who have an intercourse with any person, that we blame or praise him. We consider not whether the persons, affected by the qualities, be our acquaintance or strangers, countrymen or foreigners.

Nay, we over-look our own interest in those general judgments; and blame not a man for opposing us in any of our pretensions, when his own interest is particularly concern'd. We make allowance for a certain degree of selfishness in men; because we know it to be inseparable from human nature, and inherent in our frame and constitution. By this reflection we correct those sentiments of blame, which so naturally arise upon any opposition.

But however the general principle of our blame or praise may be corrected by those other principles, 'tis certain, they are not altogether efficacious, nor do our passions often correspond entirely to the present theory. 'Tis seldom men heartily love what lies at a distance from them, and what no way redounds to their particular benefit; as 'tis no less rare to meet with persons, who can pardon another any opposition he makes to their interest, however justifiable that opposition may be by the general rules of morality.

Here we are contented with saying, that reason requires such an Impartial conduct, but that 'tis seldom we can bring ourselves to it, and that our passions do not readily follow the determination of our judgment. This language will be easily understood, if we consider what we formerly said concerning that reason, which is able to oppose our passion; and which we have found to be nothing but a general calm determination of the passions, founded on some distant view or reflection. When we form our judgments of persons, merely from the tendency of their characters to our own benefit, or to that of our friends, we find so many contradictions to our sentiments in society and conversation, and such an uncertainty from the incessant changes of our situation, that we seek some other standard of merit and demerit, which may not admit of so great variation. Being thus loosen'd from our first station, we cannot afterwards fix ourselves so commodiously by any means as by a sympathy with those, who have

any commerce with the person we consider. This is far from being as lively as when our own interest is concern'd, or that of our particular friends; nor has it such an influence on our love and hatred: But being equally conformable to our calm and general principles, 'tis said to have an equal authority over our reason, and to command our judgment and opinion. We blame equally a bad action, which we read of in history, with one perform'd in our neighbourhood t'other day: The meaning of which is, that we know from reflection, that the former action wou'd excite as strong sentiments of disapprobation as the latter, were it plac'd in the same position.

I now proceed to the second remarkable circumstance, which I propos'd to take notice of. Where a person is possess'd of a character, that in its natural tendency is beneficial to society, we esteem him virtuous, and are delighted with the view of his character, even tho' particular accidents prevent its operation, and incapacitate him from being serviceable to his friends and country. Virtue in rags is still virtue; and the love, which it procures, attends a man into a dungeon or desert, where the virtue can no longer be exerted in action, and is lost to all the world. Now this may be esteem'd an objection to the present system. Sympathy interests us in the good of mankind; and if sympathy were the source of our esteem for virtue, that sentiment of approbation cou'd only take place, where the virtue actually attain'd its end, and was beneficial to mankind. Where it fails of its end, 'tis only an imperfect means; and therefore can never acquire any merit from that end. The goodness of an end can bestow a merit on such means alone as are compleat, and actually produce the end.

To this we may reply, that where any object, in all its parts, is fitted to attain any agreeable end, it naturally gives us pleasure, and is esteem'd beautiful, even tho' some external circumstances be wanting to render it altogether effectual. 'Tis sufficient if every thing be compleat in the object itself. A house, that is contriv'd with great judgment for all the commodities of life, pleases us upon that account; tho' perhaps we are sensible [\[4\]](#), that no one will ever dwell in it. A fertile soil, and a happy climate, delight us by a reflection on the happiness which they wou'd afford the inhabitants, tho' at present the country be desert and uninhabited. A man, whose limbs and shape promise strength and activity, is esteem'd handsome, tho' condemn'd to perpetual imprisonment. The imagination has a set of passions

belonging to it, upon which our sentiments of beauty much depend. These passions are mov'd by degrees of liveliness and strength, which are inferior to belief, and independent of the real existence of their objects. Where a character is, in every respect, fitted to be beneficial to society, the imagination passes easily from the cause to the effect, without considering that there are strn some circumstances wanting to render the cause a compleat one. General rules create a species of probability, which sometimes influences the judgment, and always the imagination.

'Tis true, when the cause is compleat, and a good disposition is attended with good fortune, which renders it really beneficial to society, it gives a stronger pleasure to the spectator, and is attended with a more lively sympathy. We are more affected by it; and yet we do not say that it is more virtuous, or that we esteem it more.

We know, that an alteration of fortune may render the benevolent disposition entirely impotent; and therefore we separate, as much as possible, the fortune from the disposition. The case is the same, as when we correct the different sentiments of virtue, which proceed from its different distances from ourselves. The passions do not always follow our corrections; but these corrections serve sufficiently to regulate our abstract notions, and are alone regarded, when we pronounce in general concerning the degrees of vice and virtue.

'Tis observ'd by critics, that all words or sentences, which are difficult to the pronunciation, are disagreeable to the ear. There is no difference, whether a man hear them pronounc'd, or read them silently to himself. When I run over a book with my eye, I Imagine I hear it all; and also, by the force of imagination, enter into the uneasiness, which the delivery of it wou'd give the speaker. The uneasiness is not real; but as such a composition of words has a natural tendency to produce it, this is sufficient to affect the mind with a painful sentiment, and render the discourse harsh and disagreeable. Tis a similar case, where any real quality is, by accidental circumstances, render'd impotent, and is depriv'd of its natural influence on society.

Upon these principles we may easily remove any contradiction, which may appear to be betwixt the extensive sympathy, on which our sentiments of virtue depend, and that limited generosity which I have frequently observ'd to be natural to men, and

which justice and property suppose, according to the precedent reasoning. My sympathy with another may give me the sentiment of pain and disapprobation, when any object is presented, that has a tendency to give him uneasiness; tho' I may not be willing to sacrifice any thing of my own interest, or cross any of my passions, for his satisfaction. A house may displease me by being ill-contriv'd for the convenience of the owner; and yet I may refuse to give a shilling towards the rebuilding of it. Sentiments must touch the heart, to make them controul our passions: But they need not extend beyond the imagination, to make them influence our taste. When a building seems clumsy and tottering to the eye, it is ugly and disagreeable; tho' we be fully assur'd of the solidity of the workmanship. 'Tis a kind of fear, which causes this sentiment of disapprobation; but the passion is not the same with that which we feel, when oblig'd to stand under a wall, that we really think tottering and insecure. The seeming tendencies of objects affect the mind: And the emotions they excite are of a like species with those, which proceed from the real consequences of objects, but their feeling is different. Nay, these emotions are so different in their feeling, that they may often be contrary, without destroying each other; as when the fortifications of a city belonging to an enemy are esteem'd beautiful upon account of their strength, tho' we cou'd wish that they were entirely destroy'd. The imagination adheres to the general views of things, and distinguishes the feelings they produce, from those which arise from our particular and momentary situation.

If we examine the panegyrics that are commonly made of great men, we shall find, that most of the qualities, which are attributed to them, may be divided into two kinds, viz. such as make them perform their part in society; and such as render them serviceable to themselves, and enable them to promote their own interest. Their prudence, temperance, frugality, industry, assiduity, enterprize, dexterity, are celebrated, as well as their generosity and humanity.

If we ever give an indulgence to any quality, that disables a man from making a figure in life, 'tis to that of indolence, which is not suppos'd to deprive one of his parts and capacity, but only suspends their exercise; and that without any inconvenience to the person himself, since 'tis, in some measure, from his own choice. Yet indolence is always allow'd to be a fault, and a very great one, if

extreme: Nor do a man's friends ever acknowledge him to be subject to it, but in order to save his character in more material articles.

He cou'd make a figure, say they, if he pleas'd to give application: His understanding is sound, his conception quick, and his memory tenacious; but he hates business, and is indifferent about his fortune. And this a man sometimes may make even a subject of vanity; tho' with the air of confessing a fault: Because he may think, that his incapacity for business implies much more noble qualities; such as a philosophical spirit, a fine taste, a delicate wit, or a relish for pleasure and society. But take any other case: Suppose a quality, that without being an indication of any other good qualities, incapacitates a man always for business, and is destructive to his interest; such as a blundering understanding, and a wrong judgment of every thing in life; inconstancy and irresolution; or a want of address in the management of men and business: These are all allow'd to be imperfections in a character; and many men wou'd rather acknowledge the greatest crimes, than have it suspected, that they are, in any degree, subject to them.

'Tis very happy, in our philosophical researches, when we find the same phaenomenon diversified by a variety of circumstances; and by discovering what is common among them, can the better assure ourselves of the truth of any hypothesis we may make use of to explain it. Were nothing esteem'd virtue but what were beneficial to society, I am persuaded, that the foregoing explication of the moral sense ought still to be receiv'd, and that upon sufficient evidence: But this evidence must grow upon us, when we find other kinds of virtue, which will not admit of any explication except from that hypothesis. Here is a man, who is not remarkably defective in his social qualities; but what principally recommends him is his dexterity in business, by which he has extricated himself from the greatest difficulties, and conducted the most delicate affairs with a singular address and prudence. I find an esteem for him immediately to arise in me: His company is a satisfaction to me; and before I have any farther acquaintance with him, I wou'd rather do him a service than another, whose character is in every other respect equal, but is deficient in that particular. In this case, the qualities that please me are all consider'd as useful to the person, and as having a tendency to promote his interest and satisfaction. They are only regarded as means to an end, and please me in proportion to their fitness for that end. The end,

therefore, must be agreeable to me. But what makes the end agreeable? The person is a stranger: I am no way interested in him, nor lie under any obligation to him: His happiness concerns not me, farther than the happiness of every human, and indeed of every sensible creature: That is, it affects me only by sympathy.

From that principle, whenever I discover his happiness and good, whether in its causes or effects, I enter so deeply into it, that it gives me a sensible emotion[5]. The appearance of qualities, that have a tendency to promote it, have an agreeable effect upon my imagination, and command my love and esteem.

This theory may serve to explain, why the same qualities, in all cases, produce both pride and love, humility and hatred; and the same man is always virtuous or vicious, accomplish'd or despicable to others, who is so to himself. A person, in whom we discover any passion or habit, which originally is only incommodious to himself, becomes always disagreeable to us, merely on its account; as on the other hand, one whose character is only dangerous and disagreeable to others, can never be satisfied with himself, as long as he is sensible of that disadvantage. Nor is this observable only with regard to characters and manners, but may be remark'd even in the most minute circumstances. A violent cough in another gives us uneasiness; tho' in itself it does not in the least affect us. A man will be mortified, if you tell him he has a stinking breath; tho' 'tis evidently no annoyance to himself. Our fancy easily changes its situation; and either surveying ourselves as we appear to others, or considering others as they feel themselves, we enter, by that means, into sentiments, which no way belong to us, and in which nothing but sympathy is able to interest us. And this sympathy we sometimes carry so far, as even to be displeas'd with a quality commodious to us, merely because it displeases others, and makes us disagreeable in their eyes; tho' perhaps we never can have any interest in rendering ourselves agreeable to them.

There have been many systems of morality advanc'd by philosophers in all ages; but if they are strictly examin'd, they may be reduc'd to two, which alone merit our attention. Moral good and evil are certainly distinguish'd by our sentiments, not by reason: But these sentiments may arise either from the mere species or appearance of characters and passions, or from reflections on their tendency to the happiness of mankind, and of particular persons. My opinion is, that

both these causes are intermix'd in our judgments of morals; after the same manner as they are in our decisions concerning most kinds of external beauty: Tho' I am also of opinion, that reflections on the tendencies of actions have by far the greatest influence, and determine all the great lines of our duty.

There are, however, instances, in cases of less moment, wherein this immediate taste or sentiment produces our approbation. Wit, and a certain easy and disengag'd behaviour, are qualities immediately agreeable to others, and command their love and esteem. Some of these qualities produce satisfaction in others by particular original principles of human nature, which cannot be accounted for: Others may be resolv'd into principles, which are more general. This will best appear upon a particular enquiry.

As some qualities acquire their merit from their being immediately agreeable to others, without any tendency to public interest; so some are denominated virtuous from their being immediately agreeable to the person himself, who possesses them. Each of the passions and operations of the mind has a particular feeling, which must be either agreeable or disagreeable. The first is virtuous, the second vicious. This particular feeling constitutes the very nature of the passion; and therefore needs not be accounted for.

But however directly the distinction of vice and virtue may seem to flow from the immediate pleasure or uneasiness, which particular qualities cause to ourselves or others; 'tis easy to observe, that it has also a considerable dependence on the principle of sympathy so often insisted on. We approve of a person, who is possess'd of qualities immediately agreeable to those, with whom he has any commerce; tho' perhaps we ourselves never reap'd any pleasure from them. We also approve of one, who is possess'd of qualities, that are immediately agreeable to himself; tho' they be of no service to any mortal. To account for this we must have recourse to the foregoing principles.

Thus, to take a general review of the present hypothesis: Every quality of the mind is denominated virtuous, which gives pleasure by the mere survey; as every quality, which produces pain, is call'd vicious. This pleasure and this pain may arise from four different sources. For we reap a pleasure from the view of a character, which is naturally fitted to be useful to others, or to the person himself, or

which is agreeable to others, or to the person himself. One may, perhaps, be surpriz'd. that amidst all these interests and pleasures, we shou'd forget our own, which touch us so nearly on every other occasion. But we shall easily satisfy ourselves on this head, when we consider, that every particular person's pleasure and interest being different, 'tis impossible men cou'd ever agree in their sentiments and judgments, unless they chose some common point of view, from which they might survey their object, and which might cause it to appear the same to all of them. Now in judging of characters, the only interest or pleasure, which appears the same to every spectator, is that of the person himself, whose character is examin'd; or that of persons, who have a connexion with him. And tho' such interests and pleasures touch us more faintly than our own, yet being more constant and universal, they counter-balance the latter even in practice, and are alone admitted in speculation as the standard of virtue and morality. They alone produce that particular feeling or sentiment, on which moral distinctions depend.

As to the good or ill desert of virtue or vice, 'tis an evident consequence of the sentiments of pleasure or uneasiness. These sentiments produce love or hatred; and love or hatred, by the original constitution of human passion, is attended with benevolence or anger; that is, with a desire of making happy the person we love, and miserable the person we hate. We have treated of this more fully on another occasion.

SECT. II

Of greatness of mind

It may now be proper to illustrate this general system of morals, by applying it to particular instances of virtue and vice, and shewing how their merit or demerit arises from the four sources here explain'd. We shall begin with examining the passions of pride^[6] and humility, and shall consider the vice or virtue that lies in their excesses or just proportion. An excessive pride or overweening conceit of ourselves is always esteem'd vicious, and is universally hated; as modesty, or a just sense of our weakness, is esteem'd virtuous, and procures the good-will of every-one. Of the four sources of moral distinctions, this is to be ascrib'd to the third; viz, the immediate agreeableness and disagreeableness of a quality to others, without any reflections on the tendency of that quality. In order to prove this, we

must have recourse to two principles, which are very conspicuous in human nature. The first of these is the sympathy, and communication of sentiments and passions abovemention'd. So close and intimate is the correspondence of human souls, that no sooner any person approaches me, than he diffuses on me all his opinions, and draws along my judgment in a greater or lesser degree. And tho', on many occasions, my sympathy with him goes not so far as entirely to change my sentiments, and way of thinking; yet it seldom is so weak as not to disturb the easy course of my thought, and give an authority to that opinion, which is recommended to me by his assent and approbation. Nor is it any way material upon what subject he and I employ our thoughts. Whether we judge of an indifferent person, or of my own character, my sympathy gives equal force to his decision: And even his sentiments of his own merit make me consider him in the same light, in which he regards himself.

This principle of sympathy is of so powerful and insinuating a nature, that it enters into most of our sentiments and passions, and often takes place under the appearance of its contrary. For 'tis remarkable, that when a person opposes me in any thing, which I am strongly bent upon, and rouses up my passion by contradiction, I have always a degree of sympathy with him, nor does my commotion proceed from any other origin. We may here observe an evident conflict or rencounter of opposite principles and passions. On the one side there is that passion or sentiment, which is natural to me; and 'tis observable, that the stronger this passion is, the greater is the commotion. There must also be some passion or sentiment on the other side; and this passion can proceed from nothing but sympathy. The sentiments of others can never affect us, but by becoming, in some measure, our own; in which case they operate upon us, by opposing and encreasing our passions, in the very same manner, as if they had been originally deriv'd from our own temper and disposition. While they remain conceal'd in the minds of others, they can never have an influence upon us: And even when they are known, if they went no farther than the imagination, or conception; that faculty is so accustom'd to objects of every different kind, that a mere idea, tho' contrary to our sentiments and inclinations, wou'd never alone be able to affect us.

The second principle I shall take notice of is that of comparison, or the variation of our judgments concerning objects, according to the

proportion they bear to those with which we compare them. We judge more, of objects by comparison, than by their intrinsic worth and value; and regard every thing as mean, when set in opposition to what is superior of the same kind. But no comparison is more obvious than that with ourselves; and hence it is that on all occasions it takes place, and mixes with most of our passions. This kind of comparison is directly contrary to sympathy in its operation, as we have observ'd in treating of compassion and malice. In all kinds of comparison an object makes us always receive from another, to which it is compar'd, a sensation contrary to what arises from itself in its direct and immediate survey. The direct survey of another's pleasure naturally gives us pleasure; and therefore produces pain, when compar'd with our own. His pain, consider'd in itself, is painful; but augments the idea of our own happiness, and gives us pleasure.

Since then those principles of sympathy, and a comparison with ourselves, are directly contrary, it may be worth while to consider, what general rules can be form'd, beside the particular temper of the person, for the prevalence of the one or the other. Suppose I am now in safety at land, and wou'd willingly reap some pleasure from this consideration: I must think on the miserable condition of those who are at sea in a storm, and must endeavour to render this idea as strong and lively as possible, in order to make me more sensible of my own happiness. But whatever pains I may take, the comparison will never have an equal efficacy, as if tost by a tempest, and in danger every moment of perishing on a rock or sand-bank.

But suppose this idea to become still more lively. Suppose the ship to be driven so near me, that I can perceive distinctly the horror, painted on the countenance of the seamen and passengers, hear their lamentable cries, see the dearest friends give their last adieu, or embrace with a resolution to perish in each others arms: No man has so savage a heart as to reap any pleasure from such a spectacle, or withstand the motions of the tenderest compassion and sympathy. 'Tis evident, therefore, there is a medium in this case; and that if the idea be too feint, it has no influence by comparison; and on the other hand, if it be too strong, it operates on us entirely by sympathy, which is the contrary to comparison. Sympathy being the conversion of an idea into an impression, demands a greater force and vivacity in the idea than is requisite to comparison.

All this is easily applied to the present subject. We sink very much in our own eyes, when in the presence of a great man, or one of a superior genius; and this humility makes a considerable ingredient in that respect, which we pay our superiors, according to our¹⁹ foregoing reasonings on that passion. Sometimes even envy and hatred arise from the comparison; but in the greatest part of men, it rests at respect and esteem. As sympathy has such a powerful influence on the human mind, it causes pride to have, in some measure, the same effect as merit; and by making us enter into those elevated sentiments, which the proud man entertains of himself, presents that comparison, which is so mortifying and disagreeable. Our judgment does not entirely accompany him in the flattering conceit, in which he pleases himself; but still is so shaken as to receive the idea it presents, and to give it an influence above the loose conceptions of the imagination. A man, who, in an idle humour, wou'd form a notion of a person of a merit very much superior to his own, wou'd not be mortified by that fiction: But when a man, whom we are really persuaded to be of inferior merit, is presented to us; if we observe in him any extraordinary degree of pride and self-conceit; the firm persuasion he has of his own merit, takes hold of the imagination, and diminishes us in our own eyes, in the same manner, as if he were really possess'd of all the good qualities which he so liberally attributes to himself. Our idea is here precisely in that medium, which is requisite to make it operate on us by comparison. Were it accompanied with belief, and did the person appear to have the same merit, which he assumes to himself, it wou'd have a contrary effect, and wou'd operate on us by sympathy. The influence of that principle wou'd then be superior to that of comparison, contrary to what happens where the person's merit seems below his pretensions.

The necessary consequence of these principles is, that pride, or an over-weening conceit of ourselves, must be vicious; since it causes uneasiness in all men, and presents them every moment with a disagreeable comparison. 'Tis a trite observation in philosophy, and even in common life and conversation, that 'tis our own pride, which makes us so much displeas'd with the pride of other people; and that vanity becomes insupportable to us merely because we are vain. The gay naturally associate themselves with the gay, and the amorous with the amorous: But the proud never can endure the proud, and rather seek the company of those who are of an opposite disposition.

As we are, all of us, proud in some degree, pride is universally blam'd and condemn'd by all mankind; as having a natural tendency to cause uneasiness in others by means of comparison. And this effect must follow the more naturally, that those, who have an ill-grounded conceit of themselves, are for ever making those comparisons, nor have they any other method of supporting their vanity. A man of sense and merit is pleas'd with himself, independent of all foreign considerations: But a fool must always find some person, that is more foolish, in order to keep himself in good humour with his own parts and understanding.

But tho' an over-weaning conceit of our own merit be vicious and disagreeable, nothing can be more laudable, than to have a value for ourselves, where we really have qualities that are valuable. The utility and advantage of any quality to ourselves is a source of virtue, as well as its agreeableness to others; and 'tis certain, that nothing is more useful to us in the conduct of life, than a due degree of pride, which makes us sensible of our own merit, and gives us a confidence and assurance in all our projects and enterprizes.

Whatever capacity any one may be endow'd with, 'tis entirely useless to him, if he be not acquainted with it, and form not designs suitable to it. 'Tis requisite on all occasions to know our own force; and were it allowable to err on either side, 'twou'd be more advantageous to over-rate our merit, than to form ideas of it, below its just standard. Fortune commonly favours the bold and enterprizing; and nothing inspires us with more boldness than a good opinion of ourselves.

Add to this, that tho' pride, or self-applause, be sometimes disagreeable to others, 'tis always agreeable to ourselves; as on the other hand, modesty, tho' it gives pleasure to every one, who observes it, produces often uneasiness in the person endow'd with it. Now it has been observ'd, that our own sensations determine the vice and virtue of any quality, as well as those sensations, which it may excite in others.

Thus self-satisfaction and vanity may not only be allowable, but requisite in a character. 'Tis, however, certain, that good breeding and decency require that we shou'd avoid all signs and expressions, which tend directly to show that passion. We have, all of us, a wonderful partiality for ourselves, and were we always to give vent to our

sentiments in this particular, we shou'd mutually cause the greatest indignation in each other, not only by the immediate presence of so disagreeable a subject of comparison, but also by the contrariety of our judgments. In like manner, therefore, as we establish the laws of nature, in order to secure property in society, and prevent the opposition of self-interest; we establish the rules of good-breeding, in order to prevent the opposition of men's pride, and render conversation agreeable and inoffensive. Nothing is more disagreeable than a man's over-weening conceit of himself: Every one almost has a strong propensity to this vice: No one can well distinguish in himself betwixt the vice and virtue, or be certain, that his esteem of his own merit is well-founded: For these reasons, all direct expressions of this passion are condemn'd; nor do we make any exception to this rule in favour of men of sense and merit. They are not allow'd to do themselves justice openly, in words, no more than other people; and even if they show a reserve and secret doubt in doing themselves justice in their own thoughts, they will be more applauded. That impertinent, and almost universal propensity of men, to over-value themselves, has given us such a prejudice against self-applause, that we are apt to condemn it, by a general rule, wherever we meet with it; and 'tis with some difficulty we give a privilege to men of sense, even in their most secret thoughts.

At least, it must be own'd, that some disguise in this particular is absolutely requisite; and that if we harbour pride in our breasts, we must carry a fair outside, and have the appearance of modesty and mutual deference in all our conduct and behaviour. We must, on every occasion, be ready to prefer others to ourselves; to treat them with a kind of deference, even tho' they be our equals; to seem always the lowest and least in the company, where we are not very much distinguish'd above them: And if we observe these rules in our conduct, men will have more indulgence for our secret sentiments, when we discover them in an oblique manner.

I believe no one, who has any practice of the world, and can penetrate into the inward sentiments of men, will assert, that the humility, which good-breeding and decency require of us, goes beyond the outside, or that a thorough sincerity in this particular is esteem'd a real part of our duty. On the contrary, we may observe, that a genuine and hearty pride, or self-esteem, if well conceal'd and well founded, is essential to the character of a man of honour, and that

there is no quality of the mind, which is more indispensibly requisite to procure the esteem and approbation of mankind.

There are certain deferences and mutual submissions, which custom requires of the different ranks of men towards each other;and whoever exceeds in this particular, if thro' interest, is accus'd-of meanness; if thro' ignorance, of simplicity. 'Tis necessary,therefore, to know our rank and station in the world, whether it be fix'd by our birth, fortune, employments, talents or reputation. 'Tis necessary to feel the sentiment and passion of pride in conformity to it, and to regulate our actions accordingly. And shou'd it be said,that prudence may suffice to regulate our actions in this particular, without any real pride, I wou'd observe, that here the object of prudence is to conform our actions to the general usage and custom;and, that 'tis impossible those tacit airs of superiority shou'd ever have been establish'd and authoriz'd by custom[7], unless men were generally proud, and unless that passion were generally approv'd,when well-grounded.

If we pass from common life and conversation to history, this reasoning acquires new force, when we observe, that all those great actions and sentiments, which have become the admiration of mankind, are founded on nothing but pride and self-esteem. Go,says Alexander the Great to his soldiers, when they refus'd to follow him to the Indies, go tell your countrymen, that you left Alexander corn pleating the conquest of the world. This passage was always particularly admir'd by the prince of Conde[8], as we learn from St Evremond[9].

'Alexander,' said that prince, 'abandon'd by his soldiers, among barbarians, not yet fully subdu'd, felt in himself such a dignity of right and of empire, that he cou'd not believe it possible any one cou'd refuse to obey him. Whether in Europe or in Asia, among Greeks or Persians, all was indifferent to him: Wherever he found men, he fancied he found subjects.'In general we may observe, that whatever we call heroic virtue,and admire under the character of greatness and elevation of mind, is either nothing but a steady and well-established pride and self-esteem,or partakes largely of that passion. Courage, intrepidity, ambition,love of glory, magnanimity, and all the other shining virtues of that kind, have plainly a strong mixture of self-esteem in them,and derive a great part of their merit from that origin. Accordingly we find, that many religious declaimers decry those

virtues as purely pagan and natural, and represent to us the excellency of the Christian religion, which places humility in the rank of virtues, and corrects the judgment of the world, and even of philosophers, who so generally admire all the efforts of pride and ambition. Whether this virtue of humility has been rightly understood, I shall not pretend to determine. I am content with the concession, that the world naturally esteems a well-regulated pride, which secretly animates our conduct, without breaking out into such indecent expressions of vanity, as many offend the vanity of others.

The merit of pride or self-esteem is deriv'd from two circumstances, viz, its utility and its agreeableness to ourselves; by which it capacitates us for business, and, at the same time, gives us an immediate satisfaction. When it goes beyond its just bounds, it loses the first advantage, and even becomes prejudicial; which is the reason why we condemn an extravagant pride and ambition, however regulated by the decorums of good-breeding and politeness.

But as such a passion is still agreeable, and conveys an elevated and sublime sensation to the person, who is actuated by it, the sympathy with that satisfaction diminishes considerably the blame, which naturally attends its dangerous influence on his conduct and behaviour. Accordingly we may observe, that an excessive courage and magnanimity, especially when it displays itself under the frowns of fortune, contributes in a great measure, to the character of a hero, and will render a person the admiration of posterity; at the same time, that it ruins his affairs, and leads him into dangers and difficulties, with which otherwise he wou'd never have been acquainted. Heroism^[10], or military glory, is much admir'd by the generality of mankind. They consider it as the most sublime kind of merit. Men of cool reflection are not so sanguine in their praises of it. The infinite confusions and disorder, which it has caus'd in the world, diminish much of its merit in their eyes. When they wou'd oppose the popular notions on this head, they always paint out the evils, which this suppos'd virtue has produc'd in human society; the subversion of empires, the devastation of provinces, the sack of cities. As long as these are present to us, we are more inclin'd to hate than admire the ambition of heroes. But when we fix our view on the person himself, who is the author of all this mischief, there is something so dazzling in his character, the mere contemplation of it so elevates the mind, that we cannot refuse it our admiration. The

pain, which we receive from its tendency to the prejudice of society, is over-power'd by a stronger and more immediate sympathy.

Thus our explication of the merit or demerit, which attends the degrees of pride or self-esteem, may serve as a strong argument for the preceding hypothesis, by shewing the effects of those principles above explain'd in all the variations of our judgments concerning that passion. Nor will this reasoning be advantageous to us only by shewing, that the distinction of vice and virtue arises from the four principles of the advantage and of the pleasure of the person himself, and of others: But may also afford us a strong proof of some underparts of that hypothesis.

No one, who duly considers of this matter, will make any scruple of allowing, that any piece of rn-breeding, or any expression of pride and haughtiness, is displeasing to us, merely because it shocks our own pride, and leads us by sympathy into a comparison, which causes the disagreeable passion of humility. Now as an insolence of this kind is blam'd even in a person who has always been civil to ourselves in particular; nay, in one, whose name is only known to us in history; it follows, that our disapprobation proceeds from a sympathy with others, and from the reflection, that such a character is highly displeasing and odious to every one, who converses or has any intercourse with the person possesst of it. We sympathize with those people in their uneasiness; and as their uneasiness proceeds in part from a sympathy with the person who insults them, we may here observe a double rebound of the sympathy; which is a principle very similar to what we have observ'd.

SECT. III

Of goodness and benevolence [11]

Having thus explain'd the origin of that praise and approbation, which attends every thing we call great in human affections; we now proceed to give an account of their goodness, and shew whence its merit is deriv'd.

When experience has once given us a competent know. ledge of human affairs, and has taught us the proportion they bear to human passion, we perceive, that the generosity of men is very limited, and that it seldom extends beyond their friends and family, or, at most,

beyond their native country. Being thus acquainted with the nature of man, we expect not any impossibilities from him; but confine our view to that narrow circle, in which any person moves, in order to form a judgment of his moral character. When the natural tendency of his passions leads him to be serviceable and useful within his sphere, we approve of his character, and love his person, by a sympathy with the sentiments of those, who have a more particular connexion with him. We are quickly oblig'd to forget our own interest in our judgments of this kind, by reason of the perpetual contradictions, we meet with in society and conversation, from persons that are not plac'd in the same situation, and have not the same interest with ourselves. The only point of view, in which our sentiments concur with those of others, is, when we consider the tendency of any passion to the advantage or harm of those, who have any immediate connexion or intercourse with the person possess'd of it. And tho' this advantage or harm be often very remote from ourselves, yet sometimes 'tis very near us, and interests us strongly by sympathy. This concern we readily extend to other cases, that are resembling; and when these are very remote, our sympathy is proportionably weaker, and our praise or blame fainter and more doubtful. The case is here the same as in our judgments concerning external bodies. All objects seem to diminish by their distance: But tho' the appearance of objects to our senses be the original standard, by which we judge of them, yet we do not say, that they actually diminish by the distance; but correcting the appearance by reflection, arrive at a more constant and established judgment concerning them. In like manner, tho' sympathy be much fainter than our concern for ourselves, and a sympathy with persons remote from us much fainter than that with persons near and contiguous; yet we neglect all these differences in our calm judgments concerning the characters of men. Besides, that we ourselves often change our situation in this particular, we every day meet with persons, who are in a different situation from ourselves, and who cou'd never converse with us on any reasonable terms, were we to remain constantly in that situation and point of view, which is peculiar to us. The intercourse of sentiments, therefore, in society and conversation, makes us form some general inalterable standard, by which we may approve or disapprove of characters and manners. And tho' the heart does not always take part with those general notions, or regulate its love and hatred by them, yet are they sufficient for discourse, and serve all our purposes in company, in the pulpit, on the theatre, and in the schools.

From these principles we may easily account for that merit, which is commonly ascrib'd to generosity, humanity, compassion, gratitude, friendship, fidelity, zeal, disinterestedness, liberality, and all those other qualities, which form the character of good and benevolent. A propensity to the tender passions makes a man agreeable and useful in all the parts of life; and gives a just direction to all his other qualities, which otherwise may become prejudicial to society. Courage and ambition, when not regulated by benevolence, are fit only to make a tyrant and public robber. 'Tis the same case with judgment and capacity, and all the qualities of that kind. They are indifferent in themselves to the interests of society, and have a tendency to the good or ill of mankind, according as they are directed by these other passions.

As Love is immediately agreeable to the person, who is actuated by it, and hatred immediately disagreeable; this may also be a considerable reason, why we praise all the passions that partake of the former, and blame all those that have any considerable share of the latter. 'Tis certain we are infinitely touch'd with a tender sentiment, as well as with a great one. The tears naturally start in our eyes at the conception of it; nor can we forbear giving a loose to the same tenderness towards the person who exerts it. All this seems to me a proof, that our approbation has, in those cases, an origin different from the prospect of utility and advantage, either to ourselves or others. To which we may add, that men naturally, without reflection, approve of that character, which is most like their own. The man of a mild disposition and tender affections, in forming a notion of the most perfect virtue, mixes in it more of benevolence and humanity, than the man of courage and enterprize, who naturally looks upon a certain elevation of mind as the most accomplish'd character. This must evidently proceed from an immediate sympathy, which men have with characters similar to their own. They enter with more warmth into such sentiments, and feel more sensibly the pleasure, which arises from them.

'Tis remarkable, that nothing touches a man of humanity more than any instance of extraordinary delicacy in love or friendship, where a person is attentive to the smallest concerns of his friend, and is willing to sacrifice to them the most considerable interest of his own. Such delicacies have little influence on society; because they make us regard the greatest trifles: But they are the more

engaging, the more minute the concern is, and are a proof of the highest merit in any one, who is capable of them. The passions are so contagious, that they pass with the greatest facility from one person to another, and produce correspondent movements in all human breasts. Where friendship appears in very signal instances, my heart catches the same passion, and is warm'd by those warm sentiments, that display themselves before me. Such agreeable movements must give me an affection to every one that excites them. This is the case with every thing that is agreeable in any person. The transition from pleasure to love is easy: But the transition must here be still more easy; since the agreeable sentiment, which is excited by sympathy, is love itself; and there is nothing requir'd but to change the object.

Hence the peculiar merit of benevolence in all its shapes and appearances. Hence even its weaknesses are virtuous and amiable; and a person, whose grief upon the loss of a friend were excessive, wou'd be esteem'd upon that account. His tenderness bestows a merit, as it does a pleasure, on his melancholy.

We are not, however, to imagine, that all the angry passions are vicious, tho' they are disagreeable. There is a certain indulgence due to human nature in this respect. Anger^[12] and hatred are passions inherent in Our very frame and constitutions. The want of them, on some occasions, may even be a proof of weakness and imbecillity. And where they appear only in a low degree, we not only excuse them because they are natural; but even bestow our applauses on them, because they are inferior to what appears in the greatest part of mankind.

Where these angry passions rise up to cruelty, they form the most detested of all vices. All the pity and concern which we have for the miserable sufferers by this vice, turns against the person guilty of it, and produces a stronger hatred than we are sensible of on any other occasion. Even when the vice of inhumanity rises not to this extreme degree, our sentiments concerning it are very much influenc'd by reflections on the harm that results from it. And we may observe in general, that if we can find any quality in a person, which renders him incommodious to those, who live and converse with him, we always allow it to be a fault or blemish, without any farther examination. On the other hand, when we enumerate the good qualities of any person. we always mention those parts of his character, which render him a

safe companion, an easy friend, a gentle master, an agreeable husband, or an indulgent father. We consider him with all his relations in society; and love or hate him, according as he affects those, who have any immediate intercourse with him. And 'tis a most certain rule, that if there be no relation of life, in which I cou'd not wish to stand to a particular person, his character must so far be allow'd to be perfect. If he be as little wanting to himself as to others, his character is entirely perfect. This is the ultimate test of merit and virtue.

SECT. IV

Of natural abilities

No distinction is more usual in all systems of ethics, than that betwixt natural abilities and moral virtues; where the former are plac'd on the same footing with bodily endowments, and are suppos'd to have no merit or moral worth annex'd to them.

Whoever considers the matter accurately, will find, that a dispute upon this head wou'd be merely a dispute of words, and that tho' these qualities are not altogether of the same kind, yet they agree in the most material circumstances. They are both of them equally mental qualities: And both of them equally produce pleasure; and have of course an equal tendency to procure the love and esteem of mankind. There are few, who are not as jealous of their character, with regard to sense and knowledge, as to honour and courage; and much more than with regard to temperance and sobriety. Men are even afraid of passing for goodnatur'd; lest that shou'd be taken for want of understanding: And often boast of more debauches than they have been really engag'd in, to give themselves airs of fire and spirit. In short, the figure a man makes in the world, the reception he meets with in company, the esteem paid him by his acquaintance; all these advantages depend almost as much upon his good sense and judgment, as upon any other part of his character. Let a man have the best intentions in the world, and be the farthest from all injustice and violence, he will never be able to make himself be much regarded, without a moderate share, at least, of parts and understanding. Since then natural abilities, tho', perhaps, inferior, yet are on the same footing, both as to their causes and effects, with those qualities which we call moral virtues, why shou'd we make any distinction betwixt them?

Tho' we refuse to natural abilities the title of virtues, we must allow, that they procure the love and esteem of mankind; that they give a new lustre to the other virtues; and that a man possess'd of them is much more intitled to our good-will and services, than one entirely void of them. It may, indeed, be pretended. that the sentiment of approbation, which those qualities produce, besides its being inferior, is also somewhat different from that, which attends the other virtues. But this, in my opinion, is not a sufficient reason for excluding them from the catalogue of virtues. Each of the virtues, even benevolence, justice, gratitude. integrity, excites a different sentiment or feeling in the spectator. The characters of Caesar and Cato, as drawn by Sallust[13], are both of them virtuous, in the strictest sense of the word; but in a different way: Nor are the sentiments entirely the same, which arise from them. The one produces love; the other esteem: The one is amiable; the other awful: We could wish to meet with the one character in a friend; the other character we wou'd be ambitious of in ourselves. In like manner, the approbation. which attends natural abilities, may be somewhat different to the feeling from that, which arises from the other virtues, without making them entirely of a different species. And indeed we may observe, that the natural abilities, no more than the other virtues, produce not, all of them, the same kind of approbation. Good sense and genius beget esteem: Wit and humour excite love. Those, who represent the distinction betwixt natural abilities and moral virtues as very material, may say, that the former are entirely involuntary, and have therefore no merit attending them, as having no dependance on liberty and free-will. But to this I answer, first, that many of those qualities, which all moralists, especially the antients, comprehend under the title of moral virtues, are equally involuntary and necessary, with the qualities of the judgment and imagination. Of this nature are constancy, fortitude, magnanimity; and, in short, all the qualities which form the great man. I might say the same, in some degree, of the others; it being almost impossible for the mind to change its character in any considerable article, or cure itself of a passionate or splenetic temper, when they are natural to it. The greater degree there is of these blameable qualities, the more vicious they become, and yet they are the less voluntary.

Secondly, I wou'd have anyone give me a reason, why virtue and vice may not be involuntary, as well as beauty and deformity. These moral distinctions arise from the natural distinctions of pain and

pleasure;and when we receive those feelings from the general consideration of any quality or character, we denominate it vicious or virtuous. Now I believe no one will assert, that a quality can never produce pleasure or pain to the person who considers it, unless it be perfectly voluntary in the person who possesses it. Thirdly, As to free-will, we have shewn that it has no place with regard to the actions, no more than the qualities of men. It is not a just consequence, that what is voluntary is free. Our actions are more voluntary than our judgments; but we have not more liberty in the one than in the other.

But tho' this distinction betwixt voluntary and involuntary be not sufficient to justify the distinction betwixt natural abilities and moral virtues, yet the former distinction will afford us a plausible reason, why moralists have invented the latter. Men have observ'd, that tho' natural abilities and moral qualities be in the main on the same footing, there is, however, this difference betwixt them, that the former are almost invariable by any art or industry; while the latter, or at least, the actions, that proceed from them, may be chang'd by the motives of rewards and punishments, praise and blame. Hence legislators, and divines, and moralists, have principally applied themselves to the regulating these voluntary actions, and have endeavour'd to produce additional motives, for being virtuous in that particular. They knew, that to punish a man for folly, or exhort him to be prudent and sagacious, wou'd have but little effect; tho' the same punishments and exhortations, with regard to justice and injustice, might have a considerable influence. But as men, in common life and conversation, do not carry those ends in view, but naturally praise or blame whatever pleases or displeases them, they do not seem much to regard this distinction, but consider prudence under the character of virtue as well as benevolence, and penetration as well as justice. Nay, we find, that all moralists, whose judgment is not perverted by a strict adherence to a system, enter into the same way of thinking; and that the antient moralists in particular made no scruple of placing prudence at the head of the cardinal virtues. There is a sentiment of esteem and approbation, which may be excited, in some degree, by any faculty of the mind, in its perfect state and condition; and to account for this sentiment is the business of Philosophers. It belongs to Grammarians to examine what qualities are entitled to the denomination of virtue; nor will they find, upon trial, that this is so easy a task, as at first sight they may be apt to imagine.

The principal reason why natural abilities are esteem'd, is because of their tendency to be useful to the person, who is possess'd of them. 'Tis impossible to execute any design with success, where it is not conducted with prudence and discretion; nor will the goodness of our intentions alone suffice to procure us a happy issue to our enterprizes. Men are superior to beasts principally by the superiority of their reason; and they are the degrees of the same faculty, which set such an infinite difference betwixt one man and another. All the advantages of art are owing to human reason; and where fortune is not very capricious, the most considerable part of these advantages must fall to the share of the prudent and sagacious.

When it is ask'd, whether a quick or a slow apprehension be most valuable? whether one, that at first view penetrates into a subject, but can perform nothing upon study; or a contrary character, which must work out every thing by dint of application? whether a clear head, or a copious invention? whether a profound genius, or a sure judgment? in short, what character, or peculiar understanding, is more excellent than another? Tis evident we can answer none of these questions, without considering which of those qualities capacitates a man best for the world, and carries him farthest in any of his undertakings.

There are many other qualities of the mind, whose merit is deriv'd from the same origin, industry, perseverance, patience, activity, vigilance, application, constancy, with other virtues of that kind, which 'twill be easy to recollect, are esteem'd valuable upon no other account, than their advantage in the conduct of life. Tis the same case with temperance, frugality, economy, resolution: As on the other hand, prodigality, luxury, irresolution, uncertainty, are vicious, merely because they draw ruin upon us, and incapacitate us for business and action.

As wisdom and good-sense are valued, because they are useful to the person possess'd of them; so wit and eloquence are valued, because they are immediately agreeable to others. On the other hand, good humour is lov'd and esteem'd, because it is immediately agreeable to the person himself. 'Tis evident, that the conversation of a man of wit is very satisfactory; as a chearful good-humour'd companion diffuses a joy^[14] over the whole company, from a sympathy with his gaiety. These qualities, therefore, being agreeable, they naturally beget love and esteem, and answer to all the characters

of virtue.

'Tis difficult to tell, on many occasions, what it is that renders one man's conversation so agreeable and entertaining, and another's so insipid and distasteful. As conversation is a transcript of the mind as well as books, the same qualities, which render the one valuable, must give us an esteem for the other. This we shall consider afterwards. In the mean time it may be affirm'd in general, that all the merit a man may derive from his conversation (which, no doubt, may be very considerable) arises from nothing but the pleasure it conveys to those who are present.

In this view, cleanliness is also to be regarded as a virtue; since it naturally renders us agreeable to others, and is a very considerable source of love and affection. No one will deny, that a negligence in this particular is a fault; and as faults are nothing but smaller vices, and this fault can have no other origin than the uneasy sensation, which it excites in others, we may in this instance, seemingly so trivial, dearly discover the origin of the moral distinction of vice and virtue in other instances.

Besides all those qualities, which render a person lovely or valuable, there is also a certain *je-ne-scai-quoi* of agreeable and handsome, that concurs to the same effect. In this case, as well as in that of wit and eloquence, we must have recourse to a certain sense, which acts without reflection, and regards not the tendencies of qualities and characters. Some moralists account for all the sentiments of virtue by this sense. Their hypothesis is very plausible.

Nothing but a particular enquiry can give the preference to any other hypothesis. When we find, that almost all the virtues have such particular tendencies; and also find, that these tendencies are sufficient alone to give a strong sentiment of approbation: We cannot doubt, after this, that qualities are approv'd of, in proportion to the advantage, which results from them. The decorum or indecorum of a quality, with regard to the age, or character, or station, contributes also to its praise or blame.

This decorum depends, in a great measure, upon experience. 'Tis usual to see men lose their levity, as they advance in years. Such a degree of gravity, therefore, and such years, are connected together in our thoughts. When we observe them separated in any person's

character, this imposes a kind of violence on our imagination, and is disagreeable.

That faculty of the soul, which, of all others, is of the least consequence to the character, and has the least virtue or vice in its several degrees, at the same time, that it admits of a great variety of degrees, is the memory. Unless it rise up to that stupendous height as to surprize us, or sink so low as, in some measure, to affect the judgment, we commonly take no notice of its variations, nor ever mention them to the praise or dispraise of any person. Tis so far from being a virtue to have a good memory, that men generally affect to complain of a bad one; and endeavouring to persuade the world, that what they say is entirely of their own invention, sacrifice it to the praise of genius and judgment. Yet to consider the matter abstractedly, 'twou'd be difficult to give a reason, why the faculty of recalling past ideas with truth and clearness, shou'd not have as much merit in it, as the faculty of placing our present ideas, in such an order, as to form true propositions and opinions. The reason of the difference certainly must be, that the memory is exerted without any sensation of pleasure or pain; and in all its middling degrees serves almost equally well in business and affairs. But the least variations in the judgment are sensibly felt in their consequences; while at the same time that faculty is never exerted in any eminent degree, without an extraordinary delight and satisfaction. The sympathy with this utility and pleasure bestows a merit on the understanding; and the absence of it makes us consider the memory as a faculty[15] very indifferent to blame or praise.

Before I leave this subject of natural abilities, I must observe, that, perhaps, one source of the esteem and affection, which attends them, is deriv'd from the importance and weight, which they bestow on the person possess'd of them. He becomes of greater consequence in life. His resolutions and actions affect a greater number of his fellow-creatures. Both his friendship and enmity are of moment. And 'tis easy to observe, that whoever is elevated, after this manner, above the rest of mankind, must excite in us the sentiments of esteem and approbation. Whatever is important engages our attention, fixes our thought, and is contemplated with satisfaction.

The histories of kingdoms are more interesting than domestic stories: The histories of great empires more than those of small cities

and principalities: And the histories of wars and revolutions more than those of peace and order. We sympathize with the persons that suffer, in all the various sentiments which belong to their fortunes. The mind is occupied by the multitude of the objects, and by the strong passions, that display themselves. And this occupation or agitation of the mind is commonly agreeable and amusing. The same theory accounts for the esteem and regard we pay to men of extraordinary parts and abilities. The good and ill of multitudes are connected with their actions. Whatever they undertake is important, and challenges our attention. Nothing is to be over-look'd and despis'd, that regards them. And where any person can excite these sentiments, he soon acquires our esteem; unless other circumstances of his character render him odious and disagreeable.

SECT. V

Some farther reflections concerning the natural virtues

It has been observ'd, in treating of the passions, that pride and humility, love and hatred, are excited by any advantages or disadvantages of the mind, body, or fortune; and that these advantages or disadvantages have that effect by producing a separate impression of pain or pleasure. The pain or pleasure, which arises from the general survey or view of any action or quality of the mind, constitutes its vice or virtue, and gives rise to our approbation or blame, which is nothing but a fainter and more imperceptible love or hatred. We have assign'd four different sources of this pain and pleasure; and in order to justify more fully that hypothesis, it may here be proper to observe, that the advantages or disadvantages of the body and of fortune, produce a pain or pleasure from the very same principles. The tendency of any object to be useful to the person possess'd of it, or to others; to convey pleasure to him or to others; all these circumstances convey an immediate pleasure to the person, who considers the object, and command his love and approbation.

To begin with the advantages of the body; we may observe a phaenomenon, which might appear somewhat trivial and ludicrous, if any thing cou'd be trivial, which fortified a conclusion of such importance, or ludicrous, which was employ'd in a philosophical reasoning. 'Tis a general remark, that those we call good women's-men, who have either signaliz'd themselves by their amorous exploits, or whose make of body promises any extraordinary vigour of that kind,

are well received by the fair sex, and naturally engage the affections even of those, whose virtue prevents any design of ever giving employment to those talents. Here tis evident, that the ability of such a person to give enjoyment, is the real source of that love and esteem he meets with among the females; at the same time that the women, who love and esteem him, have no prospect of receiving that enjoyment themselves, and can only be affected by means of their sympathy with one, that has a commerce of love with him. This instance is singular, and merits our attention.

Another source of the pleasure we receive from considering bodily advantages, is their utility to the person himself, who is possess'd of them. Tis certain, that a considerable part of the beauty of men, as well as of other animals, consists in such a conformation of members, as we find by experience to be attended with strength and agility, and to capacitate the creature for any action or exercise. Broad shoulders, a lank belly, firm joints, taper legs; all these are beautiful in our species, because they are signs of force and vigour, which being advantages we naturally sympathize with, they convey to the beholder a share of that satisfaction they produce in the possessor.

So far as to the utility, which may attend any quality of the body. As to the immediate pleasure, 'tis certain, that an air of health, as well as of strength and agility, makes a considerable part of beauty; and that a sickly air in another is always disagreeable, upon account of that idea of pain and uneasiness, which it conveys to us. On the other hand, we are pleas'd with the regularity of our own features, tho' it be neither useful to ourselves nor others; and 'tis necessary at a distance, to make it convey to us any satisfaction. We commonly consider ourselves as we appear in the eyes of others, and sympathize with the advantageous sentiments they entertain with regard to us.

How far the advantages of fortune produce esteem and approbation from the same principles, we may satisfy ourselves by reflecting on our precedent reasoning on that subject. We have observ'd, that our approbation of those, who are possess'd of the advantages of fortune, may be ascrib'd to three different causes.

First, To that immediate pleasure, which a rich man gives us, by the view of the beautiful cloaths, equipage, gardens, or houses, which he possesses. Secondly, To the advantage, which we hope to reap from him by his generosity and liberality. Thirdly, To the pleasure and

advantage, which he himself reaps from his possessions, and which produce an agreeable sympathy in us. Whether we ascribe our esteem of the rich and great to one or all of these causes, we may clearly see the traces of those principles, which give rise to the sense of vice and virtue. I believe most people, at first sight, will be inclin'd to ascribe our esteem of the rich to self-interest, and the prospect of advantage. But as 'tis certain, that our esteem or deference extends beyond any prospect of advantage to ourselves, 'tis evident, that that sentiment must proceed from a sympathy with those, who are dependent on the person we esteem and respect, and who have an immediate connexion with him. We consider him as a person capable of contributing to the happiness or enjoyment of his fellow-creatures, whose sentiments, with regard to him, we naturally embrace. And this consideration will serve to justify my hypothesis in preferring the third principle to the other two, and ascribing our esteem of the rich to a sympathy with the pleasure and advantage, which they themselves receive from their possessions. For as even the other two principles cannot operate to a due extent, or account for all the phaenomena, without having recourse to a sympathy of one kind or other; 'tis much more natural to chuse that sympathy, which is immediate and direct, than that which is remote and indirect. To which we may add, that where the riches or power are very great, and render the person considerable and important in the world, the esteem attending them, may, in part, be ascrib'd to another source, distinct from these three, viz. their interesting the mind by a prospect of the multitude, and importance of their consequences: Tho', in order to account for the operation of this principle, we must also have recourse to sympathy; as we have observ'd in the preceding section.

It may not be amiss, on this occasion, to remark the flexibility of our sentiments, and the several changes they so readily receive from the objects, with which they are conjoin'd. All the sentiments of approbation, which attend any particular species of objects, have a great resemblance to each other, tho' deriv'd from different sources; and, on the other hand, those sentiments, when directed to different objects, are different to the feeling, tho' deriv'd from the same source. Thus the beauty of all visible objects causes a pleasure pretty much the same, tho' it be sometimes deriv'd from the mere species and appearance of the objects; sometimes from sympathy, and an idea of their utility. In like manner, whenever we survey the actions and characters of men, without any particular interest in them,

the pleasure, or pain, which arises from the survey (with some minute differences) is, in the main, of the same kind, tho' perhaps there be a great diversity in the causes, from which it is deriv'd. On the other hand, a convenient house, and a virtuous character, cause not the same feeling of approbation; even tho' the source of our approbation be the same, and flow from sympathy and an idea of their utility[16].

There is something very inexplicable in this variation of our feelings;but 'tis what we have experience of with regard to all our passions and sentiments.

SECT. VI

Conclusion of this book

Thus upon the whole I am hopeful, that nothing is wanting to an accurate proof of this system of ethics. We are certain, that sympathy is a very powerful principle in human nature. We are also certain, that it has a great influence on our sense of beauty, when we regard external objects, as well as when we judge of morals. We find, that it has force sufficient to give us the strongest sentiments of approbation, when it operates alone, without the concurrence of any other principle; as in the cases of justice, allegiance, chastity, and good-manners. We may observe, that all the circumstances requisite for its operation are found in most of the virtues; which have, for the most part, a tendency to the good of society, or to that of the person possess'd of them. If we compare all these circumstances, we shall not doubt, that sympathy is the chief source of moral distinctions;especially when we reflect, that no objection can be rais'd against this hypothesis in one case, which will not extend to all cases.

Justice is certainly approv'd of for no other reason, than because it has a tendency to the public good: And the public good is indifferent to us, except so far as sympathy interests us in it. We may presume the like with regard to all the other virtues, which have a like tendency to the public good. They must derive all their merit from our sympathy with those, who reap any advantage from them: As the virtues, which have a tendency to the good of the person possess'd of them, derive their merit from our sympathy with him.

Most people will readily allow, that the useful qualities of the mind are virtuous, because of their utility. This way of thinking is so

natural, and occurs on so many occasions, that few will make any scruple of admitting it. Now this being once admitted, the force of sympathy must necessarily be acknowledg'd. Virtue is consider'd as means to an end. Means to an end are only valued so far as the end is valued. But the happiness of strangers affects us by sympathy alone. To that principle, therefore, we are to ascribe the sentiment of approbation, which arises from the survey of all those virtues, that are useful to society, or to the person possess'd of them. These form the most considerable part of morality.

Were it proper in such a subject to bribe the reader's assent, or employ any thing but solid argument, we are here abundantly supplied with topics to engage the affections. All lovers of virtue (and such we all are in speculation, however we may degenerate in practice) must certainly be pleas'd to see moral distinctions deriv'd from so noble a source, which gives us a just notion both of the generosity and capacity of human nature. It requires but very little knowledge of human affairs to perceive, that a sense of morals is a principle inherent in the soul, and one of the most powerful that enters into the composition. But this sense must certainly acquire new force, when reflecting on itself, it approves of those principles, from whence it is deriv'd, and finds nothing but what is great and good in its rise and origin. Those who resolve the sense of morals into original instincts of the human mind, may defend the cause of virtue with sufficient authority; but want the advantage, which those possess, who account for that sense by an extensive sympathy with mankind. According to their system, not only virtue must be approv'd of, but also the sense of virtue: And not only that sense, but also the principles, from whence it is deriv'd. So that nothing is presented on any side, but what is laudable and good.

This observation may be extended to justice, and the other virtues of that kind. Tho' justice be artificial, the sense of its morality is natural. 'Tis the combination of men, in a system of conduct, which renders any act of justice beneficial to society. But when once it has that tendency, we naturally approve of it; and if we did not so, 'tis impossible any combination or convention cou'd ever produce that sentiment.

Most of the inventions of men are subject to change. They depend upon humour and caprice. They have a vogue for a time, and then sink

into oblivion. It may, perhaps, be apprehended, that if justice were allow'd to be a human invention, it must be plac'd on the same footing. But the cases are widely different. The interest, on which justice is founded, is the greatest imaginable, and extends to all times and places. It cannot possibly be serv'd by any other invention. It is obvious, and discovers itself on the very first formation of society. All these causes render the rules of justice steadfast and immutable; at least, as immutable as human nature. And if they were founded on original instincts, cou'd they have any greater stability? The same system may help us to form a just notion of the happiness, as well as of the dignity of virtue, and may interest every principle of our nature in the embracing and cherishing that noble quality. Who indeed does not feel an accession of alacrity in his pursuits of knowledge and ability of every kind, when he considers, that besides the advantage, which immediately result from these acquisitions, they also give him a new lustre in the eyes of mankind, and are universally attended with esteem and approbation? And who can think any advantages of fortune a sufficient compensation for the least breach of the social virtues, when he considers, that not only his character with regard to others, but also his peace and inward satisfaction entirely depend upon his strict observance of them; and that a mind will never be able to bear its own survey, that has' been wanting in its part to mankind and society? But I forbear insisting on this subject. Such reflections require a work a-part, very different from the genius of the present. The anatomist ought never to emulate the painter; nor in his accurate dissections and portraitures of the smaller parts of the human body, pretend to give his figures any graceful and engaging attitude or expression. There is even something hideous, or at least minute in the views of things, which he presents; and 'tis necessary the objects shou'd be set more at a distance, and be more cover'd up from sight, to make them engaging to the eye and imagination. An anatomist, however, is admirably fitted to give advice to a painter; and 'tis even impracticable to excel in the latter art, without the assistance of the former. We must have an exact knowledge of the parts, their situation and connexion, before we can design with any elegance or correctness. And thus the most abstract speculations concerning human nature, however cold and unentertaining, become subservient to practical morality; and may render this latter science more correct in its precepts, and more persuasive in its exhortations.

[1] 感觉或感情。道德上的区别完全依靠于我们自己或他人的心灵特质所刺激起的特殊的痛苦或快乐情调。

[2] 人为的，人为的德与自然的德相反。

[3] 马尔克斯·卜鲁塔斯：（公元前78 年—前42 年），罗马人，他刺杀了独裁者凯撒。

[4] sensible：感性的，与理性的相对。

[5] 情绪，某种情绪都伴随着每一个观念和呈现于感官前的每一个对象；因此，当绪增增强时，我们就想像那个对象也增大了；这就说明各个对象在与共他对象比较时如何显得大些，小些。

[6] 骄傲：是间接的猛烈的反省印象，是灵魂中的纯粹情感。骄傲的每一种原因凭借其特有的性质，产生一种独立的快乐。

[7] 习惯。凡不经任何新的推理或结论而由过去的重复所发生的任何东西，我们可以称它为习惯；它在我们有暇反省之前，就发生作用，并且是一种秘密的作用。

[8]孔德公爵（1621—1686），法国将领。

[9]圣埃弗雷蒙（1610—1703），法国人，耶稣会士，初学法律，后入军籍，与孔德公爵友善。后因伏凯（Fouquet）失势，逃入英国，为查理二世所优待，给以年金。

[10] 英雄主义，只是一种稳定的、确立的骄傲和自尊。

[11] goodness and benevolence：善与慈善

[12] 愤怒，并非一切愤怒情感都是恶劣的；表现于残忍形式中时是令人憎恨的。

[13]萨鲁斯特（公元前86- 前34 年），罗马历史学家。

[14] 喜悦，喜悦与悲哀的混合产生希望和恐怖。

[15]官能、能力。

[16]效用，使真理成为愉快的，不过只是借助同情。效用通过同情成为道德情绪的来源。

APPENDIX

There is nothing I wou'd more willingly lay hold of, than an opportunity of confessing my errors; and shou'd esteem such a return to truth and reason to be more honourable than the most unerring judgment. A man, who is free from mistakes, can pretend to no praises, except from the justness of his understanding: But a man, who corrects his mistakes, shews at once the justness of his understanding, and the candour and ingenuity of his temper. I have not yet been so fortunate as to discover any very considerable mistakes in the reasonings deliver'd in the preceding volumes, except on one article: But I have found by experience, that some of my expressions have not been so well chosen, as to guard against all mistakes in the readers; and 'tis chiefly to remedy this defect, I have subjoin'd the following appendix.

We can never be induc'd to believe any matter of fact, except where its cause, or its effect, is present to us; but what the nature is of that belief, which arises from the relation of cause and effect, few have had the curiosity to ask themselves. In my opinion, this dilemma is inevitable. Either the belief is some new idea, such as that of reality or existence, which we join to the simple conception of an object, or it is merely a peculiar feeling or sentiment. That it is not a new idea, annex'd to the simple conception, may be evinc'd from these two arguments. First, We have no abstract idea of existence, distinguishable and separable from the idea of particular objects. 'Tis impossible, therefore, that this idea of existence can be annex'd to the idea of any object, or form the difference betwixt a simple conception and belief. Secondly, The mind has the command over all its ideas, and can separate, unite, mix, and vary them, as it pleases; so that if belief consisted merely in a new idea, annex'd to the conception, it wou'd be in a man's power to believe what he pleas'd. We may, therefore, conclude, that belief consists merely in a certain feeling or sentiment; in something, that depends not on the will, but must arise from certain determinate causes and principles, of which we are not masters. When we are convinc'd of any matter of fact, we do nothing but conceive it, along with a certain feeling, different from what attends the mere reveries of the imagination.

And when we express our incredulity concerning any fact, we

mean, that the arguments for the fact produce not that feeling. Did not the belief consist in a sentiment different from our mere conception, whatever objects were presented by the wildest imagination, wou'd be on an equal footing with the most establish'd truths founded on history and experience. There is nothing but the feeling, or sentiment, to distinguish the one from the other.

This, therefore, being regarded as an undoubted truth, that belief is nothing but a peculiar feeling, different from the simple conception, the next question, that naturally occurs, is, what is the nature of this feeling, or sentiment, and whether it be analogous to any other sentiment of the human mind? This question is important.

For if it be not analogous to any other sentiment, we must despair of explaining its causes, and must consider it as an original principle of the human mind. If it be analogous, we may hope to explain its causes from analogy, and trace it up to more general principles.

Now that there is a greater firmness and solidity in the conceptions, which are the objects of conviction and assurance, than in the loose and indolent reveries of a castle-builder, every one will readily own.

They strike upon us with more force; they are more present to us; the mind has a firmer hold of them, and is more actuated and mov'd by them. It acquiesces in them; and, in a manner, fixes and reposes itself on them. In short, they approach nearer to the impressions, which are immediately present to us; and are therefore analogous to many other operations of the mind.

There is not, in my opinion, any possibility of evading this conclusion, but by asserting, that belief, beside the simple conception, consists in some impression or feeling, distinguishable from the conception. It does not modify the conception, and render it more present and intense: It is only annex'd to it, after the same manner that will and desire are annex'd to particular conceptions of good and pleasure. But the following considerations will, I hope, be sufficient to remove this hypothesis. First, It is directly contrary to experience, and our immediate consciousness. All men have ever allow'd reasoning to be merely an operation of our thoughts or ideas; and however those ideas may be varied to the feeling, there is nothing ever enters into our conclusions but ideas, or our fainter conceptions. For instance; I

hear at present a person's voice, whom I am acquainted with; and this sound comes from the next room. This impression of my senses immediately conveys my thoughts to the person, along with all the surrounding objects. I paint them out to myself as existent at present, with the same qualities and relations, that I formerly knew them possess'd of. These ideas take faster hold of my mind, than the ideas of an enchanted castle. They are different to the feeling; but there is no distinct or separate impression attending them. 'Tis the same case when I recollect the several incidents of a journey, or the events of any history. Every particular fact is there the object of belief. Its idea is modified differently from the loose reveries of a castle-builder: But no distinct impression attends every distinct idea, or conception of matter of fact. This is the subject of plain experience. If ever this experience can be disputed on any occasion, 'tis when the mind has been agitated with doubts and difficulties; and afterwards, upon taking the object in a new point of view, or being presented with a new argument, fixes and reposes itself in one settled conclusion and belief. In this case there is a feeling distinct and separate from the conception. The passage from doubt and agitation to tranquility and repose, conveys a satisfaction and pleasure[1] to the mind. But take any other case.

Suppose I see the legs and thighs of a person in motion, while some interpos'd object conceals the rest of his body. Here 'tis certain, the imagination spreads out the whole figure. I give him a head and shoulders, and breast and neck. These members I conceive and believe him to be possess'd of. Nothing can be more evident, than that this whole operation is perform'd by the thought or imagination alone. The transition is immediate. The ideas presently strike us. Their customary connexion with the present impression, varies them and modifies them in a certain manner, but produces no act of the mind, distinct from this peculiarity of conception. Let any one examine his own mind, and he will evidently find this to be the truth.

Secondly, Whatever may be the case, with regard to this distinct impression, it must be allow'd, that the mind has a firmer hold, or more steady conception of what it takes to be matter of fact, than of fictions. Why then look any farther, or multiply suppositions without necessity?

Thirdly, We can explain the causes of the firm conception, but not

those of any separate impression. And not only so, but the causes of the firm conception exhaust the whole subject, and nothing is left to produce any other effect. An inference concerning a matter of fact is nothing but the idea of an object, that is frequently conjoin'd, or is associated with a present impression. This is the whole of it. Every part is requisite to explain, from analogy, the more steady conception; and nothing remains capable of producing any distinct impression.

Fourthly, The effects of belief, in influencing the passions and imagination, can all be explain'd from the firm conception; and there is no occasion to have recourse to any other principle. These arguments, with many others, enumerated in the foregoing volumes, sufficiently prove, that belief only modifies the idea or conception; and renders it different to the feeling, without producing any distinct impression. Thus upon a general view of the subject, there appear to be two questions of importance, which we may venture to recommend to the consideration of philosophers, Whether there be any thing to distinguish belief from the simple conception beside the feeling of sentiment? And, Whether this feeling be any thing but a firmer conception, or a faster hold, that we take of the object?

If, upon impartial enquiry, the same conclusion, that I have form'd, be assented to by philosophers, the next business is to examine the analogy [2], which there is betwixt belief, and other acts of the mind, and find the cause of the firmness and strength of conception: And this I do not esteem a difficult task. The transition from a present impression, always enlivens and strengthens any idea. When any object is presented, the idea of its usual attendant immediately strikes us, as something real and solid. 'Tis felt, rather than conceiv'd, and approaches the impression, from which it is deriv'd, in its force and influence. This I have prov'd at large. I cannot add any new arguments; tho' perhaps my reasoning on this whole question, concerning cause and effect, wou'd have been more convincing, had the following passages been inserted in the places, which I have mark'd for them. I have added a few illustrations on other points, where I thought it necessary. I had entertain'd some hopes, that however deficient our theory of the intellectual world might be, it wou'd be free from those contradictions, and absurdities, which seem to attend every explication, that human reason can give of the material world.

But upon a more strict review of the section concerning personal

identity, I find myself involv'd in such a labyrinth, that, I must confess, I neither know how to correct my former opinions, nor how to render them consistent. If this be not a good general reason for scepticism, 'tis at least a sufficient one (if I were not already abundantly supplied) for me to entertain a diffidence and modesty in all my decisions. I shall propose the arguments on both sides, beginning with those that induc'd me to deny the strict and proper identity and simplicity of a self or thinking being.

When we talk of self or substance, we must have an idea annex'd to these terms, otherwise they are altogether unintelligible. Every idea is deriv'd from preceding impressions; and we have no impression of self or substance, as something simple and individual. We have, therefore, no idea of them in that sense. Whatever is distinct, is distinguishable; and whatever is distinguishable, is separable by the thought or imagination. All perceptions are distinct. They are, therefore, distinguishable, and separable, and may be conceiv'd as separately existent, and may exist separately, without any contradiction or absurdity. When I view this table and that chimney, nothing is present to me but particular perceptions, which are of a like nature with all the other perceptions. This is the doctrine of philosophers. But this table, which is present to me, and the chimney, may and do exist separately. This is the doctrine of the vulgar, and implies no contradiction. There is no contradiction, therefore, in extending the same doctrine to all the perceptions.

In general, the following reasoning seems satisfactory. All ideas are borrow'd from preceding perceptions. Our ideas of objects, therefore, are deriv'd from that source. Consequently no proposition can be intelligible or consistent with regard to objects, which is not so with regard to perceptions. But 'tis intelligible and consistent to say, that objects exist distinct and independent, without any common simple substance or subject of inhesion. This proposition, therefore, can never be absurd with regard to perceptions. When I turn my reflection on myself, I never can perceive this self without some one or more perceptions; nor can I ever perceive any thing but the perceptions. 'Tis the composition of these, therefore, which forms the self. We can conceive a thinking being to have either many or few perceptions. Suppose the mind to be reduc'd even below the life of an oyster. Suppose it to have only one perception, as of thirst or hunger. Consider it in that situation. Do you conceive any

thing but merely that perception? Have you any notion of self or substance? If not, the addition of other perceptions can never give you that notion.

The annihilation, which some people suppose to follow upon death, and which entirely destroys this self, is nothing but an extinction of all particular perceptions; love and hatred, pain and pleasure, thought and sensation. These therefore must be the same with self; since the one cannot survive the other. Is self the same with substance? If it be, how can that question have place, concerning the subsistence of self, under a change of substance? If they be distinct, what is the difference betwixt them?

For my part, I have a notion of neither, when conceiv'd distinct from particular perceptions. Philosophers begin to be reconcil'd to the principle, that we have no idea of external substance, distinct from the ideas of particular qualities. This must pave the way for a like principle with regard to the mind, that we have no notion of it, distinct from the particular perceptions.

So far I seem to be attended with sufficient evidence. But having thus loosen'd all our particular perceptions, when²³ I proceed to explain the principle of connexion, which binds them together, and makes us attribute to them a real simplicity and identity; I am sensible, that my account is very defective, and that nothing but the seeming evidence of the precedent reasonings cou'd have induc'd me to receive it. If perceptions are distinct existences, they form a whole only by being connected together. But no connexions among distinct existences are ever discoverable by human understanding.

We only feel a connexion or determination of the thought, to pass from one object to another. It follows, therefore, that the thought alone finds personal identity, when reflecting on the train of past perceptions, that compose a mind, the ideas of them are felt to be connected together, and naturally introduce each other. However extraordinary this conclusion may seem, it need not surprize us. Most philosophers seem inclin'd to think, that personal identity arises from consciousness; and consciousness is nothing but a reflected thought or perception. The present philosophy, therefore, has so far a promising aspect. But all my hopes vanish, when I come to explain the principles, that unite our successive perceptions in our thought or consciousness. I cannot discover any theory, which gives me

satisfaction on this head.

In short there are two principles, which I cannot render consistent; nor is it in my power to renounce either of them, viz, that all our distinct perceptions are distinct existences, and that the mind never perceives any real connexion among distinct existences. Did our perceptions either inhere in something simple and individual, or did the mind perceive some real connexion among them, there would be no difficulty in the case. For my part, I must plead the privilege of a sceptic, and confess, that this difficulty is too hard for my understanding. I pretend not, however, to pronounce it absolutely insuperable. Others, perhaps, or myself, upon more mature reflections, may discover some hypothesis, that will reconcile those contradictions. I shall also take this opportunity of confessing two other errors of less importance, which more mature reflection has discover'd to me in my reasoning. The first may be found in Vol. I. page 106.

where I say, that the distance betwixt two bodies is known, among other things, by the angles, which the rays of light flowing from the bodies make with each other. 'Tis certain, that these angles are not known to the mind, and consequently can never discover the distance. The second error may be found in Vol. I. page 144 where I say, that two ideas of the same object can only be different by their different degrees of force and vivacity. I believe there are other differences among ideas, which cannot properly be comprehended under these terms. Had I said, that two ideas of the same object can only be different by their different feeling, I should have been nearer the truth.

NOTES:

1. Book II. Part III. Sect 3,

2. One might think it were entirely superfluous to prove this, if a late author [William Wollaston, *The Religion of Nature Delineated* (London 1722)], who has had the good fortune to obtain some reputation, had not seriously affirmed, that such a falshood is the foundation of all guilt and moral deformity. That we may discover the fallacy of his hypothesis, we need only consider, that a false conclusion is drawn from an action, only by means of an obscurity of natural principles, which makes a cause be secretly interrupted In its

operation, by contrary causes, and renders the connexion betwixt two objects uncertain and variable. Now, as a like uncertainty and variety of causes take place, even in natural objects, and produce a like error in our judgment, if that tendency to produce error were the very essence of vice and immorality, it shou'd follow, that even inanimate objects might be vicious and immoral.

'Tis in vain to urge, that inanimate objects act without liberty and choice. For as liberty and choice are not necessary to make an action produce in us an erroneous conclusion, they can be, in no respect, essential to morality; and I do not readily perceive, upon this system, how they can ever come to be regarded by it. If the tendency to cause error be the origin of immorality, that tendency and immorality wou'd in every case be inseparable.

Add to this, that if I had used the precaution of shutting the windows, while I indulg'd myself in those liberties with my neighbour's wife, I should have been guilty of no immorality; and that because my action, being perfectly conceal'd, would have had no tendency to produce any false conclusion.

For the same reason, a thief, who steals In by a ladder at a window, and takes all imaginable care to cause no disturbance, is in no respect criminal. For either he will not be perceiv'd, or if he be, 'tis impossible he can produce any error, nor will any one, from these circumstances, take him to be other than what he really is.

'Tis well known, that those who are squint-sighted, do very readily cause mistakes in others, and that we Imagine they salute or are talking to one person, while they address themselves to anther.

Are they therefore, upon that account, immoral?

Besides, we may easily observe, that in all those arguments there is an evident reasoning in a circle. A person who takes possession of another's goods, and uses them as his own, in a manner declares them to be his own; and this falshood is the source of the immorality of injustice. But is property, or right, or obligation, intelligible, without an antecedent morality? A man that is ungrateful to his benefactor, in a manner affirms, that he never received any favours from him. But in what manner? Is it because 'tis his duty to be grateful? But this supposes, that there is some antecedent rule of duty and morals. Is it

because human nature is generally grateful, and makes us conclude, that a man who does any harm never received any favour from the person he harm'd? But human nature is not so generally grateful, as to justify such a conclusion. Or if it were, is an exception to a general rule in every case criminal, for no other reason than because it is an exception?

But what may suffice entirely to destroy this whimsical system is, that it leaves us under the same difficulty to give a reason why truth is virtuous and falshood vicious, as to account for the merit or turpitude of any other action. I shall allow, if you please, that all immorality is derived from this supposed falshood in action, provided you can give me any plausible reason, why such a falshood is immoral. If you consider rightly of the matter, you will find yourself in the same difficulty as at the beginning.

This last argument is very conclusive; because, if there be not an evident merit or turpitude annex'd to this species of truth or falahood, It can never have any influence upon our actions. For, who ever thought of forbearing any action, because others might possibly draw false conclusions from it? Or, who ever perform'd any, that he might give rise to true conclusions?

3. As a proof, how confus'd our way of thinking on this subject commonly is, we may observe, that those who assert, that morality is demonstrable, do not say, that morality lies in the relations, and that the relations are distinguishable by reason. They only say, that reason can discover such an action, In such relations, to be virtuous, and such another vicious. It seems they thought it sufficient, if they cou'd bring the word, Relation, into the proposition, without troubling themselves whether it was to the purpose or not. But here, I think, is plain argument. Demonstrative reason discovers only relations. But that reason, according to this hypothesis, discovers also vice and virtue. These moral qualities, therefore, must be relations.

When we blame any action, in any situation, the whole complicated object, of action and situation, must form certain relations, wherein the essence of vice consists. This hypothesis is not otherwise intelligible. For what does reason discover, when it pronounces any action vicious? Does it discover a relation or a matter of fact? These questions are decisive, and must not be eluded.

4. In the following discourse natural is also opposed sometimes to civil, sometimes to moral. The opposition will always discover the sense, in which it is taken. 5. No questions in philosophy are more difficult, than when a number of causes present themselves for the same phaenomenon, to determine which is the principal and predominant. There seldom is any very precise argument to fix our choice, and men must be contented to be guided by a kind of taste or fancy, arising from analogy, and a comparison of familiar instances. Thus, in the present case, there are, no doubt, motives of public interest for most of the rules, which determine property; but still I suspect, that these rules are principally fix'd by the imagination, or the more frivolous properties of our thought and conception. I shall continue to explain these causes, leaving it to the reader's choice, whether he will prefer those deriv'd from publick utility, or those deriv'd from the imagination. We shall begin with the right of the present possessor.

'Tis a quality, which I have already observ'd in human nature, that when two objects appear in a close relation to each other, the mind is apt to ascribe to them any additional relation, in order to compleat the union; and this inclination is so strong, as often to make us run into errors (such as that of the conjunction of thought and matter) if we find that they can serve to that purpose. Many of our impressions are incapable of place or local position; and yet those very impressions we suppose to have a local conjunction with the impressions of sight and touch, merely because they are conjoin'd by causation, and are already united in the imagination. Since, therefore, we can feign a new relation, and even an absurd one, in order to compleat any union, 'twill easily be imagin'd, that if there be any relations, which depend on the mind, 'twill readily conjoin them to any preceding relation, and unite, by a new bond, such objects as have already an union in the fancy. Thus for instance, we never fail, in our arrangement of bodies, to place those which are resembling in contiguity to each other, or at least in correspondent points of view; because we feel a satisfaction in joining the relation of contiguity to that of resemblance, or the resemblance of situation to that of qualities. And this is easily accounted for from the known properties of human nature. When the mind is determin'd to join certain objects, but undetermin'd in its choice of the particular objects, It naturally turns its eye to such as are related together. They are already united in the mind: They present themselves at the same time to the conception; and instead of

requiring any new reason for their conjunction, it wou'd require a very powerful reason to make us over-look this natural affinity. This we shall have occasion to explain more fully afterwards, when we come to treat of beauty. In the mean time, we may content ourselves with observing, that the same love of order and uniformity, which arranges the books in a library, and the chairs in a parlour, contribute to the formation of society, and to the well-being of mankind, by modifying the general rule concerning the stability of possession. And as property forms a relation betwixt a person and an object, 'tis natural to found it on some preceding relation; and as property is nothing but a constant possession, secur'd by the laws of society, 'tis natural to add it to the present possession, which is a relation that resembles it. For this also has its influence. If it be natural to conjoin all sorts of relations, 'tis more so, to conjoin such relations as are resembling, and are related together.

6. Some philosophers account for the right of occupation, by saying, that every one has a property in his own labour; and when he joins that labour[3] to any thing, it gives him the property of the whole: But, 1. There are several kinds of occupation, where we cannot be said to join our labour to the object we acquire: As when we possess a meadow by graxing our cattle upon it. 2. This accounts for the matter by means of accession; which is taking a needless circuit. 3. We cannot be said to join our labour to any thing but in a figurative sense. Properly speaking. we only make an alteration on it by our labour. This forms a relation betwixt us and the object; and thence arises the property, according to the preceding principles. 7. If we seek a solution of these difficulties in reason and public interest, we never shall find satisfaction; and If we look for it in the imagination, 'tis evident, that the qualities, which operate upon that faculty, run so insensibly and gradually into each other, that 'tis impossible to give them any precise bounds or termination. The difficulties on this head must encrease, when we consider, that our judgment alters very sensibly, according to the subject, and that the same power and proximity will be deem'd possession in one case, which is not esteem'd such in another. A person, who has hunted a hare to the last degree of weariness, wou'd look upon it as an injustice for another to rush in before him, and seize his prey. But the same person advancing to pluck an apple, that hangs within his reach, has no reason to complain, if another, more alert, passes him, and takes possession. What is the reason of this difference, but that immobility, not being

natural to the hare, but the effect of industry, forms in that case a strong relation with the hunter, which is wanting in the other?

Here then it appears, that a certain and infallible power of enjoyment, without touch or some other sensible relation, often produces not property: And I farther observe, that a sensible relation, without any present power, is sometimes sufficient to give a title to any object. The sight of a thing is seldom a considerable relation, and is only regarded as such, when the object is hidden, or very obscure; in which case we find, that the view alone conveys a property; according to that maxim, that even a whole continent belongs to the nation, which first discover'd it. 'Tis however remarkable that both in the case of discovery and that of possession, the first discoverer and possessor must join to the relation an intention of rendering himself proprietor, otherwise the relation will not have its effect; and that because the connexion in our fancy [4] betwixt the property and the relation is not so great, but that it requires to be help'd by such an intention.

From all these circumstances, 'tis easy to see how perplex'd many questions may become concerning the acquisition of property by occupation; and the least effort of thought may present us with instances, which are not susceptible of any reasonable decision. If we prefer examples, which are real, to such as are feign'd, we may consider the following one, which is to be met with in almost every writer, that has treated of the laws of nature. Two Grecian colonies, leaving their native country, in search of new feats, were inform'd that a city near them was deserted by its inhabitants. To know the truth of this report, they dispatch'd at once two messengers, one from each colony; who finding on their approach, that their information was true, begun a race together with an intention to take possession of the city, each of them for his countrymen. One of these messengers, finding that he was not an equal match for the other, launch'd his spear at the gates of the city, and was so fortunate as to fix it there before the arrival of his companion. This produc'd a dispute betwixt the two colonies, which of them was the proprietor of the empty city and this dispute still subsists among philosophers.

For my part I find the dispute impossible to be decided, and that because the whole question hangs upon the fancy, which in this case is not possess'd of any precise or determinate standard, upon which it can give sentence. To make this evident, let us consider, that if these

two persons had been simply members of the colonies, and not messengers or deputies, their actions wou'd not have been of any consequence; since in that case their relation to the colonies wou'd have been but feeble and imperfect. Add to this, that nothing determin'd them to run to the gates rather than the walls, or any other part of the city, but that the gates, being the most obvious and remarkable part, satisfy the fancy best in taking them for the whole; as we find by the poets, who frequently draw their images and metaphors from them. Besides we may consider, that the touch or contact of the one messenger is not properly possession, no more than the piercing the gates with a spear; but only forms a relation; and there is a relation, in the other case, equally obvious, tho' not, perhaps, of equal force. Which of these relations, then, conveys a right and property, or whether any of them be sufficient for that effect, I leave to the decision of such as are wiser than myself.

8. Present possession is plainly a relation betwixt a person and an object; but is not sufficient to counter-balance the relation of first possession, unless the former be long and uninterrupted: In which case the relation is encreas'd on the side of the present possession, by the extent of time, and diminish'd on that of first possession, by the distance, This change in the relation produces a consequent change in the property.

9. This source of property can never be explain'd but from the imaginations; and one may affirm, that the causes are here unmix'd.

We shall proceed to explain them more particularly, and illustrate them by examples from common life and experience. It has been observed above, that the mind has a natural propensity to join relations, especially resembling ones, and finds a kind of fitness and uniformity in such an union. From this propensity are deriv'd these laws of nature, that upon the first formation of society, property always follows the present possession; and afterwards, that it arises from first or from long possession. Now we may easily observe, that relation is not confin'd merely to one degree; but that from an object, that is related to us, we acquire a relation to every other object, which is related to it, and so on, till the thought loses the chain by too long a progress, However the relation may weaken by each remove, 'tis not immediately destroy'd; but frequently connects two objects by means of an intermediate one, which is related to both. And this principle is

of such force as to give rise to the right of accession, and causes us to acquire the property not only of such objects as we are immediately possess'd of; but also of such as are closely connected with them.

Suppose a German, a Frenchman, and a Spaniard to come into a room, where there are plac'd upon the table three bottles of wine, Rhenish, Burgundy and Port; and suppose they shou'd fall a quarrelling about the division of them; a person, who was chosen for umpire wou'd naturally, to shew his impartiality, give every one the product of his own country: And this from a principle, which, in some measure, is the source of those laws of nature, that ascribe property to occupation, prescription and accession.

In all these Cases, and particularly that of accession, there is first a natural union betwixt the Idea of the person and that of the object, and afterwards a new and moral union produc'd by that right or property, which we ascribe to the person. But here there occurs a difficulty, which merits our attention, and may afford us an opportunity of putting to tryal that singular method of reasoning, which has been employ'd on the present subject. I have already observ'd that the imagination passes with greater facility from little to great, than from great to little, and that the transition of ideas is always easier and smoother in the former case than in the latter.

Now as the right of accession arises from the easy transition of ideas, by which related objects are connected together, it shou'd naturally be imagin'd, that the right of accession must encrease in strength, in proportion as the transition of ideas is perform'd with greater facility. It may, therefore, be thought, that when we have acquir'd the property of any small object, we shall readily consider any great object related to it as an accession, and as belonging to the proprietor of the small one; since the transition is in that case very easy from the small object to the great one, and shou'd connect them together in the closest manner. But In fact the case is always found to be otherwise, The empire of Great Britain seems to draw along with it the dominion of the Orkneys, the Hebrides, the isle of Man, and the Isle of Wight; but the authority over those lesser islands does not naturally imply any title to Great Britain. In short, a small object naturally follows a great one as its accession; but a great one Is never suppos'd to belong to the proprietor of a small one related to it, merely on account of that property and relation. Yet in this latter case

the transition of ideas is smoother from the proprietor to the small object, which is his property, and from the small object to the great one, than in the former case from the proprietor to the great object, and from the great one to the small. It may therefore be thought, that these phaenomena are objections to the foregoing hypothesis, that the ascribing of property to accession is nothing but an affect of the relations of ideas, and of the smooth transition of the imagination.

‘Twill be easy to solve this objection, if we consider the agility and unsteadiness of the imagination, with the different views, in which it is continually placing its objects. When we attribute to a person a property in two objects, we do not always pass from the person to one object, and from that to the other related to it. The objects being here to be consider’d as the property of the person, we are apt to join them together, and place them in the same light.

Suppose, therefore, a great and a small object to be related together; if a person be strongly related to the great object, he will likewise be strongly related to both the objects, consider’d together, because he is related to the most considerable part. On the contrary, if he be only related to the small object, he will not be strongly related to both, consider’d together, since his relation lies only with the most trivial part, which is not apt to strike us in any great degree, when we consider the whole. And this is the reason, why small objects become accessions to great ones, and not great to small.

’Tis the general opinion of philosophers and civilians, that the sea is incapable of becoming the property of any nation; and that because ’tis impossible to take possession of it, or form any such distinct relation with it, as may be the foundation of property. Where this reason ceases, property immediately takes place. Thus the most strenuous advocates for the liberty of the seas universally allow, that friths and hays naturally belong as an accession to the proprietors of the surrounding continent. These have properly no more bond or union with the land, than the pacific ocean wou’d have; but having an union in the fancy, and being at the same time inferior, they are of course regarded as an accession.

The property of rivers, by the laws of most nations, and by the natural turn of our thought, is attributed to the proprietors of their banks, excepting such vast rivers as the Rhine or the Danube, which seem too large to the imagination to follow as an accession the

property of the neighbouring fields. Yet even these rivers are consider'd as the property of that nation, thro' whose dominions they run; the idea of a nation being of a suitable bulk to correspond with them, and bear them such a relation in the fancy.

The accessions, which are made to lands bordering upon rivers, follow the land, say the civilians, provided it be made by what they call alluvion, that is, Insensibly and Imperceptibly; which are circumstances that mightily assist the imagination in the conjunction. Where there Is any considerable portion torn at once from one bank, and join'd to another, it becomes not his property, whose land it falls on, till it unite with the land, and till the trees or plants have spread their roots into both. Before that, the imagination does not sufficiently join them.

There are other cases, which somewhat resemble this of accession, but which, at the bottom, are considerably different, and merit our attention. Of this kind Is the conjunction of the properties of different persons, after such a manner as not to admit of separation. The question is, to whom the united mass must belong.

Where this conjunction is of such a nature as to admit of division, but not of separation, the decision is natural and easy. The whole mass must be suppos'd to be common betwixt the proprietors of the several parts, and afterwards must be divided according to the proportions of these parts. But here I cannot forbear taking notice of a remarkable subtilty of the Roman law, in distinguishing betwixt confusion and commixtion. Confusion is an union of two bodies, such as different liquors, where the parts become entirely undistinguishable. Commixtion is the blending of two bodies, such as two bushels of corn, where the parts remain separate in an obvious and visible manner. As in the latter case the imagination discovers not so entire an union as in the former, but is able to trace and preserve a distinct idea of the property of each; this is the reason, why the civil law, tho' it establish'd an entire community in the case of confusion, and after that a proportional division, yet in the case of commixtion, supposes each of the proprietors to maintain a distinct right; however necessity may at last force them to submit to the same division.

Quod si frumentum Titii frumento tuo mistum fuerit: siquidem ex voluntate vestra, commune est: quia singula corpora, id est, singula grana, quae cujusque propria fuerunt, ex consensu vestro

communicata sunt. Quod si casu id mistum fuerit, vel Titius id miscuerit sine tua voluntate, non videtur id commune esse; quia singula corpora in sua substantia durant. Sed nec magis istis casibus commune sit frumentum quam grex intelligitur esse cornu munis, si pecora Titii tuis pecoribus mista fuerint. Sed si ab alterutro vestrum totum id frumentum retineatur, in rem quidem actio pro modo frumenti cujusque cornu petit. Arbitrio autem judicis, ut ipse aestimet quale cujusque frumentum fuerit. Inst.Lib. IL Tit. i. 28.

In the case that your grain was mixed with that of Titius, if it was done voluntarily on the part of both of you, it is common property, inasmuch as the individual items, i.e., the single grains, which were the peculiar property of either of you, were combined with your joint consent. If, however, the mixture was accidental, or if Titius mixed it without your consent, it does not appear that it is common property, Inasmuch as the several components retain their original identity. Rather, in circumstances of this sort the grain does not become common property, any more than a herd of cattle is regarded as common property, If Titius' beasts should have become mixed up with yours.

However, if all of the aforesaid corn is kept by either of you, this gives rise to a suit to determine the ownership of property, in respect of the amount of corn belonging to each. It is in the discretion of the judge to determine which is the corn belonging to either party.

Where the properties of two persons are united after such a manner as neither to admit of division nor separation, as when one builds a house on another's ground, in that case, the whole must belong to one of the proprietors: And here I assert, that it naturally is conceived to belong to the proprietor of the most considerable part. For however the compound object may have a relation to two different persons.

[1] 快乐，是一种印象，没有一种继续的存在，只是“单纯的知觉”。快乐和痛苦即使不是德与恶的原因，至少也和它们分不开。

[2] 类比，第三种概然性，可以带领我们达到经验之外。

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本文库编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

目录

出版说明

导读

FOREWORD

第一卷 导读

BOOK I

- 1 . SUBJECT OF THE FIRST BOOK
- 2 . THE FIRST SOCIETIES
- 3 . THE RIGHT OF THE STRONGEST
- 4 . SLAVERY
- 5 . THAT WE MUST ALWAYS GO BACK TO A FIRST CONVENTION
- 6 . THE SOCIAL COMPACT
- 7 . THE SOVEREIGN
- 8 . THE CIVIL STATE
- 9 . REAL PROPERTY

第二卷 导读

BOOK II

- 1 . THAT SOVEREIGNTY IS INALIENABLE
- 2 . THAT SOVEREIGNTY IS INDIVISIBLE
- 3 . WHETHER THE GENERAL WILL IS FALLIBLE
- 4 . THE LIMITS OF THE SOVEREIGN POWER
- 5 . THE RIGHT OF LIFE AND DEATH
- 6 . LAW
- 7 . THE LEGISLATOR
- 8 . THE PEOPLE
- 9 . THE PEOPLE (continued)
- 10 . THE PEOPLE (continued)
- 11 . THE VARIOUS SYSTEMS OF LEGISLATION
- 12 . THE DIVISION OF THE LAWS

第三卷 导读

BOOK III

- 1 . GOVERNMENT IN GENERAL
- 2 . THE CONSTITUENT PRINCIPLE IN THE VARIOUS FORMS OF GOVERNMENT
- 3 . THE DIVISION OF GOVERNMENTS
- 4 . DEMOCRACY
- 5 . ARISTOCRACY
- 6 . MONARCHY
- 7 . MIXED GOVERNMENTS
- 8 . THAT ALL FORMS OF GOVERNMENT DO NOT SUIT ALL COUNTRIES
- 9 . THE MARKS OF A GOOD GOVERNMENT
- 10 . THE ABUSE OF GOVERNMENT AND ITS TENDENCY TO DEGENERATE
- 11 . THE DEATH OF THE BODY POLITIC
- 12 . HOW THE SOVEREIGN AUTHORITY MAINTAINS ITSELF
- 13 . THE SAME (continued)
- 14 . THE SAME (continued)
- 15 . DEPUTIES OR REPRESENTATIVES
- 16 . THAT THE INSTITUTION OF GOVERNMENT IS NOT A CONTRACT
- 17 . THE INSTITUTION OF GOVERNMENT
- 18 . HOW TO CHECK THE USURPATIONS OF GOVERNMENT

第四卷 导读

BOOK IV

- 1 . THAT THE GENERAL WILL IS INDESTRUCTIBLE
- 2 . VOTING
- 3 . ELECTIONS
- 4 . THE ROMAN COMITIA
- 5 . THE TRIBUNATE
- 6 . THE DICTATORSHIP
- 7 . THE CENSORSHIP
- 8 . CIVIL RELIGION

9 . CONCLUSION

[返回总目录](#)

“人们说生命是很短促的，我认为是他们自己使生命那样短促的。由于他们不善于利用生命，所以他们反过来抱怨说时间过得太快；可是我认为，就他们那种生活来说，时间倒是过得太慢了。”

——卢梭

“我既决定在独立和贫穷中度过我的余生，我就竭尽我灵魂的全力去挣断时论的枷锁，勇敢地做着我所以为善的一切，毫不顾忌别人的毁誉。”

——卢梭

导读

一、卢梭其人

让·雅克·卢梭（1712—1778）是18世纪法国资产阶级民主革命前夜最杰出的思想家、哲学家、文学家，启蒙运动最卓越的代表人物之一。他在自然科学、文学、音乐、哲学、教育等领域都有很深的造诣。其代表作主要有：政治学论文《论科学与艺术》、《论人类不平等的起源和基础》，教育专著《爱弥尔》，文学作品《新爱洛漪丝》，自传体小说《忏悔录》。卢梭的一生充满悲剧色彩，历经坎坷，颠沛流离，因作品触犯权威和主流价值而屡遭驱逐和通缉。

卢梭生于瑞士日内瓦，但大部分时间生活在法国。1762年4月《社会契约论》发表时，卢梭受到的最强烈的抨击恰恰来自他热爱的这两个国度。当时的日内瓦共和国说它是“胆大妄为的、可恶的、亵渎宗教的，试图打倒教会和推翻各国政府的”。当时君主专制的法国更是通告全国“无论任何人只要撰写或指使他人撰写和印刷反对宗教和国王权威的文章，都将被处以极刑”。《社会契约论》一问世便遭到日内瓦和巴黎当局的查禁，卢梭也遭到通缉捉拿，从此开始长达八年颠沛流离的驱逐生活，受到当时主流社会的谴责唾弃，连伏尔泰也认为《社会契约论》是部“反社会契约论”。直到1778年他在埃默农维尔悲凉去世时，对他的逮捕令依然没有撤销。他一生坚持独立的思想，拒绝了国王赐给的年金与俸禄，用生命践行了自己的誓言“我把我的一生献给真理”。

正如尼采所说：“我的时代还没有到来，有些人是为后世而生的。”在卢梭死后的第11年，法国大革命爆发，《社会契约论》被奉为革命者的宝典，卢梭遗骸也于1794年被请进了巴黎先贤祠。今天，在法国国民议会大厅中，卢梭的半身像与美国开国领袖华盛顿及富兰克林的塑像相对而立。卢梭的作品不断被编辑出版，为人们所热读，为学者所研究，直到今天还在不断被引用着和争论着。列夫·托尔斯泰说，卢梭是不老的。卢梭不仅是伟大的思想家，也是浪漫主义文学家，他的文字充盈着抑制不住的热情和激昂。有学者认为，卢梭以充满感情的语言，进

入非感情的维度，他能把远远超过语言速度的混沌意念生生表达出来，他抗拒当下学术规范的客观、冷静、精确的标准，他的作品用热情表达着逻辑和理性，并在不知不觉中说服你。(1)

卢梭本人并非没有争议，美国政治学家萨拜因曾评价过这个有偷盗、撒谎和暴露恶习的卢梭，认为他“把过错归罪于社会，这样既可满足他对恶谴责的需要，又可把自己掩藏在神话的安慰之中”(2)。然而事实上，我们看到和听到的关于卢梭卑微、猥琐的一面，都是来自卢梭的自传与反省，他这样做的时候所表现出的那种忠于自己的主观真诚和个性自由，在不知不觉中完成了一次“否定之否定”的升华，显示了一种非凡的人格力量，这种力量不是完美而是真实和勇气。这不仅没有诋毁卢梭的形象，反而让我们愈加感受到他的伟大和质朴。当他并不想把自己打扮成历史伟人的时候，他成了真正的历史伟人。

二、《社会契约论》产生的社会背景与思想理论渊源

卢梭所在的时代是一个变革的时代。生产力的发展和自然科学领域的成就，使宣扬“理性、科学与进步”的启蒙思想和启蒙运动迅速波及了英国、法国、德国、俄国、荷兰、比利时等国。当时的法国封建等级森严，资产阶级在经济上虽然相当富有和强大，但在政治上却长期处于无权的地位，为了发展资本主义生产，要求对经济关系和上层建筑实行全面变革。而意识形态领域波澜壮阔的反封建反宗教的“启蒙运动”为这场行将到来的政治大革命进行了思想准备。法国的启蒙运动与其他国家相比，声势最大，战斗性最强，影响最深远。

法国的启蒙运动在自然科学和社会科学的各个领域，产生了一批伟大的著作，向人们提供了最新的科学知识和最先进的思想观念，从根本上动摇了封建专制和教会统治的思想基础。卢梭和启蒙时代的其他思想家一起，为推翻封建专制制度做出了各自独特的贡献。这位信奉古典智慧的政治哲人一路批判承继了柏拉图、亚里士多德、普鲁塔克、霍布斯、斯宾诺莎、洛克等人言说，在古希腊城邦理念、古罗马共和国精神、古典自然法学说和近代国家主权理论的基础上，提出了在现代社会中最大程度实现人之平等自由的理想政治方案。但卢梭与以伏尔泰和“百科全书派”为代表的启蒙阵营存在重大分歧，对启蒙分子轻率的贬古颂今

表现出极端的不屑。(3)启蒙时代的思想家大都深信科学文明与资本主义自由经济会带来社会进步，他们把社会进步设想为连续上升的链条，高举科学的旗帜，以人类的理性权威批驳和取代情感表达和宗教权威。然而卢梭以古典哲学的眼光来处理启蒙时期的问题，他认为任何使人类偏移自然本性的权威都是恶的根源，人类一旦成为理性的奴隶，和受神权摆布同样可悲。在此意义上，德国哲学家卡西勒指出，卢梭是以分裂的形式属于启蒙阵营的。他认为卢梭移动了启蒙的重心，攻击了启蒙运动的前提——科学、理性和进步，使各种差异思想在批判辩论中丰厚饱满起来，欧洲社会也因此经“差异”和“批判”的涤荡，开始了由古典向现代的转型。(4)正因为如此，哲学史界通常认为，卢梭是启蒙运动中思想最深刻、最富现代精神的哲学家。列奥·施特劳斯更是认为，卢梭在回归古典的同时却又推进了现代性，在反启蒙时成就了“第一次现代性的危机”。(5)

三、《社会契约论》的行文框架和逻辑结构

《社会契约论》是一部政治哲学著作，卢梭在结束语中表明其探讨的是政治权利的原理，主旨是为建立人民民主主权奠定理论基础。(6)

《社会契约论》分为四卷48章，篇幅简短，增加了阅读和理解的难度，但是每章主题突出，卷章之间过渡自然，逻辑性强。

卢梭从人性本善和自由平等的自然状态出发，描述了原始状态及其必然瓦解之后，人们为了自我保存而以某种形式联合起来，希望回答生存在社会制度下的人类通过什么途径，实现政治社会中的自由。但是卢梭的问题并不是“什么是最佳的政治秩序”，而是“什么能使一个政治社会具有合法性”。他否定了因强力、父权、战争和自然优势而形成的统治合法性，得出“合法的政治权威只能通过约定产生”的结论。他指出，这种约定即全体个人将自己的一切权利全部、毫无保留地奉献给整个集体而形成一个人格，即主权者或共和国这样一种结合形式，旨在实现“人们在力量或智慧上可能不平等，但社会与法律权利上必须一律平等”。

于是他继续探讨主权的性质、边界、表现及具体承担者，一方面论述主权者表达意志（公意）的工具——法律和立法者的应然状态，一方面论述主权者实施行为的力量及其代理——行政和政府的性质和类型。

接下来，卢梭郑重得出了一个结论，政府的创建绝不是一项契约，而是一项法律，是法律的制定与执行。契约有且仅有一项，即最初结合成为主权者的契约，这样论述的目的是为了将政府与主权者予以区分，防止政府篡夺主权权力，从而说明政府和行政官吏不是凌驾于人民之上的主人，而是人民任命的，人民既可以委任他们，也可以撤换他们。卢梭强调，如果政府篡夺了人民的主权，破坏了社会契约，损害了人民的利益，人民就有权用暴力推翻它。

在主权形式层面，卢梭认为民主制主权，即人民作为主权者的国家是唯一合法的政治制度。而在讨论政府形式时，卢梭认为君主制政府、贵族制政府和民主制政府中的某一种并不优越于另一种，君主制、贵族制并不比民主制具有更少的合法性。他试图表明他的政治权利原理学说能与所有的政府形式相协调。甚至，他认为严格意义上的民主制作为一种政府管理形式在现实中是不存在的，他所推崇的是有混合性质的选举贵族（精英）制，原因在于其能避免民主制的一个重要缺陷，即贵族制下的政府是一个与人民主权不同的人格体，政府号令人们的权力完全是来自它对行使主权者职能的人民的服从。它与一个完全的民主制秩序相比，需要较少的和较低标准的社会美德和公共精神。

对于如何维护主权者的权威，卢梭指出主权不可转让、不可分割、不可毁灭、不可代表，它只能栖居在定期集会的人民那里。他以罗马政府为例，介绍了举行人民大会的方式和不同情形下投票程序问题。他进一步指出，“当人民合法地集合而成为主权者共同体（人民大会）的那个时刻，政府的一切权限便宣告终止，行政权中断”，因为在这样的集会上，现行政府形式的存续，以及那些当政的人对行政权力是否应继续行使，都被纳入提问的范围。而卢梭也承认，建立在直接民主基础上的人民主权只在小的国家具有现实可能性。因此他仍然延续什么是合法政体而非最佳政体的论题，宣称只对可设想的范围内的“人类的实际情况”所遵守的法律进行考虑，意在保证其建立的合法性标准具有可行性。

最后，卢梭跳出主权的制度框架，探讨了如何巩固国家主权和体制、避免人民受到自身腐化危害的途径，阐述了几种不同于主权者并且某种程度上高于主权者的制度设计，即保民官制、紧急状态独裁制、监察官制和公民宗教，并强调宗教不仅能够而且应当作为一个合法的组

成部分纳入政治共同体，以维护社会契约、公意和主权。

四、对中西方理论与实践产生的影响

《社会契约论》是卢梭最为深刻和成熟的政治理论著作，是世界政治学说史上最著名的经典文献之一，标志着人类民主思想发展的一个重要阶段。其中关于人民主权的思想，是他激进的资产阶级民主主义思想的重要体现，也是他的政治思想中最有价值的内容。一方面，平等、自由的思想指引了法国资产阶级革命，成为法国大革命的精神旗帜⁽⁷⁾；人民主权的思想写入了1793年《法国宪法》⁽⁸⁾、1776年美国《独立宣言》，对英美政治制度的确立产生了重要影响。另一方面，卢梭社会契约理论中对文明异化和道德堕落的警觉、对人性 and 公民宗教问题的关注，为西方近现代哲学发展做出了重大贡献。德国哲学家黑格尔⁽⁹⁾、费尔巴哈等人曾深入探讨了卢梭所提出的异化问题，恩格斯⁽¹⁰⁾、费切爾⁽¹¹⁾等马克思主义学者也注意到了社会契约论中的自由和平等观念。甚至，卢梭的思想和语言风格还影响了歌德、席勒、托尔斯泰、拜伦、雪莱等人的文学作品。⁽¹²⁾这些为推进人类政治文明、启发哲学思维与革新文学风格发挥了重要作用。

卢梭身后的时代，无论是政坛还是学界，都无法回避卢梭的光芒。法国大革命时期领袖人物发表的文章和演讲中，引用次数最多的就是卢梭在《社会契约论》中“人生来是自由的”的论点。根据国民公会颁布的法令，卢梭的遗骸在1794年10月11日迁入了巴黎的先贤祠。在移葬仪式上，国民议会主席高调地宣布：我们的道德、风俗、法律、情感和习惯有了有益健康的改造，应该归功于卢梭。自称他的学生的雅各宾派革命领袖罗伯斯庇尔在演说中说：“他是这场革命的前驱，而革命又把他送进先贤祠。”应该说，卢梭逝于法国大革命爆发前11年，大革命并不是他和他的《社会契约论》直接发动或煽动起来的，但《社会契约论》对其爆发和发展起到了催化和推动作用世所公认的。卢梭民主政治的原则，成为当时法国家喻户晓的真理。拉卡纳尔写道：“从一定意义上来说，革命替我们阐明了《社会契约论》。”⁽¹³⁾法国评论家斯塔尔夫人在其《论文学》里对卢梭的思想给予了很高的评价，她认为：“卢梭的平等思想比对自由的热爱掀起了更大的风暴，启发出性质完全不同的许多问

题，通过人性中的善或恶而牢牢地攫住了人心。”俄国社会民主工党领袖普列汉诺夫对这位“天才的作家”在他的时代展示出的历史唯物主义思想和辩证的方法论给予了高度评价。⁽¹⁴⁾在德国哲学家康德的书房里，唯一的装饰品就是墙上的卢梭肖像，康德谈到卢梭对他的影响时说：“卢梭是指引我的第一人，对我思想的基本倾向有着决定性影响，他使我学会了尊重人性。”这位理性主义大师高度评价了卢梭的“批判理性”精神，称之为“精神世界的牛顿”。⁽¹⁵⁾正如歌德所说的那样：“伏尔泰结束了一个时代，而卢梭则开始了一个时代。”

于中国而言，卢梭充当了资产阶级民主革命的号角，引领了中国近代民权斗争与革命。1877年黄遵宪出使日本时，民权思想在日本国内正如火如荼。黄遵宪“取卢梭、孟德斯鸠之说读之，心志为之一变，以谓太平世必在民主”⁽¹⁶⁾。自1896年起，以学界巨擘严复、梁启超为首，晚清知识界纷纷撰文推介、评论卢梭学说。梁启超曾评价《社会契约论》，“自此说一行，欧洲学界，如旱地起一霹雳，如暗界放一光明，风驰云卷，仅十余年，遂有法国大革命之事”，并把卢梭称之为“近世真民主主义开山鼻祖”⁽¹⁷⁾。1898年上海同文译书局刻日本中江笃介汉译第一卷《民约通义》，成为中国最早的《民约论》汉译本。革命烈士邹容在1903年《革命军》中写道：“夫卢梭诸大哲微言大义，为起死回生之灵药，返魂还魄之宝方。”正当晚清学界推介卢梭学说如火如荼时，最先倡导卢梭学说的梁启超却改变了态度，认为“从卢梭之言，则革命终无个止之时”。然而，这股革命之火一旦燃烧起来，并不能就此熄灭。孙中山就任中华民国临时大总统时宣誓，“颠覆满清专制政府，巩固中华民国，图谋民生幸福，此国民之公意”。其中的“公意”正是卢梭的概念。

五、西方学者对其观点解读与评价

中外学界对卢梭及其作品思想重要意义和价值的肯定自不待言，但不同学者对卢梭的认识和具体评价并不相同，对其观点进行批判的学者也不在少数。有学者认为卢梭虽然富于激情雄辩⁽¹⁸⁾，但常常陷于自相矛盾和混乱⁽¹⁹⁾，常常用不同的词语表达相同含义的术语和概念。有学者认为卢梭是极端理性主义者⁽²⁰⁾，企图用理性和制度来创建国家。有学者认为卢梭过于狂妄和理想，描绘的是一个不可能在现实中存在的社会⁽²¹⁾。

有学者⁽²²⁾严厉批评他是极权主义的源头，认为追求纯粹的公意容易为集权专制所利用。还有学者认为他是宣扬无政府主义的个人主义者⁽²³⁾。我们并不评论这些说法在多大程度上能站住脚，是不是真正读懂了或用对了卢梭本意⁽²⁴⁾，是不是理解了他作品中的隐喻修辞和言说对象转换，是不是注意到他不同的作品之间暗含的关联，是不是对这位善于雄辩、激情洋溢的作者在细节上过于苛刻。在这里，引用罗尔斯曾说过一段话最合适不过，“原著是务必为人所知、所尊重的东西。我总是理所应当认为，我们正在研究的这些人物比我要聪明得多，如果不是这样，我为什么要他们在他们身上浪费我和同学们的时间呢？如果我在他们的论证中发现了一个错误，我便假定他们也发现了它，并且确信他们已经对它作出了处理。我不愿向这些榜样们提出反对意见；因为那样做太容易，而且会忽视一些重要的东西。”

随着对卢梭思想研究的深入，学界倾向认为，卢梭的思想并非混沌矛盾，它具有连贯性。20世纪初，西方的卢梭研究者曾有一个重要的发现，那就是过去的研究者一直忽略了卢梭本人的看法，卢梭作品之间存在着系统性和整体性。⁽²⁵⁾卢梭曾在《一本书的写作》中向后来的读者指明了走向其思想的门径：要格外小心作品之间的内在关联，他会将那些想要告诉特定读者的智慧包裹起来，散置在不同的作品之中，期待有心人将这些散落的珍珠串起来，直至揭开面具看到真相。⁽²⁶⁾如在《社会契约论》的前言部分，卢梭就明确说过：“这篇简短的论文，是我以前不自量力从事而后来又久已放弃的一部长篇著作的撮要。”可以说，卢梭几乎所有的作品都连贯地表达出，任何使人类偏移自然本性的权威都是恶的根源，他不仅认为人生来善良，而且认为人生来自由。他从教育（《爱弥尔》）、文学（《新爱洛漪丝》）和政治（《社会契约论》）等不同的角度，勾画了自己的“理想社会”，围绕如何在脱离自然状态的情况下，以社会美德替代自然美德，重新获得那原本天真淳朴的自然人才有的幸福处境，表达了对个性自然发展、对纯真爱情的追求和建立平等和契约基础上的公民主权国家的信念，这充分体现了其思想的连贯性。恩格斯曾说过，卢梭的思想按其本质来说，是辩证统一的。

我们知道，卢梭对自然状态的描绘是希望从现存的状态来反省、回顾人类社会发展的历程。它不是一种关于存在是什么，而是关于存在应

当是什么的理论。卡西勒说：卢梭试图把伽利略在研究自然现象中所采取的假设法，引入到道德科学的领域中来，他深信只有靠这种假设和有条件的推理方法，我们才能达到对人之本性的真正理解。⁽²⁷⁾但是我们也承认，卢梭过分相信甚至神化了善的情感在个人行为和社会政治生活中的作用，而忽略了从恶的方面考虑问题，忽略如何用合适的手段追求美好的理想。同时，卢梭作为18世纪法国资产阶级思想家，他的思想中也不可避免地带有那个时代资产阶级印记，正如恩格斯所指出的，卢梭的社会契约在实践中表现为，而且也只能表现为资产阶级的民主共和国。⁽²⁸⁾可以说，如何以恰当的途径实现“主权在民”和“维护公意”的美好理想，如何设计出政治体制和具体可操作制度，使权力之间相互制衡、相互监督，避免恶行、防止暴政，并由这“美化、抽象、虚幻”的“人民”最终落实到每一个个人身上，使个体权利不被国家主权架空，使他的利益和理想都能得以实现，这是卢梭留给我们的思考，是人类政治生活中的不可回避的重要课题。

(18) 拜伦称之为“自我折磨的诡辩家、狂野的卢梭”。休谟认为，“卢梭的著作里却是满是夸诞之词，我无法相信单凭滔滔雄辩就能支撑起他的著作”（J. Y. T. Greig: *The Letters of David Hume*, Oxford: Clarendon Press, 1932,, p.103）。

(19) 欧内斯特·巴克认为，卢梭的思想无法找出一个核心，无论是左派也好，是右派也罢，在卢梭那里都能找到你自己的教条（Introduction to *Social Contract*, New York: Oxford University Press, 1948, p.XXXVIII）。

(20) 埃德蒙德·柏克将卢梭描绘为“典型的经院哲学家”、“理性时代的化身”。

(21) 约翰·莫利指责卢梭无视历史与经验，假设推论荒唐透顶（John Morley:

(22) 罗素认为浪漫主义的卢梭能够引起中下阶级的共鸣，但其论述却缺少逻辑性和理性分析，以激昂的口号打动人，施行起来却依据不足，难免成为新极权主义的精神偶像，由此通向纳粹法西斯之路。梅因认为《社会契约论》导向了换汤不换药的“君权神授说”。巴克认为，归根结底卢梭是一个极权主义者，他完美的民主是一种多元的独裁。

(23) 伏汉、埃米尔·法盖、亨利·塞经等学者认为，卢梭是一名个人主义者，《社会契约论》意味着个人主义的极端形式（C. E. Vaughan(ed.): *The Political Writings of Jean Rousseau*, 2 vols., Cambridge: Cambridge University Press, 1915, p.I）。参见 [德] 恩斯特·卡西勒著，[美] 彼得·盖伊编，王春华译：《卢梭问题》，4页，南京，译林出版社，2009。

(24) 彼得·盖伊指出，给评论者造成困难的，正是卢梭的雄辩。这些语句放在上下文阅读时，通常能被其所嵌入的论述阐述明白，而脱离了上下文，其言辞上的感染力就掩盖了它们仅仅是只言片语这一事实。被当做口号来使用时，他们就歪曲了或者完全破坏了卢梭的本意。

(25) 朗松、赖特、卡西勒、哈拉尔德·科尔等一批学者认为，虽然卢梭的一些说法自相矛盾，但这些语句上的自相矛盾并不损害卢梭思想大方向的贯通一致。

(26) 黄群：《如何阅读卢梭》，载《中国图书评论》第四期，87—91页。

(27) 参见 [德] 恩斯特·卡西勒著，[美] 彼得·盖伊编，王春华译：《卢梭问题》，91页，南京，译林出版社，2009。

(28) 恩格斯在《反杜林论》的引论初稿里写道，启蒙思想家所曾梦想的“这个理性的王国”，不是别的，正是“资产阶级理想化的王国”。理性的国家，卢梭的“社会契约”，在时间上已经成为而且只能成为资产阶级的民主共和国。

FOREWORD

This little treatise is part of a longer work⁽¹⁾ which I began years ago without realising my limitations, and long since abandoned. Of the various fragments that might have been extracted from what I wrote, this is the most considerable, and, I think, the least unworthy of being offered to the public. The rest no longer exists.

(1) 这部巨著指的是卢梭1743年左右在威尼斯时开始构思的《政治制度论》，当时他发现，“这个被人如此夸耀的政府，竟有那么多毛病。而这一切都从根本上与政治相联系；不管你怎么做，任何一国的人民都只能是他们政府的性质将他们造成的那样；因此，‘什么是可能的最好的政府’这个大问题，只能是‘什么样的政府性质能造就出最有德行、最开明、最聪慧，总之是最好的人们’这样一个问题。而这个问题又可以引出‘哪种政府在性质上最彻底地实现纯粹由法律来统治’此类问题”。参见[法]卢梭著，范希衡等译：《忏悔录》，382页，北京，人民文学出版社，1992。——此类注释为导读作者所加。

第一卷

导读

第一卷描述了人类的原始自然状态，然后批驳了政治权威建立在强力、奴役、战争等基础上的观点，指出人类结成政治社会真正的基础，说明合法的政治权威是如何通过社会契约而形成的。

人性本善和自由平等的自然状态是《社会契约论》立论的基点，卢梭曾在《论科学与艺术》和《论人类不平等的起源和基础》中对人性层层剖析，细致描述了超越历史善恶的人类原始状态和自然属性，提出自然状态的人比社会状态的人更加幸福的观点。

在第一卷卷首，卢梭开宗明义地指出，“人生来是自由的”。在自然状态中，没有善恶之分，人的自然差别不会引起任何社会后果。“而无往不在枷锁之中”，在由自然人到社会人这个不可逆转的过程中，自然的不平等由于人为的不平等而加深了，同时人还失去了天然自由，套上了枷锁。卢梭明确表明，他并不是在探讨如何能够解除人们身上的政治枷锁，重新恢复他们的天然自由，他要论证的是，如何使他们身上的枷锁合法化。

在第二章至第五章，卢梭批判了格劳秀斯、霍布斯、洛克等人描述的自然状态和政治社会基础。他指出，格劳秀斯以奴隶制存在的事实推理方法，不足以证明统治权力建立在人与人不平等的基础上，亚里士多德认为“有些人生来就是做奴隶的”则倒果为因，实际是“强力造出了最初的奴隶，他们的懦弱则使他们永远当奴隶”。转让、奉送自己的人身自由这样的行为如果只是对方受益，得不到任何好处和回报，也不是合法权威的基础。父权、战争、奴役和强力只是一种物理力量，不具有合法性和延续性，都不构成权力，对其屈服也不能构成义务，而人们只是对合法的权威才有义务服从。因此，人与人之间只有用约定才能作为一切合法权威的基础。

在第六章至第九章，卢梭指出人类的发展进程，使得人们为了自我保全，必须摒弃天然自由来结成政治社会。“把人聚合在一起的方法有千

百种，但把人结合在一起的方法却只有一种。”这条唯一合法的路径便是通过社会契约，即“创建一种能以全部共同的力量来维护和保障每个结合者的人身和财产的结合形式，使每一个在这种结合形式下与全体所联合的人所服从的只不过是他本人，而且同以往一样的自由”，以约定的自由取代天然自由。人们订立社会契约的根本目的，就是为了保障每一个订约者的自由、平等、人身和财富。

卢梭强调社会契约的订立，首先是每个人把自己奉献给集体，其次这种转让是毫无保留的，最后每个人都是把自己奉献给全体而不是任何个人。这样，社会公约就能化约为，“我们每个人都把自身和一切权力交给公共，在公意的最高指导下，将共同体的每一个成员都作为全体中不可分割的一部分看待”。这样一个由全体个人联合起来的共同体和公共人格，便是共和国或政治体。在这里，卢梭对主权者、公民、臣民做了区分。卢梭还指出了社会契约的基础性和强制性属性，即只有它才能使其他约定具有效力，并且整个共同体可以强迫拒不服从公意的人服从公意。

卢梭描述了人们结成社会契约后的状态，他的能力得到锻炼，眼界开阔了，感情高尚了，心灵提升了，甚至还获得了控制自己冲动和意志的道德上的自由。人们因社会契约而损失的，是他们天然的自由和企图并能够取得一切东西的无限权力，而他们得到的，是社会的自由和他们对自己所拥有的一切东西的所有权。财产权的形成是根据社会契约而形成的一项重要权利，卢梭认为，它使人们在契约共同体中取得了对财富的合法占有，赢得了国家所有成员对该占有的尊重，并获得了国家以全部力量使其不受外邦人侵犯的保证。

在本卷的最后，卢梭对社会契约的意义提出了非常深刻的见解，认为基本的公约不仅没有摧毁自然的平等，反而以道德的和法律的平等，来代替自然所造成人与人之间的身体上的不平等，因而，虽然人与人之间在体力和智力上不相等，但由于公约和权利的保证，他们人人都是平等的。

BOOK I

I MEAN to inquire if, in the civil order, there can be any sure and legitimate rule of administration, men being taken as they are and laws as they might be. In this inquiry I shall endeavour always to unite what right sanctions with what is prescribed by interest, in order that justice and utility may in no case be divided.

I enter upon my task without proving the importance of the subject. I shall be asked if I am a prince or a legislator, to write on politics. I answer that I am neither, and that is why I do so. If I were a prince or a legislator, I should not waste time in saying what wants doing; I should do it, or hold my peace.

As I was born a citizen⁽¹⁾ of a free State, and a member of the Sovereign, I feel that, however feeble the influence my voice can have on public affairs, the right of voting on them makes it my duty to study them: and I am happy, when I reflect upon governments, to find my inquiries always furnish me with new reasons for loving that of my own country.

第一章 第一卷的主题

“人生来是自由的，却无处不在枷锁之中”，这为后来革命者和思想家们频繁引用的一句话，是卢梭思想的高度浓缩，是贯穿他所有作品的一根红线。要真正明白这句话，就不能不认真研读卢梭的其他几本在思想史上同样举足轻重的著作。《论人类不平等的起源》描述了自然状态是如何美好、平等与自由，人们又是如何进入社会这个枷锁；《论科学与艺术》告诉人们滥用的科学是如何弱化了人的行为能力，刻意雕琢的艺术如何使人失去了淳朴；《爱弥尔》告诉人们错位的教育将如何扭曲人性，崇尚自然和天性的教育将如何使成长受益。

卢梭想要表达，在人无法抗拒地进入社会状态后，必然会失去天然自由与平等，戴上随着社会进步带来的重重枷锁。卢梭笔下的自然状态也许并非真实存在的历史阶段，但它是卢梭对社会现状和文明人的属性层层剥析后得出的一个逻辑结论，也是本书论证的一个逻辑前提。卢梭在此明确指出，他不是在探讨如何能够解除人们身上的政治枷锁，重新恢复他们的天然自由，他要论证的是，如何使他们身上的枷锁合法化，如何取得社会自由。同时，强力等任何来自自然的力量都不能使政治权威合法化，只有“建立在特殊约定基础上”的政治秩序才是合法的。

1 . SUBJECT OF THE FIRST BOOK

MAN is born free⁽²⁾; and everywhere he is in chains. One thinks himself the master of others, and still remains a greater slave than they. How did this change come about? I do not know. What can make it legitimate? That question I think I can answer.

If I took into account only force, and the effects derived from it, I should say: “As long as a people is compelled to obey, and obeys, it does well; as soon as it can shake off the yoke, and shakes it off, it does still better; for, regaining its liberty by the same right as took it away, either it is justified in resuming it, or there was no justification for those who took it away.” But the social order is a sacred right which is the basis of all other rights. Nevertheless, this right does not come from nature, and must therefore be founded on conventions. Before coming to that, I have to prove what I have just asserted.

第二章 论原初社会

君主专制在18世纪的欧洲普遍存在，其理论基础是“君权神授”，以英国人费尔默的《父权制》为代表，认为政治权力的由来应追溯到父亲对儿女的权威，在《创世纪》中神将王权交给了亚当，并由亚当下传给他的历代继承人，最后到了近世各君主手中。这将君主专制、父权权威鼓吹至极致。卢梭通过描述原始社会的家庭状态，来批驳父权制是专制社会和政治权威来源的观点。在《论人类不平等的起源》中卢梭写道：“很多学者认为专制政治和整个社会都是从父权中延伸出来的，但其实世界上没有比父权的温和与专制政治的残暴差别更大的了。依照自然法，父亲只有在子女还需要他的扶助的时候，他才是子女的主人。一旦子女能够独立生活，他们的地位就平等了，此时子女对父亲就只有尊敬的义务而没有服从的义务。因此，我们不能说文明社会是从父权派生出来的，相反地，却应该说父权是从文明社会汲取了它的主要力量。”

卢梭还批驳了关于政治社会合法性建立在奴役、天然优势、个人优秀品质等基础上的观点。格劳秀斯在其《战争与和平法》中提出，有些权力本身就是为了有利于统治者而设立的，如奴隶主对奴隶的权力。卢梭认为其这种以事实来确定权力的推理方法证明力不足。亚里士多德认为人不是天然平等的，有些人生来就是做奴隶的，而另一些人生来就是统治的。卢梭对此一针见血地指出，这是把因果关系颠倒了，是强力造出了最初的奴隶，而他们的懦弱使他们永远当奴隶。对此，卢梭在《论人类不平等的起源》第二部分有非常精彩的评析，“自由也和天真、美德一样，人们只有在切身享受到它的时候才会感觉到它的价值，一旦失去了，便也丧失了对它们的兴趣。我们不应当根据被奴役人民的堕落状态，而应当根据一切自由民族为反抗压迫而作出的惊人事迹，来判断人的天性到底是甘受奴役还是向往自由”。

2 . THE FIRST SOCIETIES

THE most ancient of all societies, and the only one that is natural, is the family: and even so the children remain attached to the father only so long as they need him for their preservation. As soon as this need ceases, the natural bond is dissolved. The children, released from the obedience they owed to the father, and the father, released from the care he owed his children, return equally to independence. If they remain united, they continue so no longer naturally, but voluntarily; and the family itself is then maintained only by convention.

This common liberty results from the nature of man. His first law is to provide for his own preservation, his first cares are those which he owes to himself; and, as soon as he reaches years of discretion, he is the sole judge of the proper means of preserving himself, and consequently becomes his own master.

The family then may be called the first model of political societies: the ruler corresponds to the father, and the people to the children; and all, being born free and equal, alienate their liberty only for their own advantage. The whole difference is that, in the family, the love of the father for his children repays him for the care he takes of them, while, in the State, the pleasure of commanding takes the place of the love which the chief cannot have for the peoples under him.

Grotius denies that all human power is established in favour of the governed, and quotes slavery as an example. His usual method of reasoning is constantly to establish right by fact.^[1] It would be possible to employ a more logical method, but none could be more favourable to tyrants.

It is then, according to Grotius, doubtful whether the human race

belongs to a hundred men, or that hundred men to the human race: and, throughout his book, he seems to incline to the former alternative, which is also the view of Hobbes. On this showing, the human species is divided into so many herds of cattle, each with its ruler, who keeps guard over them for the purpose of devouring them.

As a shepherd is of a nature superior to that of his flock, the shepherds of men, i.e., their rulers, are of a nature superior to that of the peoples under them. Thus, Philo⁽³⁾ tells us, the Emperor Caligula⁽⁴⁾ reasoned, concluding equally well either that kings were gods, or that men were beasts.

The reasoning of Caligula agrees with that of Hobbes and Grotius. Aristotle, before any of them, had said that men are by no means equal naturally, but that some are born for slavery, and others for dominion.

Aristotle was right; but he took the effect for the cause. Nothing can be more certain than that every man born in slavery is born for slavery. Slaves lose everything in their chains, even the desire of escaping from them: they love their servitude, as the comrades of Ulysses⁽⁵⁾ loved their brutish condition.^[2] If then there are slaves by nature, it is because there have been slaves against nature. Force made the first slaves, and their cowardice perpetuated the condition.

原始社会：卢梭笔下的自然状态自由、平等、美好，他认为人在无法抗拒地进入社会状态后，必然会失去天然自由和平等。

I have said nothing of King Adam⁽⁶⁾, or Emperor Noah⁽⁷⁾, father of the three great monarchs who shared out the universe, like the children of Saturn, whom some scholars have recognised in them. I trust to getting due thanks for my moderation; for, being a direct descendant of one of these princes, perhaps of the eldest branch, how do I know that a verification of titles might not leave me the legitimate king of the human race? In any case, there can be no doubt that Adam was sovereign of the world, as Robinson Crusoe was of his island, as long as he was its only inhabitant; and this empire had the advantage that the monarch, safe on his throne, had no rebellions, wars, or conspirators to fear.

第三章 论最强者的权利

父权制不是政治权威的合法性来源，那么力量最强者是否就拥有合法的政治权威？卢梭对此坚定地给予否定。他举出两点理由：首先，强力是物理力量，屈服强力是被迫的行为而不是意志行为，不具有道德属性，不能构成义务。其次，强力不可持续，一旦人们发现不服从并不会受到惩罚，他们便会正大光明地不再服从。当强力不具有道德性时，它便不可能是合法权威。卢梭在《论人类不平等起源中》写道，最强者的权利本来就是一种讥讽，因而仅仅强调赤裸裸的强力构成政治统治正当性的理论骗不了几个人。于是他继续追寻与论证，什么才是合法的政治权威。

3 . THE RIGHT OF THE STRONGEST

THE strongest is never strong enough to be always the master, unless he transforms strength into right, and obedience into duty. Hence the right of the strongest, which, though to all seeming meant ironically, is really laid down as a fundamental principle. But are we never to have an explanation of this phrase? Force is a physical power, and I fail to see what moral effect it can have. To yield to force is an act of necessity, not of will—at the most, an act of prudence. In what sense can it be a duty?

Suppose for a moment that this so-called “right” exists. I maintain that the sole result is a mass of inexplicable nonsense. For, if force creates right, the effect changes with the cause: every force that is greater than the first succeeds to its right. As soon as it is possible to disobey with impunity, disobedience is legitimate; and, the strongest being always in the right, the only thing that matters is to act so as to become the strongest. But what kind of right is that which perishes when force fails? If we must obey perforce, there is no need to obey because we ought; and if we are not forced to obey, we are under no obligation to do so. Clearly, the word “right” adds nothing to force: in this connection, it means absolutely nothing.

Obey the powers that be. If this means yield to force, it is a good precept, but superfluous: I can answer for its never being violated. All power comes from God, I admit; but so does all sickness: does that mean that we are forbidden to call in the doctor? A brigand surprises me at the edge of a wood: must I not merely surrender my purse on compulsion; but, even if I could withhold it, am I in conscience bound to give it up? For certainly the pistol he holds is also a power.

Let us then admit that force does not create right, and that we are obliged to obey only legitimate powers. In that case, my original

question(8) recurs.

第四章 论奴隶制度

卢梭指出，人与人之间只有用约定作为一切合法性权威的基础。那么人与人之间为什么不能约定转让或放弃自己的自由呢？格劳秀斯和普芬道夫认为这没有什么不妥。

格劳秀斯认为，既然根据希伯来法和罗马法，容许个人卖身为奴，为什么就不能容许所有人将统治权转让给一个人或若干人？卢梭对此批驳道：臣民转让自己的自由没有合理性。他们既不是为了获取生活用品，相反还要向君主提供生活供给，也不能安享安全太平，因为君主的野心和贪婪很可能使他们遭受战争。并且在政治社会中，太平的生活与自由的生活相比较，后者更为重要。在此卢梭列举了西克洛甫吃人洞穴的例子来说明这一点。由此，卢梭得出：转让自由的行为不符合人的理智，是疯狂的行为，不能构成权利来源。

普芬道夫则认为自由和财产一样，是能够放弃的，“人可以根据协议和契约把自己的财产让与别人，同样也可以为了他人的利益而放弃自己的自由。”卢梭认为此种推理很不合理，他在《论人类不平等的起源》中作了反驳：首先，我把财产让与别人之后，这项财产就与我无关了，即使别人滥用，我也不必负什么责任。但是，人们要滥用我的自由则不可能与我无关，我很可能沦为别人犯罪的工具。此外，所有权不过是一种协议和人为的制度，人人能够随意处分他所有的东西。但是上天赋予我们的生命和自由，则不能与此并论。一个人抛弃了自由，便贬低了自己的生命，抛弃了生命，也就丢掉了自己的性命。无论以任何代价抛弃自由和生命，都是违反自然和理性的。

卢梭继续以退为进，他说即使每个人能够转让他自己，也不能转让他的孩子。在《论人类不平等的起源》中他这样论证：子女们的自由是天赋的，父母没有任何权利剥夺他们这种天然禀赋。因此，奴隶制的建立必然违反自然，只有改变自然和天性，奴隶制才能永存下去。法学家们宣布奴隶的孩子生下来就是奴隶，等于在说，人生下来就不是人。

在本章，卢梭还批驳了格劳秀斯等人关于战争和所谓征服

权是统治合法性来源的观点。一些理论家认为，战胜者有处死战败者的权利，战败者能转让自己的自由以获得存活，这样战胜者也就取得了统治战败者的理由。卢梭认为，这种理论是荒谬的。首先，在自然状态中和在“一切都处于法律权威之下”的社会状态中都不存在战争状态，因为在前一种状态中人与人之间没有经常性的联系，不会成为仇敌，在后一种状态中，人与人之间的一切关系都有了法律规定，也不可能产生战争状态。战争只能出现在民族、国家之间，而不能出现在任何一方是个人的情况下。真正的战争，不能产生与其目的无关的权利，没有赋予战胜者生杀权，以生杀权为基础的奴役权就更加不存在了。同时，在征服民族与被征服民族之间，除非被征服民族获得完全的自由，选择征服者作为自己的首领，否则，他们就仍然处在战争状态中。即使签订条约，被征服者对条约的服从也只是权宜之计。如此建立的统治基于暴力而非基于人的自由，因而这并不证明征服者拥有政治统治的合法性。

经过以上论证，卢梭得出一个结论：自由不能转让和放弃，奴役根本不可能成为一种合法权力。如果一项契约只约束一方，所有义务由一方负担，而另一方没有任何义务，从而使负担义务的一方完全处于不利的地位，那么这项契约是荒唐无效的。

4 . SLAVERY

SINCE no man has a natural authority over his fellow, and force creates no right, we must conclude that conventions form the basis of all legitimate authority among men.

If an individual, says Grotius, can alienate his liberty and make himself the slave of a master, why could not a whole people do the same and make itself subject to a king? There are in this passage plenty of ambiguous words which would need explaining; but let us confine ourselves to the word *alienate*. To alienate is to give or to sell. Now, a man who becomes the slave of another does not give himself; he sells himself, at the least for his subsistence: but for what does a people sell itself? A king is so far from furnishing his subjects with their subsistence that he gets his own only from them; and, according to Rabelais⁽⁹⁾, kings do not live on nothing. Do subjects then give their persons on condition that the king takes their goods also? I fail to see what they have left to preserve.

It will be said that the despot assures his subjects civil tranquillity. Granted; but what do they gain, if the wars his ambition brings down upon them, his insatiable avidity, and the vexations conduct of his ministers press harder on them than their own dissensions would have done? What do they gain, if the very tranquillity they enjoy is one of their miseries? Tranquillity is found also in dungeons; but is that enough to make them desirable places to live in?⁽¹⁰⁾ The Greeks imprisoned in the cave of the Cyclops⁽¹¹⁾ lived there very tranquilly, while they were awaiting their turn to be devoured.

To say that a man gives himself gratuitously, is to say what is absurd and inconceivable; such an act is null and illegitimate, from the mere fact that he who does it is out of his mind. To say the same

of a whole people is to suppose a people of madmen; and madness creates no right.

Even if each man could alienate himself, he could not alienate his children: they are born men and free; their liberty belongs to them, and no one but they has the right to dispose of it. Before they come to years of discretion, the father can, in their name, lay down conditions for their preservation and well-being, but he cannot give them irrevocably and without conditions: such a gift is contrary to the ends of nature, and exceeds the rights of paternity. It would therefore be necessary, in order to legitimise an arbitrary government, that in every generation the people should be in a position to accept or reject it; but, were this so, the government would be no longer arbitrary.

To renounce liberty is to renounce being a man, to surrender the rights of humanity and even its duties. For him who renounces everything no indemnity is possible. Such a renunciation is incompatible with man's nature; to remove all liberty from his will is to remove all morality from his acts. Finally, it is an empty and contradictory convention that sets up, on the one side, absolute authority, and, on the other, unlimited obedience. Is it not clear that we can be under no obligation to a person from whom we have the right to exact everything? Does not this condition alone, in the absence of equivalence or exchange, in itself involve the nullity of the act? For what right can my slave have against me, when all that he has belongs to me, and, his right being mine, this right of mine against myself is a phrase devoid of meaning?

Grotius and the rest find in war another origin for the so-called right of slavery. The victor having, as they hold, the right of killing the vanquished, the latter can buy back his life at the price of his liberty; and this convention is the more legitimate because it is to the advantage of both parties.

But it is clear that this supposed right to kill the conquered is by no means deducible from the state of war. Men, from the mere fact that, while they are living in their primitive independence, they have no mutual relations stable enough to constitute either the state of peace or the state of war, cannot be naturally enemies. War is constituted by a relation between things, and not between persons; and, as the state of war cannot arise out of simple personal relations, but only out of real relations, private war, or war of man with man, can exist neither in the state of nature, where there is no constant property, nor in the social state, where everything is under the authority of the laws.

Individual combats, duels and encounters, are acts which cannot constitute a state; while the private wars, authorised by the Establishments of Louis IV King of France, and suspended by the Peace of God, are abuses of feudalism, in itself an absurd system if ever there was one, and contrary to the principles of natural right and to all good polity.

War then is a relation, not between man and man, but between State and State, and individuals are enemies only accidentally, not as men, nor even as citizens,^[3] but as soldiers; not as members of their country, but as its defenders. Finally, each State can have for enemies only other States, and not men; for between things disparate in nature there can be no real relation.

Furthermore, this principle is in conformity with the established rules of all times and the constant practice of all civilised peoples. Declarations of war are intimations less to powers than to their subjects. The foreigner, whether king, individual, or people, who robs, kills or detains the subjects, without declaring war on the prince, is not an enemy, but a brigand. Even in real war, a just prince, while laying hands, in the enemy's country, on all that belongs to the public, respects the lives and goods of individuals: he respects rights on which

his own are founded. The object of the war being the destruction of the hostile State, the other side has a right to kill its defenders, while they are bearing arms; but as soon as they lay them down and surrender, they cease to be enemies or instruments of the enemy, and become once more merely men, whose life no one has any right to take. Sometimes it is possible to kill the State without killing a single one of its members; and war gives no right which is not necessary to the gaining of its object. These principles are not those of Grotius: they are not based on the authority of poets, but derived from the nature of reality and based on reason.

The right of conquest has no foundation other than the right of the strongest. If war does not give the conqueror the right to massacre the conquered peoples, the right to enslave them cannot be based upon a right which does not exist. No one has a right to kill an enemy except when he cannot make him a slave, and the right to enslave him cannot therefore be derived from the right to kill him. It is accordingly an unfair exchange to make him buy at the price of his liberty his life, over which the victor holds no right. Is it not clear that there is a vicious circle in founding the right of life and death on the right of slavery, and the right of slavery on the right of life and death?

Even if we assume this terrible right to kill everybody, I maintain that a slave made in war, or a conquered people, is under no obligation to a master, except to obey him as far as he is compelled to do so. By taking an equivalent for his life, the victor has not done him a favour; instead of killing him without profit, he has killed him usefully. So far then is he from acquiring over him any authority in addition to that of force, that the state of war continues to subsist between them: their mutual relation is the effect of it, and the usage of the right of war does not imply a treaty of peace. A convention has indeed been made; but this convention, so far from destroying the state of war, presupposes its continuance.

So, from whatever aspect we regard the question, the right of slavery is null and void, not only as being illegitimate, but also because it is absurd and meaningless. The words *slave* and *right* contradict each other, and are mutually exclusive. It will always be equally foolish for a man to say to a man or to a people: "I make with you a convention wholly at your expense and wholly to my advantage; I shall keep it as long as I like, and you will keep it as long as I like."

第五章 论我们必须追溯最原始的约定

卢梭曾在《社会契约论》初稿本中写道：“把人聚合在一起的方法有千百种，但是把人结合在一起的方法却只有一种。”他认为，一个人即使奴役了一群相互之间没有共同利益的人，不论人数有多少，也构不成一个共同体，他死后这个群体会立刻分崩离析。

他认为，即使按格劳秀斯所说人民要把自己奉献给国王，这也潜含着这种奉献是一种政治行为，那么就要考量人民是采用何种行为使自己成为人民的。当最原始的构建共同体的约定全体一致通过之后，才有可能按照少数服从多数的原则来决定事项。

5 . THAT WE MUST ALWAYS GO BACK TO A FIRST CONVENTION

EVEN if I granted all that I have been refuting, the friends of despotism would be no better off. There will always be a great difference between subduing a multitude and ruling a society. Even if scattered individuals were successively enslaved by one man, however numerous they might be, I still see no more than a master and his slaves, and certainly not a people and its ruler; I see what may be termed an aggregation, but not an association; there is as yet neither public good nor body politic. The man in question, even if he has enslaved half the world, is still only an individual; his interest, apart from that of others, is still a purely private interest. If this same man comes to die, his empire, after him, remains scattered and without unity, as an oak falls and dissolves into a heap of ashes when the fire has consumed it.

A people, says Grotius, can give itself to a king.⁽¹²⁾ Then, according to Grotius, a people is a people before it gives itself. The gift is itself a civil act, and implies public deliberation. It would be better, before examining the act by which a people gives itself to a king, to examine that by which it has become a people; for this act, being necessarily prior to the other, is the true foundation of society.

Indeed, if there were no prior convention, where, unless the election were unanimous, would be the obligation on the minority to submit to the choice of the majority? How have a hundred men who wish for a master the right to vote on behalf of ten who do not? The law of majority voting is itself something established by convention, and presupposes unanimity, on one occasion at least.⁽¹³⁾

第六章 论社会公约

契约的观念早在古希腊古罗马时代已经产生，是作为商品交易过程的经济法律概念出现的。到了中世纪，契约沾染了宗教神学的色彩，在人与神之间确立。在罗马法、《圣经》和亚里士多德的《政治学》中都可以寻觅其踪。出现在近现代政治领域的社会契约概念，是经历了中世纪漫长的反对专制、文艺复兴运动的争取自由以及启蒙运动推崇理性的浪潮，建立在自然状态和人类理性的基础之上，其主要观点是处于“自然状态”下的人们，基于彼此间的合意，以契约的形式把原本属于自己的天赋权利让渡出来形成政治统治权力，从而进入国家状态，是一种“国家发生学说”。“在这一理论中，契约被用来证明政治权威的合法性，或用来对政治权威施加限制。”⁽¹⁴⁾其最具代表性的人物有：霍布斯、洛克和卢梭。他们社会契约思想主要包括对人性、自然状态与社会状态、主权形式界限等的阐述。

对霍布斯来说，人性天生自私残忍，自然状态就是战争状态，通过契约方式形成的国家利维坦，凭借权威能保证人民生活的安定、和平与稳定。他认为，任何能够保障其成员安全的政治权威都是合法的，人们的安全胜于自由，君主制的专断也比一种无政府的状态要好。在他看来，战争带给人们的灾难是最悲惨最糟糕的一种境遇了，人们通过选择，宁愿冒此风险，也不愿意再回到契约形成之前的自然状态中。

洛克承认，人的首要欲望是自我保存，但认为自然状态并不必然是战争状态，人们之所以舍弃自然状态的自由而加入社会和甘受社会约束，其根本目的是为了保护他们的生命、权利和财产，如果没有关于权利和财产的规定来保障他们的和平与安宁，人们根本不会加入社会。因此，政治权威合法性的标准是能否保障其成员的财产权利。但洛克继续论述，他认为政治社会中的人面临着更为可怕的危险，那就是暴政与专制，这种滥用权力引发的战争可能远比通常之自然状态下的战争糟糕得多，为此人民必须奋起反抗。于是，洛克的社会契约理论没有

像霍布斯那样将人送入专制主的口中。

对于卢梭来说，人性起点是良善自由，理想契约要探寻的是一个不仅能保障人民的人身和财产，而且能维护和促进所有社会成员的幸福和美德的理想政治秩序。他为自己的社会契约设定的目标是“要寻找出一种结合的形式，使它能以全部共同的力量来保护每个结合者的人身和财富，并且由于这一结合而使得每一个与全体相联合的个人又只不过是服从其本人，并且仍然像以往一样自由”。这段话实际上包含了两个约定，即吉尔丁在《设计论证》中阐释的“低级约定”与“高级约定”，即“保护每个结合者的人身和利益”和“只不过是服从其本人，并且仍然像从前一样自由”。进一步说，这一契约可以表述为：“我们每个人都以其自身及其全部的力量共同置于公意的最高指导之下，并且作为一个整体，我们把每一个成员接纳为全体不可分割的一部分。”

三位主要代表人物的观点与其所处的社会历史背景有很大的关联。霍布斯由于身处动荡年代，对于安全的渴求要比其他一切都更为重要与可贵，认为人们最基本的伦理需要是出于对“安全”的考虑。在他看来，只有在一个和平与稳定的社会局势下，人们才能真正做到自我保存，并最终实现人的生活幸福与社会和平，因此，人们自主选择订立契约，通过契约达成共识是人们希望过上安稳的生活，而只有国家的强力才能满足人们对“安全”的需求。洛克身处的时代，政局已趋于稳定，因此，他订立社会契约，与霍布斯为了自保、维护个人最基本的生命安全不同，他的社会契约论主要围绕“自由”这一伦理思想展开，希望借助“有限政府”的力量，保护人们获得最大限度的自由权。而卢梭认为，在人们一致同意的社会契约上建立起来的国家与社会，“并没有摧毁自然的平等，而是以道德与法律的平等代替自然所造成的人与人之间的身体上的不平等，所以，人们尽管在力量和才智上不平等，但是通过契约和权利，他们变得平等了”。显然，他的社会契约论是为了纠正人类在进入社会生活中的种种不平等与不公现象，所以，他的契约思想主要是为实现“平等”而提出的。

6 . THE SOCIAL COMPACT

I SUPPOSE men to have reached the point at which the obstacles in the way of their preservation in the state of nature show their power of resistance to be greater than the resources at the disposal of each individual for his maintenance in that state. That primitive condition can then subsist no longer; and the human race would perish unless it changed its manner of existence.

But, as men cannot engender new forces, but only unite and direct existing ones, they have no other means of preserving themselves than the formation, by aggregation, of a sum of forces great enough to overcome the resistance. These they have to bring into play by means of a single motive power, and cause to act in concert.

This sum of forces can arise only where several persons come together: but, as the force and liberty of each man are the chief instruments of his self-preservation, how can he pledge them without harming his own interests, and neglecting the care he owes to himself? This difficulty, in its bearing on my present subject, may be stated in the following terms:

“The problem is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before.” This is the fundamental problem of which the *Social Contract* provides the solution.

The clauses of this contract are so determined by the nature of the act that the slightest modification would make them vain and ineffective; so that, although they have perhaps never been formally

set forth, they are everywhere the same and everywhere tacitly admitted and recognised, until, on the violation of the social compact, each regains his original rights and resumes his natural liberty, while losing the conventional liberty in favour of which he renounced it.

These clauses, properly understood, may be reduced to one—the total alienation of each associate, together with all his rights, to the whole community; for, in the first place, as each gives himself absolutely, the conditions are the same for all; and, this being so, no one has any interest in making them burdensome to others.

Moreover, the alienation being without reserve, the union is as perfect as it can be, and no associate has anything more to demand: for, if the individuals retained certain rights, as there would be no common superior to decide between them and the public, each, being on one point his own judge, would ask to be so on all; the state of nature would thus continue, and the association would necessarily become inoperative or tyrannical.

Finally, each man, in giving himself to all, gives himself to nobody; and as there is no associate over whom he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has.

If then we discard from the social compact what is not of its essence, we shall find that it reduces itself to the following terms:

“Each of us puts his person and all his power in common under the supreme direction of the general will, and, in our corporate capacity, we receive each member as an indivisible part of the whole.”

At once, in place of the individual personality of each contracting party, this act of association creates a moral and collective body, composed of as many members as the assembly contains votes, and

receiving from this act its unity, its common identity, its life and its will. This public person, so formed by the union of all other persons formerly took the name of *city*,^[4] and now takes that of *Republic* or *body politic*⁽¹⁵⁾; it is called by its members *State* when passive, *Sovereign* when active, and *Power* when compared with others like itself. Those who are associated in it take collectively the name of *people*, and severally are called *citizens*, as sharing in the sovereign power, and *subjects*, as being under the laws of the State. But these terms are often confused and taken one for another: it is enough to know how to distinguish them when they are being used with precision.

迦太基遗址：在三次布匿战争中，迦太基人因无法舍弃作为地理意义和建筑意义上的城池，最终失去了作为国家政体和公民共同体意义上的城邦。

第七章 论主权者

卢梭之前的主权理论，在亚里士多德《政治学》、博丹《论共和国》、阿尔色修斯《政治学的系统考察》、格劳秀斯《战争与和平法》、霍布斯《利维坦》、普芬道夫《自然法与国家法》、洛克《政府论》中都有不同程度的阐述。卢梭则将以自然权利为基础发展而来的主权学说推到了顶峰。(16)

卢梭在陈述社会契约时，对理想社会契约做了三条补充解释，要求每个个人的转让是彻底的、无条件的，并且是向全体而不是某一个个人转让，这意味着没有任何人滞留在社会契约建立的秩序之外，没有任何人滞留在法律之外，主权者是全体个人联合起来的整体，没有与组成其的个人相反的利益，对任何一个成员的伤害就是对共同体的伤害。卢梭认为，每一个参与订约之人都有双重身份，他既是主权者的一个成员，又是国家的臣民。臣民有与公意相反或不相同的个人意志，与作为组成主权者的个人是有区别的，不能将两者混同。

此外，契约中还应当有强制力的规定，保证其能够有效执行。卢梭指出，这种强制力使每个公民拥有国家，从而保护他免于一切人身依附的条件。谁拒不服从公意，全体将强迫他服从，这不过是说人们强迫他自由而已。有些学者引用此句来证明：卢梭的学说是极权主义的，至少隐含极权主义。对此，吉尔丁认为这种指控不具有合理证明效果。这顶多是一种爱国主义，而仅依据爱国主义则不足以推断卢梭是极权主义者。(17)卢梭在这里强调的自由，是指服从人们为自己制定的法律，才能自由。而使法治成为可能的力量，同样使自由成为可能。

与卢梭相比，霍布斯的主权者拥有使用权力的绝对自由和至高无上的权力，并且不受法律的约束。霍布斯认为，为摆脱充满战争的自然状态，获得和平与安全，人们开始相互订立契约，奉献出除自我保存、生命安全等基本权利以外的所有权利，并指定一个人或一个由多人组成的集体来代表他们的人格。对于主权者，霍布斯一直强调可以是个人，也可以是某个集体，其数量可以区分成三种国家形式：主权者为一个人的君

主制国家、主权者由部分人组成的贵族制国家和主权者由所有人组成的民主制国家。他认为君主制是最好的国家形式。洛克则认为，人们只是把一部分权利转让出来，由社会委托立法机关或指定专门人员，按照社会全体成员的共同意愿来行使权力。洛克认为，个人权利是一切权力的基础，自然权利亦优先于政治权力，国家或政府行使的权力源于其成员通过契约让渡的那部分权利。国家并没有其自身的目的，它是人们为了实现自身安全与福利而创造出来的一种工具，国家的权力及其一切活动必须忠实于这一目的并以此为限度，否则国家权力的运行就成为非法的活动。

7 . THE SOVEREIGN

THIS formula shows us that the act of association comprises a mutual undertaking between the public and the individuals, and that each individual, in making a contract, as we may say, with himself, is bound in a double capacity; as a member of the Sovereign he is bound to the individuals, and as a member of the State to the Sovereign. But the maxim of civil right, that no one is bound by undertakings made to himself, does not apply in this case; for there is a great difference between incurring an obligation to yourself and incurring one to a whole of which you form a part.

Attention must further be called to the fact that public deliberation, while competent to bind all the subjects to the Sovereign, because of the two different capacities in which each of them may be regarded, cannot, for the opposite reason, bind the Sovereign to itself; and that it is consequently against the nature of the body politic for the Sovereign to impose on itself a law which it cannot infringe. Being able to regard itself in only one capacity, it is in the position of an individual who makes a contract with himself; and this makes it clear that there neither is nor can be any kind of fundamental law binding on the body of the people—not even the social contract itself. This does not mean that the body politic cannot enter into undertakings with others, provided the contract is not infringed by them; for in relation to what is external to it, it becomes a simple being, an individual.

But the body politic or the Sovereign, drawing its being wholly from the sanctity of the contract, can never bind itself, even to an outsider, to do anything derogatory to the original act, for instance, to alienate any part of itself, or to submit to another Sovereign. Violation of the act by which it exists would be self-annihilation; and that which

is itself nothing can create nothing.

As soon as this multitude is so united in one body, it is impossible to offend against one of the members without attacking the body, and still more to offend against the body without the members resenting it. Duty and interest therefore equally oblige the two contracting parties to give each other help; and the same men should seek to combine, in their double capacity, all the advantages dependent upon that capacity.

Again, the Sovereign, being formed wholly of the individuals who compose it, neither has nor can have any interest contrary to theirs; and consequently the sovereign power need give no guarantee to its subjects, because it is impossible for the body to wish to hurt all its members. We shall also see later on that it cannot hurt any in particular. The Sovereign, merely by virtue of what it is, is always what it should be.

This, however, is not the case with the relation of the subjects to the Sovereign, which, despite the common interest, would have no security that they would fulfil their undertakings, unless it found means to assure itself of their fidelity.

In fact, each individual, as a man, may have a particular will contrary or dissimilar to the general will which he has as a citizen. His particular interest may speak to him quite differently from the common interest: his absolute and naturally independent existence may make him look upon what he owes to the common cause as a gratuitous contribution, the loss of which will do less harm to others than the payment of it is burdensome to himself; and, regarding the moral person which constitutes the State as a *persona ficta*, because not a man, he may wish to enjoy the rights of citizenship without being ready to fulfil the duties of a subject. The continuance of such an injustice could not but prove the undoing of the body politic.

In order then that the social compact may not be an empty formula, it tacitly includes the undertaking—which alone can give force to the rest—that whoever refuses to obey the general will shall be compelled to do so by the whole body. This means nothing less than that he will be forced to be free⁽¹⁸⁾; for this is the condition which, by giving each citizen to his country, secures him against all personal dependence. In this lies the key to the working of the political machine; this alone legitimises civil undertakings, which, without it, would be absurd, tyrannical, and liable to the most frightful abuses.

第八章 论公民社会

在关于卢梭描述自然状态的字里行间，人们很容易想起他在《论人类不平等的起源》一书中的著名论点：自然状态的人类，比“现实的人”或政治人更幸福。“再也没有比原始状态的人更温和的了，那个时候，人为自然所安排，既与野兽的愚钝保持距离，亦与文明人的不幸启蒙同距相隔，并接受本能和理性的平等限制，只知道防备威胁他的祸害，天性怜悯，不伤害他人，即便受到别人的伤害也不会那么做。”⁽¹⁹⁾但是，从某一时刻开始，随着固定居所、固定分工和私有财产的出现，忌恨、虚荣、轻蔑、羞愧和嫉妒逐步产生，“人出现了两面性：本性是一面，展现给别人的是另一面，这种区别催生了浮夸的排场、骗人的诡计及永无止尽的野心”⁽²⁰⁾，人人变得血腥、邪恶和残忍。自然状态处于战争状态的边缘，构造政治社会与摒弃天然自由成为必需。

卢梭比较了人们在社会契约前后的得失，指出权利、义务、道德代替了本能、欲望，社会的自由和财产权取代了天然的自由和占有权，人们因遵守法律而获得自由，使人真正成为他自己主人的自由。在此，卢梭用了一个至关重要的限定条件句，“如果不是在某些情况下，他对于这些新条件的滥用使他堕落得比他原来的状态更糟糕的话”，人们将会无限感激进入社会状态这样的幸福时刻。于是，我们看到了卢梭的结论：在发展到人们彼此危及生命财产的自然状态的最后阶段，和政治社会之间，他倾向选择政治社会，但他所推崇的并非任何政治社会，而是遵守社会契约的政治社会。

8 . THE CIVIL STATE

THE passage from the state of nature to the civil state produces a very remarkable change in man, by substituting justice for instinct in his conduct, and giving his actions the morality they had formerly lacked. Then only, when the voice of duty takes the place of physical impulses and right of appetite, does man, who so far had considered only himself, find that he is forced to act on different principles, and to consult his reason before listening to his inclinations. Although, in this state, he deprives himself of some advantages which he got from nature, he gains in return others so great, his faculties are so stimulated and developed, his ideas so extended, his feelings so ennobled, and his whole soul so uplifted, that, did not the abuses of this new condition often degrade him below that which he left, he would be bound to bless continually the happy moment which took him from it for ever, and, instead of a stupid and unimaginative animal, made him an intelligent being and a man.⁽²¹⁾

Let us draw up the whole account in terms easily commensurable. What man loses by the social contract is his natural liberty and an unlimited right to everything he tries to get and succeeds in getting; what he gains is civil liberty and the proprietorship of all he possesses. If we are to avoid mistake in weighing one against the other, we must clearly distinguish natural liberty, which is bounded only by the strength of the individual, from civil liberty, which is limited by the general will; and possession, which is merely the effect of force or the right of the first occupier, from property, which can be founded only on a positive title.

We might, over and above all this, add, to what man acquires in the civil state, moral liberty, which alone makes him truly master of himself; for the mere impulse of appetite is slavery, while obedience

to a law which we prescribe to ourselves is liberty. But I have already said too much on this head, and the philosophical meaning of the word liberty does not now concern us.

第九章 关于财产权

财产权的形成是根据社会契约而形成的一项重要权利。卢梭认为，当人们从自然状态进入社会状态，他们基于自我保全所必需的权利和最先占有的权利所拥有的一切便转交给了社会共同体。人们在契约共同体中取得了对财富的合法占有，赢得了国家所有成员对该占有的尊重，并获得了国家以全部力量使其不受外邦人侵犯的保证。卢梭为认可土地先占者的权利设定了三个条件：不曾被任何人居住过，不超过维持生存所需，实际劳动和耕作。吉尔丁指出，很少有哪个社会或成员能够得上卢梭为保护最初占有者权利设定的条件，假如严格理解这些条件的话。尤其是不曾被任何人居住过的条件，很多民族难以满足。卢梭在此列举了藐视这些条件肆意扩张领土的例子，如探险家以国王的名义宣布占有南美洲广阔的领土等。

卢梭还论述了财产权是如何发生的，他认为在结成社会契约后，主权权利由对臣民本身扩展到对他们所占有的土地，这样主权权利由人及物。还有另一种情况是，原本一无所有的人们联合起来，去占有一块供全体使用的土地，共同享有，或均分或按规定的比例划分。但是，卢梭指出了社会契约的局限，它仅能约束社会内部，国家所有权对于其他主权国家，并不比自然状态中个人所有权对其他人更具有合法性。

在本章的最后，卢梭为本卷做出了一个振聋发聩的总结，他认为基本的公约不仅没有摧毁自然的平等，反而以道德的和法律的平等，来代替自然所造成人与人之间的身体上的不平等，因而，虽然人与人之间在体力和智力上不相等，但由于公约和权利的保证，他们人人都是平等的。

9 . REAL PROPERTY

EACH member of the community gives himself to it, at the moment of its foundation, just as he is, with all the resources at his command, including the goods he possesses. This act does not make possession, in changing hands, change its nature, and become property in the hands of the Sovereign; but, as the forces of the city are incomparably greater than those of an individual, public possession is also, in fact, stronger and more irrevocable, without being any more legitimate, at any rate from the point of view of foreigners. For the State, in relation to its members, is master of all their goods by the social contract, which, within the State, is the basis of all rights; but, in relation to other powers, it is so only by the right of the first occupier, which it holds from its members.

The right of the first occupier, though more real than the right of the strongest, becomes a real right only when the right of property has already been established. Every man has naturally a right to everything he needs; but the positive act which makes him proprietor of one thing excludes him from everything else. Having his share, he ought to keep to it, and can have no further right against the community. This is why the right of the first occupier, which in the state of nature is so weak, claims the respect of every man in civil society. In this right we are respecting not so much what belongs to another as what does not belong to ourselves.

In general, to establish the right of the first occupier over a plot of ground, the following conditions are necessary: first, the land must not yet be inhabited; secondly, a man must occupy only the amount he needs for his subsistence; and, in the third place, possession must be taken, not by an empty ceremony, but by labour and cultivation, the only sign of proprietorship that should be respected by others, in

default of a legal title.

In granting the right of first occupancy to necessity and labour, are we not really stretching it as far as it can go? Is it possible to leave such a right unlimited? Is it to be enough to set foot on a plot of common ground, in order to be able to call yourself at once the master of it? Is it to be enough that a man has the strength to expel others for a moment, in order to establish his right to prevent them from ever returning? How can a man or a people seize an immense territory and keep it from the rest of the world except by a punishable usurpation, since all others are being robbed, by such an act, of the place of habitation and the means of subsistence which nature gave them in common? When Nuñez Balboa⁽²²⁾, standing on the seashore, took possession of the South Seas and the whole of South America in the name of the crown of Castile, was that enough to dispossess all their actual inhabitants, and to shut out from them all the princes of the world? On such a showing, these ceremonies are idly multiplied, and the Catholic King need only take possession all at once, from his apartment, of the whole universe, merely making a subsequent reservation about what was already in the possession of other princes.

We can imagine how the lands of individuals, where they were contiguous and came to be united, became the public territory, and how the right of Sovereignty, extending from the subjects over the lands they held, became at once real and personal. The possessors were thus made more dependent, and the forces at their command used to guarantee their fidelity. The advantage of this does not seem to have been felt by ancient monarchs, who called themselves Kings of the Persians, Scythians, or Macedonians, and seemed to regard themselves more as rulers of men than as masters of a country. Those of the present day more cleverly call themselves Kings of France, Spain, England, etc.: thus holding the land, they are quite confident of holding the inhabitants.

The peculiar fact about this alienation is that, in taking over the goods of individuals, the community, so far from despoiling them, only assures them legitimate possession, and changes usurpation into a true right and enjoyment into proprietorship. Thus the possessors, being regarded as depositaries of the public good, and having their rights respected by all the members of the State and maintained against foreign aggression by all its forces, have, by a cession which benefits both the public and still more themselves, acquired, so to speak, all that they gave up. This paradox may easily be explained by the distinction between the rights which the Sovereign and the proprietor have over the same estate, as we shall see later on.

It may also happen that men begin to unite one with another before they possess anything, and that, subsequently occupying a tract of country which is enough for all, they enjoy it in common, or share it out among themselves, either equally or according to a scale fixed by the Sovereign. However the acquisition be made, the right which each individual has to his own estate is always subordinate to the right which the community has over all: without this, there would be neither stability in the social tie, nor real force in the exercise of Sovereignty.

I shall end this chapter and this book by remarking on a fact on which the whole social system should rest: i.e., that, instead of destroying natural inequality, the fundamental compact substitutes, for such physical inequality⁽²³⁾ as nature may have set up between men, an equality that is moral and legitimate, and that men, who may be unequal in strength or intelligence, become every one equal by convention and legal right.^[5]

(1) 卢梭1712年生于日内瓦，1728年放弃加尔文教皈依天主教后，失去日内瓦公

民资格。1754年又荣归日内瓦，重新皈依新教，参加了日内瓦共和国全体公民大会。1762年本书出版后遭日内瓦当局焚禁，卢梭本人遭日内瓦当局逮捕。1763年，卢梭致信日内瓦首席执政官，放弃了其公民身份。

(2) 当时的欧洲政治思想领域里主宰的是君权神授的思想，法国天主教主教波舒哀（1627—1704）宣扬“人生来就是臣民”，英国专制王权维护者费尔默的立场为“人是生而不自由的”。卢梭正是为了反驳此言论，开宗明义提出“人生来是自由的”。

(3) 斐洛（约公元前15—45），生于亚历山大城的犹太哲学家和政治家，被视为希腊化时期犹太教哲学的代表人物和基督教神学的先驱。

(4) 卡里古拉（12—41），罗马帝国第三任皇帝，被认为是罗马帝国早期的典型暴君，本性凶残，穷奢极欲，最终被忍无可忍的侍卫杀死。

(5) 尤利西斯，希腊神话中的人物，也称奥德修斯，在特洛伊战争中英勇善战、足智多谋，利用木马计攻陷了特洛伊城。在率同伴从特洛伊回国途中，因得罪了海神波塞冬，在海上漂泊十年，并屡遭阻挠和险境。最终冲出海怪与神女的阻挡与妻子团聚。

(6) 基督教《圣经》中的人物。关于亚当与国家理论，可参考〔奥地利〕耶利内克著，林国基译，张宪校：《国家理论中的亚当》，载刘小枫、陈少明主编：《柏拉图的政治哲学》，上海：上海三联出版社，2003。

(7) 据《圣经》中记载，世上洪水泛滥时，诺亚一家进入他按照上帝的旨意预先制造的方舟存活了下来。后来他上航地中海，将亚、非和欧洲分派给他三个儿子。

(8) 指的是第一卷开头所提出的“如何才能使这样的权威合法化”这一问题。

(9) 拉伯雷（1495—1553），文艺复兴时期法国人文主义作家。对数理、医药、考古、天文、植物等都有研究，著有长篇小说《巨人传》。

(10) 牢狱生活的比喻意在说明，卢梭在政治社会的自由和安全两者中，更加看重自由。

(11) 西克洛甫，希腊神话中西西里岛的独眼巨人，粗野、喜食人。

(12) 可阅读格劳秀斯《战争与和平法》第一卷第三章。

(13) 至少有一次须全体一致，是指最原始的构建共同体的约定需要全体一致通过。

(21) 本段比较了自然状态发展到人们威胁彼此生命和财产的末期，与遵守社会契约的社会，指出了后者的优越性。

(22) 努涅兹·巴尔波（1475—1517），西班牙航海家，1513年发现南美洲和南太平洋，遂以卡斯提王的名义宣布为西班牙占有。

(23) 卢梭在《论人类不平等的起源》本论中写道：我认为人类存在着两种不平等：一种是自然的或生理上的不平等，之所以这样说是因为这种不平等是基于自然和生理因素，由年龄、健康、体质以及心智上的差异而产生的；另一种是精神上的或政治上的不平等，它起因于人们的一种共同协议，经由人们的认可和同意。

[1] “Learned inquiries into public right are often only the history of past abuses; and troubling to study them too deeply is a profitless infatuation” (*Essay on the Interests of France in Relation to Its Neighbours*, by the Marquis d'Argenson). This is exactly what Grotius has done.

[2] See a short treatise of Plutarch's entitled “That Animals Reason.”

[3] The Romans, who understood and respected the right of war more than any other nation on earth, carried their scruples on this head so far that a citizen was not allowed to serve as a volunteer without engaging himself expressly against the enemy, and against such and such an enemy by name. A legion in which the younger Cato was seeing his first service under Popilius having been reconstructed, the elder Cato wrote to Popilius that, if he wished his son to continue serving under him, he must administer to him a new military oath, because, the first having been annulled, he was no longer able to bear arms against the enemy. The same Cato wrote to his son telling him to take great care not to go into battle before taking this new oath. I know that the siege of Clusium and other isolated events can be quoted against me; but I am citing laws and customs. The Romans are the people that least often transgressed its laws; and no other people has had such good ones.

[4] The real meaning of this word has been almost wholly lost in modern times;

most people mistake a town for a city, and a townsman for a citizen. They do not know that houses make a town, but citizens a city. The same mistake long ago cost the Carthaginians dear. I have never read of the title of citizens being given to the subjects of any prince, not even the ancient Macedonians or the English of today, though they are nearer liberty than any one else. The French alone everywhere familiarly adopt the name of citizens, because, as can be seen from their dictionaries, they have no idea of its meaning; otherwise they would be guilty in usurping it, of the crime of *lèse-majesté*: among them, the name expresses a virtue, and not a right. When Bodin spoke of our citizens and townsmen, he fell into a bad blunder in taking the one class for the other. M. d'Alembert has avoided the error, and, in his article on Geneva, has clearly distinguished the four orders of men (or even five, counting mere foreigners) who dwell in our town, of which two only compose the Republic. No other French writer, to my knowledge, has understood the real meaning of the word citizen.

[5] Under bad governments, this equality is only apparent and illusory: it serves only to keep the pauper in his poverty and the rich man in the position he has usurped. In fact, laws are always of use to those who possess and harmful to those who have nothing: from which it follows that the social state is advantageous to men only when all have something and none too much.

第二卷 导读

社会契约使政治共同体存在并有了生命，而法律则使共同体能表达意志并运转起来。卢梭在第二卷中围绕主权和立法者论述了法律这个主题，主权是法律的源泉，立法者是法律的表达途径，通过阐述主权的性质、边界和对立法者的要求来阐释公意是如何通过法律表达出来的。

卢梭在阐述人民主权的性质时，他指出主权不可转让，主权者不可被他人代表其意志，只能委托他人行使权利。同样，主权也不可分割。在此，他反驳了格劳秀斯、洛克、孟德斯鸠等人的分权理论，认为这些思想家不是从原则上区分主权，而是从对象上区分主权，也就是把主权分割为立法权、行政权、税收权、司法权、战争权、内政权、外交权等。他指出，这样把主权者弄成是一个支离破碎拼凑起来的怪物，是把主权派生出来的东西理解为主权的组成部分了。如行政权只不过是主权的职能和运用，这两者是不能平行并列的。卢梭认为，主权主要表现为立法权，立法权应该而且也只能属于人民。

公意表现为整个共同体为全体成员颁布的法律，是全体人民对全体人民作出的普遍性规定，当卢梭对公意如此定义时，他就明确地将公意与众意、私人意志区别开了，虽然它们之间有部分交叠。公意永远追求公共利益，但它并不完全排斥私人利益，公意是否可能出错？卢梭认为，公意追求的是公平，体现为一种道德人格，主权权利绝不会超过公共约定的界限。作为公意体现、具有普遍性的法律，即使君主也应当服从，人们因为遵守法律而获得自由，道德上的自由和行为上的自由。

从第七章开始，卢梭对立法者应该具备什么样的资质以及应当如何来为人民立法做了细致论述。公意永远是正确的，但引导公意的判断力并不总是明智的，于是卢梭提出了法律的表达途径问题。如何将主权者的意志形成条文并加以公布，这需要有一个立法者，他能清楚地辨别实情和假象，使公意不受个人意志和眼前利益的诱惑，将理性和意志在社会体中结合起来。卢梭认为，立法者应当是“能够理解人类的感情但是又

不会被人类的感情左右；与人类的本性没有任何关系，但却完全地了解人类的本性；它的幸福独立于我们的幸福，但是它却会把我们的幸福作为它的关怀；它乐意花费充足的时间去等待一个长远的荣耀；它也乐意在这个时代里辛勤地劳作，而在下一个时代中去享受劳作的果实”的最高智慧。伟大的立法者比伟大的国君更加稀缺，因为国君只不过是遵循立法者所提供的模型而已。立法者的非凡不仅源于其智慧，而且在于其独特的、超越的职能，既不同于行政职能，也不同于主权职能。

很显然，卢梭提出了合法性的问题，到底是哲人的智慧还是人们的同意，才是合法性的源泉？卢梭吸收了柏拉图的哲学王立法路径，他得出的结论是具有最高智慧的立法者制定出为全体人民同意的法律。这意味着人民的自愿同意是合法性的唯一源泉，而智慧则是实现人类建立政治社会目标的重要条件。卢梭用了三章篇幅来讨论作为主权者的人民，这里的人民是广义上的，包括了民族、人口和领土等内容。他指出了国家的领土、人口和官僚体系规模及国家治理方式与人民负担之间的关系，以及这种关系对立法的影响。他指出，要依据人民应当能够成为的样子来为他们立法，且在立法之前要给人民一段充足的时间让他们成熟到能够接受法律。他对适合于立法的人民归纳了很苛刻的条件，如拥有起源、利益等特殊的联系纽带，没有根深蒂固的习惯或迷信，能抵抗外敌侵略不参与邻国纠纷，能自给自足，兼有古老民族的坚韧性和新兴民族的温顺性等等。

在第二卷的最后两章，卢梭从立法的目标，即自由和平等着手，来阐释不同的民族适用不同的法律和体制，这种法律和体制不一定是最好的，但应该是最适合这个民族的，法律只不过是在确保、陪伴和纠正着自然的东西，法律与自然、习俗的协调一致是一个国家体制真正强大和持久的根本原因。法律按照不同的关系可分为政治法、民法、刑法，卢梭在这里强调了上述法律赖以成功、比之更为重要的法律——道德、习俗和信仰，卢梭认为正是这种法律，“它们不是刻在大理石或铜表上，而是刻在人民心里的，它形成了国家真正的体制，它每天都会积聚新的力量，而且在其他法律衰亡时，它激励或者代替它们；它使一个民族的制度精神得以保存，并且不知不觉中运用习惯的力量取代权威的力量”，它为伟大的立法者真正关注，而被政治理论家们所忽视。同时卢梭也表

示，决定政府形式的政治法是与他讨论主题相关的。

BOOK II

第一章 论主权是不可转让的

根据卢梭，政治权力来源于人民，政治统治的合法性来源于人民的同意。他在《山中来信》第六封中写道：社会契约是一种特殊的公约，因为它是绝对的、无条件的、无保留的，因此它不可能是不公正的，也不可能遭到滥用，只要整个集体都为大家着想，共同体是不会自己伤害自己的。主权实质上存在于共同体的全体成员，是不可分割、不可转让的。

关于卢梭之前的主权学说，最有代表性的有博丹、霍布斯的君主主权论，格劳秀斯的国家主权论和洛克的议会主权论。中世纪后期，随着罗马法复兴、宗教改革和文艺复兴在欧洲的蔓延，近代民族国家逐渐产生，君主政体日益成熟，政治和法律上的主权学说也随之诞生。法国的博丹在《共和六论》中最早提出了主权概念。他针对当时罗马教皇凌驾于国家之上的神权统治，提出了要加强君主王权的主张。博丹把主权的性质表述为“不受法律约束的，对公民和臣民进行统治的最高权力”。他指出君主主权是至高无上的、绝对的、永久的、不可分割的、不可让与的权力，掌握主权的人（主权者）应当是君主。除受上帝和自然法约束以外，它不受任何限制，主权的行使不能附加任何条件。博丹的主权理论是近代主权理论发展的起点。

与博丹相比，格劳秀斯主要是从对外主权的角度来理解和阐释国家主权，致力于为国家主权提供国际法基础。他在《论战争与和平法》中指出“所谓主权，就是说它的行为不受另外一个权力的限制，所以它的行为不是其他任何人类意志可以任意视为无效的”。他认为，一个国家的主权对内最高，对外独立。同时，如同人们可以合法转让其对财产的控制一样，人民可以完全转让他们的主权。从最高统治权角度出发，格劳秀斯将国家主权范围内的权力概括为颁布法律、司法、任命公职人员、

征收捐税、决定战争与和平问题、缔结国际条约⁽¹⁾等。格劳秀斯在论证主权合理性和合法性的同时，也第一次提出了对国家主权的限制问题。

在此过程中，作为态度鲜明的“反君主主义者”阿尔色修斯在其《政治学的考察》中指出，主权是“管理通常事关国家成员之灵与肉之安全与福利等事务最高和最普遍的权力”，他认为所有政府的权力来源最终都是人民，人民是伟大的政治创造者。最为最高权力的主权具有整体的属性，不能转让给任何部门或者成员。不论让与的权力有多大，让与方总是高于受让方，派生的权力要服从这最高意志。只有人民才是永久权力的适格主体。

霍布斯的主权理论建立在对“自然状态”的探讨之上，通过明确的定义和严格的演绎，他指出受到自然法的指引，在自然状态中的人们为了自我保全，彼此签约而形成社会，并将他们所有的权力给予一个人或一些人，得到这样授权的人就是主权者，社会中所有其他的人皆是臣民，臣民必须完全服从主权的命令。根据霍布斯的观点，这契约是初始臣民之间订立的，而不是主权者与初始臣民之间的。人民并不存在于主权创设之前，换言之，人民从未拥有过最高权力，因而也无权对其进行处置。霍布斯的主权是绝对的、统一的、不可让渡的，建立在一个自愿但不可撤销的契约基础上，具有绝对主义的性质。

17世纪后期，洛克提出了议会主权说，他认为人们为了避免自然状态中的潜战争状态，便订立契约，把在自然状态中必要的自然权利交给共同体。洛克把国家权力分为立法权、行政权和对外权三部分。在一系列主权者中，国王是形式上或法律上的主权者，只要在法律的范围内就是最高的；其次是立法机关，它是被赋予了特定权力的“信托”组织，是政府权力中的主权者。而真正的主权者是建立立法机关的市民社会，它是潜在的政治上的主权者。

在《社会契约论》本卷第一、二章中，卢梭提出并阐述了人民主权的性质。他认为，以社会契约形式建立的国家，其最高权力属于全体人民。由于主权是共同意志的实践，而共同意志是社会的共同利益，所以主权的权力和权威是不受限制

的，“任何人拒不服从这个公意的，全体就要迫使他服从公意”。由于全体人民是创立主权的参加者，主权来源于人民，属于人民，任何个人或者部分人民都不是主权者，只是主权的参与者。为此，他提出了主权的三大原则：不可转让，不可分割，绝对、神圣和不可侵犯。他指出：“主权既然不外是公意的行使，所以就永远不能被转让；并且，主权者既然不过是一个集体的存在，那么除了它自己，任何人都不能代表它。”“正如主权是不可转让的，基于同样的原因，主权也是不可分割的。因为意志或者是公意，或者不是；它或者是人民共同体的意志，或者只是其中一部分人的意志。在第一种情况下，这种意志的宣布是主权行为，并且构成法律。在第二种情况下，它仅仅是一种个别意志的宣布或者是行政的行为，顶多也只是一道政令而已。”

以上主权学说表明，在主权性质问题上，政治思想家们基本都同意主权作为政治社会的最高权力，具有统一性、独立性、排他性和不可分割性，但在主权者归属、是否可以转让、绝对性程度等方面有不同看法和论述。

1 . THAT SOVEREIGNTY IS INALIENABLE

THE first and most important deduction from the principles we have so far laid down is that the general will alone can direct the State according to the object for which it was instituted, i.e., the common good: for if the clashing of particular interests made the establishment of societies necessary, the agreement of these very interests made it possible. The common element in these different interests is what forms the social tie; and, were there no point of agreement between them all, no society could exist. It is solely on the basis of this common interest that every society should be governed.

I hold then that Sovereignty, being nothing less than the exercise of the general will, can never be alienated, and that the Sovereign, who is no less than a collective being, cannot be represented except by himself: the power indeed may be transmitted, but not the will.

In reality, if it is not impossible for a particular will to agree on some point with the general will, it is at least impossible for the agreement to be lasting and constant; for the particular will tends, by its very nature, to partiality, while the general will tends to equality. It is even more impossible to have any guarantee of this agreement; for even if it should always exist, it would be the effect not of art, but of chance. The Sovereign may indeed say: "I now will actually what this man wills, or at least what he says he wills"; but it cannot say: "What he wills tomorrow, I too shall will" because it is absurd for the will to bind itself for the future, nor is it incumbent on any will to consent to anything that is not for the good of the being who wills. If then the people promises simply to obey, by that very act it dissolves itself and loses what makes it a people; the moment a master exists, there is no longer a Sovereign, and from that moment the body politic

has ceased to exist.

This does not mean that the commands of the rulers cannot pass for general wills, so long as the Sovereign, being free to oppose them, offers no opposition. In such a case, universal silence is taken to imply the consent of the people. This will be explained later on.

第二章 论主权是不可分割的

卢梭认为，主权的第一个本质属性是不可转让。“权力可以转移和代表，但是意志不能转移和代表。”除了主权机关自身以外，任何机关都不能行使主权意志。如果人民允诺服从一个统治者，那么共同体则解散，国家也就不复存在了。就像让渡了其意志后的人不再成其为人一样，让渡了主权的国家也不再成其为国家。因而，卢梭反对人民通过自愿行为丧失这种最高地位，这点与格劳秀斯和霍布斯是不同的。以此推理，代议制的概念是不应当存在的，因为主权权力从来就不是被授予的，一旦人民为其自身规定了代言者，它就不再是自由的了。⁽²⁾主权只有一个可能的拥有者，那就是人民。

主权的第二个本质属性是不可分割。主权本身作为完整整体，是不可分割的。主权与由主权组成或衍生的内容应当区分开来，如立法权和行政权，如内政权和外交权。在此，卢梭批驳了格劳秀斯、洛克和孟德斯鸠等人关于对主权种类划分的说法。

2 . THAT SOVEREIGNTY IS INDIVISIBLE

SOVEREIGNTY, for the same reason as makes it inalienable, is indivisible; for will either is, or is not, general;^[1] it is the will either of the body of the people, or only of a part of it. In the first case, the will, when declared, is an act of Sovereignty and constitutes law: in the second, it is merely a particular will, or act of magistracy—at the most a decree.

But our political theorists, unable to divide Sovereignty in principle, divide it according to its object⁽³⁾: into force and will; into legislative power and executive power; into rights of taxation, justice and war; into internal administration and power of foreign treaty. Sometimes they confuse all these sections, and sometimes they distinguish them; they turn the Sovereign into a fantastic being composed of several connected pieces: it is as if they were making man of several bodies, one with eyes, one with arms, another with feet, and each with nothing besides. We are told that the jugglers of Japan dismember a child before the eyes of the spectators; then they throw all the members into the air one after another, and the child falls down alive and whole. The conjuring tricks of our political theorists are very like that; they first dismember the body politic by an illusion worthy of a fair, and then join it together again we know not how.

This error is due to a lack of exact notions concerning the Sovereign authority, and to taking for parts of it what are only emanations from it. Thus, for example, the acts of declaring war and making peace have been regarded as acts of Sovereignty⁽⁴⁾; but this is not the case, as these acts do not constitute law, but merely the application of a law, a particular act which decides how the law

applies, as we shall see clearly when the idea attached to the word law has been defined.

If we examined the other divisions in the same manner, we should find that, whenever Sovereignty seems to be divided, there is an illusion: the rights which are taken as being part of Sovereignty are really all subordinate, and always imply supreme wills of which they only sanction the execution.

It would be impossible to estimate the obscurity this lack of exactness has thrown over the decisions of writers who have dealt with political right, when they have used the principles laid down by them to pass judgment on the respective rights of kings and peoples. Every one can see, in Chapters III and IV of the First Book of Grotius⁽⁵⁾, how the learned man and his translator, Barbeyrac, entangle and tie themselves up in their own sophistries, for fear of saying too little or too much of what they think, and so offending the interests they have to conciliate. Grotius, a refugee in France, ill-content with his own country, and desirous of paying his court to Louis XIII, to whom his book is dedicated, spares no pains to rob the peoples of all their rights and invest kings with them by every conceivable artifice. This would also have been much to the taste of Barbeyrac, who dedicated his translation to George I of England. But unfortunately the expulsion of James II, which he called his “abdication,” compelled him to use all reserve, to shuffle and to tergiversate, in order to avoid making William out a usurper. If these two writers had adopted the true principles, all difficulties would have been removed, and they would have been always consistent; but it would have been a sad truth for them to tell, and would have paid court for them to no one save the people. Moreover, truth is no road to fortune, and the people dispenses neither ambassadorships, nor professorships, nor pensions.

第三章 论公意是否会错

除了论述主权的不可转让和不可分割，卢梭还认为作为主权表达的公意是永远公正和不会出错的，但是主权能否正确地表达出来，不受到误导，需要排除小团体派系的干扰，需要每个公民都应当参与其中并畅所欲言。

卢梭指出，在现实政治社会中，除了作为共同体意志的公意外，还存在个别意志、众意和团体意志等特殊意志。社会契约的建立，使每个订约者都获得了两重身份。一方面，对于个人，他是主权者的一个成员；另一方面，对于主权者，他又是国家的一个成员。因而每个订约者可以具有个别意志。众意是个别意志的总和，和个别意志一样，只着眼于私人利益。当社会形成政治派别时，作为派别的小集团的意志就是团体意志。团体意志往往以牺牲大集体为代价来维护小集团的利益。

在公意与个别意志、众意和团体意志的相互关系上，卢梭认为，公意有别于个别意志、众意和团体意志。因为公意着眼于公共利益，其他意志都着眼于私人利益，不同的意志和利益有着自己不同的原则，必然会导致意志和利益的差异，因而它们之间很难协调一致。根据社会契约的性质，个人的真正意志和利益，与共同体的意志和利益应该是一致的，正如躯体中的每个器官和健康依赖于整个躯体的健康一样。然而，事实上，个别意志与公意可能在某些方面可以相互一致，但由于“每个个人作为人来说，可以具有个别的意志，而与他作为公民所具有的公意相反或者不同。他的个人利益对他所说的话，可以完全违背公共利益”，或者当个别意志只愿享受公民权利而不愿尽臣民义务时，他与公意之间可能出现很大的差异乃至对立，因而它们不可能永远保持一致，“即便它总是应该存在的，但这种持续的和谐状态也只不过是机遇的结果，而非人为的设计”。^⑥众意作为个别意志的总和，它包含着公意，但往往着眼于私利，公意的形成是对众意的克服，众意“除掉这些个别意志中正负相抵消的部分之外，剩下的那些差异的总和就是公意”。团体意志对于构成这一集团的成员来说，是一种公意，但相对于国家来

说，则只是这个社团党派的意志，是一种个别意志。由于集团往往会因小团体的利益而牺牲国家的利益，因此团体意志不仅很难与公意一致，而且由于它的存在，会给公意的形成造成重大的障碍。尽管如此，但公意不能脱离个别意志、众意或团体意志而孤立存在。事实上，由于个别意志之间的对立和冲突，才使公意的形成成为必要，也正由于个别意志之间存在协调一致之处，才使公意的形成成为可能。

3 . WHETHER THE GENERAL WILL IS FALLIBLE

IT follows from what has gone before that the general will is always right and tends to the public advantage; but it does not follow that the deliberations of the people are always equally correct. Our will is always for our own good, but we do not always see what that is; the people is never corrupted, but it is often deceived, and on such occasions only does it seem to will what is bad.

There is often a great deal of difference between the will of all and the general will; the latter considers only the common interest, while the former takes private interest into account, and is no more than a sum of particular wills: but take away from these same wills the pluses and minuses that cancel one another,^[2] and the general will remains as the sum of the differences.

If, when the people, being furnished with adequate information, held its deliberations, the citizens had no communication one with another, the grand total of the small differences would always give the general will, and the decision would always be good. But when factions arise, and partial associations are formed at the expense of the great association, the will of each of these associations becomes general in relation to its members, while it remains particular in relation to the State: it may then be said that there are no longer as many votes as there are men, but only as many as there are associations. The differences become less numerous and give a less general result. Lastly, when one of these associations is so great as to prevail over all the rest, the result is no longer a sum of small differences, but a single difference; in this case there is no longer a general will, and the opinion which prevails is purely particular.

It is therefore essential, if the general will is to be able to express

itself, that there should be no partial society within the State, and that each citizen should think only his own thoughts:^[3] which was indeed the sublime and unique system established by the great Lycurgus⁽⁷⁾. But if there are partial societies, it is best to have as many as possible and to prevent them from being unequal, as was done by Solon⁽⁸⁾, Numa⁽⁹⁾ and Servius⁽¹⁰⁾. These precautions are the only ones that can guarantee that the general will shall be always enlightened, and that the people shall in no way deceive itself.

第四章 论主权利力的界限

本章题目展示了所要论述的主题。如卢梭所论述，主权利是一个国家的最高权力，是绝对的、神圣的、不可侵犯的，它使政治体对自己的成员拥有一种绝对的支配的权利。但同时它也是合法的、公平的、有益的、稳定的，它不会超过而且也不可能超过公共约定的界限，它不能对臣民施加对共同体没有用处的约束，它无权使某个臣民比另一个臣民承受更多的负担。

具体而言，卢梭为主权限定了如下条件：首先，主权者的行为须在公意的指导下。社会公约虽然赋予了政治体以支配其成员的绝对权力，但这个权力只有受公意指导时才能拥有主权这个名称。其次，指导主权者行为的公意，在目的上和本质上必须要有普遍性。它必须来自所有的人，又适用于所有的人。如果公意指向任何个别的、限定的对象的话，它就丧失了公正性。再次，主权利是受契约限制的，它“不会超过、也不能超过公共契约的界限，并且每个人都可以根据自己所愿来处置那些依据契约留给他的财富和自由”，因此“主权者在任何时候都无权施加给某个臣民比其他臣民更大的负担，因为每当这种事情发生时，就造成了对个人的不平，主权者的权力就不再有效”。最后，主权者不能给臣民施加不必要的义务。“站在主权者的角度上，主权者不可以把任何一种不失为共同体所需的负担强加于公民身上，事实上，主权者甚至不可以有这种意图。”

卢梭在对主权者权力行使进行约束的同时，还对人民的权利义务进行了界定。一个公民应尽自己所能义不容辞地为国家服务，卢梭指出：“对于公民所能够为国家提供的任何服务，每当主权者提出要求时，公民就应该马上提供。”“把公民同社会共同体联结起来的那个义务之所以是义不容辞的，是因为这种义务是相互的；而且它们的本性也使得一个人为了履行这种义务而为别人服务的时候，他不可能不同时也是为他自己服务。如果不是事实上所有人都认为‘每个人’这个词适用于他自己，而且在为全体投票的时候又考虑到他自己的话，公意怎么可能

永远是公正的，而所有的人又怎么可能总是希望每个人都能幸福呢？”卢梭还指出权利（力）和义务是对等的，“如果要问主权者和公民各自相应的权利能够扩展到多大的程度，那就等于在问这两者对于他们自身能够承诺和约束到多大的程度”。

4 . THE LIMITS OF THE SOVEREIGN POWER

If the State is a moral person whose life is in the union of its members, and if the most important of its cares is the care for its own preservation, it must have a universal and compelling force, in order to move and dispose each part as may be most advantageous to the whole. As nature gives each man absolute power over all his members, the social compact gives the body politic absolute power over all its members also; and it is this power which, under the direction of the general will, bears, as I have said, the name of Sovereignty.

But, besides the public person, we have to consider the private persons composing it, whose life and liberty are naturally independent of it. We are bound then to distinguish clearly between the respective rights of the citizens and the Sovereign,^[4] and between the duties the former have to fulfil as subjects, and the natural rights they should enjoy as men.

Each man alienates, I admit, by the social compact, only such part of his powers, goods and liberty as it is important for the community to control; but it must also be granted that the Sovereign is sole judge of what is important.

Every service a citizen can render the State he ought to render as soon as the Sovereign demands it; but the Sovereign, for its part, cannot impose upon its subjects any fetters that are useless to the community, nor can it even wish to do so; for no more by the law of reason than by the law of nature can anything occur without a cause.

The undertakings which bind us to the social body are obligatory only because they are mutual; and their nature is such that in fulfilling them we cannot work for others without working for ourselves. Why

is it that the general will is always in the right, and that all continually will the happiness of each one, unless it is because there is not a man who does not think of “each” as meaning him, and consider himself in voting for all? This proves that equality of rights and the idea of justice which such equality creates originate in the preference each man gives to himself, and accordingly in the very nature of man. It proves that the general will, to be really such, must be general in its object as well as its essence; that it must both come from all and apply to all; and that it loses its natural rectitude when it is directed to some particular and determinate object, because in such a case we are judging of something foreign to us, and have no true principle of equity to guide us.

Indeed, as soon as a question of particular fact or right arises on a point not previously regulated by a general convention, the matter becomes contentious. It is a case in which the individuals concerned are one party, and the public the other, but in which I can see neither the law that ought to be followed nor the judge who ought to give the decision. In such a case, it would be absurd to propose to refer the question to an express decision of the general will, which can be only the conclusion reached by one of the parties and in consequence will be, for the other party, merely an external and particular will, inclined on this occasion to injustice and subject to error. Thus, just as a particular will cannot stand for the general will, the general will, in turn, changes its nature, when its object is particular, and, as general, cannot pronounce on a man or a fact. When, for instance, the people of Athens nominated or displaced its rulers, decreed honours to one, and imposed penalties on another, and, by a multitude of particular decrees, exercised all the functions of government indiscriminately, it had in such cases no longer a general will in the strict sense; it was acting no longer as Sovereign, but as magistrate. This will seem contrary to current views; but I must be given time to expound my own.

It should be seen from the foregoing that what makes the will general is less the number of voters than the common interest uniting them; for, under this system, each necessarily submits to the conditions he imposes on others: and this admirable agreement between interest and justice gives to the common deliberations an equitable character which at once vanishes when any particular question is discussed, in the absence of a common interest to unite and identify the ruling of the judge with that of the party.

From whatever side we approach our principle, we reach the same conclusion, that the social compact sets up among the citizens an equality of such a kind, that they all bind themselves to observe the same conditions and should therefore all enjoy the same rights. Thus, from the very nature of the compact, every act of Sovereignty, i.e., every authentic act of the general will, binds or favours all the citizens equally; so that the Sovereign recognises only the body of the nation, and draws no distinctions between those of whom it is made up. What, then, strictly speaking, is an act of Sovereignty? It is not a convention between a superior and an inferior, but a convention between the body and each of its members. It is legitimate, because based on the social contract, and equitable, because common to all; useful, because it can have no other object than the general good, and stable, because guaranteed by the public force and the supreme power. So long as the subjects have to submit only to conventions of this sort, they obey no-one but their own will; and to ask how far the respective rights of the Sovereign and the citizens extend, is to ask up to what point the latter can enter into undertakings with themselves, each with all, and all with each.

We can see from this that the sovereign power, absolute, sacred and inviolable as it is, does not and cannot exceed the limits of general conventions, and that every man may dispose at will of such goods and liberty as these conventions leave him; so that the

Sovereign never has a right to lay more charges on one subject than on another, because, in that case, the question becomes particular, and ceases to be within its competency.

When these distinctions have once been admitted, it is seen to be so untrue that there is, in the social contract, any real renunciation on the part of the individuals, that the position in which they find themselves as a result of the contract is really preferable to that in which they were before. Instead of a renunciation, they have made an advantageous exchange: instead of an uncertain and precarious way of living they have got one that is better and more secure; instead of natural independence they have got liberty, instead of the power to harm others security for themselves, and instead of their strength, which others might overcome, a right which social union makes invincible. Their very life, which they have devoted to the State, is by it constantly protected; and when they risk it in the State's defence, what more are they doing than giving back what they have received from it? What are they doing that they would not do more often and with greater danger in the state of nature, in which they would inevitably have to fight battles at the peril of their lives in defence of that which is the means of their preservation? All have indeed to fight when their country needs them; but then no one has ever to fight for himself. Do we not gain something by running, on behalf of what gives us our security, only some of the risks we should have to run for ourselves, as soon as we lost it?

第五章 论生死权

本章是对上一章所讨论主权权力界限主题的延续。在上一章，卢梭指出，主权权力使政治体对自己的成员拥有一种绝对的支配权利，也对行使主权权力做了一些限定。在本章，卢梭讨论了一种特殊的情况，即在什么情况下国家有权要求公民承受牺牲生命的风险，在什么情况下国家有权剥夺一个人的生命。

霍布斯在《利维坦》中指出，在国家成立之前，任何人都无权做他认为能够保护自己的事，甚至可以因此而征服、伤害以及杀人。建立国家时，每个人都放弃了防御他人的权利，这增强了主权者在认为合适的时候为保护全体臣民而使用这一权利的力量，这就是国家行使惩罚权的根据。洛克在《政府论》中指出，人们在加入政治社会时必须放弃的两种权力，一种是在自然法允许的范围里，为了保护自己 and 别人，可以做他认为合适的任何事情。另一种就是处罚任何违反自然法的罪行的行为。这两种权力都完全转交给了政治社会，这是为了满足政治社会幸福、繁荣和安全的需要，这不仅是必要的，而且是公道的。

卢梭从社会契约的目的着手，指出为了保全缔约者，国家在必要时要求公民效死或者处死犯人的行为是正当合法的。在前者的条件下，由于公民的生命能平平安安保存下来，已不单纯是“自然的恩赐”，也是“国家的一种有条件的馈赠”。在后者的条件下，破坏国家法律的人已不再是国家的一个成员，而是在向国家宣战。为了不至于成为凶手的牺牲品，所以人们才同意，如果自己成了杀人犯的话，那么他自己就得去死。同时卢梭表明，定罪判刑是个别行为，不是主权权力，不属于主权者，是执行权力。但赦免或宽恕的权力超越了法官和法律，属于主权者。

5 . THE RIGHT OF LIFE AND DEATH⁽¹¹⁾

THE question is often asked how individuals, having no right to dispose of their own lives, can transfer to the Sovereign a right which they do not possess. The difficulty of answering this question seems to me to lie in its being wrongly stated. Every man has a right to risk his own life in order to preserve it. Has it ever been said that a man who throws himself out of the window to escape from a fire is guilty of suicide? Has such a crime ever been laid to the charge of him who perishes in a storm because, when he went on board, he knew of the danger?

The social treaty has for its end the preservation of the contracting parties. He who wills the end wills the means also, and the means must involve some risks, and even some losses. He who wishes to preserve his life at others' expense should also, when it is necessary, be ready to give it up for their sake. Furthermore, the citizen is no longer the judge of the dangers to which the law desires him to expose himself; and when the prince says to him: "It is expedient for the State that you should die," he ought to die, because it is only on that condition that he has been living in security up to the present, and because his life is no longer a mere bounty of nature, but a gift made conditionally by the State.

The death penalty inflicted upon criminals may be looked on in much the same light: it is in order that we may not fall victims to an assassin that we consent to die if we ourselves turn assassins. In this treaty, so far from disposing of our own lives, we think only of securing them, and it is not to be assumed that any of the parties then expects to get hanged.

Again, every malefactor, by attacking social rights, becomes on forfeit a rebel and a traitor to his country; by violating its laws he

ceases to be a member of it; he even makes war upon it. In such a case the preservation of the State is inconsistent with his own, and one or the other must perish; in putting the guilty to death, we slay not so much the citizen as an enemy. The trial and the judgment are the proofs that he has broken the social treaty, and is in consequence no longer a member of the State. Since, then, he has recognised himself to be such by living there, he must be removed by exile as a violator of the compact, or by death as a public enemy; for such an enemy is not a moral person, but merely a man; and in such a case the right of war is to kill the vanquished.

But, it will be said, the condemnation of a criminal is a particular act. I admit it: but such condemnation is not a function of the Sovereign; it is a right the Sovereign can confer without being able itself to exert it. All my ideas are consistent, but I cannot expound them all at once.

We may add that frequent punishments are always a sign of weakness or remissness on the part of the government. There is not a single ill-doer who could not be turned to some good. The State has no right to put to death, even for the sake of making an example, any one whom it can leave alive without danger.

The right of pardoning or exempting the guilty from a penalty imposed by the law and pronounced by the judge belongs only to the authority which is superior to both judge and law, i.e., the Sovereign; even its right in this matter is far from clear, and the cases for exercising it are extremely rare. In a well-governed State, there are few punishments, not because there are many pardons, but because criminals are rare; it is when a State is in decay that the multitude of crimes is a guarantee of impunity. Under the Roman Republic, neither the Senate nor the Consuls ever attempted to pardon; even the people never did so, though it sometimes revoked its own decision. Frequent pardons mean that crime will soon need them no longer, and no one

can help seeing whither that leads. But I feel my heart protesting and restraining my pen; let us leave these questions to the just man who has never offended, and would himself stand in no need of pardon.

第六章 论法律

卢梭在其《日内瓦手稿》中指出了法律的必要性，“法律是政治体的唯一动力，政治体只能是由于法律而行动并为人所感受到；没有法律，已经形成的国家只不过是一个没有灵魂的躯壳，它虽然存在但不能行动。因为每个人都顺从公意，这还不够；为了遵循公意，就必须认识公意。于是就出现了法律的必要性。”虽然社会公约赋予了政治体以生存和生命，但是仍然需要通过“立法”，赋予它以“行动和意志”。关于法律的必要性问题，卢梭另在本卷第十二章和第三卷第一章也有论述。

在本章，卢梭谈了有关法律的几个问题：一是什么是法律。他认为仅仅从概念和形而上学层面谈论法律是不够的，要区分自然法和国家法。二是法律具有普遍性。卢梭认为，法律是全体人民对全体人民作出的规定，具体而言，是作为主权者的全体人民对作为臣民的全体人民作出的规定。这种规定具有普遍性，因为它表达的是公意，它只针对臣民共同体和抽象的行为，而绝不考虑个别的人和行为。三是法律具有公正性。因为没有人会对自己本人不公正。即使是君主，作为国家的成员也要服从法律。四是法律与自由的关系。“法律只不过是我们自己意志的记录。”在《山中来信》第三封中，卢梭指出，“根本就不存在没有法律的自由”，也不存在任何人是凌驾在法律之上的。一个自由的人民，服从但不受奴役；有首领但没有主人；服从法律但仅仅是服从法律。”

在本章的最后，卢梭抛出了一个立法者必要性的问题，再次提出了公意能否出错的问题。他指出，虽然公意永远是正确的，但指导公意的判断并不总是明智的。个人看得到幸福却又拒绝它，公众期待幸福却又看不见它。因此，需要一个立法者来指导，使个人的欲望服从他们的理性，使公众认清他们真正想要的东西。

6 . LAW

BY the social compact we have given the body politic existence and life; we have now by legislation to give it movement and will. For the original act by which the body is formed and united still in no respect determines what it ought to do for its preservation.

What is well and in conformity with order is so by the nature of things and independently of human conventions. All justice comes from God, who is its sole source; but if we knew how to receive so high an inspiration, we should need neither government nor laws. Doubtless, there is a universal justice emanating from reason alone; but this justice, to be admitted among us, must be mutual. Humanly speaking, in default of natural sanctions, the laws of justice are ineffective among men: they merely make for the good of the wicked and the undoing of the just, when the just man observes them towards everybody and nobody observes them towards him. Conventions and laws are therefore needed to join rights to duties and refer justice to its object. In the state of nature, where everything is common, I owe nothing to him whom I have promised nothing; I recognise as belonging to others only what is of no use to me. In the state of society all rights are fixed by law, and the case becomes different.

But what, after all, is a law? As long as we remain satisfied with attaching purely metaphysical ideas to the word⁽¹²⁾, we shall go on arguing without arriving at an understanding; and when we have defined a law of nature, we shall be no nearer the definition of a law of the State.

I have already said that there can be no general will directed to a particular object. Such an object must be either within or outside the State. If outside, a will which is alien to it cannot be, in relation to it, general; if within, it is part of the State, and in that case there arises a

relation between whole and part which makes them two separate beings, of which the part is one, and the whole minus the part the other. But the whole minus a part cannot be the whole; and while this relation persists, there can be no whole, but only two unequal parts; and it follows that the will of one is no longer in any respect general in relation to the other.

But when the whole people decrees for the whole people, it is considering only itself; and if a relation is then formed, it is between two aspects of the entire object, without there being any division of the whole. In that case the matter about which the decree is made is, like the decreeing will, general. This act is what I call a law.

When I say that the object of laws is always general, I mean that law considers subjects *en masse* and actions in the abstract, and never a particular person or action. Thus the law may indeed decree that there shall be privileges, but cannot confer them on anybody by name. It may set up several classes of citizens, and even lay down the qualifications for membership of these classes, but it cannot nominate such and such persons as belonging to them; it may establish a monarchical government and hereditary succession, but it cannot choose a king, or nominate a royal family. In a word, no function which has a particular object belongs to the legislative power.

On this view, we at once see that it can no longer be asked whose business it is to make laws, since they are acts of the general will; nor whether the prince is above the law, since he is a member of the State; nor whether the law can be unjust, since no one is unjust to himself; nor how we can be both free and subject to the laws, since they are but registers of our wills.

We see further that, as the law unites universality of will with universality of object, what a man, whoever he be, commands of his own motion cannot be a law; and even what the Sovereign commands

with regard to a particular matter is no nearer being a law, but is a decree, an act, not of sovereignty, but of magistracy.

I therefore give the name “Republic” to every State that is governed by laws, no matter what the form of its administration may be: for only in such a case does the public interest govern, and the *res publica* rank as a reality. Every legitimate government is republican;^[5] what government is I will explain later on.

Laws are, properly speaking, only the conditions of civil association. The people, being subject to the laws, ought to be their author: the conditions of the society ought to be regulated solely by those who come together to form it. But how are they to regulate them? Is it to be by common agreement, by a sudden inspiration? Has the body politic an organ to declare its will? Who can give it the foresight to formulate and announce its acts in advance? Or how is it to announce them in the hour of need? How can a blind multitude, which often does not know what it wills, because it rarely knows what is good for it, carry out for itself so great and difficult an enterprise as a system of legislation? Of itself the people wills always the good, but of itself it by no means always sees it. The general will is always in the right, but the judgment which guides it is not always enlightened. It must be got to see objects as they are, and sometimes as they ought to appear to it; it must be shown the good road it is in search of, secured from the seductive influences of individual wills, taught to see times and spaces as a series, and made to weigh the attractions of present and sensible advantages against the danger of distant and hidden evils. The individuals see the good they reject; the public wills the good it does not see. All stand equally in need of guidance. The former must be compelled to bring their wills into conformity with their reason; the latter must be taught to know what it wills. If that is done, public enlightenment leads to the union of understanding and will in the social body: the parts are made to work exactly together, and the

whole is raised to its highest power. This makes a legislator necessary.

第七章 论立法者

立法者既不是行政职务，也不是主权职务，它是一种独特的、超越的职能，这样才能维护其工作的神圣和公正。卢梭列举了莱格古士让出王位，希腊、意大利、日内瓦由外邦人为国家和民族立法等情况，意在说明立法者最好能够超脱“处身事外”，他本人也想做这样一位立法者，曾为科西嘉和波兰制宪拟案。罗马十人委员会的例子意在表明，要区分编订法律的人和立法者，唯独人民具有立法的主权权力。同时，卢梭表明，立法者的提议，除非为人民同意，即被提交全体人民自由投票表决通过，否则将无法获得法律效力。这说明，立法者只能建议，他不能立法。除了存在于社会初始阶段的立法者，还有为已存民族设计法规的立法者。

卢梭表明了立法者的困难，因而需求助神明与宗教。卢梭借马基雅维利的话，“事实是，在任何一个国家中都从来没有一个可以不借助于神明的非凡的立法者。因为若是不借助于神明，他的法律将不会被人们接受。一个智者可能知道很多有用的道理，但却不能通过某种方式论证这些真理以使人们信服。”这些立法者，必然“让神以他们的智慧为荣”，必然佯言，他们带给人民的法规是神明的作品，并非他们自己的。不过，卢梭暗示，在开始接受光荣之前，立法者的创造已经开始衰落。而一个民族开始衰亡之后，才逐渐闻名于世。在《爱弥尔》中他写道：“历史的一个重大缺陷，是过多描绘人的恶行，而非善行。因为历史只能凭借革命和灾变才有趣。一个民族，一旦有和平的政府，平静地生息繁衍，历史便绝口不谈。只有民族衰落之时，历史才让他辉煌。”于是在本章，他将能为国家立法的“最高智慧”描绘为，“它乐意花费充足的时间去等待一个长远的荣耀，它也乐意在这个时代里辛勤劳作，而在下一个时代中去享受劳作的果实”。

根据卢梭，立法者除了要“找到一个最适合于国家的社会法则”，为了使立法达到其完美的顶点，还需要将自然个人转变为公民体的成员，要塑造出具有公益精神的公民，“用一种道德

的、公共性的存在方式代替人们得之于自然的那种生理的、独立的存在方式”，他们习惯于在追求自身利益时，将其作为公共利益的一部分，并绝不以牺牲共同利益换取个人利益。“为了使一个新建立的民族能够领会那些明智的政治原则，并遵循那些治理国家的根本准则，我们必须倒果为因：那些本来应该是社会制度的产物的社会精神，将不得不反过来支配这些社会制度的创立，人们将不得不在法律出现之前，变成本来应该是有法律所塑造的那个样子。”卢梭进一步描述，身处社会秩序初期的立法者，将自己装扮成先知，他们将希望人民采纳的建议，说成神明的训诫，经由他们转达。

卢梭指出了伟大立法者的稀缺性。虽然卢梭认为是同意而非智慧构成了政治社会权威的合法性，但是他也承认，才能卓越的领导者（如立法者）对于社会契约的成功来说，是必不可少的。而这种伟大的立法者甚至比一个伟大的国君还要稀缺。“立法者是发明机器的工程师，而国王仅仅是组装机器、操纵机器的技术工人而已。”“毫无价值的权威可以建立一种短暂的结合，但是唯有智慧才能确立一种长久的结合。”在本章，卢梭引出了宗教对民族和政治社会产生影响这个话题，指出宗教这种“可以不以暴力而能强制人，不用论证而能说服人”的权威的作用，为在第四卷中谈论宗教主题埋下了伏笔。

7 . THE LEGISLATOR

IN order to discover the rules of society best suited to nations, a superior intelligence beholding all the passions of men without experiencing any of them would be needed. This intelligence would have to be wholly unrelated to our nature, while knowing it through and through; its happiness would have to be independent of us, and yet ready to occupy itself with ours; and lastly, it would have, in the march of time, to look forward to a distant glory, and, working in one century, to be able to enjoy in the next.^[6] It would take gods to give men laws.

What Caligula argued from the facts, Plato, in the dialogue called the *Politicus*, argued in defining the civil or kingly man, on the basis of right. But if great princes are rare, how much more so are great legislators? The former have only to follow the pattern which the latter have to lay down. The legislator is the engineer who invents the machine, the prince merely the mechanic who sets it up and makes it go. “At the birth of societies,” says Montesquieu, “the rulers of Republics establish institutions, and afterwards the institutions mould the rulers.”^[7]

He who dares to undertake the making of a people's institutions ought to feel himself capable, so to speak, of changing human nature, of transforming each individual, who is by himself a complete and solitary whole, into part of a greater whole from which he in a manner receives his life and being; of altering man's constitution for the purpose of strengthening it; and of substituting a partial and moral existence for the physical and independent existence nature has conferred on us all. He must, in a word, take away from man his own resources and give him instead new ones alien to him, and incapable of being made use of without the help of other men. The more

completely these natural resources are annihilated, the greater and the more lasting are those which he acquires, and the more stable and perfect the new institutions; so that if each citizen is nothing and can do nothing without the rest, and the resources acquired by the whole are equal or superior to the aggregate of the resources of all the individuals, it may be said that legislation is at the highest possible point of perfection.

The legislator occupies in every respect an extraordinary position in the State. If he should do so by reason of his genius, he does so no less by reason of his office, which is neither magistracy, nor Sovereignty. This office, which sets up the Republic, nowhere enters into its constitution; it is an individual and superior function, which has nothing in common with human empire; for if he who holds command over men ought not to have command over the laws, he who has command over the laws ought not any more to have it over men; or else his laws would be the ministers of his passions and would often merely serve to perpetuate his injustices: his private aims would inevitably mar the sanctity of his work.

When Lycurgus gave laws to his country, he began by resigning the throne. It was the custom of most Greek towns to entrust the establishment of their laws to foreigners. The Republics of modern Italy in many cases followed this example; Geneva did the same and profited by it.^[8] Rome, when it was most prosperous, suffered a revival of all the crimes of tyranny, and was brought to the verge of destruction, because it put the legislative authority and the sovereign power into the same hands.

Nevertheless, the decemvirs themselves never claimed the right to pass any law merely on their own authority. "Nothing we propose to you," they said to the people, "can pass into law without your consent. Romans, be yourselves the authors of the laws which are to make you happy."

He, therefore, who draws up the laws has, or should have, no right of legislation, and the people cannot, even if it wishes, deprive itself of this incommunicable right, because, according to the fundamental compact, only the general will can bind the individuals, and there can be no assurance that a particular will is in conformity with the general will, until it has been put to the free vote of the people. This I have said already; but it is worthwhile to repeat it.

Thus in the task of legislation we find together two things which appear to be incompatible: an enterprise too difficult for human powers, and, for its execution, an authority that is no authority.

There is a further difficulty that deserves attention. Wise men, if they try to speak their language to the common herd instead of its own, cannot possibly make themselves understood. There are a thousand kinds of ideas which it is impossible to translate into popular language. Conceptions that are too general and objects that are too remote are equally out of its range: each individual, having no taste for any other plan of government than that which suits his particular interest, finds it difficult to realise the advantages he might hope to draw from the continual privations good laws impose. For a young people to be able to relish sound principles of political theory and follow the fundamental rules of statecraft, the effect would have to become the cause; the social spirit, which should be created by these institutions, would have to preside over their very foundation; and men would have to be before law what they should become by means of law. The legislator therefore, being unable to appeal to either force or reason, must have recourse to an authority of a different order, capable of constraining without violence and persuading without convincing.

This is what has, in all ages, compelled the fathers of nations to have recourse to divine intervention and credit the gods with their own wisdom, in order that the peoples, submitting to the laws of the

State as to those of nature, and recognising the same power in the formation of the city as in that of man, might obey freely, and bear with docility the yoke of the public happiness.

This sublime reason, far above the range of the common herd, is that whose decisions the legislator puts into the mouth of the immortals, in order to constrain by divine authority those whom human prudence could not move.^[9] But it is not anybody who can make the gods speak, or get himself believed when he proclaims himself their interpreter. The great soul of the legislator is the only miracle that can prove his mission. Any man may grave tablets of stone, or buy an oracle, or feign secret intercourse with some divinity, or train a bird to whisper in his ear, or find other vulgar ways of imposing on the people. He whose knowledge goes no further may perhaps gather round him a band of fools; but he will never found an empire, and his extravagances will quickly perish with him. Idle tricks form a passing tie; only wisdom can make it lasting. The Judaic law⁽¹³⁾, which still subsists, and that of the child of Ishmael⁽¹⁴⁾, which, for ten centuries, has ruled half the world, still proclaim the great men who laid them down; and, while the pride of philosophy or the blind spirit of faction sees in them no more than lucky impostures, the true political theorist admires, in the institutions they set up, the great and powerful genius which presides over things made to endure.

We should not, with Warburton, conclude from this that politics and religion have among us a common object, but that, in the first periods of nations, the one is used as an instrument for the other.

第八章 论人民

从本章开始，卢梭用了三章篇幅来论述“人民”这个主题，这里“人民”是广义上的，包含了人口、领土、自然资源、战和状态等民族国家构成的要素。本章主要围绕立法的时机，即立法时，人民所应具备的条件和素质来展开。

卢梭认为，并不是所有的民族都适合被立法。“人们可以争取自由，但却永远不能恢复自由。”（2.8.5）卢梭讨论了哪类民族适合接受健全的法律，他在《日内瓦手稿》中写道：“一般来说，一个被长期的奴役及其所伴随的罪恶而消耗得筋疲力尽的民族，会同时丧失他们对祖国的热爱以及他们对幸福的情操的；他们只是想象着处境不可能更好而聊以自慰；他们生活在一起而没有任何真正的联合，就好像人们聚居在同一块土地上的被断崖峭壁分割开来那样。他们中任何人的不幸一点也触动不了他们，因为野心蒙蔽住了他们，因为除了自己所钻营的那个地位以外，没有人能看清楚自己的地位。一个民族处于这种状态之下是不可能再有一个健全的制度的，因为他们的意志和他们的体制已经同样的腐化了。他们再没有什么可丧失的。”马基雅维利在《李维论》中表达了相同的意思：“一个习惯于在君主制下过活的民族，如果意外地变得自由，他们很难保持自己的自由”，“一个腐化了的民族，在恢复了他们的自由之后要保持自由，就会遇到世上的一切困难。”⁽¹⁵⁾

卢梭还认为，并不是所有的民族都适合当下被立法。他认为，在为人民制定法律之前，人民应该是有一段时间来成熟到适合接受法律的。他指出，明智的立法者应当为已存的民族拟定法律，而最适于接受健全法律的发展阶段，既不是这个民族的老年时期，也不是其幼年时期。他认为，太年轻的民族太灵活易变，也缺乏必需的社会精神，年迈的民族穷途末路，坚固凝滞，缺乏对新法规的适应能力。“一旦习俗形成，或者偏见一旦生根，改革就将是一件危险而且毫无结果的事情。”（2.8.2）

卢梭认为，社会初建和秩序形成后对立法者的要求不同。

在社会初建之时，需要从零创造一切的立法者，他要特立独行，敢于创造，其任务是创建完善的社会秩序和具有公益精神的民族。在此后的立法者，则在这样的既有社会中提供政治社会运行规则。卢梭在此批判了俄国的彼得大帝，他只模仿而不创造，他本应承担训练民族开化、培育公民精神、打下深厚基业的重任，却不顾社情民意，只顺手拈来照搬照抄，在一个尚没有准备好接受的国度按照具有成熟条件的民族进行治理，“想使它们在幼年时代短时间内就显姓扬名，但是他们长大后却一事无成”（2.8.5）。

8 . THE PEOPLE

AS, before putting up a large building, the architect surveys and sounds the site to see if it will bear the weight, the wise legislator does not begin by laying down laws good in themselves, but by investigating the fitness of the people, for which they are destined, to receive them. Plato refused to legislate for the Arcadians and the Cyrenaeans⁽¹⁶⁾, because he knew that both peoples were rich and could not put up with equality; and good laws and bad men were found together in Crete, because Minos⁽¹⁷⁾ had inflicted discipline on a people already burdened with vice.

A thousand nations have achieved earthly greatness, that could never have endured good laws; even such as could have endured them could have done so only for a very brief period of their long history. Most peoples, like most men, are docile only in youth; as they grow old they become incorrigible. When once customs have become established and prejudices inveterate, it is dangerous and useless to attempt their reformation; the people, like the foolish and cowardly patients who rave at sight of the doctor, can no longer bear that any one should lay hands on its faults to remedy them.

There are indeed times in the history of States when, just as some kinds of illness turn men's heads and make them forget the past, periods of violence and revolutions do to peoples what these crises do to individuals: horror of the past takes the place of forgetfulness, and the State, set on fire by civil wars, is born again, so to speak, from its ashes, and takes on anew, fresh from the jaws of death, the vigour of youth. Such were Sparta at the time of Lycurgus, Rome after the Tarquins⁽¹⁸⁾, and, in modern times, Holland and Switzerland after the expulsion of the tyrants.

But such events are rare; they are exceptions, the cause of which

is always to be found in the particular constitution of the State concerned. They cannot even happen twice to the same people, for it can make itself free as long as it remains barbarous, but not when the civic impulse has lost its vigour. Then disturbances may destroy it, but revolutions cannot mend it: it needs a master, and not a liberator. Free peoples, be mindful of this maxim: "Liberty may be gained, but can never be recovered."⁽¹⁹⁾

Youth is not infancy. There is for nations, as for men, a period of youth, or, shall we say, maturity, before which they should not be made subject to laws; but the maturity of a people is not always easily recognisable, and, if it is anticipated, the work is spoilt. One people is amenable to discipline from the beginning; another, not after ten centuries. Russia will never be really civilised, because it was civilised too soon. Peter had a genius for imitation; but he lacked true genius, which is creative and makes all from nothing. He did some good things, but most of what he did was out of place. He saw that his people was barbarous, but did not see that it was not ripe for civilisation: he wanted to civilise it when it needed only hardening. His first wish was to make Germans or Englishmen, when he ought to have been making Russians; and he prevented his subjects from ever becoming what they might have been by persuading them that they were what they are not. In this fashion too a French teacher turns out his pupil to be an infant prodigy, and for the rest of his life to be nothing whatsoever. The empire of Russia will aspire to conquer Europe, and will itself be conquered. The Tartars, its subjects or neighbours, will become its masters and ours, by a revolution which I regard as inevitable. Indeed, all the kings of Europe are working in concert to hasten its coming.

第九章 论人民（续）

在本章，卢梭论述了领土面积对国家治理和法律适用提出的挑战。

卢梭认为，良好体制的国家，其幅员大小应有所限制。一般来说，小国的治理会更加坚强有力。有几点理由：一是距离越远，行政层级就越多，管理会越困难，行政负担越重。同时国家应对偏远地区的治安突发事件无法反应灵敏和有力。二是公民之间互不相识，感情陌生，难以培育公民情感和责任。三是同一法律适用于不同地域会出现困难，容易在人民中产生误解和混乱，同样不同的习俗风尚彼此交融也存在困难。四是管理者的精力都花费在治理和执行，而无力关心人民福祉和安全。这样，一个过于庞大的政治体会在其自身重力压迫之下分崩离析以致毁灭。

卢梭还指出，致力于拥有强大力量的国家总倾向于扩张，但事实上，即使是为了保存自己而进行无休止的扩张也有垮台的危险，罗马帝国就是一个生动的例子。（2.9.6）卢梭认为，建立一种强大而健康的体制，需要“在扩张和收缩之间找到一种精确的均衡”，这是“政治智慧中极为重要的方面”，“源自于良好政府的力量要比广阔的领土所能提供的丰富资源更加可靠”。（2.9.5）

9 . THE PEOPLE (continued)

As nature has set bounds to the stature of a well-made man, and, outside those limits, makes nothing but giants or dwarfs, similarly, for the constitution of a State to be at its best, it is possible to fix limits that will make it neither too large for good government, nor too small for self-maintenance. In every body politic there is a *maximum* strength which it cannot exceed and which it only loses by increasing in size. Every extension of the social tie means its relaxation; and, generally speaking, a small State is stronger in proportion than a great one.

A thousand arguments could be advanced in favour of this principle. First, long distances make administration more difficult, just as a weight becomes heavier at the end of a longer lever. Administration therefore becomes more and more burdensome as the distance grows greater; for, in the first place, each city has its own, which is paid for by the people: each district its own, still paid for by the people: then comes each province, and then the great governments, satrapies, and vice-royalties, always costing more the higher you go, and always at the expense of the unfortunate people. Last of all comes the supreme administration, which eclipses all the rest. All these over charges are a continual drain upon the subjects; so far from being better governed by all these different orders, they are worse governed than if there were only a single authority over them. In the meantime, there scarce remain resources enough to meet emergencies; and, when recourse must be had to these, the State is always on the eve of destruction.

This is not all; not only has the government less vigour and promptitude for securing the observance of the laws, preventing nuisances, correcting abuses, and guarding against seditious

undertakings begun in distant places; the people has less affection for its rulers, whom it never sees, for its country, which, to its eyes, seems like the world, and for its fellow-citizens, most of whom are unknown to it. The same laws cannot suit so many diverse provinces with different customs, situated in the most various climates, and incapable of enduring a uniform government. Different laws lead only to trouble and confusion among peoples which, living under the same rulers and in constant communication one with another, intermingle and intermarry, and, coming under the sway of new customs, never know if they can call their very patrimony their own. Talent is buried, virtue unknown and vice unpunished, among such a multitude of men who do not know one another, gathered together in one place at the seat of the central administration. The leaders, overwhelmed with business, see nothing for themselves; the State is governed by clerks. Finally, the measures which have to be taken to maintain the general authority, which all these distant officials wish to escape or to impose upon, absorb all the energy of the public, so that there is none left for the happiness of the people. There is hardly enough to defend it when need arises, and thus a body which is too big for its constitution gives way and falls crushed under its own weight.

Again, the State must assure itself a safe foundation, if it is to have stability, and to be able to resist the shocks it cannot help experiencing, as well as the efforts it will be forced to make for its maintenance; for all peoples have a kind of centrifugal force that makes them continually act one against another, and tend to aggrandise themselves at their neighbours' expense, like the vortices of Descartes. Thus the weak run the risk of being soon swallowed up; and it is almost impossible for any one to preserve itself except by putting itself in a state of equilibrium with all, so that the pressure is on all sides practically equal.

It may therefore be seen that there are reasons for expansion and

reasons for contraction; and it is no small part of the statesman's skill to hit between them the mean that is most favourable to the preservation of the State. It may be said that the reason for expansion, being merely external and relative, ought to be subordinate to the reasons for contraction, which are internal and absolute. A strong and healthy constitution is the first thing to look for; and it is better to count on the vigour which comes of good government than on the resources a great territory furnishes.

It may be added that there have been known States so constituted that the necessity of making conquests entered into their very constitution, and that, in order to maintain themselves, they were forced to expand ceaselessly. It may be that they congratulated themselves greatly on this fortunate necessity, which none the less indicated to them, along with the limits of their greatness, the inevitable moment of their fall.⁽²⁰⁾

第十章 论人民（续）

在本章，卢梭论述了人口数量、地理环境与国家治理和法律适用之间的关系。卢梭指出，要使一个国家达到它的最佳大小，就要在“领土面积”和“人口数量”之间达到平衡，这样就既不会引发防御性的战争，也不会导致侵略性的战争。而只有既不依赖于邻国，也不依赖于局势的国家，才能够长久稳固，才能保护自己的自由。

卢梭认为，土地面积和居民数量之间的最佳比例，不同的地方是不同的，这取决于土地及自然资源的丰瘠、气候影响、女性生育能力，甚至居民在气质上的差异、体制的优越性都对其有影响。因此，立法者要考虑到人口自然会达到的数量，根据他所能预见到的来做如何立法的决定。卢梭指出，立法还有一个不可替代的关键条件，即和平稳定的状态。而国家在初创立时期是最没有抵抗力、最易遭破坏的时期，不是立法的合适时期。区分立法者和暴君，就是看他选择的为人民立法的时间。

卢梭为适合接受法律的国家设定了近乎苛刻的条件。在他眼中，这个国家应当是还未接受过法律约束、没有根深蒂固传统或迷信的国家，是既能抵抗侵略又不扩张侵略的勇敢民族，是彼此认识并不彼此奴役的民族，是不需也不被其他民族依赖的民族，是自给自足、中产阶级占主体的国家，是结合了稳定性与可塑性的民族。在此，对于最后一个条件，他的回答与前面相比发生了细微而重要的变化。在前面（2.8.2），他曾经劝告立法者不要为幼年或老年民族立法，而现在，卢梭认为适合立法的民族需要将古老民族的坚韧性和年轻民族的可塑性结合起来，“立法者任务的艰难，不在于必须建立什么，而在于必须破坏什么”。（2.10.5）

卢梭自己也承认这些条件很难全部被满足，“这也是为什么很少有体制良好的国家存在了”，但卢梭推崇了作为例外的科西嘉岛。1764年，科西嘉一名名叫布达富柯的特使邀请卢梭为科西嘉制宪。他写信给卢梭说，科西嘉差不多就处于你所提出的

可以进行立法的那种局面。它还完全不曾负荷过真正的法律羁绊；它不怕被突然的侵略摧毁；它不需要其他民族便可以过活；它既不富有也不贫穷，它能够自给自足。它的一些偏见是不难消除的，而且我敢说，人们会发现在科西嘉，自然的需要与社会的需要是结合在一起的。次年，卢梭写成《科西嘉制宪拟议》，但其生前未出版，至1867年才正式发行。

科西嘉风光：科西嘉岛是地中海第四大岛，面积为8 681平方公里。历史上曾被热那亚统治。1768年科西嘉岛被法国侵略性购入后，卢梭曾谴责法国违背了“一切正义、人道、政治权利及理性”。

10 . THE PEOPLE (continued)

A BODY politic may be measured in two ways—either by the extent of its territory, or by the number of its people; and there is, between these two measurements, a right relation which makes the State really great. The men make the State, and the territory sustains the men; the right relation therefore is that the land should suffice for the maintenance of the inhabitants, and that there should be as many inhabitants as the land can maintain. In this proportion lies the *maximum* strength of a given number of people; for, if there is too much land, it is troublesome to guard and inadequately cultivated, produces more than is needed, and soon gives rise to wars of defence; if there is not enough, the State depends on its neighbours for what it needs over and above, and this soon gives rise to wars of offence. Every people, to which its situation gives no choice save that between commerce and war, is weak in itself: it depends on its neighbours, and on circumstances; its existence can never be more than short and uncertain. It either conquers others, and changes its situation, or it is conquered and becomes nothing. Only insignificance or greatness can keep it free.

No fixed relation can be stated between the extent of territory and the population that are adequate one to the other, both because of the differences in the quality of land, in its fertility, in the nature of its products, and in the influence of climate, and because of the different tempers of those who inhabit it; for some in a fertile country consume little, and others on an ungrateful soil much. The greater or less fecundity of women, the conditions that are more or less favourable in each country to the growth of population, and the influence the legislator can hope to exercise by his institutions, must also be taken into account. The legislator therefore should not go by what he sees, but by what he foresees; he should stop not so much at the state in

which he actually finds the population, as at that to which it ought naturally to attain. Lastly, there are countless cases in which the particular local circumstances demand or allow the acquisition of a greater territory than seems necessary. Thus, expansion will be great in a mountainous country, where the natural products, i.e., woods and pastures, need less labour, where we know from experience that women are more fertile than in the plains, and where a great expanse of slope affords only a small level tract that can be counted on for vegetation. On the other hand, contraction is possible on the coast, even in lands of rocks and nearly barren sands, because there fishing makes up to a great extent for the lack of land-produce, because the inhabitants have to congregate together more in order to repel pirates, and further because it is easier to unburden the country of its superfluous inhabitants by means of colonies.

To these conditions of law-giving must be added one other which, though it cannot take the place of the rest, renders them all useless when it is absent. This is the enjoyment of peace and plenty; for the moment at which a State sets its house in order is, like the moment when a battalion is forming up, that when its body is least capable of offering resistance and easiest to destroy. A better resistance could be made at a time of absolute disorganisation than at a moment of fermentation, when each is occupied with his own position and not with the danger. If war, famine, or sedition arises at this time of crisis, the State will inevitably be overthrown.

Not that many governments have not been set up during such storms; but in such cases these governments are themselves the State's destroyers. Usurpers always bring about or select troublous times to get passed, under cover of the public terror, destructive laws, which the people would never adopt in cold blood. The moment chosen is one of the surest means of distinguishing the work of the legislator from that of the tyrant.

What people, then, is a fit subject for legislation? One which, already bound by some unity of origin, interest, or convention, has never yet felt the real yoke of law; one that has neither customs nor superstitions deeply ingrained, one which stands in no fear of being overwhelmed by sudden invasion; one which, without entering into its neighbours' quarrels, can resist each of them single-handed, or get the help of one to repel another; one in which every member may be known by every other, and there is no need to lay on any man burdens too heavy for a man to bear; one which can do without other peoples, and without which all others can do;^[10] one which is neither rich nor poor, but self-sufficient; and, lastly, one which unites the consistency of an ancient people with the docility of a new one. Legislation is made difficult less by what it is necessary to build up than by what has to be destroyed; and what makes success so rare is the impossibility of finding natural simplicity together with social requirements. All these conditions are indeed rarely found united, and therefore few States have good constitutions.

There is still in Europe one country capable of being given laws—Corsica⁽²¹⁾. The valour and persistency with which that brave people has regained and defended its liberty well deserves that some wise man should teach it how to preserve what it has won. I have a feeling that some day that little island will astonish Europe.

第十一章 论各类不同的法律体系

卢梭认为，平等和自由是立法的一般目的，与美德、宗教等特殊目的相比，前者更接近政治社会的目的。因为环境的力量总是倾向于破坏平等，所以立法的力量总是倾向于保持这种平等。（2.11.3）在第一卷第八章中，卢梭曾谈到了自由。在这里平等与自由两者相比，卢梭似乎更加看重自由，他将平等看做通向自由的途径。

不同的国家和民族，应根据其自身的特点和条件如自然资源、地理环境来立法，不求最好，只求最适合。只有顺应自然、习俗的立法，才能使一个国家体制强大和持久。“法律只不过是确保、陪伴和纠正着自然的东西。”（2.11.5）除了对所有民族而言是共同的原则，如自由和平等外，每个民族都有理由拥有只适合于他们自己的特殊原则，如希伯来人和阿拉伯人的宗教、雅典人的文艺、迦太基人的贸易、罗马人的公民美德等等。

11 . THE VARIOUS SYSTEMS OF LEGISLATION

IF we ask in what precisely consists the greatest good of all, which should be the end of every system of legislation, we shall find it reduce itself to two main objects, liberty and equality—liberty, because all particular dependence means so much force taken from the body of the State and equality, because liberty cannot exist without it.

I have already defined civil liberty; by equality, we should understand, not that the degrees of power and riches are to be absolutely identical for everybody; but that power shall never be great enough for violence, and shall always be exercised by virtue of rank and law; and that, in respect of riches, no citizen shall ever be wealthy enough to buy another, and none poor enough to be forced to sell himself:^[11] which implies, on the part of the great, moderation in goods and position, and, on the side of the common sort, moderation in avarice and covetousness.

Such equality, we are told, is an unpractical ideal that cannot actually exist. But if its abuse is inevitable, does it follow that we should not at least make regulations concerning it? It is precisely because the force of circumstances tends continually to destroy equality that the force of legislation should always tend to its maintenance.

But these general objects of every good legislative system need modifying in every country in accordance with the local situation and the temper of the inhabitants; and these circumstances should determine, in each case, the particular system of institutions which is best, not perhaps in itself, but for the State for which it is destined. If, for instance, the soil is barren and unproductive, or the land too

crowded for its inhabitants, the people should turn to industry and the crafts, and exchange what they produce for the commodities they lack. If, on the other hand, a people dwells in rich plains and fertile slopes, or, in a good land, lacks inhabitants, it should give all its attention to agriculture, which causes men to multiply, and should drive out the crafts, which would only result in depopulation, by grouping in a few localities the few inhabitants there are.^[12] If a nation dwells on an extensive and convenient coastline, let it cover the sea with ships and foster commerce and navigation. It will have a life that will be short and glorious. If, on its coasts, the sea washes nothing but almost inaccessible rocks, let it remain barbarous and ichthyophagous: it will have a quieter, perhaps a better, and certainly a happier life. In a word, besides the principles that are common to all, every nation has in itself something that gives them a particular application, and makes its legislation peculiarly its own. Thus, among the Jews long ago and more recently among the Arabs, the chief object was religion, among the Athenians letters, at Carthage and Tyre commerce, at Rhodes shipping, at Sparta war, at Rome virtue. The author of *The Spirit of the Laws* has shown with many examples by what art the legislator directs the constitution towards each of these objects.

What makes the constitution of a State really solid and lasting is the due observance of what is proper, so that the natural relations are always in agreement with the laws on every point, and law only serves, so to speak, to assure, accompany and rectify them. But if the legislator mistakes his object and adopts a principle other than circumstances naturally direct; if his principle makes for servitude while they make for liberty, or if it makes for riches, while they make for populousness, or if it makes for peace, while they make for conquest—the laws will insensibly lose their influence, the constitution will alter, and the State will have no rest from trouble till it is either destroyed or changed, and nature has resumed her

invincible sway.

第十二章 法律的分类

卢梭在本章为其论题从如何建立合法的政治权威，到如何设立政治机构进行了铺垫。

关于法律的分类，卢梭将法律分为政治法、民法、刑法和道德习俗信仰。政治法是规定主权者与国家关系的法律，它决定着政府的形式，这正是卢梭在下一卷所讨论的主题。民法是规定共同体成员之间关系的法律。刑法规定着共同体个人与法律之间关系，它是一种不服从即对此惩罚的法律。除了以上三种法律，卢梭非常看重的是这第四种法。“它是所有法律中最重要，它不是刻在大理石上或铜表上，而是刻在人民心里，它形成了国家真正的体制，它每天都会集聚新的力量，而且在其他法律衰亡的时候，它激励或者代替它们；它使一个民族的制度精神得以保存，并且不知不觉地用习惯的力量取代权威的力量。我在这里说的就是道德、习俗，最重要的是信仰。”（2.12.5）

霍布斯在《利维坦》中曾对法律的区别和分类作了介绍。他指出，不同学者的目的与视野及采用的论述方式不同，所以分类也不同。查士丁尼从颁布者不同，将市民法分为七类：国王的敕令、宪法、诏书，元老院的裁决，护民官的裁决，元老院的法令，执政官的布告，法学家的解答，不成文的习惯。有的将法律分为人定法和神定法，人定法包括刑法、确权法。还有一种分类是将法律分为基本法和非基本法。基本法是臣民必须遵守的、已经授权给主权者、一经缺失国家就不复存在的权力，如宣战媾和、任命官员等。非基本法是废除之后不会导致国家解体的法律，如臣民之间的诉讼。霍布斯有一个观点，认为习惯之所以能够成为法律，不是因为长期使用，而是因为主权者以沉默的方式表示了认可。

12 . THE DIVISION OF THE LAWS

IF the whole is to be set in order, and the commonwealth put into the best possible shape, there are various relations to be considered. First, there is the action of the complete body upon itself, the relation of the whole to the whole, of the Sovereign to the State; and this relation, as we shall see, is made up of the relations of the intermediate terms.⁽²²⁾

The laws which regulate this relation bear the name of political laws, and are also called fundamental laws, not without reason if they are wise. For, if there is, in each State, only one good system, the people that is in possession of it should hold fast to this; but if the established order is bad, why should laws that prevent men from being good be regarded as fundamental? Besides, in any case, a people is always in a position to change its laws, however good; for, if it choose to do itself harm, who can have a right to stop it?

The second relation is that of the members one to another, or to the body as a whole; and this relation should be in the first respect as unimportant, and in the second as important, as possible. Each citizen would then be perfectly independent of all the rest, and at the same time very dependent on the city; which is brought about always by the same means, as the strength of the State can alone secure the liberty of its members. From this second relation arise civil laws.

We may consider also a third kind of relation between the individual and the law, a relation of disobedience to its penalty. This gives rise to the setting up of criminal laws, which, at bottom, are less a particular class of law than the sanction behind all the rest.

Along with these three kinds of law goes a fourth, most important of all, which is not graven on tablets of marble or brass, but on the

hearts of the citizens. This forms the real constitution of the State, takes on every day new powers, when other laws decay or die out, restores them or takes their place, keeps a people in the ways in which it was meant to go, and insensibly replaces authority by the force of habit. I am speaking of morality, of custom, above all of public opinion; a power unknown to political thinkers, on which none the less success in everything else depends. With this the great legislator concerns himself in secret, though he seems to confine himself to particular regulations; for these are only the arc of the arch, while manners and morals, slower to arise, form in the end its immovable keystone.

Among the different classes of laws, the political, which determine the form of the government, are alone relevant to my subject.

(1) 这样的分类为卢梭所诟病，他在后面第二章中进行了批驳。

(2) 参见本书第三卷第五章。

(3) 指孟德斯鸠和洛克对主权种类的划分。参见洛克《政府论（下篇）》第12章，孟德斯鸠《论法的精神》第十一卷第6章。

(4) 卢梭在《山中来信》第七封中详细阐释：国家与国家之间的结盟、宣战与媾和，都不是主权者行为，而是政府的行为。权力的对外行使不适合于人民；国家的这类大行动是他们很难提出什么意见的；对于这类事情，首领比他们更清楚，是不会对外订立不利于祖国的条约的。大议会应当让官员们去办理对外事务，而它只一心专注于自身地位的巩固。罗马人在这方面最明智，他们让参议院对外拥有很大的权力，但在罗马城中，却要求他们即使对最卑微的公民也要非常尊重。

(5) 格劳秀斯的第一本书，指的是《战争与和平法》。

(6) 参见本卷第一章。

(7) 莱格古士，传说中公元前8世纪斯巴达国王，采用均分土地的方法消除贫富等级差别。

(8) 梭伦，公元前6世纪古希腊首席执政官，将公民按照财富多寡分成四个等级。

(9) 努玛，传说中古罗马国王，将公民按照不同职业分成许多小团体。

(10) 塞尔维乌斯，传说中古罗马王政时期国王，将罗马人民编成若干“百人团”。参见本书第四卷第四章。

(11) 本章是前一章内容的延续，讨论在何种情况下主权利能够剥夺一个人的生命。

(12) 形而上学的观念针对的是孟德斯鸠在《论法的精神》中对法的定义，即法是由事物的本性而产生的必然的关系。

(13) 希伯来人的法律，指犹太人摩西制定的律法。

(14) 伊斯梅尔人的后嗣的法律，指穆罕默德制定的法律。

(15) 参见马基雅维利《李维论》第一卷，第16章和第17章。

(16) 阿加狄亚和昔兰尼均为古希腊属地，曾请柏拉图为其立法。

(17) 希腊神话中宙斯与腓尼基公主欧罗巴之子，克里特之王，其统治期间法治严明。

(18) 罗马曾受塔尔干王朝的压迫与统治，卢梭在其《论人类不平等的起源》中的《献给日内瓦共和国》一文中写道，罗马人被看成是自由民族的典范，但他们在脱离了塔尔干王朝的压迫时，还没有自治的能力。

(19) 卢梭意在表达，一个被奴役惯了或将要腐化的民族，如若得到自由，会很难保持自己的自由。

(20) 在此，卢梭指的是罗马。孟德斯鸠在《罗马盛衰原因论》中将罗马衰亡的原因归结于无休止的扩张与征服。

(21) 科西嘉岛，当时为热那亚属地，正在进行反热那亚统治的起义。其有一名叫布达富柯的特使读了《社会契约论》后写信给卢梭，邀请其为科西嘉制宪，卢梭遂写成《科西嘉制宪拟议》。

(22) 这个比例等式即“主权者：政府 = 政府：臣民”，其中政府是比例中项，而人民具有双重身份，既享有主权又要服从主权。

[1] To be general, a will need not always be unanimous; but every vote must be counted: any exclusion is a breach of generality.

[2] “Every interest,” says the Marquis d’Argenson, “has different principles. The agreement of two particular interests is formed by opposition to a third.” He might have added that the agreement of all interests is formed by opposition to that of each. If there were no different interests, the common interest would be barely felt, as it would encounter no obstacle; all would go on of its own accord, and politics would cease to be an art.

[3] “In fact,” says Machiavelli, “there are some divisions that are harmful to a Republic and some that are advantageous. Those which stir up sects and parties are harmful; those attended by neither are advantageous. Since, then, the founder of a Republic cannot help enmities arising, he ought at least to prevent them from growing into sects” (*History of Florence*, Book vii).

[4] Attentive readers, do not, I pray, be in a hurry to charge me with contradicting myself. The terminology made it unavoidable, considering the poverty of the language; but wait and see.

[5] I understand by this word, not merely an aristocracy or a democracy, but generally any government directed by the general will, which is the law. To be legitimate, the government must be, not one with the Sovereign, but its minister. In such a case even a monarchy is a Republic. This will be made clearer in the following book.

[6] A people becomes famous only when its legislation begins to decline. We do not know for how many centuries the system of Lycurgus made the Spartans happy before the rest of Greece took any notice of it.

[7] Montesquieu, *The Greatness and Decadence of the Romans*, ch. i.

[8] Those who know Calvin only as a theologian much underestimate the extent of his genius. The codification of our wise edicts, in which he played a large part, does him no less honour than his Institute. Whatever revolution time may bring in our religion, so long as the spirit of patriotism and liberty still lives among us, the memory of this great man will be for ever blessed.

[9] "In truth," says Machiavelli, "there has never been, in any country, an extraordinary legislator who has not had recourse to God; for otherwise his laws would not have been accepted: there are, in fact, many useful truths of which a wise man may have knowledge without their having in themselves such clear reasons for their being so as to be able to convince others" (*Discourses on Livy*, Bk. v, ch. xi).

[10] If there were two neighbouring peoples, one of which could not do without the other, it would be very hard on the former, and very dangerous for the latter. Every wise nation, in such a case, would make haste to free the other from dependence. The Republic of Thiascala, enclosed by the Mexican Empire, preferred doing without salt to buying from the Mexicans, or even getting it from them as a gift. The Thiascalans were wise enough to see the snare hidden under such liberality. They kept their freedom, and that little State, shut up in that great Empire, was finally the instrument of its ruin.

[11] If the object is to give the State consistency, bring the two extremes as near to each other as possible; allow neither rich men nor beggars. These two estates, which are naturally inseparable, are equally fatal to the common good; from the one come the friends of tyranny, and from the other tyrants. It is always between them that public liberty is put up to auction; the one buys, and the other sells.

[12] "Any branch of foreign commerce," says M. d'Argenson, "creates on the whole only apparent advantage for the kingdom in general; it may enrich some individuals, or even some towns; but the nation as a whole gains nothing by it, and the people is no better off."

第三卷

导读

在第三卷，卢梭讨论了政府这个主题。卢梭认为推动政治共同体运行的有两种动力：意志和力量。前者是表达公意的立法权，后者是执行公意的行政权。由于行政权力的行使属于个别行为，不具有普遍性，它不能通过作为立法者和主权者的全体人民来行使，这就需要有一个代理机构来将公意付诸实施，这个在臣民和主权者之间建立联系的代理机构便是政府。它以主权者的名义，来行使主权者委托给他们并能限制、修改和收回的权力。卢梭很有创造性地用数学公式来表达主权者、臣民和政府之间的关系：主权者：政府 = 政府：臣民。主权者、政府、臣民三者要坚守自己的职责，分别是立法、行政、服从。作为人民的代理人，政府服从作为主权者的人民；作为法律的执行者，政府又管理作为臣民的人民。为了使国家运转协调，立法和行政这两种动力必须保持一定的比例，可以看出，随着臣民人口数量的增多，政府的力量就需要增强到相应的程度，主权者也就需要越多的权力来控制政府。作为比例中项的政府形式，会随着国家的大小、臣民的多寡而不同。而在一种既定的条件下只能有一种最好的政府形式。卢梭也试图表明，用几何的语言表达观点具有局限性，因为几何学的精确性在对道德的衡量中是不太适用的。

接下来卢梭向读者介绍了政府的分类。传统的分类方法是按照统治者人数以及其统治是否正义来划分的，卢梭遵循了这一传统并按照自己的方式进行了重新解释，将政府形式大致分为民主制、贵族制和君主制。民主制是政府把职权交给全体人民或大部分人民，这种政府形式有很多苛刻的条件，如人口面积、道德风尚、社会分层和财富分化等。若主权者和行政者是同一个人，即立法权和行政权都属于同一人，那就是等于应该分开的东西没有被分开，建构起来的将是一个没有政府的政府。卢梭认为严格意义上民主制政府形式的国家既不可遇也不可求，是“不适合于人类的”。而贵族制是指政府由一小部分人掌管的政府形式，它能避免民主制的一个重要缺陷，即将政府与主权者（人民）明确

区分开，能选拔贤德之士为行政官员，行政权更加便于实施。君主制是由一个个人来代替一个集体人格行使行政权，仍受法律制约，并不是专制政体，这种政府形式具有更强大的支配力，所有的努力都朝着一个目标，但是这个目标却不是公众幸福，而是个人利益。

卢梭认为，在这三种政府形式中，没有一种形式在任何条件下都是好的或都是坏的。在一种情况下最好的政府形式，在另一种情况下则有可能是最坏的。一个国家究竟选择哪一种形式，这要根据这个国家的具体情况而定，如国家的人口、疆域大小甚至气候条件。与其问什么样的政府是最好的政府，不如问一个民族是否得到了良好的治理。即使是对于后者的回答，标准也不是唯一的，君主制崇尚安定，民主制崇尚自由；君主制严厉、重惩治，民主制温和、重预防。卢梭的标准是人丁兴旺与否，能使人口增长最多的就是最好的政府，因为他认为政治结合的目的就在于保证人的生存与繁荣。此外，卢梭还指出，国家的构成与政府的构成是不同的，最好的政府形式是贵族制政府，最坏的主权形式是贵族主权制。

从第十章开始，卢梭开始讨论政府的蜕化和国家的解体，如何防止政府篡夺主权者权威。在此他阐明了人民在政府权威以及主权者权威行使中所发挥的决定性作用。卢梭认为，政府有渐渐由更少数人说了算的天然倾向，它使政府发生蜕变，或者政府首脑逐渐成为事实上的君主，法律被虚化，这便是“寡头”统治。或者政府个别成员以个人身份篡夺来了原本由他们集体行使的权力，这便是“群氓”统治。卢梭用了三章篇幅来论述合法主权者必须是人民大会，因为人民大会能使一个健全的社会抵抗不可避免的腐化。人民大会会有两种形式：一种是在特殊情况下召开的特别集会，另一种是固定的按期的、绝对不能取消或延期的集会。在卢梭看来，由人民直接行使主权的民主制度，在大国是无法实行的。只有在一个小国里，人民可以定期集会，直接制定法律并监督政府、任免官吏，从而稳定地行使自己的权利。可以看出，虽然卢梭在本卷前九章并未直接表明对人民民主的偏好，但随着论证层次推进，他提出了具有鲜明人民民主色彩的政制设计方案。他认为，最好的办法就是由人民直接行使自己的主权，也就是人民通过集会来考察政府，讨论和决定是否保留现存的政府形式，以及是否让那些担任行政职责的人们继续当政。

创制政府的行为绝不是一项契约，而是一项法律，对于行政官员来说，这不是订约的讨价还价，只能严格服从而不能践踏。否则，政府有可能以各种借口篡夺人民享有的主权。

BOOK III

BEFORE speaking of the different forms of government, let us try to fix the exact sense of the word, which has not yet been very clearly explained.

第一章 政府总论

从本章到第九章，卢梭探讨了政府的含义、产生及其分类。卢梭首先指出政府是在臣民和主权者之间建立的、便于两者之间相互交流的中枢体，是一个负责法律执行并维护个人和社会自由的中枢体（3.1.5）。他在《山中来信》第五封信中写过一段对“政府”的论述⁽¹⁾：“‘政府’一词的含义，并不是在所有的国家中都是相同的，其原因是由于各国的宪法并不完全一样。在君主国，行政权和主权的行使是结合在一起的，政府就是君主本人；他通过他的大臣、资政和各种绝对服从他的意志的团体行使他的权力。而在共和国，尤其是在民主制国家中，主权者从来不亲自行使政权；这一点，与君主国完全不同。在民主制国家中，政府只不过是行使行政权的机构，而行政权与主权是截然不同的。这个区别非常重要。”

在第一章中，卢梭用数学公式来表达政府，他将政府与主权者、臣民的关系表达为：主权者：政府 = 政府：臣民。显然，政府是该比例等式的比例中项。该等式中的每一项都承担了一种与其他项有本质区别的功能：主权者立法，政府行政和臣民服从（3.1.9）。而任何一个发生异化，如果主权者要进行统治，或者政府想要立法，或者臣民拒绝服从，那么秩序就会被混乱代替，国家将会解体。卢梭在本章开始，将主权和行政权比作意志和力量，正如为了使身体能够行动，意志必须与身体力量相匹配那样，为了国家行动起来，政府的“力量”同样也必须与公民们的“力量”相匹配。从该等式中，卢梭还力图说明，不同的民族不同的时期可以有无限多样可能的政制安排，但在一种既定条件下，只能有一种最好的政府。

吉尔丁在对《社会契约论》的注疏集中⁽²⁾还进一步指出，在这个比喻等式中，不仅中项是同一物——虽然看的视点不同（作为发布命令者和作为接收命令者的政府），而且端项也是同一物——尽管也是从不同的视点来看（集体性的人民和分散性的人民）。人民一定不能太缺少分散性以至于会不服从政府，同时也要有足够强的集体性使政府不会不服从它。政府的

力量必须超过人民的力量，同时它又必须被人民的力量超过。吉尔丁还解读到，卢梭将前面对政府、主权者和臣民之间的关系分析延伸到政府自身的管理运作中（3.1.17），政府就像是政治社会的小型化，在达成决定和执行决定之间存在的区别在政府这里也同样得面对。而只有那些在有权作出决定的团体和执行决定的团体之间没有区别的时候，才能避免对一个新的比例中项的需要。

卢梭指出了国家和政府之间的主要差别和冲突，国家以其自身而存在，政府只能通过主权者而存在。而行政官的统治意志只能是公意或法律，若行政官有一个比主权者意志更为活跃的个别意志，如果行政官为了人民服从于他的个人意志而使用了手中的公共力量，那么就有了法律上和事实上两个主权者，那么这个社会结合体就立刻消亡（3.1.19）。政府要正常地运转，就需要拥有召开行政大会来行使审议并解决问题的权力，需要有对其行政官晋升嘉奖的权力，但困难在于怎样使政府在强化自己体制的时候不削弱国家的公共体制，使政府总是会准备为了人民而牺牲政府，而不是为了政府而牺牲人民（3.1.20）。政府是国家的产物，虽然不会直接背离人民建立政府时的目标，但它却可能根据它自身的建构方式而在某种程度上偏离这个目标（3.1.21）。

1 . GOVERNMENT IN GENERAL

I WARN the reader that this chapter requires careful reading, and that I am unable to make myself clear to those who refuse to be attentive.

Every free action is produced by the concurrence of two causes; one moral, i.e., the will which determines the act; the other physical, i.e., the power which executes it. When I walk towards an object, it is necessary first that I should will to go there, and, in the second place, that my feet should carry me. If a paralytic wills to run and an active man wills not to, they will both stay where they are. The body politic has the same motive powers; here too force and will are distinguished, will under the name of legislative power and force under that of executive power. Without their concurrence, nothing is, or should be, done.

We have seen that the legislative power belongs to the people, and can belong to it alone. It may, on the other hand, readily be seen, from the principles laid down above, that the executive power cannot belong to the generality as legislature or Sovereign, because it consists wholly of particular acts which fall outside the competency of the law, and consequently of the Sovereign, whose acts must always be laws.

The public force therefore needs an agent of its own to bind it together and set it to work under the direction of the general will, to serve as a means of communication between the State and the Sovereign, and to do for the collective person more or less what the union of soul and body does for man. Here we have what is, in the State, the basis of government, often wrongly confused with the Sovereign, whose minister it is.

What then is government? An intermediate body set up between

the subjects and the Sovereign, to secure their mutual correspondence, charged with the execution of the laws and the maintenance of liberty, both civil and political.

The members of this body are called magistrates or *kings*⁽³⁾, that is to say *governors*, and the whole body bears the name *prince*.^[1] Thus those who hold that the act, by which a people puts itself under a prince, is not a contract, are certainly right. It is simply and solely a commission, an employment, in which the rulers, mere officials of the Sovereign, exercise in their own name the power of which it makes them depositaries. This power it can limit, modify or recover at pleasure; for the alienation of such a right is incompatible with the nature of the social body, and contrary to the end of association.

I call then *government*, or supreme administration, the legitimate exercise of the executive power, and prince or magistrate the man or the body entrusted with that administration.

In government reside the intermediate forces whose relations make up that of the whole to the whole, or of the Sovereign to the State. This last relation may be represented as that between the extreme terms of a continuous proportion, which has government as its mean proportional. The government gets from the Sovereign the orders it gives the people, and, for the State to be properly balanced, there must, when everything is reckoned in, be equality between the product or power of the government taken in itself, and the product or power of the citizens, who are on the one hand sovereign and on the other subject.

Furthermore, none of these three terms can be altered without the equality being instantly destroyed. If the Sovereign desires to govern, or the magistrate to give laws, or if the subjects refuse to obey, disorder takes the place of regularity, force and will no longer act together, and the State is dissolved and falls into despotism or

anarchy. Lastly, as there is only one mean proportional between each relation, there is also only one good government possible for a State. But, as countless events may change the relations of a people, not only may different governments be good for different peoples, but also for the same people at different times.

In attempting to give some idea of the various relations that may hold between these two extreme terms, I shall take as an example the number of a people, which is the most easily expressible.

Suppose the State is composed of ten thousand citizens. The Sovereign can only be considered collectively and as a body; but each member, as being a subject, is regarded as an individual: thus the Sovereign is to the subject as ten thousand to one, i.e., each member of the State has as his share only a ten-thousandth part of the sovereign authority, although he is wholly under its control. If the people numbers a hundred thousand, the condition of the subject undergoes no change, and each equally is under the whole authority of the laws, while his vote, being reduced to a hundred-thousandth part, has ten times less influence in drawing them up. The subject therefore remaining always a unit, the relation between him and the Sovereign increases with the number of the citizens. From this it follows that, the larger the State, the less the liberty.

When I say the relation increases, I mean that it grows more unequal. Thus the greater it is in the geometrical sense, the less relation there is in the ordinary sense of the word. In the former sense, the relation, considered according to quantity, is expressed by the quotient; in the latter, considered according to identity, it is reckoned by similarity.

Now, the less relation the particular wills have to the general will, that is, morals and manners to laws, the more should the repressive force be increased. The government, then, to be good, should be

proportionately stronger as the people is more numerous.

On the other hand, as the growth of the State gives the depositaries of the public authority more temptations and chances of abusing their power, the greater the force with which the government ought to be endowed for keeping the people in hand, the greater too should be the force at the disposal of the Sovereign for keeping the government in hand. I am speaking, not of absolute force, but of the relative force of the different parts of the State.

It follows from this double relation that the continuous proportion between the Sovereign, the prince and the people, is by no means an arbitrary idea, but a necessary consequence of the nature of the body politic. It follows further that, one of the extreme terms, viz., the people, as subject, being fixed and represented by unity, whenever the duplicate ratio increases or diminishes, the simple ratio does the same, and is changed accordingly. From this we see that there is not a single unique and absolute form of government, but as many governments differing in nature as there are States differing in size.

If, ridiculing this system, any one were to say that, in order to find the mean proportional and give form to the body of the government, it is only necessary, according to me, to find the square root of the number of the people, I should answer that I am here taking this number only as an instance; that the relations of which I am speaking are not measured by the number of men alone, but generally by the amount of action, which is a combination of a multitude of causes; and that, further, if, to save words, I borrow for a moment the terms of geometry, I am none the less well aware that moral quantities do not allow of geometrical accuracy.

The government is on a small scale what the body politic which includes it is on a great one. It is a moral person endowed with certain faculties, active like the Sovereign and passive like the State, and

capable of being resolved into other similar relations. This accordingly gives rise to a new proportion, within which there is yet another, according to the arrangement of the magistracies, till an indivisible middle term is reached, i.e., a single ruler or supreme magistrate, who may be represented, in the midst of this progression, as the unity between the fractional and the ordinal series.

Without encumbering ourselves with this multiplication of terms, let us rest content with regarding government as a new body within the State, distinct from the people and the Sovereign, and intermediate between them.

There is between these two bodies this essential difference, that the State exists by itself, and the government only through the Sovereign. Thus the dominant will of the prince is, or should be, nothing but the general will or the law; his force is only the public force concentrated in his hands, and, as soon as he tries to base any absolute and independent act on his own authority, the tie that binds the whole together begins to be loosened. If finally the prince should come to have a particular will more active than the will of the Sovereign, and should employ the public force in his hands in obedience to this particular will, there would be, so to speak, two Sovereigns, one rightful and the other actual, the social union would evaporate instantly, and the body politic would be dissolved.

However, in order that the government may have a true existence and a real life distinguishing it from the body of the State, and in order that all its members may be able to act in concert and fulfil the end for which it was set up, it must have a particular personality, a sensibility common to its members, and a force and will of its own making for its preservation. This particular existence implies assemblies, councils, power and deliberation and decision, rights, titles, and privileges belonging exclusively to the prince and making the office of magistrate more honourable in proportion as it is more

troublesome. The difficulties lie in the manner of so ordering this subordinate whole within the whole, that it in no way alters the general constitution by affirmation of its own, and always distinguishes the particular force it possesses, which is destined to aid in its preservation, from the public force, which is destined to the preservation of the State; and, in a word, is always ready to sacrifice the government to the people, and never to sacrifice the people to the government.

Furthermore, although the artificial body of the government is the work of another artificial body, and has, we may say, only a borrowed and subordinate life, this does not prevent it from being able to act with more or less vigour or promptitude, or from being, so to speak, in more or less robust health. Finally, without departing directly from the end for which it was instituted, it may deviate more or less from it, according to the manner of its constitution.

From all these differences arise the various relations which the government ought to bear to the body of the State, according to the accidental and particular relations by which the State itself is modified, for often the government that is best in itself will become the most pernicious, if the relations in which it stands have altered according to the defects of the body politic to which it belongs.

第二章 论不同的政府形式的建制原则

本章卢梭将要讨论的问题是，政府规模应该按照什么样的原则来构建，即行政官员数量控制在什么比例能够有利于国家。卢梭指出，正如主权者与国家不同，行政官员与政府之间的区分是明显的。每一位行政官员身上具备三种不同性质的意志：作为私人个体，拥有只关心个人利益的个别意志；作为行政官员团体成员之一，拥有只关心该团体利益的集体意志；作为主权者成员，拥有主权者意志即公意。如果政府只有一位行政官员，那么其个别意志与政府团体意志重合，达到其最大可能的强度，此时政府将最活跃有力，但此时政府的团体意志必然就是个别意志。如果政府由全体公民组成，那么团体意志就和公意重合，团体意志就不会比公意更活跃，同时个别意志仍掌握全部权力，此时政府最不活跃最无力，但此时政府的团体意志便最接近公意。这就是本章所要讨论问题的难点所在，政府的力量与政府的意志总是成反比。

卢梭指出，每个行政官员比单个公民更为活跃，因为每个行政官员都被赋予了某种确定的政府职能，而单个的公民却不可能被赋予某种特定的主权职能（3.2.10）。对此，吉尔丁的理解是，这既是因为政府比主权者规模小，也是因为每一位行政官员能将额外的重量施加其上，这一重量是由它所实施的治理功能带给其欲望造成的。⁽⁴⁾卢梭继续指出，在国家的力量恒而不变的情况下，增加行政官员的数量不能使政府获得更多的力量。

卢梭断言，按照自然秩序，导向个人利益的个别意志是三者中最强的，公意是三者中最弱的。公意比政府的团体意志更弱的原因在于，公意较少受到私人意志的影响，而政府的团体意志则受到私人意志的更大影响。而在完美的立法体系中，公意总是居于主导地位，个别意志是没有地位的。可见在自然秩序与完美立法体系所要求的秩序即一个健全的社会秩序中，三种意志的排序是相反的。卢梭指出了政府过于庞大的种种弊端，如效率低下、过于审慎而失去机会。政府在其成员身上耗

费的力量越多，则用在全体人民身上的力量就越少。所以，卢梭的结论是：国家越是扩大，政府就越是应该缩减它的行政等级，使行政官员的数目随着人口的增加成比例地减少。立法者的艺术就在于知道如何确定一个合适的点，使永远互成反比的政府力量和政府意志根据最有利于国家的比例结合在一起（3.2.13）。

2 . THE CONSTITUENT PRINCIPLE IN THE VARIOUS FORMS OF GOVERNMENT⁽⁵⁾

TO set forth the general cause of the above differences, we must here distinguish between government and its principle, as we did before between the State and the Sovereign.

The body of the magistrate may be composed of a greater or a less number of members. We said that the relation of the Sovereign to the subjects was greater in proportion as the people was more numerous, and, by a clear analogy, we may say the same of the relation of the government to the magistrates.

But the total force of the government, being always that of the State, is invariable; so that, the more of this force it expends on its own members, the less it has left to employ on the whole people.

The more numerous the magistrates, therefore, the weaker the government. This principle being fundamental, we must do our best to make it clear.

In the person of the magistrate we can distinguish three essentially different wills: first, the private will of the individual, tending only to his personal advantage; secondly, the common will of the magistrates, which is relative solely to the advantage of the prince, and may be called corporate will, being general in relation to the government, and particular in relation to the State, of which the government forms part; and, in the third place, the will of the people or the sovereign will, which is general both in relation to the State regarded as the whole, and to the government regarded as a part of the whole.

In a perfect act of legislation, the individual or particular will should be at zero; the corporate will belonging to the government should occupy a very subordinate position; and, consequently, the general or sovereign will should always predominate and should be the sole guide of all the rest.

According to the natural order, on the other hand, these different wills become more active in proportion as they are concentrated. Thus, the general will is always the weakest, the corporate will second, and the individual will strongest of all: so that, in the government, each member is first of all himself, then a magistrate, and then a citizen—in an order exactly the reverse of what the social system requires.

This granted, if the whole government is in the hands of one man, the particular and the corporate will are wholly united, and consequently the latter is at its highest possible degree of intensity. But, as the use to which the force is put depends on the degree reached by the will, and as the absolute force of the government is invariable, it follows that the most active government is that of one man.

Suppose, on the other hand, we unite the government with the legislative authority, and make the Sovereign prince also, and all the citizens so many magistrates: then the corporate will, being confounded with the general will, can possess no greater activity than that will, and must leave the particular will as strong as it can possibly be. Thus, the government, having always the same absolute force, will be at the lowest point of its relative force or activity.

These relations are incontestable, and there are other considerations which still further confirm them. We can see, for instance, that each magistrate is more active in the body to which he belongs than each citizen in that to which he belongs, and that

consequently the particular will has much more influence on the acts of the government than on those of the Sovereign; for each magistrate is almost always charged with some governmental function, while each citizen, taken singly, exercises no function of Sovereignty. Furthermore, the bigger the State grows, the more its real force increases, though not in direct proportion to its growth; but, the State remaining the same, the number of magistrates may increase to any extent, without the government gaining any greater real force; for its force is that of the State, the dimension of which remains equal. Thus the relative force or activity of the government decreases, while its absolute or real force cannot increase.

Moreover, it is a certainty that promptitude in execution diminishes as more people are put in charge of it: where prudence is made too much of, not enough is made of fortune; opportunity is let slip, and deliberation results in the loss of its object.

I have just proved that the government grows remiss in proportion as the number of the magistrates increases; and I previously proved that, the more numerous the people, the greater should be the repressive force. From this it follows that the relation of the magistrates to the government should vary inversely to the relation of the subjects to the Sovereign; that is to say, the larger the State, the more should the government be tightened, so that the number of the rulers diminish in proportion to the increase of that of the people.

It should be added that I am here speaking of the relative strength of the government, and not of its rectitude: for, on the other hand, the more numerous the magistracy, the nearer the corporate will comes to the general will; while, under a single magistrate, the corporate will is, as I said, merely a particular will. Thus, what may be gained on one side is lost on the other, and the art of the legislator is to know how to fix the point at which the force and the will of the government, which

are always in inverse proportion, meet in the relation that is most to the advantage of the State.

第三章 论政府的分类

本章卢梭讨论了如何来划分政府的类型。政府的形式与国家的形式有区别，前者由掌握行政权的行政官员的数量决定，后者由掌握立法权的主权者人数决定。卢梭沿用了传统意义上的民主制、贵族制和君主制的政府类型划分。他同时指出，这三种政府形式可以有不同程度的幅度变化，在政府由全体人民组成和半数人民组成的范围，是民主制政府；在政府由少于半数人民组成和极少的人民组成的范围，是贵族制政府；政府由一个人组成，是君主制政府。卢梭指出，虽然政府只具有以上三种名称，但可以具有和一个国家公民数目不同的不同政府形式，如几种不同形式的混合形式。

在吉尔丁看来，这三种政府形式的名称顶多具有如同“瘦”、“正常”、“胖”之类的词那样的作用，卢梭选用这些词不过是为了指出政府形式的近乎无限多样性，并且他显然拒绝认为它们中的某一种要优越于另一种。他是为了说明他的政治权利原理能与所有的政府形式相协调。(6)

卢梭在这里提出一个“什么是最好的政府”的问题，他自己回答说，在不同的情况下有不同的答案。一般来说，民主制政府适合于小国家，贵族制政府适合于中等程度的国家，君主制则适合大国家。但卢梭同时指出，例外的特殊情况大量存在。

3 . THE DIVISION OF GOVERNMENTS

WE saw in the last chapter what causes the various kinds or forms of government to be distinguished according to the number of the members composing them: it remains in this to discover how the division is made.⁽⁷⁾

In the first place, the Sovereign may commit the charge of the government to the whole people or to the majority of the people, so that more citizens are magistrates than are mere private individuals. This form of government is called *democracy*.

Or it may restrict the government to a small number, so that there are more private citizens than magistrates; and this is named *aristocracy*.

Lastly, it may concentrate the whole government in the hands of a single magistrate from whom all others hold their power. This third form is the most usual, and is called *monarchy*, or royal government.

It should be remarked that all these forms, or at least the first two, admit of degree, and even of very wide differences; for democracy may include the whole people, or may be restricted to half. Aristocracy, in its turn, may be restricted indefinitely from half the people down to the smallest possible number. Even royalty is susceptible of a measure of distribution. Sparta always had two kings, as its constitution provided; and the Roman Empire saw as many as eight emperors at once, without it being possible to say that the Empire was split up. Thus there is a point at which each form of government passes into the next, and it becomes clear that, under three comprehensive denominations, government is really susceptible of as many diverse forms as the State has citizens.

There are even more: for, as the government may also, in certain

aspects, be subdivided into other parts, one administered in one fashion and one in another, the combination of the three forms may result in a multitude of mixed forms, each of which admits of multiplication by all the simple forms.

There has been at all times much dispute concerning the best form of government, without consideration of the fact that each is in some cases the best, and in others the worst.

If, in the different States, the number of supreme magistrates should be in inverse ratio to the number of citizens, it follows that, generally, democratic government suits small States, aristocratic government those of middle size, and monarchy great ones. This rule is immediately deducible from the principle laid down. But it is impossible to count the innumerable circumstances which may furnish exceptions.

第四章 论民主制

承继卢梭前面所讨论的政府形式的话题，本章所讨论的民主制指的是民主制的政府形式，即由全体人民或者绝大多数人民组成的政府。在卢梭看来，民主制政府并不是完美的政府形式，原因是在这种情况下，行政官与主权者是同一人或同一群体，制定法律的人同时执行并解释法律，那么“一些被分开的东西并没有被分开”，“建构起来的就是一个没有政府的政府”（3.4.1）。这并非一件好事，卢梭认为，这意味着全体人民将自己的注意力从普遍的对象转移到了个别的目标，将注意力从公共事务上转移到了私人利益上，这意味着国家从根基上被败坏了。一个使其主权者腐化，并按这一主权者的意志行事的政府，比起一个背离了公意，但并未毁坏公意的政府更为可怕⁽⁸⁾。主权被一个民主制政府僭取的危险，至少与它被君主制或贵族制政府僭取的危险一样大⁽⁹⁾。

因此卢梭认为，真正意义上的民主制政府形式过去不存在，以后也不会存在。一方面是由于大多数人对少数人进行管理违反了自然状态，人民不可能无休止地开会来执行自己的法律。另一方面民主制政府形式预设了非常多苛刻的条件：要求国家地域小以便于人民集会和相互认识，要求道德风尚淳朴防止过多的纠纷和争论，要求等级和财富上要高度的平等以维持权利和权威的平等，要求没有奢侈的风气以防止产生奴役和虚荣等等。在论述到此处时，卢梭借用了孟德斯鸠的观点：“在人民的国家里，还需要另一种动力，那就是美德。”⁽¹⁰⁾孟德斯鸠认为，共和美德是一切民主制国家必须具备的条件。卢梭认为，自己与孟德斯鸠的分歧在于，他认为共和美德必须成为一切体制良好的国家，而不只是民主制国家的原则。

在这里，读者必须要区分民主制政府与民主制国家，孟德斯鸠意义上的民主制是国家形式，指的是全体人民作为主权者的国家，其实就是卢梭所指的唯一合法的政治秩序。而在本章中卢梭所否定的只是作为政府形式的民主制，而非作为国家形式的民主制，只有理解了这些区别，才能对本章和以后章节中

出现的民主制一词不再困惑。

4 . DEMOCRACY

HE who makes the law knows better than any one else how it should be executed and interpreted. It seems then impossible to have a better constitution than that in which the executive and legislative powers are united; but this very fact renders the government in certain respects inadequate, because things which should be distinguished⁽¹¹⁾ are confounded, and the prince and the Sovereign, being the same person, form, so to speak, no more than a government without government.

It is not good for him who makes the laws to execute them, or for the body of the people to turn its attention away from a general standpoint and devote it to particular objects. Nothing is more dangerous than the influence of private interests in public affairs, and the abuse of the laws by the government is a less evil than the corruption of the legislator, which is the inevitable sequel to a particular standpoint. In such a case, the State being altered in substance, all reformation becomes impossible. A people that would never misuse governmental powers would never misuse independence; a people that would always govern well would not need to be governed.

If we take the term in the strict sense, there never has been a real democracy, and there never will be. It is against the natural order for the many to govern and the few to be governed. It is unimaginable that the people should remain continually assembled to devote their time to public affairs, and it is clear that they cannot set up commissions for that purpose without the form of administration being changed.

In fact, I can confidently lay down as a principle that, when the functions of government are shared by several tribunals, the less

numerous sooner or later acquire the greatest authority, if only because they are in a position to expedite affairs, and power thus naturally comes into their hands.

Besides, how many conditions that are difficult to unite does such a government presuppose! First, a very small State, where the people can readily be got together and where each citizen can with ease know all the rest; secondly, great simplicity of manners, to prevent business from multiplying and raising thorny problems; next, a large measure of equality in rank and fortune, without which equality of rights and authority cannot long subsist; lastly, little or no luxury—for luxury either comes of riches or makes them necessary; it corrupts at once rich and poor, the rich by possession and the poor by covetousness; it sells the country to softness and vanity, and takes away from the State all its citizens, to make them slaves one to another, and one and all to public opinion.

This is why a famous writer has made virtue the fundamental principle of Republics; for all these conditions could not exist without virtue. But, for want of the necessary distinctions, that great thinker was often inexact, and sometimes obscure, and did not see that, the sovereign authority being everywhere the same, the same principle should be found in every well-constituted State, in a greater or less degree, it is true, according to the form of the government.

It may be added that there is no government so subject to civil wars and intestine agitations as democratic or popular government, because there is none which has so strong and continual a tendency to change to another form, or which demands more vigilance and courage for its maintenance as it is. Under such a constitution above all, the citizen should arm himself with strength and constancy, and say, every day of his life, what a virtuous Count Palatine^[2] said in the Diet of Poland: *Malo periculosam libertatem quam quietum servitium.*
^[3]

Were there a people of gods, their government would be democratic. So perfect a government is not for men.

第五章 论贵族制

卢梭在本章开头，再次强调了政府与主权者是两种不同的虚拟人格，前者属于行政机构成员，后者则属于全体公民。他注意到，贵族制政府之所以能够避免民主制的一个重要缺陷，原因在于由一少部分人组成的贵族制政府与人民主权者有不同的人格体，在贵族制政府中，政府号令人民的权利是来自它对作为主权者的人民的服从。

通过描述一种贵族制如何转变为另一种，卢梭介绍了三种形式的贵族制：自然贵族制、世袭贵族制和选举贵族制。在原始社会中，最初人们是由有经验和权威的家族首领组成的管理委员会共同商讨公共事务来治理的，这便是自然贵族制。而慢慢的财富和权力的优势成为被推选的条件，这便是选举贵族制。再后来，成为管理委员会成员的权利成为父亲传给儿子的遗产的一部分，这便是世袭贵族制。卢梭认为，其中第二种选举贵族制最好，世袭贵族制最糟糕。

卢梭将选举贵族制当做最佳的政府形式，理由是人们选举具备贤明、诚实、经验丰富及其他被人看重品质的人为管理员，是一个明智政府的保障，使更好的召集会议、更充分的讨论事务、更勤勉有序的处理事务成为可能。此外，贵族制政府也比民主制政府要求不那么苛刻的条件和较少的德行。但这种意义上的选举贵族制已经不再是他在前面所描述的三种贵族制之间转变的那种“选举贵族制”了。可以说，当卢梭声称选举贵族制是一切政府中最好的政府时，他所指的是他所讨论的政府形式，而当他称世袭制政府是一切政府中最坏的政府时，他是将世袭贵族制当做了一种主权或者国家形式。为了使读者更加清楚，在这里引用他在《山中来信》第六封中的话来解释：“应该记住国家的构成与政府的构成是两件完全不同的事，而我也从不把它们弄混，最好的政府是贵族制政府，最坏的主权制是贵族主权制。”

5 . ARISTOCRACY⁽¹²⁾

WE have here two quite distinct moral persons, the government and the Sovereign, and in consequence two general wills, one general in relation to all the citizens, the other only for the members of the administration. Thus, although the government may regulate its internal policy as it pleases, it can never speak to the people save in the name of the Sovereign, that is, of the people itself, a fact which must not be forgotten.

The first societies governed themselves aristocratically. The heads of families took counsel together on public affairs. The young bowed without question to the authority of experience. Hence such names as *priests*, *elders*, *senate*, and *gerontes*. The savages of North America govern themselves in this way even now, and their government is admirable.

But, in proportion as artificial inequality produced by institutions became predominant over natural inequality, riches or power^[4] were put before age, and aristocracy became elective. Finally, the transmission of the father's power along with his goods to his children, by creating patrician families, made government hereditary, and there came to be senators of twenty.

There are then three sorts of aristocracy—natural, elective and hereditary. The first is only for simple peoples; the third is the worst of all governments; the second is the best, and is aristocracy properly so called.

Besides the advantage that lies in the distinction between the two powers, it presents that of its members being chosen; for, in popular government⁽¹³⁾, all the citizens are born magistrates; but here magistracy is confined to a few, who become such only by election.^[5]

By this means uprightness, understanding, experience and all other claims to pre-eminence and public esteem become so many further guarantees of wise government.

Moreover, assemblies are more easily held, affairs better discussed and carried out with more order and diligence, and the credit of the State is better sustained abroad by venerable senators than by a multitude that is unknown or despised.

In a word, it is the best and most natural arrangement that the wisest should govern the many, when it is assured that they will govern for its profit, and not for their own. There is no need to multiply instruments, or get twenty thousand men to do what a hundred picked men can do even better. But it must not be forgotten that corporate interest here begins to direct the public power less under the regulation of the general will, and that a further inevitable propensity takes away from the laws part of the executive power.

If we are to speak of what is individually desirable, neither should the State be so small, nor a people so simple and upright, that the execution of the laws follows immediately from the public will, as it does in a good democracy. Nor should the nation be so great that the rulers have to scatter in order to govern it and are able to play the Sovereign each in his own department, and, beginning by making themselves independent, end by becoming masters.

But if aristocracy does not demand all the virtues needed by popular government, it demands others which are peculiar to itself; for instance, moderation on the side of the rich and contentment on that of the poor; for it seems that thorough-going equality would be out of place, as it was not found even at Sparta.

Furthermore, if this form of government carries with it a certain inequality of fortune, this is justifiable in order that as a rule the administration of public affairs may be entrusted to those who are

most able to give them their whole time, but not, as Aristotle maintains, in order that the rich may always be put first. On the contrary, it is of importance that an opposite choice should occasionally teach the people that the deserts of men offer claims to pre-eminence more important than those of riches.

第六章 论君主制

依据卢梭，君主制是由一个真实的自然人来掌握国家行政权力的政府形式，行政官的道德体和肉体高度统一。这使得君主制比别的政府形式具有更大的活力和支配力。但是，虽然所有的行为都指向同样的目标，卢梭进一步指出，这个目标却不是公众的幸福，它只服务于君主的利益，它永远也不会服务于人民的利益。

虽然在第二卷第六章中卢梭明确指出“一切合法的政府都是共和制的”，在本卷后面的第十章卢梭还清楚地区分了暴君和专制君主的区别，但在本章，卢梭所讨论的君主制显然不是他之前所定义的合法政府形式，他通章都在对君主制进行无情的剖析和批驳。从这里开始，君主制被作为共和制的对抗形式存在着，并且有不可避免腐坏变质的属性。卢梭指出，共和制和君主制国家行政官员任命的方式有本质的区别，前者是“公共选择几乎总是只把那些有智慧的、有能力的人提拔到那些最高的位子上”（3.6.8），而后的君主使“获得提升的几乎总是那些缺乏头脑的人、卑鄙的骗子、阴谋家”。卢梭举例说，马基雅维利的《君主论》是一本为人民而非为君主们写的书，马基雅维利也被描述成是共和制而非君主制政府的拥护者。卢梭还比较了由公众选举的元老院治理的政府和由君主及其顾问进行的统治，他毫无疑问地偏向前者，因为前者的成员英明能干，有稳定不变的品质和存在形式，避免国家动荡。

吉尔丁认为，卢梭在此对君主制的批判与亚里士多德和柏拉图对君主制的赞美并不是完全对立的，因为卢梭所设想的是个人卓越品质完全不存在的状况。卢梭并不怀疑超尘脱俗卓越个体的存在，只是怀疑人们能看到这样的个人登上王位。在第一章论贵族制中，卢梭认为，最好和最自然的秩序是由最贤明者来治理众人，并不否认这种情况的真实存在。而在此他为何要一个与之类似的君主制政府的存在感到绝望？吉尔丁指出，卢梭曾提到过一位拥有卓越品质和智慧的国王莱格古士，而正是由于他的卓越，他才选择成为一位立法者而不是国王，

他认为自己只能从作为一位立法者中发现自己能力的界限，从而为此放弃了王位。(14)

6 . MONARCHY

So far, we have considered the prince as a moral and collective person, unified by the force of the laws, and the depositary in the State of the executive power. We have now to consider this power when it is gathered together into the hands of a natural person, a real man, who alone has the right to dispose of it in accordance with the laws. Such a person is called a monarch or king.

In contrast with other forms of administration, in which a collective being stands for an individual, in this form an individual stands for a collective being; so that the moral unity that constitutes the prince is at the same time a physical unity, and all the qualities, which in the other case are only with difficulty brought together by the law, are found naturally united.

Thus the will of the people, the will of the prince, the public force of the State, and the particular force of the government, all answer to a single motive power; all the springs of the machine are in the same hands, the whole moves towards the same end; there are no conflicting movements to cancel one another, and no kind of constitution can be imagined in which a less amount of effort produces a more considerable amount of action. Archimedes⁽¹⁵⁾, seated quietly on the bank and easily drawing a great vessel afloat, stands to my mind for a skilful monarch, governing vast states from his study, and moving everything while he seems himself unmoved.

But if no government is more vigorous than this, there is also none in which the particular will holds more sway and rules the rest more easily. Everything moves towards the same end indeed, but this end is by no means that of the public happiness, and even the force of the administration constantly shows itself prejudicial to the State.

Kings desire to be absolute, and men are always crying out to them from afar that the best means of being so is to get themselves loved by their people. This precept is all very well, and even in some respects very true. Unfortunately, it will always be derided at court. The power which comes of a people's love is no doubt the greatest; but it is precarious and conditional, and princes will never rest content with it. The best kings desire to be in a position to be wicked, if they please, without forfeiting their mastery: political sermonisers may tell them to their hearts' content that, the people's strength being their own, their first interest is that the people should be prosperous, numerous and formidable; they are well aware that this is untrue. Their first personal interest is that the people should be weak, wretched, and unable to resist them. I admit that, provided the subjects remained always in submission, the prince's interest would indeed be that it should be powerful, in order that its power, being his own, might make him formidable to his neighbours; but, this interest being merely secondary and subordinate, and strength being incompatible with submission, princes naturally give the preference always to the principle that is more to their immediate advantage. This is what Samuel^[16] put strongly before the Hebrews, and what Machiavelli has clearly shown. He professed to teach kings; but it was the people he really taught. His *Prince* is the book of Republicans.^[6]

We found, on general grounds, that monarchy is suitable only for great States, and this is confirmed when we examine it in itself. The more numerous the public administration, the smaller becomes the relation between the prince and the subjects, and the nearer it comes to equality, so that in democracy the ratio is unity, or absolute equality. Again, as the government is restricted in numbers the ratio increases and reaches its *maximum* when the government is in the hands of a single person. There is then too great a distance between prince and people, and the State lacks a bond of union. To form such a bond, there must be intermediate orders, and princes, personages and

nobility to compose them. But no such things suit a small State, to which all class differences mean ruin.

If, however, it is hard for a great State to be well governed, it is much harder for it to be so by a single man; and every one knows what happens when kings substitute others for themselves.

An essential and inevitable defect, which will always rank monarchical below the republican government, is that in a republic the public voice hardly ever raises to the highest positions men who are not enlightened and capable, and such as to fill them with honour; while in monarchies those who rise to the top are most often merely petty blunderers, petty swindlers, and petty intriguers, whose petty talents cause them to get into the highest positions at Court, but, as soon as they have got there, serve only to make their ineptitude clear to the public. The people is far less often mistaken in its choice than the prince; and a man of real worth among the king's ministers is almost as rare as a fool at the head of a republican government. Thus, when, by some fortunate chance, one of these born governors takes the helm of State in some monarchy that has been nearly overwhelmed by swarms of “gentlemanly” administrators, there is nothing but amazement at the resources he discovers, and his coming marks an era in his country's history.

For a monarchical State to have a chance of being well governed, its population and extent must be proportionate to the abilities of its governor. It is easier to conquer than to rule. With a long enough lever, the world could be moved with a single finger; to sustain it needs the shoulders of Hercules⁽¹⁷⁾. However small a State may be, the prince is hardly ever big enough for it. When, on the other hand, it happens that the State is too small for its ruler, in these rare cases too it is ill governed, because the ruler, constantly pursuing his great designs, forgets the interests of the people, and makes it no less wretched by misusing the talents he has, than a ruler of less capacity

would make it for want of those he had not. A kingdom should, so to speak, expand or contract with each reign, according to the prince's capabilities; but, the abilities of a senate being more constant in quantity, the State can then have permanent frontiers without the administration suffering.

The disadvantage that is most felt in monarchical government is the want of the continuous succession which, in both the other forms, provides an unbroken bond of union. When one king dies, another is needed; elections leave dangerous intervals and are full of storms; and unless the citizens are disinterested and upright to a degree which very seldom goes with this kind of government, intrigue and corruption abound. He to whom the State has sold itself can hardly help selling it in his turn and repaying himself, at the expense of the weak, the money the powerful have wrung from him. Under such an administration, venality sooner or later spreads through every part, and peace so enjoyed under a king is worse than the disorders of an interregnum.

What has been done to prevent these evils? Crowns have been made hereditary in certain families, and an order of succession has been set up, to prevent disputes from arising on the death of kings. That is to say, the disadvantages of regency have been put in place of those of election, apparent tranquillity has been preferred to wise administration, and men have chosen rather to risk having children, monstrosities, or imbeciles as rulers to having disputes over the choice of good kings. It has not been taken into account that, in so exposing ourselves to the risks this possibility entails, we are setting almost all the chances against us. There was sound sense in what the younger Dionysius said to his father, who reproached him for doing some shameful deed by asking, "Did I set you the example?" "No," answered his son, "but your father was not king."

Everything conspires to take away from a man who is set in

authority over others the sense of justice and reason. Much trouble, we are told, is taken to teach young princes the art of reigning; but their education seems to do them no good. It would be better to begin by teaching them the art of obeying. The greatest kings whose praises history tells were not brought up to reign: reigning is a science we are never so far from possessing as when we have learnt too much of it, and one we acquire better by obeying than by commanding. “*Nam utilissimus idem ac brevissimus bonarum malarumque rerum delectus cogitare quid aut nolueris sub alio principe, aut volueris.*”^[7]

One result of this lack of coherence is the inconstancy of royal government, which, regulated now on one scheme and now on another, according to the character of the reigning prince or those who reign for him, cannot for long have a fixed object or a consistent policy—and this variability, not found in the other forms of government, where the prince is always the same, causes the State to be always shifting from principle to principle and from project to project. Thus we may say that generally, if a court is more subtle in intrigue, there is more wisdom in a senate, and Republics advance towards their ends by more consistent and better considered policies; while every revolution in a royal ministry creates a revolution in the State; for the principle common to all ministers and nearly all kings is to do in every respect the reverse of what was done by their predecessors.

This incoherence further clears up a sophism that is very familiar to royalist political writers; not only is civil government likened to domestic government, and the prince to the father of a family—this error has already been refuted—but the prince is also freely credited with all the virtues he ought to possess, and is supposed to be always what he should be. This supposition once made, royal government is clearly preferable to all others, because it is incontestably the strongest, and, to be the best also, wants only a corporate will more in

conformity with the general will.

But if, according to Plato,^[8] the “king by nature” is such a rarity, how often will nature and fortune conspire to give him a crown? And, if royal education necessarily corrupts those who receive it, what is to be hoped from a series of men brought up to reign? It is, then, wanton self-deception to confuse royal government with government by a good king. To see such government as it is in itself, we must consider it as it is under princes who are incompetent or wicked: for either they will come to the throne wicked or incompetent, or the throne will make them so.

These difficulties have not escaped our writers, who, all the same, are not troubled by them. The remedy, they say, is to obey without a murmur: God sends bad kings in His wrath, and they must be borne as the scourges of Heaven. Such talk is doubtless edifying; but it would be more in place in a pulpit than in a political book. What are we to think of a doctor who promises miracles, and whose whole art is to exhort the sufferer to patience? We know for ourselves that we must put up with a bad government when it is there; the question is how to find a good one.

第七章 论混合制政府

在卢梭眼中，混合制政府是一种划分为不同部分，且各部分互不完全依附也不完全独立的政府形式。他认为，事实上的单一形式政府是不存在的，一个有唯一的首领的国家也必须有附属的行政官员，而一个人民政府也必须要有个首领。

混合政府形式的必要性在于：行政权力并不总是完全依附于立法权力，当政府对主权者的比率大于人民对君主的比率的时候，这种比率的失衡必须通过对政府进行划分来补救。混合政府形式的优越性在于：它能排除极度的强力和极度的软弱，总是能够提供比较适中的力量。他赞赏英国政府各个组成部分之间相互依存，批驳波兰政府各个部分拥有过多的权力。

对本章仔细分析后，会发现卢梭在此没有提及贵族制，他在断言“单一形式的政府是不存在的”时候，只用了君主制和民主制作为例证。那是因为在三种形式的贵族制中，自然贵族制只在原始社会存在，世袭贵族制是最差的政府形式，卢梭唯一推崇并认为是最佳的政府形式的是选举贵族制，而实际上选举贵族制正是一种既有民主制成分又有贵族制成分的混合制政府。

7 . MIXED GOVERNMENTS

STRICTLY speaking, there is no such thing as a simple government. An isolated ruler must have subordinate magistrates; a popular government must have a head. There is therefore, in the distribution of the executive power, always a gradation from the greater to the lesser number, with the difference that sometimes the greater number is dependent on the smaller, and sometimes the smaller on the greater.

Sometimes the distribution is equal, when either the constituent parts are in mutual dependence, as in the government of England, or the authority of each section is independent, but imperfect, as in Poland. This last form is bad; for it secures no unity in the government, and the State is left without a bond of union.

Is a simple or a mixed government the better? Political writers are always debating the question, which must be answered as we have already answered a question about all forms of government.

Simple government is better in itself, just because it is simple. But when the executive power is not sufficiently dependent upon the legislative power, i.e., when the prince is more closely related to the Sovereign than the people to the prince, this lack of proportion must be cured by the division of the government; for all the parts have then no less authority over the subjects, while their division makes them all together less strong against the Sovereign.

The same disadvantage is also prevented by the appointment of intermediate magistrates, who leave the government entire, and have the effect only of balancing the two powers and maintaining their respective rights. Government is then not mixed, but moderated.

The opposite disadvantages may be similarly cured, and, when

the government is too lax, tribunals may be set up to concentrate it. This is done in all democracies. In the first case, the government is divided to make it weak; in the second, to make it strong: for the *maxima* of both strength and weakness are found in simple governments, while the mixed forms result in a mean strength.

第八章 论任何一种政府形式都不能适用于所有的国家

本章和下一章可以看成是卢梭对政府这个主题做的总结，他围绕两个内容展开：没有一种政府形式适宜于一切国家，以及一个好政府的标志是什么。在本章，他并不是单纯地讨论何种国家适宜于何种政体，而是什么样的政制安排能与一国的合法统治相适应。卢梭同意孟德斯鸠关于自由与气候的观点：“自由并非是在任何气候条件下都能长出的果实，因而它就不是任何民族都能拥有的。”（3.8.1）

那到底是什么使得一个现存的国家与气候需要某种类型的政府？卢梭认为首先是个人产品的剩余数和国家消耗的数量。没有剩余产品，就不可能有政治社会。人民和政府之间的距离越大，赋税就越繁重，对剩余产品的要求就越多。民主制国家的人民负担最轻，而君主制国家中人民的负担最重。因此君主制适合于富裕的国家，贵族制适合于财富和领土中等规模的国家，民主制适合于小而贫穷的国家。卢梭指出在欧洲环境和气候与政府之间的对应关系并不总是如此。但就气候而言，专制更适用于热带国家，野蛮民族适合寒冷的国家，而良好的政治适合于温带国家。但这只是一般情况，必须结合产出、体力和消费等综合考虑。

卢梭通过比较欧洲南部与北部国家，指出一个事实，越是北方的国家耕作土地越是艰辛，所生产的食物越是有限，而他们的居民却越是消耗得多。他倾向于得出唯有共和政体最适合欧洲，因为这里完全没有剩余的产品来维系君主制，但现实中君主制却是这里最普遍的政体。这一事实对于卢梭来说，意味着革命迟早都要爆发，以使一切事物重返自然秩序。有学者认为，法国在这一章中被提及的次数比在《社会契约论》其他章节频繁得多。这一点应当值得注意。⁽¹⁸⁾

卢梭还认为，人口密度对于政府与气候的关系也有影响。如南方与北方地区相比，更容易产出丰裕的食物，只要较少的

劳力便能生产出供给全部人口的食物，超出部分可以供君主消费。这种情况君主制消耗了剩余品，免于国家和人民因懒惰和奢侈患病，那么对于国家而言是好的。但他也同时认为，这一情况并不适用于欧洲，因为在欧洲君主消费的并不是臣民的剩余品，而是臣民的必需品，欧洲君主将因奢靡而毁灭。

8 . THAT ALL FORMS OF GOVERNMENT DO NOT SUIT ALL COUNTRIES

LIBERTY, not being a fruit of all climates, is not within the reach of all peoples. The more this principle, laid down by Montesquieu⁽¹⁹⁾, is considered, the more its truth is felt; the more it is combated, the more chance is given to confirm it by new proofs.

In all the governments that there are, the public person consumes without producing. Whence then does it get what it consumes? From the labour of its members. The necessities of the public are supplied out of the superfluities of individuals. It follows that the civil State can subsist only so long as men's labour brings them a return greater than their needs.

The amount of this excess is not the same in all countries. In some it is considerable, in others middling, in yet others nil, in some even negative. The relation of product to subsistence depends on the fertility of the climate, on the sort of labour the land demands, on the nature of its products, on the strength of its inhabitants, on the greater or less consumption they find necessary, and on several further considerations of which the whole relation is made up.

On the other side, all governments are not of the same nature: some are less voracious than others, and the differences between them are based on this second principle, that the further from their source the public contributions are removed, the more burdensome they become. The charge should be measured not by the amount of the impositions, but by the path they have to travel in order to get back to those from whom they came. When the circulation is prompt and well established, it does not matter whether much or little is paid; the

people is always rich and, financially speaking, all is well. On the contrary, however little the people gives, if that little does not return to it, it is soon exhausted by giving continually: the State is then never rich, and the people is always a people of beggars.

It follows that, the more the distance between people and government increases, the more burdensome tribute becomes: thus, in a democracy, the people bears the least charge; in an aristocracy, a greater charge; and, in monarchy, the weight becomes heaviest. Monarchy therefore suits only wealthy nations; aristocracy, States of middling size and wealth; and democracy, States that are small and poor.

In fact, the more we reflect, the more we find the difference between free and monarchical States to be this: in the former, everything is used for the public advantage; in the latter, the public forces and those of individuals are affected by each other, and either increases as the other grows weak; finally, instead of governing subjects to make them happy, despotism makes them wretched in order to govern them.

We find then, in every climate, natural causes according to which the form of government which it requires can be assigned, and we can even say what sort of inhabitants it should have.

Unfriendly and barren lands, where the product does not repay the labour, should remain desert and uncultivated, or peopled only by savages; lands where men's labour brings in no more than the exact *minimum* necessary to subsistence should be inhabited by barbarous peoples: in such places all polity is impossible. Lands where the surplus of product over labour is only middling are suitable for free peoples; those in which the soil is abundant and fertile and gives a great product for a little labour call for monarchical government, in order that the surplus of superfluities among the subjects may be

consumed by the luxury of the prince: for it is better for this excess to be absorbed by the government than dissipated among the individuals. I am aware that there are exceptions; but these exceptions themselves confirm the rule, in that sooner or later they produce revolutions which restore things to the natural order.

General laws should always be distinguished from individual causes that may modify their effects. If all the South were covered with Republics and all the North with despotic States, it would be none the less true that, in point of climate, despotism is suitable to hot countries, barbarism to cold countries, and good polity to temperate regions. I see also that, the principle being granted, there may be disputes on its application; it may be said that there are cold countries that are very fertile, and tropical countries that are very unproductive. But this difficulty exists only for those who do not consider the question in all its aspects. We must, as I have already said, take labour, strength, consumption, etc., into account.

Take two tracts of equal extent, one of which brings in five and the other ten. If the inhabitants of the first consume four and those of the second nine, the surplus of the first product will be a fifth and that of the second a tenth. The ratio of these two surpluses will then be inverse to that of the products, and the tract which produces only five will give a surplus double that of the tract which produces ten.

But there is no question of a double product, and I think no one would put the fertility of cold countries, as a general rule, on an equality with that of hot ones. Let us, however, suppose this equality to exist: let us, if you will, regard England as on the same level as Sicily, and Poland as Egypt—further south, we shall have Africa and the Indies; further north, nothing at all. To get this equality of product, what a difference there must be in tillage: in Sicily, there is only need to scratch the ground; in England, how men must toil! But, where more hands are needed to get the same product, the superfluity

must necessarily be less.

Consider, besides, that the same number of men consume much less in hot countries. The climate requires sobriety for the sake of health; and Europeans who try to live there as they would at home all perish of dysentery and indigestion. "We are," says Chardin, "carnivorous animals, wolves, in comparison with the Asiatics. Some attribute the sobriety of the Persians to the fact that their country is less cultivated; but it is my belief that their country abounds less in commodities because the inhabitants need less. If their frugality," he goes on, "were the effect of the nakedness of the land, only the poor would eat little; but everybody does so. Again, less or more would be eaten in various provinces, according to the land's fertility; but the same sobriety is found throughout the kingdom. They are very proud of their manner of life, saying that you have only to look at their hue to recognise how far it excels that of the Christians. In fact, the Persians are of an even hue; their skins are fair, fine and smooth; while the hue of their subjects, the Armenians, who live after the European fashion, is rough and blotchy, and their bodies are gross and unwieldy."

The nearer you get to the equator, the less people live on. Meat they hardly touch; rice, maize, couscous, millet and cassava are their ordinary food. There are in the Indies millions of men whose subsistence does not cost a halfpenny a day. Even in Europe we find considerable differences of appetite between Northern and Southern peoples. A Spaniard will live for a week on a German's dinner. In the countries in which men are more voracious, luxury therefore turns in the direction of consumption. In England, luxury appears in a well-filled table; in Italy, you feast on sugar and flowers.

Luxury in clothes shows similar differences. In climates in which the changes of season are prompt and violent, men have better and simpler clothes; where they clothe themselves only for adornment,

what is striking is more thought of than what is useful; clothes themselves are then a luxury. At Naples, you may see daily walking in the Pausilippeum men in gold-embroidered upper garments and nothing else. It is the same with buildings; magnificence is the sole consideration where there is nothing to fear from the air. In Paris and London, you desire to be lodged warmly and comfortably; in Madrid, you have superb salons, but not a window that closes, and you go to bed in a mere hole.

In hot countries foods are much more substantial and succulent; and the third difference cannot but have an influence on the second. Why are so many vegetables eaten in Italy? Because there they are good, nutritious and excellent in taste. In France, where they are nourished only on water, they are far from nutritious and are thought nothing of at table. They take up all the same no less ground, and cost at least as much pains to cultivate. It is a proved fact that the wheat of Barbary, in other respects inferior to that of France, yields much more flour, and that the wheat of France in turn yields more than that of northern countries; from which it may be inferred that a like gradation in the same direction, from equator to pole, is found generally. But is it not an obvious disadvantage for an equal product to contain less nourishment?

To all these points may be added another, which at once depends on and strengthens them. Hot countries need inhabitants less than cold countries, and can support more of them. There is thus a double surplus, which is all to the advantage of despotism. The greater the territory occupied by a fixed number of inhabitants, the more difficult revolt becomes, because rapid or secret concerted action is impossible, and the government can easily unmask projects and cut communications; but the more a numerous people is gathered together, the less can the government usurp the Sovereign's place: the people's leaders can deliberate as safely in their houses as the prince

in council, and the crowd gathers as rapidly in the squares as the prince's troops in their quarters. The advantage of tyrannical government therefore lies in acting at great distances. With the help of the rallying-points it establishes, its strength, like that of the lever,^[9] grows with distance. The strength of the people, on the other hand, acts only when concentrated: when spread abroad, it evaporates and is lost, like powder scattered on the ground, which catches fire only grain by grain. The least populous countries are thus the fittest for tyranny: fierce animals reign only in deserts.

第九章 论一个好政府的标志

作为卢梭论述政府这个主题的最后一章，他一开始便指出，对于“什么是绝对意义上最好的政府”这个问题并不存在一个确定的答案。他坚持如前面章节一样的论断：没有一种政府对于所有民族甚至同一民族的不同时期都是最适合的。接着，卢梭指出，若换一个问题，以更加客观的方式来提问，“有什么标志能判断一个民族是否得到了良好的治理”，则是可以回答的。

但对于这个问题的回答，卢梭也还是分别站在绝对君主制下臣民和自由国度中公民的角度做了不同的回答。他认为，在前者，臣民追求的是公共的安宁而非个人的自由，宁愿财产受保障而非人身的安全，宁愿要严厉政府而不是温和政府，更看重惩罚犯罪而不是预防犯罪，宁愿被邻国所畏惧而不是被其所忽视，追求财物的流转即贸易和奢侈，而不是民众的普遍温饱。自由国度中的公民的选择每一项都与前者相反。

显然，卢梭认为在这样的问题及评判上达成一致很困难，“道德的维度是没有衡量的精确标准的”。于是他从结成政治社会最原初的目的即保存着手，提出了一个最好的政府明确而充分的标准，最大多数人最大程度的自我保存，“如果在某个政府的治理下，不借助于诸如归化和移民等外在帮助，它的公民增长和繁衍最多，那么这个政府绝对无误的就是最好的政府。”（3.9.4）

吉尔丁在其注疏中对卢梭的这一标准也做了解读。他认为，无论卢梭在这章中表现得多么偏爱它，这一标准经过反思被证明是需要受到严格限制的。在《爱弥尔》中，卢梭承认中国是他的规律的一个例外。在《山中来信》中，卢梭将东方的专制主义并未带来人口的减少归结为一个原因：东方的专制君主把与人民的结盟以反对高级官僚作为自己的原则。吉尔丁认为，卢梭的“社会成员数量内部增加”标准只是“一切情况都同等”时的标准。人口的增加是发生在一个极其富饶的国度还是一个非常贫瘠的国度必须予以考虑。对于卢梭这样一位“宁做骄傲

而独立的美洲印第安人而不愿做专制主的奴性臣民的思想家”而言，拒绝承认专制主义国家因具有这一标准就具有优越性的判断也并不奇怪。(20)

9 . THE MARKS OF A GOOD GOVERNMENT

THE question “What absolutely is the best government?” is unanswerable as well as indeterminate; or rather, there are as many good answers as there are possible combinations in the absolute and relative situations of all nations.

But if it is asked by what sign we may know that a given people is well or ill governed, that is another matter, and the question, being one of fact, admits of an answer.

It is not, however, answered, because everyone wants to answer it in his own way. Subjects extol public tranquillity, citizens individual liberty⁽²¹⁾; the one class prefers security of possessions, the other that of person; the one regards as the best government that which is most severe, the other maintains that the mildest is the best; the one wants crimes punished, the other wants them prevented; the one wants the State to be feared by its neighbours, the other prefers that it should be ignored; the one is content if money circulates, the other demands that the people shall have bread. Even if an agreement were come to on these and similar points, should we have got any further? As moral qualities do not admit of exact measurement, agreement about the mark does not mean agreement about the valuation.

For my part, I am continually astonished that a mark so simple is not recognised, or that men are of so bad faith as not to admit it. What is the end of political association? The preservation and prosperity of its members. And what is the surest mark of their preservation and prosperity? Their numbers and population. Seek then nowhere else this mark that is in dispute. The rest being equal, the government under which, without external aids, without naturalisation or colonies, the citizens increase and multiply most, is beyond question the best.

The government under which a people wanes and diminishes is the worst. Calculators, it is left for you to count, to measure, to compare.

[\[10\]](#)

第十章 论政府的滥用权力和它退化的倾向

在前九章中，卢梭并未涉及关于人民在每一健全政府中所必须扮演的重要角色，而从本章开始，卢梭的论述从政府转向了主权人民和政府，他开始对人民在政制设计和主权者权威的行使中所扮演的决定性作用做充分的阐释。

在本章开始，卢梭指出每个政治体如同每个人的夭折、衰老和死亡一样是不可避免的。政府的退化有两种方式，政府自身的收缩和国家的解体。根据卢梭，一个国家的衰老会自然地由从民主制过渡到贵族制，又从贵族制过渡到君主制，最终当君主意志不可避免地压抑主权者并且破坏社会条约时，政治体将最终死亡。但是，政治体不必然会死于衰老，它如果在最初的民主阶段就死去，那么作为政府而行动的人民就有篡夺他自己的主权的的可能性，这意味着卢梭意义上主权和主权人民的终结，取而代之的是暴民统治。政治体如果在第二个阶段死去，贵族制政府将主权者权威据为己有，就会导致寡头政治。当政府的成员分别篡取了他们本该集体行使的权力的时候，国家中就有了同行政官员数目相同的君主。作为整体的国家解体了，而在它的内部却形成了另一个国家，这个国家仅仅是由政府的官员构成。当君主不再按照法律治理国家，并且篡夺了主权者权力的时候，君主制退化为暴君制。这三种情况，都使得国家和政府走向灭亡或者改变它的形式。此时政府对于权利的滥用便称为“无政府状态”。

在本卷的前几章，卢梭曾论述民主制对于人类来说过于苛责（3.4.8），贵族制中的选举贵族制被认为是最好的政府形式，但在本章，卢梭将贵族制说成是民主制的蜕化，君主制则是贵族制的蜕化，很显然，民主制取代了贵族制成为最好的政府形式。他所列举的古罗马曾是一个真正的民主制政体，他认为罗马人民曾经“不仅是主权者，而且也是行政官和司法官”。这种转变服务于卢梭论证的需要，在前面，他需要表明自己的

政治原则适用于所有种类的政制安排，而现在，他需要民主制政府来作为他最终提出解决方案的一个重要组成部分。

在本章的最后，卢梭对暴君和专制君主做了区分：篡夺皇室行政权威的为“暴君”，篡夺主权者权威的为“专制君主”；暴君违背法律进入政权，但是却依照法律进行统治，而专制君主却将自己置于法律之上。因此，暴君不一定是专制君主，而一个专制君主总是一个暴君。（3.10.9）

10 . THE ABUSE OF GOVERNMENT AND ITS TENDENCY TO DEGENERATE

AS the particular will acts constantly in opposition to the general will, the government continually exerts itself against the Sovereignty. The greater this exertion becomes, the more the constitution changes; and, as there is in this case no other corporate will to create an equilibrium by resisting the will of the prince, sooner or later the prince must inevitably suppress the Sovereign and break the social treaty. This is the unavoidable and inherent defect which, from the very birth of the body politic, tends ceaselessly to destroy it, as age and death end by destroying the human body.

There are two general courses by which government degenerates: i.e., when it undergoes contraction, or when the State is dissolved.

Government undergoes contraction when it passes from the many to the few, that is, from democracy to aristocracy, and from aristocracy to royalty. To do so is its natural propensity.^[11] If it took the backward course from the few to the many, it could be said that it was relaxed; but this inverse sequence is impossible.

Indeed, governments never change their form except when their energy is exhausted and leaves them too weak to keep what they have. If a government at once extended its sphere and relaxed its stringency, its force would become absolutely nil, and it would persist still less. It is therefore necessary to wind up the spring and tighten the hold as it gives way: or else the State it sustains will come to grief.

The dissolution of the State may come about in either of two ways.

First, when the prince ceases to administer the State in

accordance with the laws, and usurps the Sovereign power. A remarkable change then occurs: not the government, but the State, undergoes contraction; I mean that the great State is dissolved, and another is formed within it, composed solely of the members of the government, which becomes for the rest of the people merely master and tyrant. So that the moment the government usurps the Sovereignty, the social compact is broken, and all private citizens recover by right their natural liberty, and are forced, but not bound, to obey.

The same thing happens when the members of the government severally usurp the power they should exercise only as a body; this is as great an infraction of the laws, and results in even greater disorders. There are then, so to speak, as many princes as there are magistrates, and the State, no less divided than the government, either perishes or changes its form.

When the State is dissolved, the abuse of government, whatever it is, bears the common name of *anarchy*. To distinguish, democracy degenerates into *ochlocracy*, and aristocracy into *oligarchy*; and I would add that royalty degenerates into tyranny; but this last word is ambiguous and needs explanation.⁽²²⁾

In vulgar usage, a tyrant is a king who governs violently and without regard for justice and law. In the exact sense, a tyrant is an individual who arrogates to himself the royal authority without having a right to it. This is how the Greeks understood the word “tyrant”: they applied it indifferently to good and bad princes whose authority was not legitimate.^[12] *Tyrant* and *usurper* are thus perfectly synonymous terms.

In order that I may give different things different names, I call him who usurps the royal authority a *tyrant*, and him who usurps the sovereign power a *despot*. The tyrant is he who thrusts himself in

contrary to the laws to govern in accordance with the laws; the despot is he who sets himself above the laws themselves. Thus the tyrant cannot be a despot, but the despot is always a tyrant.

第十一章 论政治体的死亡

卢梭认为，政治体的死亡是自然的、不可避免的倾向，最好的体制也不过是令其终结得晚一些而已。卢梭将政府或早或晚蜕化的不可避免性归结于最初使政府的出现变得十分必要的那些原因上。由于私人个体意志与公意之间存在冲突，使政府的出现变得必要的这种个人意志的任性，又在政府身上重新出现了。进行治理的人篡夺主权的努力永远存在，政府中的个别意志迟早会成功地压倒主权者公意。

卢梭将立法和行政比作人的心脏和大脑，大脑麻痹时人依然活着，然而一旦心脏停止，这个人就死亡了。他以此说明立法权和法律对于政治体生存的重要性。依据卢梭在前面的论述可知，在一个民族的法律和风尚衰老、公民精神正在丧失的时候，这个民族就会变得衰弱，而当民族变得衰弱的时候，政府就会加强，政府的集中和强化最终导致国家的解体。卢梭认为，时间并不必然影响法律的生命力，在一个自由的国度，卓越的不成文法和成文法一样，会随着时间的流逝获取新的力量。

11 . THE DEATH OF THE BODY POLITIC

SUCH is the natural and inevitable tendency of the best-constituted governments. If Sparta and Rome perished, what State can hope to endure for ever? If we would set up a long-lived form of government, let us not even dream of making it eternal. If we are to succeed, we must not attempt the impossible, or flatter ourselves that we are endowing the work of man with a stability of which human conditions do not permit.

The body politic, as well as the human body, begins to die as soon as it is born, and carries in itself the causes of its destruction. But both may have a constitution that is more or less robust and suited to preserve them a longer or a shorter time. The constitution of man is the work of nature; that of the State the work of art. It is not in men's power to prolong their own lives; but it is for them to prolong as much as possible the life of the State, by giving it the best possible constitution. The best-constituted State will have an end; but it will end later than any other, unless some unforeseen accident brings about its untimely destruction.

The life-principle of the body politic lies in the sovereign authority. The legislative power is the heart of the State; the executive power is its brain, which causes the movement of all the parts. The brain may become paralysed and the individual still live. A man may remain an imbecile and live; but as soon as the heart ceases to perform its functions, the animal is dead.

The State subsists by means not of the laws, but of the legislative power. Yesterday's law is not binding today; but silence is taken for tacit consent, and the Sovereign is held to confirm incessantly the laws it does not abrogate as it might. All that it has once declared itself to

will it wills always, unless it revokes its declaration.

Why then is so much respect paid to old laws? For this very reason: We must believe that nothing but the excellence of old acts of will can have preserved them so long: if the Sovereign had not recognised them as throughout salutary, it would have revoked them a thousand times. This is why, so far from growing weak, the laws continually gain new strength in any well constituted State; the precedent of antiquity makes them daily more venerable: while wherever the laws grow weak as they become old, this proves that there is no longer a legislative power, and that the State is dead.

第十二章 论主权权威如何维持自身

在接下来的三章里，卢梭将论述人民大会对于主权者维护自身存在及权威的必要性。我们不难发现，在《社会契约论》全书中，连续三章都具有相同标题的只有两处，另一处在第二卷第八到十章，主题是人民，而此处的主题是人民大会。

在本章，卢梭指出，只有召开大会的人民正式表达出的公意，才能是法律。只有通过这样的方式，主权者才能起作用，才能够保持主权权威。为了证明自己的观点，卢梭采用了列举事实的方法，他指出，罗马共和国是一个很大的国家，拥有四百万以上的公民，但是他们却能够实现集会，甚至一星期集会好多次。他们不仅行使主权权利，也行使一部分政府权力。一些古代民族如马其顿人或者法兰克人的君主制政府，都曾有过类似的集会。所以，在卢梭看来，即使在大国，人民的集会也是可以实现的。吉尔丁在对《社会契约论》的注疏中提醒读者们，卢梭并没有试图去表明，人民的集会对于他自己的时代的世袭君主制有任何类似的可行性。卢梭的原理只与一种具有很大民主制成分的混合政府相容，这一点将在此后的论述中越来越明显。⁽²³⁾

12 . HOW THE SOVEREIGN AUTHORITY MAINTAINS ITSELF

THE Sovereign, having no force other than the legislative power, acts only by means of the laws; and the laws being solely the authentic acts of the general will, the Sovereign cannot act save when the people is assembled. The people in assembly, I shall be told, is a mere chimera. It is so today, but two thousand years ago it was not so. Has man's nature changed?

The bounds of possibility, in moral matters, are less narrow than we imagine: it is our weaknesses, our vices and our prejudices that confine them. Base souls have no belief in great men; vile slaves smile in mockery at the name of liberty.

Let us judge of what can be done by what has been done. I shall say nothing of the Republics of ancient Greece; but the Roman Republic was, to my mind, a great State, and the town of Rome a great town. The last census showed that there were in Rome four hundred thousand citizens capable of bearing arms, and the last computation of the population of the Empire showed over four million citizens, excluding subjects, foreigners, women, children and slaves.

What difficulties might not be supposed to stand in the way of the frequent assemblage of the vast population of this capital and its neighbourhood. Yet few weeks passed without the Roman people being in assembly, and even being so several times. It exercised not only the rights of Sovereignty, but also a part of those of government. It dealt with certain matters, and judged certain cases, and this whole people was found in the public meeting-place hardly less often as magistrates than as citizens.

If we went back to the earliest history of nations, we should find

that most ancient governments, even those of monarchical form, such as the Macedonian and the Frankish, had similar councils. In any case, the one incontestable fact I have given is an answer to all difficulties; it is good logic to reason from the actual to the possible.

第十三章 论主权权威如何维持自身 (续)

卢梭继续讨论人民大会。他提出，除了那些由于不可预知的事件所必需的特别集会之外，国家中还必须要有固定的、定期举行的集会，而且什么事情都不能废除或者中止这些集会（3.13.1）。这是因为，即使一个社会中重要的法律都已经建立起来，然而除非人民大会继续保持其有效性，即其定时并依法召开的形式合法性，否则法律将是无效的。这种形式合法性决定了没有按照法定日期召开的集会是无效的，由非负有此职责的行政官员召集的集会是无效的，在这种集会上所决定的任何事情都是无效的。

对于合法集会举行的频次，卢梭给了一个原则，“政府拥有越强大的力量，主权者就应该越频繁地表达自己”（3.13.3）。一个大国该如何保持主权权威，卢梭批驳了将其划分为若干城镇而只将主权权威集中在一个城镇上的观点，再次强调主权不可分割。他认为，如果不能把国家规模限定在一个合理的界限，那么可以考虑，不同的城镇轮流做首都，轮流在每一个城镇召集国家的各个阶层，“相同的权力扩展到每一个人，给每一个角落带去同样的富足和生机”（3.13.7），这样，一个国家才能够变得最为强壮。

13 . THE SAME (continued)

IT is not enough for the assembled people to have once fixed the constitution of the State by giving its sanction to a body of law; it is not enough for it to have set up a perpetual government, or provided once for all for the election of magistrates. Besides the extraordinary assemblies unforeseen circumstances may demand, there must be fixed periodical assemblies which cannot be abrogated or prorogued, so that on the proper day the people is legitimately called together by law, without need of any formal summoning.

But, apart from these assemblies authorised by their date alone, every assembly of the people not summoned by the magistrates appointed for that purpose, and in accordance with the prescribed forms, should be regarded as unlawful, and all its acts as null and void, because the command to assemble should itself proceed from the law.

The greater or less frequency with which lawful assemblies should occur depends on so many considerations that no exact rules about them can be given. It can only be said generally that the stronger the government the more often should the Sovereign show itself.

This, I shall be told, may do for a single town; but what is to be done when the State includes several? Is the sovereign authority to be divided? Or is it to be concentrated in a single town to which all the rest are made subject?

Neither the one nor the other, I reply. First, the sovereign authority is one and simple, and cannot be divided without being destroyed. In the second place, one town cannot, any more than one nation, legitimately be made subject to another, because the essence of the body politic lies in the reconciliation of obedience and liberty,

and the words subject and Sovereign are identical correlatives the idea of which meets in the single word “citizen.”

I answer further that the union of several towns in a single city is always bad, and that, if we wish to make such a union, we should not expect to avoid its natural disadvantages. It is useless to bring up abuses that belong to great States against one who desires to see only small ones; but how can small States be given the strength to resist great ones, as formerly the Greek towns resisted the Great King, and more recently Holland and Switzerland have resisted the House of Austria?(24)

Nevertheless, if the State cannot be reduced to the right limits, there remains still one resource; this is, to allow no capital, to make the seat of government move from town to town, and to assemble by turn in each the Provincial Estates of the country.

People the territory evenly, extend everywhere the same rights, bear to every place in it abundance and life: by these means will the State become at once as strong and as well governed as possible. Remember that the walls of towns are built of the ruins of the houses of the countryside. For every palace I see raised in the capital, my mind's eye sees a whole country made desolate.

第十四章 论主权权威如何维持自身 (续)

在本章，卢梭提出了行政权的中止问题。他认为，当人民作为主权者共同体合法集会的时候，政府的行政权力就暂时中止了。这个时候一切权力处于待定状态，“在被代表的人已经出现的地方就不能再有什么代表了”，根据他之前的论述，他指的是在政治体最高权力即主权权力行使的当下，行政权力将暂时失效或待定。

卢梭认为，政府总是倾向于摧毁作为其约束者的人民集会，它会对其反对、发难或承诺以达到目的。而如果人民不具备公民美德，即如果其贪婪、胆怯、懦弱、热爱安逸或过分自由，那么政府对抗主权者的力量将最终成为压倒性的，此时主权权威将萎缩，这将导致民主政体的衰亡。

吉尔丁对“中断的行政权”提出了几个非常有意义的问题，即中断的行政权被归还给了谁呢？难道是归还给了“作为主权者共同体而集会的人民”？对于并不能直接行使行政权的人民，如何能实现这种归还？⁽²⁵⁾这几个问题不仅有助于读者对本章的理解，还由此引出了卢梭在下面几章的大胆论述。

14 . THE SAME (continued)

THE moment the people is legitimately assembled as a sovereign body, the jurisdiction of the government wholly lapses, the executive power is suspended, and the person of the meanest citizen is as sacred and inviolable as that of the first magistrate; for in the presence of the person represented, representatives no longer exist. Most of the tumults that arose in the comitia at Rome were due to ignorance or neglect of this rule. The consuls were in them merely the presidents of the people; the tribunes were mere speakers;^[13] the senate was nothing at all.

These intervals of suspension, during which the prince recognises or ought to recognise an actual superior, have always been viewed by him with alarm; and these assemblies of the people, which are the aegis of the body politic and the curb on the government, have at all times been the horror of rulers: who therefore never spare pains, objections, difficulties, and promises, to stop the citizens from having them. When the citizens are greedy, cowardly, and pusillanimous, and love ease more than liberty, they do not long hold out against the redoubled efforts of the government; and thus, as the resisting force incessantly grows, the sovereign authority ends by disappearing, and most cities fall and perish before their time.

But between the sovereign authority and arbitrary government there sometimes intervenes a mean power of which something must be said.

第十五章 论议员或代表

在本章，卢梭旗帜鲜明地反对了代议制度，表达了主权不可被代表的观点。他认为，在政治社会中，公民亲自参与公共事务的公共精神和爱国热情，是比利益更强有力的连接社会的纽带。我们应当注意到，卢梭将具有公共精神的爱国主义，作为政治生活中尤其是民主制不可或缺的重要基石来对待。他对商业和艺术的发展带来的对金钱和利益的追逐深恶痛绝，他坚定地指出：“在一个真正的共和国之中，公民亲自做一切事情，而不用金钱做任何一件事（3.15.2）。”因此，允许或者购买别人来代表自己参与公共事务的代议制度为他所极大地不屑。他认为如果公民开始花钱雇佣军队开赴战场，如果公民开始花钱雇用代表参加集会，那么这个国家将会被奴役或者出卖。而“一旦人民接受了代表，他们就不再自由了；自由就不再存在了”（3.15.11）。他甚至对英国代议制评价道，英国人只有在选举国会议员的时候才是自由的，一旦国会议员选举出来之后，他们就被奴役了，他们就什么也不是了（3.15.5）。

卢梭分析了代议制度出现的原因。他认为，代表的观念是近代才有的，在古代共和政体甚至君主政体中从来就没有代表存在。在一个良好体制的国家里，公共幸福总是为每一个人提供了绝大部分的私人幸福，需要其本人去追求的幸福已经很少了，这时公共事务优先于私人事务，人们会踊跃参加集会。而在坏体制的国家中，则是相反，人们热衷的是自己的私人利益。如果爱国热情冷却、私人利益活跃恰好发生在一个不克制自己权力四处征战的大国的时候，那么议员和代表就会出现在国家的集会中。

卢梭对被代表的问题又做了进一步分析，他认为在作为表达公意的立法权力的行使上，人民是不能被代表的，但是作为执行公意的行政权力的行使，人民则是可以被代表的。卢梭用了古希腊人民亲自集会参政如何可能的例子，这除了温和的气候、良好的政治风尚、公民美德，还有一点就是奴隶制的存在，因为奴隶承担了所有的劳动，公民首要关注的只是自己的

自由。难道自由合法的政治秩序必须借助奴隶制才能维持吗？卢梭本意并非如此，他在之前也论证了奴隶制是不合法的。他认为，近代奴隶制消失的后果，并不意味着合法的政治秩序不再可能，只是意味着当国家非常小的时候才是可能的。可见，“小国”这一限制条件，是废除奴隶制和避免代议制所必须付出的代价。政治体的规模小并不意味着其在处理对外事务时的力量就弱。卢梭认为，人民能够结合自由的政府、良好的秩序和适当的联盟如联邦制来增强国家的力量。

15 . DEPUTIES OR REPRESENTATIVES

AS soon as public service ceases to be the chief business of the citizens, and they would rather serve with their money than with their persons, the State is not far from its fall. When it is necessary to march out to war, they pay troops and stay at home: when it is necessary to meet in council, they name deputies and stay at home. By reason of idleness and money, they end by having soldiers to enslave their country and representatives to sell it.

It is through the hustle of commerce and the arts, through the greedy self-interest of profit, and through softness and love of amenities that personal services are replaced by money payments. Men surrender a part of their profits in order to have time to increase them at leisure. Make gifts of money, and you will not be long without chains. The word *fiance* is a slavish word, unknown in the city-state. In a country that is truly free, the citizens do everything with their own arms and nothing by means of money; so far from paying to be exempted from their duties, they would even pay for the privilege of fulfilling them themselves. I am far from taking the common view: I hold enforced labour to be less opposed to liberty than taxes.

The better the constitution of a State is, the more do public affairs encroach on private in the minds of the citizens. Private affairs are even of much less importance, because the aggregate of the common happiness furnishes a greater proportion of that of each individual, so that there is less for him to seek in particular cares. In a well-ordered city every man flies to the assemblies: under a bad government no one cares to stir a step to get to them, because no one is interested in what happens there, because it is foreseen that the general will will not prevail, and lastly because domestic cares are all-absorbing. Good laws lead to the making of better ones; bad ones bring about worse. As

soon as any man says of the affairs of the State—*What does it matter to me?*—the State may be given up for lost.

The lukewarmness of patriotism, the activity of private interest, the vastness of States, conquest and the abuse of government suggested the method of having deputies or representatives of the people in the national assemblies. These are what, in some countries, men have presumed to call the Third Estate. Thus the individual interest of two orders is put first and second; the public interest occupies only the third place.

Sovereignty, for the same reason as makes it inalienable, cannot be represented; it lies essentially in the general will, and will does not admit of representation: it is either the same, or other; there is no intermediate possibility. The deputies of the people, therefore, are not and cannot be its representatives: they are merely its stewards, and can carry through no definitive acts. Every law the people has not ratified in person is null and void—is, in fact, not a law. The people of England regards itself as free; but it is grossly mistaken; it is free only during the election of members of parliament. As soon as they are elected, slavery overtakes it, and it is nothing. The use it makes of the short moments of liberty it enjoys shows indeed that it deserves to lose them.

The idea of representation is modern; it comes to us from feudal government, from that iniquitous and absurd system which degrades humanity and dishonours the name of man. In ancient republics and even in monarchies, the people never had representatives; the word itself was unknown. It is very singular that in Rome, where the tribunes were so sacrosanct, it was never even imagined that they could usurp the functions of the people, and that in the midst of so great a multitude they never attempted to pass on their own authority a single plebiscitum. We can, however, form an idea of the difficulties caused sometimes by the people being so numerous, from what

happened in the time of the Gracchi⁽²⁶⁾, when some of the citizens had to cast their votes from the roofs of buildings.

Where right and liberty are everything, disadvantages count for nothing. Among this wise people everything was given its just value, its lictors were allowed to do what its tribunes would never have dared to attempt; for it had no fear that its lictors would try to represent it.

To explain, however, in what way the tribunes did sometimes represent it, it is enough to conceive how the government represents the Sovereign. Law being purely the declaration of the general will, it is clear that, in the exercise of the legislative power, the people cannot be represented; but in that of the executive power, which is only the force that is applied to give the law effect, it both can and should be represented. We thus see that if we looked closely into the matter we should find that very few nations have any laws. However that may be, it is certain that the tribunes, possessing no executive power, could never represent the Roman people by right of the powers entrusted to them, but only by usurping those of the senate.

In Greece, all that the people had to do, it did for itself; it was constantly assembled in the public square. The Greeks lived in a mild climate; they had no natural greed; slaves did their work for them; their great concern was with liberty. Lacking the same advantages, how can you preserve the same rights? Your severer climates add to your needs;^[14] for half the year your public squares are uninhabitable; the flatness of your languages unfits them for being heard in the open air; you sacrifice more for profit than for liberty, and fear slavery less than poverty.

What then? Is liberty maintained only by the help of slavery? It may be so. Extremes meet. Everything that is not in the course of nature has its disadvantages, civil society most of all. There are some

unhappy circumstances in which we can only keep our liberty at others' expense, and where the citizen can be perfectly free only when the slave is most a slave. Such was the case with Sparta. As for you, modern peoples, you have no slaves, but you are slaves yourselves; you pay for their liberty with your own. It is in vain that you boast of this preference; I find in it more cowardice than humanity.

I do not mean by all this that it is necessary to have slaves, or that the right of slavery is legitimate: I am merely giving the reasons why modern peoples, believing themselves to be free, have representatives, while ancient peoples had none. In any case, the moment a people allows itself to be represented, it is no longer free: it no longer exists.

All things considered, I do not see that it is possible henceforth for the Sovereign to preserve among us the exercise of its rights, unless the city is very small. But if it is very small, it will be conquered? No. I will show later on how the external strength of a great people^[15] may be combined with the convenient polity and good order of a small State.

第十六章 论政府的创制不是一项契约

在本章，卢梭从行政权力与主权的区分着手，论述政府的创制并不是主权者和他们设立的行政官之间的一种契约。前者是个别行为的行使，而后者是作为主权者共同体的普遍行为，将主权混同于行政权力的做法，会导致“权力与事实严重混淆，以至于人们再也分不清什么是法律，什么不是法律”（3.16.1）。

卢梭批驳了政府的创制是主权者和他们设立的行政官之间的一种契约的观点。他指出，主权是一国的最高权威，想要限制它就是毁坏它。主权者给自己设立一个主人和在上者是荒谬的。此外，人民和某些人订立契约是个别行为，没有强制力保证，也不是一种主权行为，因此绝不是结成共同体的原初意义上的契约。卢梭郑重声明，国家只有一个契约，即结成共同体的契约，这个契约本身就排斥了其他所有的契约（3.16.5）。

16 . THAT THE INSTITUTION OF GOVERNMENT IS NOT A CONTRACT

THE legislative power once well established, the next thing is to establish similarly the executive power; for this latter, which operates only by particular acts, not being of the essence of the former, is naturally separate from it. Were it possible for the Sovereign, as such, to possess the executive power, right and fact would be so confounded that no one could tell what was law and what was not; and the body politic, thus disfigured, would soon fall a prey to the violence it was instituted to prevent.

As the citizens, by the social contract, are all equal, all can prescribe what all should do, but no one has a right to demand that another shall do what he does not do himself. It is strictly this right, which is indispensable for giving the body politic life and movement, that the Sovereign, in instituting the government, confers upon the prince.

It has been held that⁽²⁷⁾ this act of establishment was a contract between the people and the rulers it sets over itself—a contract in which conditions were laid down between the two parties binding the one to command and the other to obey. It will be admitted, I am sure, that this is an odd kind of contract to enter into. But let us see if this view can be upheld.

First, the supreme authority can no more be modified than it can be alienated; to limit it is to destroy it. It is absurd and contradictory for the Sovereign to set a superior over itself; to bind itself to obey a master would be to return to absolute liberty.

Moreover, it is clear that this contract between the people and such and such persons would be a particular act; and from this it

follows that it can be neither a law nor an act of Sovereignty, and that consequently it would be illegitimate.

It is plain too that the contracting parties in relation to each other would be under the law of nature alone and wholly without guarantees of their mutual undertakings, a position wholly at variance with the civil state. He who has force at his command being always in a position to control execution, it would come to the same thing if the name “contract” were given to the act of one man who said to another: “I give you all my goods, on condition that you give me back as much of them as you please.”

There is only one contract in the State, and that is the act of association, which in itself excludes the existence of a second. It is impossible to conceive of any public contract that would not be a violation of the first.

第十七章 论政府的创制

既然政府的创制绝不是一项契约，那么它是什么？卢梭紧接着必然要对这个问题做出明确回答。卢梭分析了政府是怎样建立起来的：首先由主权者以法律规定必须要有这样一个政府实体，这是具有普遍性的主权行为，然后由人民任命行政官员，这是个别的行政行为，在此之后政府才建立起来。这样便有一个不容回避的严峻问题：在政府存在之前怎么就能有了一种政府行为呢？这是否意味着政府必须在自己开始出现之前就已经出现？

卢梭走出这一困境的方式，是果断地抛弃了除民主主权的混合制政府之外的其他政府形式，这意味着他在此第一次明确提出了他认为唯一合法的政治方案：民主主权的混合制政府。卢梭认为，一个政府被合法地构建起来的唯一途径为：首先，由主权者制定一部有关政府形式的法律；其次，组成主权者的公民们必须将自身转换成一种临时的民主制。由临时民主制的人民组织任命政府官员。卢梭指出，“民主制政府的优点就在于它事实上只要通过公意的一次简单行为就可以确立起来”（3.17.7）。吉尔丁对此解读道，因为在所有人都参与的治理之处，对于谁应当治理就无需作出决定。⁽²⁸⁾这之后，如果此政府形式被采纳，那其就能继续执政，否则就以主权者的名义建立由法律规定的政府形式。如此，民主政府不必在它正式出现之前就已经存在。

17 . THE INSTITUTION OF GOVERNMENT

UNDER what general idea then should the act by which government is instituted be conceived as falling? I will begin by stating that the act is complex, as being composed of two others—the establishment of the law and its execution.

By the former, the Sovereign decrees that there shall be a governing body established in this or that form; this act is clearly a law.

By the latter, the people nominates the rulers who are to be entrusted with the government that has been established. This nomination, being a particular act, is clearly not a second law, but merely a consequence of the first and a function of government.

The difficulty is to understand how there can be a governmental act before government exists, and how the people, which is only Sovereign or subject, can, under certain circumstances, become a prince or magistrate.

It is at this point that there is revealed one of the astonishing properties of the body politic, by means of which it reconciles apparently contradictory operations; for this is accomplished by a sudden conversion of Sovereignty into democracy, so that, without sensible change, and merely by virtue of a new relation of all to all, the citizens become magistrates and pass from general to particular acts, from legislation to the execution of the law.

This changed relation is no speculative subtlety without instances in practice: it happens every day in the English Parliament, where, on certain occasions, the Lower House resolves itself into Grand

Committee, for the better discussion of affairs, and thus, from being at one moment a sovereign court, becomes at the next a mere commission; so that subsequently it reports to itself, as House of Commons, the result of its proceedings in Grand Committee, and debates over again under one name what it has already settled under another.

It is, indeed, the peculiar advantage of democratic government that it can be established in actuality by a simple act of the general will. Subsequently, this provisional government remains in power, if this form is adopted, or else establishes in the name of the Sovereign the government that is prescribed by law; and thus the whole proceeding is regular. It is impossible to set up government in any other manner legitimately and in accordance with the principles so far laid down.

第十八章 论防止政府篡权的方式

如何防止政府篡夺主权者权威，是卢梭在本卷最后一章所要讨论的内容。

卢梭指出，从上一章的论证中可知，建立政府的行为不是契约行为，而是法律行为，它不是履约的问题，而是服从的问题。行政官员并不是人民的主人，而只是人民的职员，人民有权任命或者解雇他们。他们在履行国家赋予他们职权的时候，只是作为公民在承担他们的义务。而在现实中，卢梭认为，人们总是对政府侵蚀其权利的行为不断地容忍，而政府又利用禁言的氛围更加肆无忌惮，以公共安全为借口阻止人民集会，惩罚那些胆敢说话的人们，这样政府迟早会篡夺主权者权威。

卢梭认为，定期集会是阻止政府篡夺公共权威的有效办法。在这里，读者便会对卢梭在本卷第十四章提出的“行政权中止”问题有更好的理解了，因为我们最终知道了在主权者集会上为什么行政权的暂时中止是必要的。在这个集会上，现行政府形式能否存续，和承担行政职责的人能否能够继续行使权力，都被纳入提问的范围。如果对第一个问题的回答是满意的，那么第二个问题会紧跟着被放在所有人民面前。“这两个议题永远都不能被废除，而且必须单独投票。”（3.18.6）卢梭认为，在一个国家中，如果所有公民举行集会一致同意结束一个契约，那么没有人能够怀疑这是一种合法的终结行为。当然，他也表明任何人不能为了逃避义务而离开他的国家，不能在国家需要他的时候背信弃义，否则是应当得到惩罚的。

18 . HOW TO CHECK THE USURPATIONS OF GOVERNMENT

WHAT we have just said confirms Chapter XVI, and makes it clear that the institution of government is not a contract, but a law; that the depositaries of the executive power are not the people's masters, but its officers; that it can set them up and pull them down when it likes; that for them there is no question of contract, but of obedience and that in taking charge of the functions the State imposes on them they are doing no more than fulfilling their duty as citizens, without having the remotest right to argue about the conditions.

When therefore the people sets up an hereditary government, whether it be monarchical and confined to one family, or aristocratic and confined to a class, what it enters into is not an undertaking; the administration is given a provisional form, until the people chooses to order it otherwise.

It is true that such changes are always dangerous, and that the established government should never be touched except when it comes to be incompatible with the public good; but the circumspection this involves is a maxim of policy and not a rule of right, and the State is no more bound to leave civil authority in the hands of its rulers than military authority in the hands of its generals.

It is also true that it is impossible to be too careful to observe, in such cases, all the formalities necessary to distinguish a regular and legitimate act from a seditious tumult, and the will of a whole people from the clamour of a faction. Here above all no further concession should be made to the untoward possibility than cannot, in the strictest logic, be refused it. From this obligation the prince derives a great advantage in preserving his power despite the people, without it being possible to say he has usurped it; for, seeming to avail himself

only of his rights, he finds it very easy to extend them, and to prevent, under the pretext of keeping the peace, assemblies that are destined to the re-establishment of order; with the result that he takes advantage of a silence he does not allow to be broken, or of irregularities he causes to be committed, to assume that he has the support of those whom fear prevents from speaking, and to punish those who dare to speak. Thus it was that the decemvirs, first elected for one year and then kept on in office for a second, tried to perpetuate their power by forbidding the comitia to assemble; and by this easy method every government in the world, once clothed with the public power, sooner or later usurps the sovereign authority.

The periodical assemblies of which I have already spoken are designed to prevent or postpone this calamity, above all when they need no formal summoning; for in that case, the prince cannot stop them without openly declaring himself a law-breaker and an enemy of the State.

The opening of these assemblies, whose sole object is the maintenance of the social treaty, should always take the form of putting two propositions that may not be suppressed, which should be voted on separately.

The first is: “Does it please the Sovereign to preserve the present form of government?”

The second is: “Does it please the people to leave its administration in the hands of those who are actually in charge of it?”

I am here assuming what I think I have shown; that there is in the State no fundamental law that cannot be revoked, not excluding the social compact itself; for if all the citizens assembled of one accord to break the compact, it is impossible to doubt that it would be very legitimately broken. Grotius even thinks that each man can renounce his membership of his own State, and recover his natural liberty and

his goods on leaving the country.^[16] It would be indeed absurd if all the citizens in assembly could not do what each can do by himself.

[1] Thus at Venice the College, even in the absence of the Doge, is called “Most Serene Prince.”

[2] The Palatine of Posen, father of the King of Poland, Duke of Lorraine.

[3] I prefer liberty with danger than peace with slavery.

[4] It is clear that the word *optimales* meant, among the ancients, not the best, but the most powerful.

[5] It is of great importance that the form of the election of magistrates should be regulated by law; for if it is left at the discretion of the prince, it is impossible to avoid falling into hereditary aristocracy, as the Republics of Venice and Berne actually did. The first of these has therefore long been a State dissolved; the second, however, is maintained by the extreme wisdom of the senate, and forms an honourable and highly dangerous exception.

[6] Machiavelli was a proper man and a good citizen; but, being attached to the court of the Medici, he could not help veiling his love of liberty in the midst of his

country's oppression. The choice of his detestable hero, Caesar Borgia, clearly enough shows his hidden aim; and the contradiction between the teaching of the Prince and that of the *Discourses on Livy* and the *History of Florence* shows that this profound political thinker has so far been studied only by superficial or corrupt readers. The Court of Rome sternly prohibited his book. I can well believe it; for it is that Court it most clearly portrays.

[7] Tacitus, *Histories*, i. 16. "For the best, and also the shortest way of finding out what is good and what is bad is to consider what you would have wished to happen or not to happen, had another than you been Emperor."

[8] In the Statesman.

[9] This does not contradict what I said before (Book , ch. 9) about the disadvantages of great States; for we were then dealing with the authority of the government over the members, while here we are dealing with its force against the subjects. Its scattered members serve it as rallying-points for action against the people at a distance, but it has no rallying-point for direct action on its members themselves. Thus the length of the lever is its weakness in the one case, and its strength in the other.

[10] On the same principle it should be judged what centuries deserve the preference for human prosperity. Those in which letters and arts have flourished have been too much admired, because the hidden object of their culture has not been fathomed, and their fatal effects not taken into account. "Idque apud imperitos humanitas vocabatur, cum pars servitutis esset." (Fools called "humanity" what was a part of slavery, Tacitus, *Agricola*, 31.) Shall we never see in the maxims books lay down the vulgar interest that makes their writers speak? No, whatever they may say, when, despite its renown, a country is depopulated, it is not true that all is well, and it is not enough that a poet should have an income of 100,000 francs to make his age the best of all. Less attention should be paid to the apparent repose and tranquillity of the rulers than to the well-being of their nations as wholes, and above all of the most numerous States. A hail-storm lays several cantons waste, but it rarely makes a famine. Outbreaks and civil wars give rulers rude shocks, but they are not the real ills of peoples, who may even get a respite, while there is a dispute as to who shall tyrannise over them. Their true prosperity and calamities come from their permanent condition: it is when the whole remains crushed beneath the yoke, that decay sets in, and that the rulers destroy them at will, and "ubi solitudinem faciunt, pacem appellant." (Where they create solitude, they call it peace, Tacitus, *Agricola*, 31.) When the bickerings of the great disturbed the kingdom of France, and the Coadjutor of Paris took a dagger in his pocket to the Parliament, these things did not prevent the people of France from prospering and multiplying in dignity, ease and freedom. Long ago Greece flourished in the midst of the most savage wars; blood ran in torrents, and yet the whole country was covered with inhabitants. It appeared, says Machiavelli, that in the midst of murder, proscription and civil war,

our republic only thrive: the virtue, morality and independence of the citizens did more to strengthen it than all their dissensions had done to enfeeble it. A little disturbance gives the soul elasticity; what makes the race truly prosperous is not so much peace as liberty.

[11] The slow formation and the progress of the Republic of Venice in its lagoons are a notable instance of this sequence; and it is most astonishing that, after more than twelve hundred years' existence, the Venetians seem to be still at the second stage, which they reached with the Serrar di Consiglio in 1198. As for the ancient Dukes who are brought up against them, it is proved, whatever the Squittinio della libertà veneta may say of them, that they were in no sense sovereigns.

A case certain to be cited against my view is that of the Roman Republic, which, it will be said, followed exactly the opposite course, and passed from monarchy to aristocracy and from aristocracy to democracy. I by no means take this view of it.

What Romulus first set up was a mixed government, which soon deteriorated into despotism. From special causes, the State died an untimely death, as new-born children sometimes perish without reaching manhood. The expulsion of the Tarquins was the real period of the birth of the Republic. But at first it took on no constant form, because, by not abolishing the patriciate, it left half its work undone. For, by this means, hereditary aristocracy, the worst of all legitimate forms of administration, remained in conflict with democracy, and the form of the government, as Machiavelli has proved, was only fixed on the establishment of the tribunate: only then was there a true government and a veritable democracy. In fact, the people was then not only Sovereign, but also magistrate and judge; the senate was only a subordinate tribunal, to temper and concentrate the government, and the consuls themselves, though they were patricians, first magistrates, and absolute generals in war, were in Rome itself no more than presidents of the people.

From that point, the government followed its natural tendency, and inclined strongly to aristocracy. The patriciate, we may say, abolished itself, and the aristocracy was found no longer in the body of patricians as at Venice and Genoa, but in the body of the senate, which was composed of patricians and plebeians, and even in the body of tribunes when they began to usurp an active function: for names do not affect facts, and, when the people has rulers who govern for it, whatever name they bear, the government is an aristocracy.

The abuse of aristocracy led to the civil wars and the triumvirate. Sulla, Julius Caesar and Augustus became in fact real monarchs; and finally, under the despotism of Tiberius, the State was dissolved. Roman history then confirms, instead of invalidating, the principle I have laid down.

[12] "Omnes enim et habentur et dicuntur tyranni, qui potestate utuntur perpetua in ea civitate quae libertate usa est" (Cornelius Nepos, *Life of Miltiades*).

(For all those are called and considered tyrants, who hold perpetual power in a State that has known liberty.) It is true that Aristotle (*Ethics*, Book viii, chapter x) distinguishes the tyrant from the king by the fact that the former governs in his own interest, and the latter only for the good of his subjects; but not only did all Greek authors in general use the word tyrant in a different sense, as appears most clearly in Xenophon's *Hiero*, but also it would follow from Aristotle's distinction that, from the very beginning of the world, there has not yet been a single king.

[13] In nearly the same sense as this word has in the English Parliament. The similarity of these functions would have brought the consuls and the tribunes into conflict, even had all jurisdiction been suspended.

[14] To adopt in cold countries the luxury and effeminacy of the East is to desire to submit to its chains; it is indeed to bow to them far more inevitably in our case than in theirs.

[15] I had intended to do this in the sequel to this work, when in dealing with external relations I came to the subject of confederations. The subject is quite new, and its principles have still to be laid down.

[16] Provided, of course, he does not leave to escape his obligations and avoid having to serve his country in the hour of need. Flight in such a case would be criminal and punishable, and would be, not withdrawal, but desertion.

第四卷

导读

第四卷围绕的是如何巩固国家主权这个主题。紧接着第三卷末尾所谈的须防止政府篡取主权权威，第四卷开章便再次谈起公意，意在引出如何来充分地表达与体现公意，使得国家正常的政治秩序得以维护。前四章介绍了主权行使过程中的投票和选举规则，并以罗马人民大会为例对人民大会的运行做了详细说明，试图表明如何才能使人民主权制度得到保持。后四章则跳离出主权的制度设计，论述了四种不同于主权者但能有助于巩固主权利量的制度设计。

卢梭指出，在民风淳朴的社会里，公意的发现只需要常识，法律的颁布只不过是把所有人都感觉到的东西表达出来而已；而当社会纽带开始松弛、国家被削弱的时候，公意便不再是所有人的意志，投票便不再是全体一致的了；当社会联系破裂、国家濒临毁灭时，公意便沉默了。但即使在事实上公民已不受公意支配的时候，公意也一直在场，公意是不可毁灭的，它只是缄默了，而人民大会的目的便是为了让它的声音被人民听到，投票便是具体的实现方式。

对于公意的确定，多大比例的多数是必要的呢？卢梭指出，社会契约本身要求全体一致的同意，除此之外，在多数人能代表公意的方向的时候，多数人的投票就能达到约束少数人的效果。具体而言，当要决定的事情越是重要越是严肃时，那么投票结果应当接近于全体一致，即应当实行绝对多数票决制。而当要决定的事情是紧急迫切的，则一票的多数就足够了。对于选举行政官员的推选和抽签这两种形式，卢梭认为在真正民主制下，行政职位的担任不意味着获取好处，而是一种沉重的“负担”，因此抽签抽到的，只是一种负担。在一些需要有专门才能的领域如军事，应该采取选定的方式；在只需要常识、正义和诚实就足够的职位如行政职位，抽签就可以。卢梭对罗马人民大会非常重视，在对它的描述中，表明罗马所有公民都被编入不同组别，他们是法律和事实上的主权者。人民大会会有自己的“议会”，是由保民官召集的部落大会，会上要通过由平民制定的法律。最有权势的贵族把持的元老院元老们，无权

出席部落大会，但要服从自己并不能投票表决的那些法律。即使是贵族，也只能以普通公民身份出席大会，没有权力影响投票表决结果。卢梭认为罗马人民大会是一个“政治上的杰作”。

在最后四章，卢梭继续探讨了如何巩固国家体制、保护避免人民受到自身腐化危害的途径，通过不同于主权者、在某种程度上高于主权者的制度设计，即保民官制、紧急状态独裁制、监察官制和公民宗教，来维护社会契约、公意和主权。卢梭认为，保民官制作为法律和立法权力的保卫者，比主权者“更加神圣、更为可敬”。它是一种用来防止违法行为的暂时性非常机构，它无权决定任何事情，却能禁止一切事情。它有时保护人民对抗政府，有时支持政府对抗人民，使政府和人民之间保持某种平衡。独裁制是指紧急状态下任命的独裁官可以暂时中止主权者的权威，并被置于“法律之上”。它使政府力量得以集中加强，有助于挽救危机，但它本身应当是一条法律，只不过是容许中止法律的法律，危机过后应当恢复原来的法律，防止紧急状态变为专制。监察官制则是被卢梭称为“最重要的法律”和“国家真正宪法”的“风尚”和“公共意见”的代言人。卢梭引用孟德斯鸠的观点：“监察官制的作用不在于建立风尚，而在于保持风尚。风尚因立法而诞生，因监察法律的实行而得以保持，从而避免了法律变质腐化。”在全书的最后，卢梭谈到了政治权威与宗教权威的关系，他描绘了世界历史上宗教与政治的关系演进图，强调宗教感情是国家建立的基础，应当与世俗的政治权力融合在一起，为此他批判了基督教对人民的“鸦片”作用，认为耶稣所建立的精神王国与政治实体分离开来，虽然在精神上独立超脱，但归根到底不利于国家的稳固。同时他还认为只要不违反公民义务，要对各种宗教持宽容态度，不应当迫害异教徒。

BOOK IV

第一章 论公意是不可破坏的

在本卷的前四章，卢梭从如何充分表达和体现公意，来继续探讨主权者如何防止政府篡权这个问题。在本章中，卢梭继在前面论述了公意的不可转让、不可分割、不可代表之后，又指出公意是不可破坏的。

卢梭分别论述了几种情况下公意的表现。第一种情况下，在人民正直淳朴、社会纽带坚韧有力的社会中，公共利益清晰可见，只需要常识就能发现公意。而作为公意表达的法律的制定只不过是“第一个提议的人把所有人都感觉到的东西表达出来而已”（4.1.2），此时法律与阴谋、与雄辩无关。第二种情况下，社会纽带变得松弛，小团体开始施加影响，公共利益便开始受到腐蚀，投票不再是全体一致，公意反映着个体之间的斗争。而人们也不再像淳朴的氛围中那样能够清楚地感到自己有遵守公意的义务。第三种情况下，国家濒临毁灭，社会的联系在每一个人心中心破裂，人们都只关心自己及其所拥有的东西。对公共利益的诉求不过是自私的伪饰，人们假借法律之名行私利之欲。

但是，卢梭并不认为公意在后两种情况下是被腐蚀或者被毁灭了。他认为，那只是公意变得沉默了，公意总是纯洁的，而且会继续存在，只是公民们已经不再受公意支配，刻意回避公意。他这么处理的目的似乎在表明，即使在这样令人绝望的处境中，人们也还是可以做些什么，来避免公意继续被个人意志蒙蔽和取代，来使人们注意到它，让它使自己的声音被人们听到，去追求希望的曙光，挽救将要灭亡的国家。而至于做些什么，卢梭把它留到了本卷的最后几章来论述。

1 . THAT THE GENERAL WILL IS INDESTRUCTIBLE

AS long as several men in assembly regard themselves as a single body, they have only a single will which is concerned with their common preservation and general well-being. In this case, all the springs of the State are vigorous and simple and its rules clear and luminous; there are no embroilments or conflicts of interests; the common good is everywhere clearly apparent, and only good sense is needed to perceive it. Peace, unity and equality are the enemies of political subtleties. Men who are upright and simple are difficult to deceive because of their simplicity; lures and ingenious pretexts fail to impose upon them, and they are not even subtle enough to be dupes. When, among the happiest people in the world, bands of peasants are seen regulating affairs of State under an oak, and always acting wisely, can we help scorning the ingenious methods of other nations, which make themselves illustrious and wretched with so much art and mystery?

A State so governed needs very few laws; and, as it becomes necessary to issue new ones, the necessity is universally seen. The first man to propose them merely says what all have already felt, and there is no question of factions or intrigues or eloquence in order to secure the passage into law of what every one has already decided to do, as soon as he is sure that the rest will act with him.

Theorists are led into error because, seeing only States that have been from the beginning wrongly constituted, they are struck by the impossibility of applying such a policy to them. They make great game of all the absurdities a clever rascal or an insinuating speaker might get the people of Paris or London to believe. They do not know that Cromwell⁽¹⁾ would have been put to “the bells” by the people of

Berne, and the Duc de Beaufort⁽²⁾ on the treadmill by the Genevese.

But when the social bond begins to be relaxed and the State to grow weak, when particular interests begin to make themselves felt and the smaller societies to exercise an influence over the larger, the common interest changes and finds opponents: opinion is no longer unanimous; the general will ceases to be the will of all; contradictory views and debates arise; and the best advice is not taken without question.

Finally, when the State, on the eve of ruin, maintains only a vain, illusory and formal existence, when in every heart the social bond is broken, and the meanest interest brazenly lays hold of the sacred name of “public good,” the general will becomes mute: all men, guided by secret motives, no more give their views as citizens than if the State had never been; and iniquitous decrees directed solely to private interest get passed under the name of laws.

Does it follow from this that the general will is exterminated or corrupted? Not at all: it is always constant, unalterable and pure; but it is subordinated to other wills which encroach upon its sphere. Each man, in detaching his interest from the common interest, sees clearly that he cannot entirely separate them; but his share in the public mishaps seems to him negligible beside the exclusive good he aims at making his own. Apart from this particular good, he wills the general good in his own interest, as strongly as any one else. Even in selling his vote for money, he does not extinguish in himself the general will, but only eludes it. The fault he commits is that of changing the state of the question, and answering something different from what he is asked. Instead of saying, by his vote, “It is to the advantage of the State,” he says, “It is of advantage to this or that man or party that this or that view should prevail.” Thus the law of public order in assemblies is not so much to maintain in them the general will as to secure that the question be always put to it, and the answer always

given by it.

I could here set down many reflections on the simple right of voting in every act of Sovereignty—a right which no one can take from the citizens—and also on the right of stating views, making proposals, dividing and discussing, which the government is always most careful to leave solely to its members, but this important subject would need a treatise to itself, and it is impossible to say everything in a single work.

第二章 论投票

在本章中，如题所述，卢梭阐述了投票这种处理公共事务的方式。多大程度的多数对于认识和表达公意是必要的呢？卢梭认为，一般而言，越是趋向一致越是对于表达公意有积极的作用，从而有助于国家政治社会的健康。但是，有两种情况下不适用此判断。一种是当一个国家体制中分为若干等级时，如罗马贵族与平民的意见相左引起的争执并不代表着共和国的没落，而在元老院干预下和平一致的投票结果也并不意味着国家就能远离动荡。另一种情况是当公民完全堕入奴隶状态，没有自由意志，只有奉承附和时，这种全体一致也不代表公意得到了充分正确的认识和表达。因此，卢梭指出，人们要根据如何更容易地认识公意、是否会引起国家的动荡衰落来安排计算票数和比较意见的方式。

卢梭认为，社会契约是唯一一种需要全体一致通过的法律，任何人没有经过他的同意都不能以任何借口使其屈从。那么，缔结社会契约时候的反对声音，能否会使社会契约变得无效？卢梭对此问题的回答同霍布斯、洛克如出一辙：那些投票反对社会契约的人，与赞成的人并不是一个社会的人，反对者被排除在了社会契约之外。而当国家建立后，居住则表示反对的人在事实上默许了社会契约，那么他就必须服从这个主权。卢梭进一步指出，在这个原始基础性的全体一致的社会契约之上，对于其他问题的表决多数便足以约束全体成员。卢梭对其原因进行了很细致的分析，他说：“在人民的集会上提议一个法律的时候，人们被提问的问题并不是他们赞同还是反对这个提议，而是问这个提议是否与他们自己的公意相符合。”（4.2.8）每个公民进行投票便宣告了公意，当少数人产生相反的意见时，只是说明他的意见错了，他的意见代表的是个别意志而非公意。

但是，我们会发现，卢梭所说的多数，并非在所有情况下都是简单多数。“根据政治体的状况和政治体的需要，人们可以在任何一个点上确定宣告公意所需的票数比例。”（4.2.10）吉

尔丁解读说，这要取决于公意使自己的声音被听到的困难程度，也就是说，取决于国家衰败到了什么样的程度。⁽³⁾在本章的结尾，卢梭提出了至今在我们的政治生活中还依然有效的多数决定原则：当要决定的事情越是基本越是重要，例如颁布法律，那么这个多数应当越接近于全体一致；当要决定的事情越是紧急越是迫切，例如处理行政事务，那么这个多数只要简单多数，哪怕一票的多数便是足够。

2 . VOTING

IT may be seen, from the last chapter, that the way in which general business is managed may give a clear enough indication of the actual state of morals and the health of the body politic. The more concert reigns in the assemblies, that is, the nearer opinion approaches unanimity, the greater is the dominance of the general will. On the other hand, long debates, dissensions and tumult proclaim the ascendancy of particular interests and the decline of the State.

This seems less clear when two or more orders enter into the constitution, as patricians and plebeians did at Rome; for quarrels between these two orders often disturbed the comitia, even in the best days of the Republic. But the exception is rather apparent than real; for then, through the defect that is inherent in the body politic, there were, so to speak, two States in one, and what is not true of the two together is true of either separately. Indeed, even in the most stormy times, the plebiscita of the people, when the Senate did not interfere with them, always went through quietly and by large majorities. The citizens having but one interest, the people had but a single will.

At the other extremity of the circle, unanimity recurs; this is the case when the citizens, having fallen into servitude, have lost both liberty and will. Fear and flattery then change votes into acclamation; deliberation ceases, and only worship or malediction is left. Such was the vile manner in which the senate expressed its views under the Emperors. It did so sometimes with absurd precautions. Tacitus observes that, under Otho⁽⁴⁾, the senators, while they heaped curses on Vitellius⁽⁵⁾, contrived at the same time to make a deafening noise, in order that, should he ever become their master, he might not know what each of them had said.

On these various considerations depend the rules by which the

methods of counting votes and comparing opinions should be regulated, according as the general will is more or less easy to discover, and the State more or less in its decline.

There is but one law which, from its nature, needs unanimous consent. This is the social compact; for civil association is the most voluntary of all acts. Every man being born free and his own master, no one, under any pretext whatsoever, can make any man subject without his consent. To decide that the son of a slave is born a slave is to decide that he is not born a man.

If then there are opponents when the social compact is made, their opposition does not invalidate the contract, but merely prevents them from being included in it. They are foreigners among citizens. When the State is instituted, residence constitutes consent; to dwell within its territory is to submit to the Sovereign.^[1]

Apart from this primitive contract, the vote of the majority always binds all the rest. This follows from the contract itself. But it is asked how a man can be both free and forced to conform to wills that are not his own. How are the opponents at once free and subject to laws they have not agreed to?

I retort that the question is wrongly put. The citizen gives his consent to all the laws, including those which are passed in spite of his opposition, and even those which punish him when he dares to break any of them. The constant will of all the members of the State is the general will; by virtue of it they are citizens and free.^[2] When in the popular assembly a law is proposed, what the people is asked is not exactly whether it approves or rejects the proposal, but whether it is in conformity with the general will, which is their will. Each man, in giving his vote, states his opinion on that point; and the general will is found by counting votes. When therefore the opinion that is contrary to my own prevails, this proves neither more nor less than

that I was mistaken, and that what I thought to be the general will was not so. If my particular opinion had carried the day I should have achieved the opposite of what was my will; and it is in that case that I should not have been free.

苏格拉底之死：公元前399年，苏格拉底因坚持真理而为雅典城公民以281票对220票处死，罪名是亵渎神灵和败坏年轻人。

This presupposes, indeed, that all the qualities of the general will still reside in the majority: when they cease to do so, whatever side a man may take, liberty is no longer possible.

In my earlier demonstration of how particular wills are substituted for the general will in public deliberation, I have adequately pointed out the practicable methods of avoiding this abuse; and I shall have more to say of them later on. I have also given the principles for determining the proportional number of votes for declaring that will. A difference of one vote destroys equality; a single opponent destroys unanimity; but between equality and unanimity, there are several grades of unequal division, at each of which this proportion may be fixed in accordance with the condition and the needs of the body politic.

There are two general rules that may serve to regulate this relation. First, the more grave and important the questions discussed, the nearer should the opinion that is to prevail approach unanimity. Secondly, the more the matter in hand calls for speed, the smaller the prescribed difference in the numbers of votes may be allowed to become: where an instant decision has to be reached, a majority of one vote should be enough. The first of these two rules seems more in harmony with the laws, and the second with practical affairs. In any case, it is the combination of them that gives the best proportions for determining the majority necessary.

第三章 论选举

选举依然是卢梭关于人民大会讨论的一部分。卢梭认为，选举政府官员可以通过推选和抽签两种方式进行。孟德斯鸠认为抽签的方式对于民主制来说很自然，因为这不会伤害到任何人，还能满足公民服务于国家的美好希望。卢梭对此并不以为然，他认为，真正的原因是在民主制中，作为行政行为的选举越少，政府就能把越多的精力投入到社会治理中，行政效果就会成比例地变得更好。

卢梭指出，在真正的民主制中，由于所有的人在品质、才能、财富和节操上都是相等的，所以无论谁当选差别都不大。并且在民主制中行政官职并非特权，而是沉重的责任，而抽签的方式也不取决于任何人的意志，因而稍显公平，进而人们通过法律将负担施加于被抽中签的某某，这样法律的普遍性就不会被其个别应用所歪曲了。

在卢梭对选举贵族制的讨论中，有一个问题需要明确，那就是谁来选举？在本章的讨论中，卢梭倾向于一种由人民来进行选举的选举贵族制，严格地说，这是一种混合政体。既然卢梭认为，真正意义的民主制政府是不存在的，那么不仅民主主权是唯一合法的主权形式，而且具有很大民主成分的混合政府也是现实中唯一合法的政府形式。他在本章对比了日内瓦和威尼斯，用以说明日内瓦正是他所赞赏的那种意义上的合法的混合政体，不难发现，卢梭所提出的政制方案的民主性越来越鲜明。

卢梭明确了投票和抽签这两种方式分别应该在何时使用。他认为，投票适用于那些需要特殊技能和才智的岗位，如军事指挥。抽签适用于那些一般品质如常识和正直足矣的岗位，如行政管理，特别是建制良好的国家。在君主制下，这两种方式均不适用，因为此时选举权只属于君主自己。

3 . ELECTIONS

IN the elections of the prince and the magistrates, which are, as I have said, complex acts⁽⁶⁾, there are two possible methods of procedure, choice and lot. Both have been employed in various republics, and a highly complicated mixture of the two still survives in the election of the Doge at Venice.

“Election by lot,” says Montesquieu, “is democratic in nature.” I agree that it is so; but in what sense? “The lot,” he goes on, “is a way of making choice that is unfair to nobody; it leaves each citizen a reasonable hope of serving his country.” These are not reasons.

If we bear in mind that the election of rulers is a function of government, and not of Sovereignty, we shall see why the lot is the method more natural to democracy, in which the administration is better in proportion as the number of its acts is small.

In every real democracy, magistracy is not an advantage, but a burdensome charge which cannot justly be imposed on one individual rather than another. The law alone can lay the charge on him on whom the lot falls. For, the conditions being then the same for all, and the choice not depending on any human will, there is no particular application to alter the universality of the law.

In an aristocracy, the prince chooses the prince, the government is preserved by itself, and voting is rightly ordered.

The instance of the election of the Doge of Venice confirms, instead of destroying, this distinction; the mixed form suits a mixed government. For it is an error to take the government of Venice for a real aristocracy. If the people has no share in the government, the nobility is itself the people. A host of poor Barnabotes never gets near any magistracy, and its nobility consists merely in the empty title of

Excellency, and in the right to sit in the Great Council. As this Great Council is as numerous as our General Council at Geneva, its illustrious members have no more privileges than our plain citizens. It is indisputable that, apart from the extreme disparity between the two republics, the *bourgeoisie* of Geneva is exactly equivalent to the *patriciate* of Venice; our *natives* and *inhabitants* correspond to the *townsmen* and the *people* of Venice; our *peasants* correspond to the *subjects* on the mainland; and, however that republic be regarded, if its size be left out of account, its government is no more aristocratic than our own. The whole difference is that, having no life-ruler, we do not, like Venice, need to use the lot.

Election by lot would have few disadvantages in a real democracy, in which, as equality would everywhere exist in morals and talents as well as in principles and fortunes, it would become almost a matter of indifference who was chosen. But I have already said that a real democracy is only an ideal.

When choice and lot are combined, positions that require special talents, such as military posts, should be filled by the former; the latter does for cases, such as judicial offices, in which good sense, justice, and integrity are enough, because in a State that is well constituted, these qualities are common to all the citizens.

Neither lot nor vote has any place in monarchical government. The monarch being by right sole prince and only magistrate, the choice of his lieutenants belongs to none but him. When the Abbé de Saint-Pierre proposed that the Councils of the King of France should be multiplied, and their members elected by ballot, he did not see that he was proposing to change the form of government.

I should now speak of the methods of giving and counting opinions in the assembly of the people; but perhaps an account of this aspect of the Roman constitution will more forcibly illustrate all the

rules I could lay down. It is worth the while of a judicious reader to follow in some detail the working of public and private affairs in a Council consisting of two hundred thousand men.

第四章 论罗马人民大会

在上一章的结尾，卢梭表明，他希望用罗马体制的历史沿革更有力地论证人民集会是如何行使最高权力和处理公共事务的。在本章中，卢梭对罗马公民以何种方式被划分为不同的类别做了详细介绍。

罗马建国后将人民按照本邦人和外邦人划分为三个不同的部落，每个部落再进一步被划分为十个库利亚。同时，从每个部落中抽出一百个骑兵或者武士为军事之需，称为“百人团”。卢梭对此高度评价说：“看上去似乎有一种追求伟大的天分引导着罗马这个小城在一开始就为自己提供了一套适合成为世界的首都的体制。”随着罗马的发展和繁荣，这种按照本邦人和外邦人的划分有了不利的因素，那就是外邦人的增长很快超过了本邦部落。塞尔维乌斯于是改变了划分人民的标准，他引入了以地区为基础的划分方式，以每一座小山分别建立了四个城市部落，并严格限制居民迁徙。同时增强了作为军事之用的百人团，使军事团体和人民团体区分开来。后来，塞尔维乌斯又建立了十五个由乡村居民组成的乡村部落，逐步扩大到并一直维持了三十五个部族。按照卢梭，乡村部落因劳动而民风淳朴、品味高尚，而城市部落却因工艺、贸易、财富和奴隶制而放纵懒散。有权力的官员会将自己编入乡村部落，这样一来，依靠地区已不再能够区分部族成员身份，“部族”逐渐多了人格上的含义，而不再具有领土的意义而变得名不副实。

罗马建国最早划分的三十个“库利亚”局限在以地区划分的四个城市部落中，成为独立于部族的对于罗马居民的另一种划分。除了部族和库利亚，塞尔维乌斯还根据财富将罗马居民划分为六个等级共193个团体，富人全在第一个等级，占团体的半数以上。穷人全在第六个等级，只占一个团，但人数占了罗马居民的半数以上。为了麻痹人民对于此分类意义的认识，塞氏将其伪装成军事形式，在其中安插军事百人团，合起来成为了新的“百人团”。卢梭倾向于表明，他并不对此分类的好坏做评价，但他认为这样的划分现实上行得通，因为罗马人民民风

淳朴，并且其监察机构有力量纠正这种制度的弊病。

与上述三种划分相对应的，罗马召集人民大会便有三种方式，所有的公民都被编入库利亚、百人团或者部族，任何公民都没有被排斥在投票权之外，在此意义上，卢梭称“罗马人民是法律上和事实上的真正主权者”。卢梭指出人民大会合法召集及作出具有法律效力的决定的三个条件：召集人须具有相应权限，在法律许可的日期举行，占卜的结果为吉兆。卢梭对于三种方式优劣的态度很明确，他认为，部族大会是最适合人民政府的一种集会，百人团大会则是最适合于贵族制的，而库利亚大会则最容易被叛乱分子利用实施阴谋和暴政。由于部族大会把元老院和贵族排斥在外，库利亚大会把乡村部族排斥在外，只有百人团大会才是全民的集会。

对于投票的方式，卢梭指出，填写选票单取代了口头公开投票和秘密投票，人们还制定了关于选票收集、计数和比较以及防止官员营私舞弊的规则，但是依然无法阻止一个民族的衰落的历程。一个腐化了的民族将无法适用健康高尚的法律。但是，根据卢梭对于罗马人民大会的阐述，即使政府秩序已经腐化到了威胁国家存在的地步，以正确的方式举行人民大会仍是阻止其进一步腐化的重要努力。

4 . THE ROMAN COMITIA

WE are without well-certified records of the first period of Rome's existence; it even appears very probable that most of the stories told about it are fables; indeed, generally speaking, the most instructive part of the history of peoples, that which deals with their foundation, is what we have least of. Experience teaches us every day what causes lead to the revolutions of empires; but, as no new peoples are now formed, we have almost nothing beyond conjecture to go upon in explaining how they were created.

The customs we find established show at least that these customs had an origin. The traditions that go back to those origins, that have the greatest authorities behind them, and that are confirmed by the strongest proofs, should pass for the most certain. These are the rules I have tried to follow in inquiring how the freest and most powerful people on earth exercised its supreme power.

After the foundation of Rome, the newborn republic, that is, the army of its founder, composed of Albans, Sabines and foreigners, was divided into three classes, which, from this division, took the name of tribes. Each of these tribes was subdivided into ten *curiae*, and each *curia* into *decuriae*, headed by leaders called *curiones* and *decuriones*.

古罗马集市遗址：古罗马人民大会和元老院诞生并繁荣于此。所有的公民都被编入库利亚、百人团或者部族，任何公民都没有被排斥在投票权之外，在此意义上，卢梭称“罗马人民是法律上和事实上的真正主权者”。

Besides this, out of each tribe was taken a body of one hundred *Equites* or Knights, called a *century*, which shows that these divisions, being unnecessary in a town, were at first merely military. But an instinct for greatness seems to have led the little township of Rome to provide itself in advance with a political system suitable for the capital of the world.

Out of this original division an awkward situation soon arose. The tribes of the Albans (Ramnenses) and the Sabines (Tatienses) remained always in the same condition, while that of the foreigners (Luceres) continually grew as more and more foreigners came to live at Rome, so that it soon surpassed the others in strength. Servius remedied this dangerous fault by changing the principle of cleavage, and substituting for the racial division, which he abolished, a new one based on the quarter of the town inhabited by each tribe. Instead of three tribes he created four, each occupying and named after one of the hills of Rome. Thus, while redressing the inequality of the moment, he also provided for the future; and in order that the division might be one of persons as well as localities, he forbade the inhabitants of one quarter to migrate to another, and so prevented the mingling of the races.

He also doubled the three old centuries of Knights and added twelve more, still keeping the old names, and by this simple and prudent method, succeeded in making a distinction between the body of Knights, and the people, without a murmur from the latter.

To the four urban tribes Servius added fifteen others called rural tribes, because they consisted of those who lived in the country, divided into fifteen cantons. Subsequently, fifteen more were created, and the Roman people finally found itself divided into thirty-five tribes, as it remained down to the end of the Republic.

The distinction between urban and rural tribes had one effect

which is worth mention, both because it is without parallel elsewhere, and because to it Rome owed the preservation of her morality and the enlargement of her empire. We should have expected that the urban tribes would soon monopolise power and honours, and lose no time in bringing the rural tribes into disrepute; but what happened was exactly the reverse. The taste of the early Romans for country life is well known. This taste they owed to their wise founder, who made rural and military labours go along with liberty, and, so to speak, relegated to the town arts, crafts, intrigue, fortune and slavery.

Since therefore all Rome's most illustrious citizens lived in the fields and tilled the earth, men grew used to seeking there alone the mainstays of the republic. This condition, being that of the best patricians, was honoured by all men; the simple and laborious life of the villager was preferred to the slothful and idle life of the *bourgeoisie* of Rome; and he who, in the town, would have been but a wretched proletarian, became, as a labourer in the fields, a respected citizen. Not without reason, says Varro, did our great-souled ancestors establish in the village the nursery of the sturdy and valiant men who defended them in time of war and provided for their sustenance in time of peace. Pliny states positively that the country tribes were honoured because of the men of whom they were composed; while cowards men wished to dishonour were transferred, as a public disgrace, to the town tribes. The Sabine Appius Claudius, when he had come to settle in Rome, was loaded with honours and enrolled in a rural tribe, which subsequently took his family name. Lastly, freedmen always entered the urban, and never the rural, tribes: nor is there a single example, throughout the Republic, of a freedman, though he had become a citizen, reaching any magistracy.

This was an excellent rule; but it was carried so far that in the end it led to a change and certainly to an abuse in the political system.

First the censors, after having for a long time claimed the right of

transferring citizens arbitrarily from one tribe to another, allowed most persons to enrol themselves in whatever tribe they pleased. This permission certainly did no good, and further robbed the censorship of one of its greatest resources. Moreover, as the great and powerful all got themselves enrolled in the country tribes, while the freedmen who had become citizens remained with the populace in the town tribes, both soon ceased to have any local or territorial meaning, and all were so confused that the members of one could not be told from those of another except by the registers; so that the idea of the word *tribe* became personal instead of real, or rather came to be little more than a chimera.

It happened in addition that the town tribes, being more on the spot, were often the stronger in the comitia and sold the State to those who stooped to buy the votes of the rabble composing them.

As the founder had set up ten *curiae* in each tribe, the whole Roman people, which was then contained within the walls, consisted of thirty *curiae*, each with its temples, its gods, its officers, its priests and its festivals, which were called *compitalia* and corresponded to the *paganalia*, held in later times by the rural tribes.

When Servius made his new division, as the thirty *curiae* could not be shared equally between his four tribes, and as he was unwilling to interfere with them, they became a further division of the inhabitants of Rome, quite independent of the tribes: but in the case of the rural tribes and their members there was no question of *curiae*, as the tribes had then become a purely civil institution, and, a new system of levying troops having been introduced, the military divisions of Romulus were superfluous. Thus, although every citizen was enrolled in a tribe, there were very many who were not members of a *curia*.

Servius made yet a third division, quite distinct from the two we

have mentioned, which became, in its effects, the most important of all. He distributed the whole Roman people into six classes, distinguished neither by place nor by person, but by wealth; the first classes included the rich, the last the poor, and those between persons of moderate means. These six classes were subdivided into one hundred and ninety-three other bodies, called centuries, which were so divided that the first class alone comprised more than half of them, while the last comprised only one. Thus the class that had the smallest number of members had the largest number of centuries, and the whole of the last class only counted as a single subdivision, although it alone included more than half the inhabitants of Rome.

In order that the people might have the less insight into the results of this arrangement, Servius tried to give it a military tone: in the second class he inserted two centuries of armourers, and in the fourth two of makers of instruments of war: in each class, except the last, he distinguished young and old, that is, those who were under an obligation to bear arms and those whose age gave them legal exemption. It was this distinction, rather than that of wealth, which required frequent repetition of the census or counting. Lastly, he ordered that the assembly should be held in the Campus Martius, and that all who were of age to serve should come there armed.

The reason for his not making in the last class also the division of young and old was that the populace, of whom it was composed, was not given the right to bear arms for its country: a man had to possess a hearth to acquire the right to defend it, and of all the troops of beggars who today lend lustre to the armies of kings, there is perhaps not one who would not have been driven with scorn out of a Roman cohort, at a time when soldiers were the defenders of liberty.

In this last class, however, *proletarians* were distinguished from *capite censi*. The former, not quite reduced to nothing, at least gave the State citizens, and sometimes, when the need was pressing, even

soldiers. Those who had nothing at all, and could be numbered only by counting heads, were regarded as of absolutely no account, and Marius was the first who stooped to enrol them.

Without deciding now whether this third arrangement was good or bad in itself, I think I may assert that it could have been made practicable only by the simple morals, the disinterestedness, the liking for agriculture and the scorn for commerce and for love of gain which characterised the early Romans. Where is the modern people among whom consuming greed, unrest, intrigue, continual removals, and perpetual changes of fortune, could let such a system last for twenty years without turning the State upside down? We must indeed observe that morality and the censorship, being stronger than this institution, corrected its defects at Rome, and that the rich man found himself degraded to the class of the poor for making too much display of his riches.

From all this it is easy to understand why only five classes are almost always mentioned, though there were really six. The sixth, as it furnished neither soldiers to the army nor votes in the Campus Martius,^[3] and was almost without function in the State, was seldom regarded as of any account.

These were the various ways in which the Roman people was divided. Let us now see the effect on the assemblies. When lawfully summoned, these were called *comitia*: they were usually held in the public square at Rome or in the Campus Martius, and were distinguished as *Comitia Curiata*, *Comitia Centuriata*, and *Comitia Tributa*, according to the form under which they were convoked. The *Comitia Curiata* were founded by Romulus; the *Centuriata* by Servius; and the *Tributa* by the tribunes of the people. No law received its sanction and no magistrate was elected, save in the *comitia*; and as every citizen was enrolled in a *curia*, a century, or a tribe, it follows that no citizen was excluded from the right of voting, and that the

Roman people was truly sovereign both *de jure* and *de facto*.

For the comitia to be lawfully assembled, and for their acts to have the force of law, three conditions were necessary. First, the body or magistrate convoking them had to possess the necessary authority; secondly, the assembly had to be held on a day allowed by law; and thirdly, the auguries had to be favourable.

The reason for the first regulation needs no explanation; the second is a matter of policy. Thus, the comitia might not be held on festivals or market-days, when the country-folk, coming to Rome on business, had not time to spend the day in the public square. By means of the third, the senate held in check the proud and restive people, and meetly restrained the ardour of seditious tribunes, who, however, found more than one way of escaping this hindrance.

Laws and the election of rulers were not the only questions submitted to the judgment of the comitia: as the Roman people had taken on itself the most important functions of government, it may be said that the lot of Europe was regulated in its assemblies. The variety of their objects gave rise to the various forms these took, according to the matters on which they had to pronounce.

In order to judge of these various forms, it is enough to compare them. Romulus, when he set up *curiae*, had in view the checking of the senate by the people, and of the people by the senate, while maintaining his ascendancy over both alike. He therefore gave the people, by means of this assembly, all the authority of numbers to balance that of power and riches, which he left to the patricians. But, after the spirit of monarchy, he left all the same a greater advantage to the patricians in the influence of their clients on the majority of votes. This excellent institution of patron and client was a masterpiece of statesmanship and humanity without which the patriciate, being flagrantly in contradiction to the republican spirit, could not have

survived. Rome alone has the honour of having given to the world this great example, which never led to any abuse, and yet has never been followed.

As the assemblies by *curiae* persisted under the kings till the time of Servius, and the reign of the later Tarquin was not regarded as legitimate, royal laws were called generally *leges curiatae*.

Under the Republic, the *curiae*, still confined to the four urban tribes, and including only the populace of Rome, suited neither the senate, which led the patricians, nor the tribunes, who, though plebeians, were at the head of the well-to-do citizens. They therefore fell into disrepute, and their degradation was such, that thirty lictors used to assemble and do what the *Comitia Curiata* should have done.

The division by centuries was so favourable to the aristocracy that it is hard to see at first how the senate ever failed to carry the day in the comitia bearing their name, by which the consuls, the censors and the other curule magistrates were elected. Indeed, of the hundred and ninety-three centuries into which the six classes of the whole Roman people were divided, the first class contained ninety-eight; and, as voting went solely by centuries, this class alone had a majority over all the rest. When all these centuries were in agreement, the rest of the votes were not even taken; the decision of the smallest number passed for that of the multitude, and it may be said that, in the comitia centuriata, decisions were regulated far more by depth of purses than by the number of votes.

But this extreme authority was modified in two ways. First, the tribunes as a rule, and always a great number of plebeians, belonged to the class of the rich, and so counterbalanced the influence of the patricians in the first class.

The second way was this. Instead of causing the centuries to vote throughout in order, which would have meant beginning always with

the first, the Romans always chose one by lot which proceeded alone to the election; after this all the centuries were summoned another day according to their rank, and the same election was repeated, and as a rule confirmed. Thus the authority of example was taken away from rank, and given to the lot on a democratic principle.

From this custom resulted a further advantage. The citizens from the country had time, between the two elections, to inform themselves of the merits of the candidate who had been provisionally nominated, and did not have to vote without knowledge of the case. But, under the pretext of hastening matters, the abolition of this custom was achieved, and both elections were held on the same day.

The *Comitia Tributa* were properly the council of the Roman people. They were convoked by the tribunes alone; at them the tribunes were elected and passed their plebiscita. The senate not only had no standing in them, but even no right to be present; and the senators, being forced to obey laws on which they could not vote, were in this respect less free than the meanest citizens. This injustice was altogether ill-conceived, and was alone enough to invalidate the decrees of a body to which all its members were not admitted. Had all the patricians attended the comitia by virtue of the right they had as citizens, they would not, as mere private individuals, have had any considerable influence on a vote reckoned by counting heads, where the meanest proletarian was as good as the *princeps senatus*.

It may be seen, therefore, that besides the order which was achieved by these various ways of distributing so great a people and taking its votes, the various methods were not reducible to forms indifferent in themselves, but the results of each were relative to the objects which caused it to be preferred.

Without going here into further details, we may gather from what has been said above that the *Comitia Tributa* were the most favourable

to popular government, and the *Comitia Centuriata* to aristocracy. The *Comitia Curiata*, in which the populace of Rome formed the majority, being fitted only to further tyranny and evil designs, naturally fell into disrepute, and even seditious persons abstained from using a method which too clearly revealed their projects. It is indisputable that the whole majesty of the Roman people lay solely in the *Comitia Centuriata*, which alone included all; for the *Comitia Curiata* excluded the rural tribes, and the *Comitia Tributa* the senate and the patricians.

As for the method of taking the vote, it was among the ancient Romans as simple as their morals, although not so simple as at Sparta. Each man declared his vote aloud, and a clerk duly wrote it down; the majority in each tribe determined the vote of the tribe, the majority of the tribes that of the people, and so with *curiae* and centuries. This custom was good as long as honesty was triumphant among the citizens, and each man was ashamed to vote publicly in favour of an unjust proposal or an unworthy subject; but, when the people grew corrupt and votes were bought, it was fitting that voting should be secret in order that purchasers might be restrained by mistrust, and rogues be given the means of not being traitors.

I know that Cicero attacks this change, and attributes partly to it the ruin of the Republic. But though I feel the weight Cicero's authority must carry on such a point, I cannot agree with him; I hold, on the contrary, that, for want of enough such changes, the destruction of the State must be hastened. Just as the regimen of health does not suit the sick, we should not wish to govern a people that has been corrupted by the laws that a good people requires. There is no better proof of this rule than the long life of the Republic of Venice, of which the shadow still exists, solely because its laws are suitable only for men who are wicked.⁽⁷⁾

The citizens were provided, therefore, with tablets by means of which each man could vote without any one knowing how he voted:

new methods were also introduced for collecting the tablets, for counting voices, for comparing numbers, etc.; but all these precautions did not prevent the good faith of the officers charged with these functions^[4] from being often suspect. Finally, to prevent intrigues and trafficking in votes, edicts were issued; but their very number proves how useless they were.

Towards the close of the Republic, it was often necessary to have recourse to extraordinary expedients in order to supplement the inadequacy of the laws. Sometimes miracles were supposed; but this method, while it might impose on the people, could not impose on those who governed. Sometimes an assembly was hastily called together, before the candidates had time to form their factions: sometimes a whole sitting was occupied with talk, when it was seen that the people had been won over and was on the point of taking up a wrong position. But in the end ambition eluded all attempts to check it; and the most incredible fact of all is that, in the midst of all these abuses, the vast people, thanks to its ancient regulations, never ceased to elect magistrates, to pass laws, to judge cases, and to carry through business both public and private, almost as easily as the senate itself could have done.

第五章 论保民官制

本卷的最后四章，都是跳出主权者来更好地维护人民主权的制度设计。本章的保民官制的存在是为了维护主权者、政府和人民之间的力量比率关系，“有时候它会起到保护主权者以反对政府的作用，有时候它会起到支持政府以反对人民的作用，有时候又在这两者中保持一种平衡”（4.5.2）。保民官并不是国家政治体制必须的组成，它的缺席并不会使国家停止运行，但它的存在能够有效地维护国家主权。

保民官制的作用在于，在主权者会议具有违反其制定的法律的行为倾向时，保民官能够审查并制止主权者行为。保民官作为法律神圣性的守护者，用来对抗处于违法状态的主权者。倘若政府试图阻止主权者在适当时候召集大会，或者群众非常规性聚集企图将其决定变成主权者行为时，保民官就有权制止这些行为。当然，保民官并不是要处理所有的违法行为，它只是对违反国家政治秩序的行为予以阻止。在这个意义上，卢梭指出，“它比执行法律的统治者和制定法律的立法者更加神圣、更受到尊崇。”

同时，卢梭也看到了失控的保民官制带来的危害将是非常可怕的，它会加速国家体制的腐化，它会颠覆一切。因此，卢梭认为，防止保民官篡权的一个办法，就是使它成为非常设机构，对其行使职权的时间和期间都予以限制，防止权力滥用。

5 . THE TRIBUNATE

WHEN an exact proportion cannot be established between the constituent parts of the State, or when causes that cannot be removed continually alter the relation of one part to another, recourse is had to the institution of a peculiar magistracy that enters into no corporate unity with the rest. This restores to each term its right relation to the others, and provides a link or middle term between either prince and people, or prince and Sovereign, or, if necessary, both at once.

This body, which I shall call the *tribunate*, is the preserver of the laws and of the legislative power. It serves sometimes to protect the Sovereign against the government, as the tribunes of the people did at Rome; sometimes to uphold the government against the people, as the Council of Ten now does at Venice; and sometimes to maintain the balance between the two, as the Ephors did at Sparta.

The tribunate is not a constituent part of the city, and should have no share in either legislative or executive power; but this very fact makes its own power the greater: for, while it can do nothing, it can prevent anything from being done. It is more sacred and more revered, as the defender of the laws, than the prince who executes them, or than the Sovereign which ordains them. This was seen very clearly at Rome, when the proud patricians, for all their scorn of the people, were forced to bow before one of its officers, who had neither auspices nor jurisdiction.

The tribunate, wisely tempered, is the strongest support a good constitution can have; but if its strength is ever so little excessive, it upsets the whole State. Weakness, on the other hand, is not natural to it: provided it is something, it is never less than it should be.

It degenerates into tyranny when it usurps the executive power,

which it should confine itself to restraining, and when it tries to dispense with the laws, which it should confine itself to protecting. The immense power of the Ephors, harmless as long as Sparta preserved its morality, hastened corruption when once it had begun. The blood of Agis, slaughtered by these tyrants, was avenged by his successor; the crime and the punishment of the Ephors alike hastened the destruction of the republic, and after Cleomenes Sparta ceased to be of any account. Rome perished in the same way: the excessive power of the tribunes, which they had usurped by degrees, finally served, with the help of laws made to secure liberty, as a safeguard for the emperors⁽⁸⁾ who destroyed it. As for the Venetian Council of Ten, it is a tribunal of blood, an object of horror to patricians and people alike; and, so far from giving a lofty protection to the laws, it does nothing, now they have become degraded, but strike in the darkness blows of which no one dare take note.

The tribunate, like the government, grows weak as the number of its members increases. When the tribunes of the Roman people, who first numbered only two, and then five, wished to double that number, the senate let them do so, in the confidence that it could use one to check another, as indeed it afterwards freely did.

The best method of preventing usurpations by so formidable a body, though no government has yet made use of it, would be not to make it permanent, but to regulate the periods during which it should remain in abeyance. These intervals, which should not be long enough to give abuses time to grow strong, may be so fixed by law that they can easily be shortened at need by extraordinary commissions.

This method seems to me to have no disadvantages, because, as I have said, the tribunate, which forms no part of the constitution, can be removed without the constitution being affected. It seems to be also efficacious, because a newly restored magistrate starts not with the power his predecessor exercised, but with that which the law

allows him.

第六章 论独裁制

独裁制是一种国家非常状态时维护国家主权的制度设计。法律的滞后性和缺乏弹性使其面临一经制定便已经过时的窘境，尤其在一些危难紧急的情况下，冗繁的法律程序不为局势所允许，为了保护主权权威和国家安全，一种能够集中统治权力或者能够暂时中止法律效力的权力成为必要。在本章，卢梭所讨论的独裁制正是这样一种非常制度。

卢梭认为，在这样的紧急情况下，人们可以通过一种特别的行为把维护国家安全的责任赋予一个最值得信任的人。而根据紧急事件的性质，有两种方式：当增加政府的能动性便足以应付危机的时候，可以将政府的权力集中在一个或者两个人手中；而当法律的执行本身会危及国家安全的情况下，就应当有一个拥有最高权力的人暂时中止法律效力。卢梭认为，罗马共和国对于独裁制的运用并不恰当，在共和国早期频繁运用于“选举、飨祭”等纯事务上使得这一制度被贬低和架空，逐渐失去其威信和强力。而在共和国晚期需要这种独裁的时候，又过于谨慎保守，使“马留乌斯对苏拉、庞贝对恺撒的抵抗”错过了挽救共和国的最佳时机。另一个例子是西塞罗，卢梭认为，他作为执政官的身份而不是独裁者的身份，行使了超越权限、破坏法律的行为，最终受到了惩罚。

卢梭强调，必须将独裁者的任期限制在一定的短时间内。一旦紧急状态结束，必须立刻结束独裁制，否则独裁者会变得残暴，会滥用权力。“独裁者只应有时间来应付那些使他们得以被任命的紧急需要，而不应有时间来筹谋更进一步的计划。”（4.6.11）

6 . THE DICTATORSHIP⁽⁹⁾

THE inflexibility of the laws, which prevents them from adapting themselves to circumstances, may, in certain cases, render them disastrous, and make them bring about, at a time of crisis, the ruin of the State. The order and slowness of the forms they enjoin require a space of time which circumstances sometimes withhold. A thousand cases against which the legislator has made no provision may present themselves, and it is a highly necessary part of foresight to be conscious that everything cannot be foreseen.

It is wrong therefore to wish to make political institutions so strong as to render it impossible to suspend their operation. Even Sparta allowed its laws to lapse.

However, none but the greatest dangers can counterbalance that of changing the public order, and the sacred power of the laws should never be arrested save when the existence of the country is at stake. In these rare and obvious cases, provision is made for the public security by a particular act entrusting it to him who is most worthy. This commitment may be carried out in either of two ways, according to the nature of the danger.

If increasing the activity of the government is a sufficient remedy, power is concentrated in the hands of one or two of its members: in this case the change is not in the authority of the laws, but only in the form of administering them. If, on the other hand, the peril is of such a kind that the paraphernalia of the laws are an obstacle to their preservation, the method is to nominate a supreme ruler, who shall silence all the laws and suspend for a moment the sovereign authority. In such a case, there is no doubt about the general will, and it is clear that the people's first intention is that the State shall not perish. Thus the suspension of the legislative authority is in no sense its abolition;

the magistrate who silences it cannot make it speak; he dominates it, but cannot represent it. He can do anything, except make laws.

The first method was used by the Roman senate when, in a consecrated formula, it charged the consuls to provide for the safety of the Republic. The second was employed when one of the two consuls nominated a dictator:^[5] a custom Rome borrowed from Alba.

During the first period of the Republic, recourse was very often had to the dictatorship, because the State had not yet a firm enough basis to be able to maintain itself by the strength of its constitution alone. As the state of morality then made superfluous many of the precautions which would have been necessary at other times, there was no fear that a dictator would abuse his authority, or try to keep it beyond his term of office. On the contrary, so much power appeared to be burdensome to him who was clothed with it, and he made all speed to lay it down, as if taking the place of the laws had been too troublesome and too perilous a position to retain.

It is therefore the danger not of its abuse, but of its cheapening, that makes me attack the indiscreet use of this supreme magistracy in the earliest times. For as long as it was freely employed at elections, dedications and purely formal functions, there was danger of its becoming less formidable in time of need, and of men growing accustomed to regarding as empty a title that was used only on occasions of empty ceremonial.

Towards the end of the Republic, the Romans, having grown more circumspect, were as unreasonably sparing in the use of the dictatorship as they had formerly been lavish. It is easy to see that their fears were without foundation, that the weakness of the capital secured it against the magistrates who were in its midst; that a dictator might, in certain cases, defend the public liberty, but could never endanger it; and that the chains of Rome would be forged, not

in Rome itself, but in her armies. The weak resistance offered by Marius to Sulla, and by Pompey to Caesar, clearly showed what was to be expected from authority at home against force from abroad.

This misconception led the Romans to make great mistakes; such, for example, as the failure to nominate a dictator in the Catilinarian conspiracy. For, as only the city itself, with at most some province in Italy, was concerned, the unlimited authority the laws gave to the dictator would have enabled him to make short work of the conspiracy, which was, in fact, stifled only by a combination of lucky chances human prudence had no right to expect.

Instead, the senate contented itself with entrusting its whole power to the consuls, so that Cicero, in order to take effective action, was compelled on a capital point to exceed his powers; and if, in the first transports of joy, his conduct was approved, he was justly called, later on, to account for the blood of citizens spilt in violation of the laws. Such a reproach could never have been levelled at a dictator. But the consul's eloquence carried the day; and he himself, Roman though he was, loved his own glory better than his country, and sought, not so much the most lawful and secure means of saving the State, as to get for himself the whole honour of having done so.^[6] He was therefore justly honoured as the liberator of Rome, and also justly punished as a law-breaker. However brilliant his recall may have been, it was undoubtedly an act of pardon.

古罗马元老院：古罗马元老院有权推举独裁者，赋予其统领军队和处理紧急事务的特权，在一段时间内维护了罗马的统一和强盛。

However this important trust be conferred, it is important that its duration should be fixed at a very brief period, incapable of being ever prolonged. In the crises which lead to its adoption, the State is either soon lost, or soon saved; and, the present need passed, the dictatorship becomes either tyrannical or idle. At Rome, where dictators held office for six months only, most of them abdicated before their time was up. If their term had been longer, they might well have tried to prolong it still further, as the decemvirs did when chosen for a year. The dictator had only time to provide against the need that had caused him to be chosen; he had none to think of further projects.

第七章 论监察官制

与同样是维护主权和公意的保民官制和独裁制相比，监察官是通过维护一个社会的公知、道德、风尚来发挥作用的。与前者不同之处在于，监察官制只在国家保持活力和健康的肌体上才能发挥作用，而对于一个已走向衰落腐化的国家是无助的。“监察机关在维护道德上可能是有用的，但是在重建道德上则永远都不会起到什么作用。”（4.7.5）卢梭在前面“论法律的分类”的一章中特别强调了一个民族的道德、风俗和习惯的重要作用，指出它们在国家成文法行将衰亡时使之获得新生，是所有法律中最为重要的（2.12.5）。

卢梭认为，监察官的作用在于防止舆论被腐蚀来维护道德，通过贤明的裁决保持正直的舆论以维护道德，甚至通过把不确定的舆论确定下来以维护道德。卢梭强调，它并不是表达自己的意见，而是将早已成型的公众意见表达出来。一个国家或民族的道德风尚是从其政治体制中孕育生长出来，此后，这种风尚又成为国家体制成长的土壤，不成文法与国家政治秩序相互扶持，相互为对方提供活力，也会一同变得腐化。卢梭指出这便是监察官制的局限，它不能创立风尚，不能左右公共意见，无法强制舆论做出改变，而只能在公共意见尚未发言的事情上表明某种立场，并且只有当这种立场符合公共意见的倾向时才会成功。

7 . THE CENSORSHIP⁽¹⁰⁾

AS the law is the declaration of the general will, the censorship is the declaration of the public judgment: public opinion is the form of law which the censor administers, and, like the prince, only applies to particular cases.

The censorial tribunal, so far from being the arbiter of the people's opinion, only declares it, and, as soon as the two part company, its decisions are null and void.

It is useless to distinguish the morality of a nation from the objects of its esteem; both depend on the same principle and are necessarily indistinguishable. There is no people on earth the choice of whose pleasures is not decided by opinion rather than nature. Right men's opinions, and their morality will purge itself. Men always love what is good or what they find good; it is in judging what is good that they go wrong. This judgment, therefore, is what must be regulated. He who judges of morality judges of honour; and he who judges of honour finds his law in opinion.

The opinions of a people are derived from its constitution; although the law does not regulate morality, it is legislation that gives it birth. When legislation grows weak, morality degenerates; but in such cases the judgment of the censors will not do what the force of the laws has failed to effect.

From this it follows that the censorship may be useful for the preservation of morality, but can never be so for its restoration. Set up censors while the laws are vigorous; as soon as they have lost their vigour, all hope is gone; no legitimate power can retain force when the laws have lost it.

The censorship upholds morality by preventing opinion from

growing corrupt, by preserving its rectitude by means of wise applications, and sometimes even by fixing it when it is still uncertain. The employment of seconds in duels, which had been carried to wild extremes in the kingdom of France, was done away with merely by these words in a royal edict: "As for those who are cowards enough to call upon seconds." This judgment, in anticipating that of the public, suddenly decided it. But when edicts from the same source tried to pronounce duelling itself an act of cowardice, as indeed it is, then, since common opinion does not regard it as such, the public took no notice of a decision on a point on which its mind was already made up.

I have stated elsewhere^[7] that as public opinion is not subject to any constraint, there need be no trace of it in the tribunal set up to represent it. It is impossible to admire too much the art with which this resource, which we moderns have wholly lost, was employed by the Romans, and still more by the Lacedaemonians.

A man of bad morals having made a good proposal in the Spartan Council, the Ephors neglected it, and caused the same proposal to be made by a virtuous citizen. What an honour for the one, and what a disgrace for the other, without praise or blame of either! Certain drunkards from Samos^[8] polluted the tribunal of the Ephors: the next day, a public edict gave Samians permission to be filthy. An actual punishment would not have been so severe as such an impunity. When Sparta has pronounced on what is or is not right, Greece makes no appeal from her judgments.

第八章 论公民宗教

在卢梭论述的关于维护一个国家生命和活力的制度中，最后一个、着墨最多也是最为重要的一个便是宗教。在本章，卢梭主要讨论的是在一个国家中，政治权威和宗教权威之间应该具有什么样的关系。他描述了宗教产生、发展及演变的一幅历史长卷，从是否有益于社会的角度对历史上产生的不同类型的宗教进行了分析，指出了在一个运行良好的国家政治体制中与宗教相关的政治权利原则。

卢梭认为，在宗教发展的历史长河中，最早的人类由神灵统治，神灵的数目和民族的数目一样多，政治统治与神权统治不可区分，而国家的边境就限定了神灵的管辖范围，民族之间的战争被认为是神灵之间的战争。因此，当犹太人被巴比伦人打败之后拒绝抛弃自己的宗教而皈依征服者的宗教时，这一拒绝显然意味着拒绝接受政治统治的臣服，因而遭受了史无前例的迫害。在此意义上，卢梭认为“征服者是唯一的传教士”，“远不是人在为神明而战，相反，却是神明在为人类而战”（4.8.6）。后来罗马允许被征服者保存自己的宗教；当被征服的民族成为罗马帝国的一部分时，他们就开始崇拜所有这些神灵。这样，“异教信仰在整个已知世界中就这样成为唯一一个宗教信仰”，罗马异教成为与其政治社会统一的第一个普世宗教。

卢梭认为，政治宗教统一体瓦解的开始应追溯至耶稣基督，耶稣建立的精神王国区分了神学体系和政治体系，这种双重权力的后果是无穷无尽的权限上的冲突，人们不知道该服从于君主还是牧师，基督教徒只关心天国的事务，国家的繁荣和毁灭与他毫不相干，这使得基督教国家不可能有任何良好的政体。卢梭认为，而后许多国家和民族都努力想重建一个政教合一的国家制度，但由于基督教的庞大影响，宗教势力总能成功地保持与国家政权的独立性。从卢梭的态度中，我们知道，他所谈论的公民宗教绝非与国家决然分离的基督教。他甚至尖锐地批判道，基督教只是鼓吹奴役和服从，其精神太有利于暴

政。

卢梭从与社会的关系的角度将宗教划分为三种：人类性的宗教、市民性的宗教和牧师的宗教。人类性的宗教出于对神灵发自内心的虔诚和道德追求，不为庙宇祭坛仪式所累，他认为这是“纯粹的、简朴的福音的宗教”。市民性的宗教有法律加以规定的崇拜形式，它那对神明的崇拜与对法律的热爱结合在一起，使祖国和城邦成为公民的崇拜对象。而牧师的宗教使人们拥有“两种立法秩序、两个统治者和两个祖国”，将人们置于“相互矛盾的义务之中”，使他们“不能同时既是牧师又是公民”，与之相匹配的是“一种混合的、反社会的法律体系”。

卢梭直接否定了第三种宗教，认为“对它的坏处进行论证只是浪费时间”。第一种宗教虽然庄严神圣，但它与政治体没有什么特别的联系，使公民远离国家和社会。而第二种宗教的优点在于，神权政治会教导人民为国家服务就是为保护他们的神灵服务，但其缺点也显而易见，它使人民变得轻信而迷信，是对神明的崇拜易流于空洞形式，尤其当被有心计人利用时会使一个民族变得嗜杀和残忍。

那么，卢梭所推崇的公民宗教到底是一种什么样的宗教？卢梭认为，虽公民没有义务向其主权者说明他们的信仰，但是每个公民应该有一种可以使他热爱自己的义务的宗教。这需要主权者宣布一种纯社会性的信仰宣言，对宣言的信仰意味着真诚地热爱法律和正义，意味着在必要的时候能够为其义务而献出生命，主权者有权驱逐不信仰这些条文的人。卢梭甚至详细说明了这种公民宗教所应包含的积极和消极教条，要求简单精准。卢梭认为，这种公民宗教的精髓是宽容，只要不违反公民义务，要对各种宗教持宽容态度，“所有能够宽容其他宗教的宗教都应当得到宽容，只要它们的教条中不包含违反公民义务的内容”（4.8.35）。

8 . CIVIL RELIGION

AT first men had no kings save the gods, and no government save theocracy. They reasoned like Caligula, and, at that period, reasoned aright. It takes a long time for feeling so to change that men can make up their minds to take their equals as masters, in the hope that they will profit by doing so.

From the mere fact that God was set over every political society, it followed that there were as many gods as peoples. Two peoples that were strangers the one to the other, and almost always enemies, could not long recognise the same master: two armies giving battle could not obey the same leader. National divisions thus led to polytheism, and this in turn gave rise to theological and civil intolerance, which, as we shall see hereafter, are by nature the same.

The fancy the Greeks had for rediscovering their gods among the barbarians arose from the way they had of regarding themselves as the natural Sovereigns of such peoples. But there is nothing so absurd as the erudition which in our days identifies and confuses gods of different nations. As if Moloch, Saturn, and Chronos could be the same god! As if the Phoenician Baal, the Greek Zeus, and the Latin Jupiter could be the same! As if there could still be anything common to imaginary beings with different names!

If it is asked how in pagan times, where each State had its cult and its gods, there were no wars of religion, I answer that it was precisely because each State, having its own cult as well as its own government, made no distinction between its gods and its laws. Political war was also theological; the provinces of the gods were, so to speak, fixed by the boundaries of nations. The god of one people had no right over another. The gods of the pagans were not jealous gods; they shared among themselves the empire of the world: even

Moses and the Hebrews sometimes lent themselves to this view by speaking of the God of Israel. It is true, they regarded as powerless the gods of the Canaanites, a proscribed people condemned to destruction, whose place they were to take; but remember how they spoke of the divisions of the neighbouring peoples they were forbidden to attack! "Is not the possession of what belongs to your god Chamos lawfully your due?" said Jephthah to the Ammonites. "We have the same title to the lands our conquering God has made his own."^[9] Here, I think, there is a recognition that the rights of Chamos and those of the God of Israel are of the same nature.

But when the Jews, being subject to the Kings of Babylon, and, subsequently, to those of Syria, still obstinately refused to recognise any god save their own, their refusal was regarded as rebellion against their conqueror, and drew down on them the persecutions we read of in their history, which are without parallel till the coming of Christianity.^[10]

Every religion, therefore, being attached solely to the laws of the State which prescribed it, there was no way of converting a people except by enslaving it, and there could be no missionaries save conquerors. The obligation to change cults being the law to which the vanquished yielded, it was necessary to be victorious before suggesting such a change. So far from men fighting for the gods, the gods, as in Homer, fought for men; each asked his god for victory, and repayed him with new altars. The Romans, before taking a city, summoned its gods to quit it; and, in leaving the Tarentines their outraged gods, they regarded them as subject to their own and compelled to do them homage. They left the vanquished their gods as they left them their laws. A wreath to the Jupiter of the Capitol was often the only tribute they imposed.

Finally, when, along with their empire, the Romans had spread their cult and their gods, and had themselves often adopted those of

the vanquished, by granting to both alike the rights of the city, the peoples of that vast empire insensibly found themselves with multitudes of gods and cults, everywhere almost the same; and thus paganism throughout the known world finally came to be one and the same religion.

It was in these circumstances that Jesus came to set up on earth a spiritual kingdom, which, by separating the theological from the political system, made the State no longer one, and brought about the internal divisions which have never ceased to trouble Christian peoples. As the new idea of a kingdom of the other world could never have occurred to pagans, they always looked on the Christians as really rebels, who, while feigning to submit, were only waiting for the chance to make themselves independent and their masters, and to usurp by guile the authority they pretended in their weakness to respect. This was the cause of the persecutions.

What the pagans had feared took place. Then everything changed its aspect: the humble Christians changed their language, and soon this so-called kingdom of the other world turned, under a visible leader, into the most violent of earthly despotisms.

However, as there have always been a prince and civil laws, this double power and conflict of jurisdiction have made all good polity impossible in Christian States; and men have never succeeded in finding out whether they were bound to obey the master or the priest.

Several peoples, however, even in Europe and its neighbourhood, have desired without success to preserve or restore the old system: but the spirit of Christianity has everywhere prevailed. The sacred cult has always remained or again become independent of the Sovereign, and there has been no necessary link between it and the body of the State. Mahomet held very sane views, and linked his political system well together; and, as long as the form of his government continued under

the caliphs who succeeded him, that government was indeed one, and so far good. But the Arabs, having grown prosperous, lettered, civilised, slack and cowardly, were conquered by barbarians: the division between the two powers began again; and, although it is less apparent among the Mahometans than among the Christians, it none the less exists, especially in the sect of Ali, and there are States, such as Persia, where it is continually making itself felt.

Among us, the Kings of England have made themselves heads of the Church, and the Czars have done the same: but this title has made them less its masters than its ministers; they have gained not so much the right to change it, as the power to maintain it: they are not its legislators, but only its princes. Wherever the clergy is a corporate body,^[11] it is master and legislator in its own country. There are thus two powers, two Sovereigns, in England and in Russia, as well as elsewhere.

Of all Christian writers, the philosopher Hobbes alone has seen the evil and how to remedy it, and has dared to propose the reunion of the two heads of the eagle, and the restoration throughout of political unity, without which no State or government will ever be rightly constituted. But he should have seen that the masterful spirit of Christianity is incompatible with his system, and that the priestly interest would always be stronger than that of the State. It is not so much what is false and terrible in his political theory, as what is just and true, that has drawn down hatred on it.^[12]

I believe that if the study of history were developed from this point of view, it would be easy to refute the contrary opinions of Bayle and Warburton, one of whom holds that religion can be of no use to the body politic, while the other, on the contrary, maintains that Christianity is its strongest support. We should demonstrate to the former that no State has ever been founded without a religious basis, and to the latter, that the law of Christianity at bottom does more

harm by weakening than good by strengthening the constitution of the State. To make myself understood, I have only to make a little more exact the too vague ideas of religion as relating to this subject.

Religion, considered in relation to society, which is either general or particular, may also be divided into two kinds: the religion of man, and that of the citizen. The first, which has neither temples, nor altars, nor rites, and is confined to the purely internal cult of the supreme God and the eternal obligations of morality, is the religion of the Gospel pure and simple, the true theism, what may be called natural divine right or law. The other, which is codified in a single country, gives it its gods, its own tutelary patrons; it has its dogmas, its rites, and its external cult prescribed by law; outside the single nation that follows it, all the world is in its sight infidel, foreign and barbarous; the duties and rights of man extend for it only as far as its own altars. Of this kind were all the religions of early peoples, which we may define as civil or positive divine right or law.

There is a third sort of religion of a more singular kind, which gives men two codes of legislation, two rulers, and two countries, renders them subject to contradictory duties, and makes it impossible for them to be faithful both to religion and to citizenship. Such are the religions of the Lamas and of the Japanese, and such is Roman Christianity, which may be called the religion of the priest. It leads to a sort of mixed and anti-social code which has no name.

In their political aspect, all these three kinds of religion have their defects. The third is so clearly bad, that it is waste of time to stop to prove it such. All that destroys social unity is worthless; all institutions that set man in contradiction to himself are worthless.

The second is good in that it unites the divine cult with love of the laws, and, making country the object of the citizens' adoration, teaches them that service done to the State is service done to its

tutulary god. It is a form of theocracy, in which there can be no pontiff save the prince, and no priests save the magistrates. To die for one's country then becomes martyrdom; violation of its laws, impiety; and to subject one who is guilty to public execration is to condemn him to the anger of the gods: *Sacer est od.*

On the other hand, it is bad in that, being founded on lies and error, it deceives men, makes them credulous and superstitious, and drowns the true cult of the Divinity in empty ceremonial. It is bad, again, when it becomes tyrannous and exclusive, and makes a people bloodthirsty and intolerant, so that it breathes fire and slaughter, and regards as a sacred act the killing of every one who does not believe in its gods. The result is to place such a people in a natural state of war with all others, so that its security is deeply endangered.

There remains therefore the religion of man or Christianity—not the Christianity of today, but that of the Gospel, which is entirely different. By means of this holy, sublime, and real religion all men, being children of one God, recognise one another as brothers, and the society that unites them is not dissolved even at death.

But this religion, having no particular relation to the body politic, leaves the laws in possession of the force they have in themselves without making any addition to it; and thus one of the great bonds that unite society considered in severalty fails to operate. Nay, more, so far from binding the hearts of the citizens to the State, it has the effect of taking them away from all earthly things. I know of nothing more contrary to the social spirit.

We are told that a people of true Christians would form the most perfect society imaginable. I see in this supposition only one great difficulty: that a society of true Christians would not be a society of men.

I say further that such a society, with all its perfection, would be

neither the strongest nor the most lasting: the very fact that it was perfect would rob it of its bond of union; the flaw that would destroy it would lie in its very perfection.

Every one would do his duty; the people would be law-abiding, the rulers just and temperate; the magistrates upright and incorruptible; the soldiers would scorn death; there would be neither vanity nor luxury. So far, so good; but let us hear more.

Christianity as a religion is entirely spiritual, occupied solely with heavenly things; the country of the Christian is not of this world. He does his duty, indeed, but does it with profound indifference to the good or ill success of his cares. Provided he has nothing to reproach himself with, it matters little to him whether things go well or ill here on earth. If the State is prosperous, he hardly dares to share in the public happiness, for fear he may grow proud of his country's glory; if the State is languishing, he blesses the hand of God that is hard upon His people.

For the State to be peaceable and for harmony to be maintained, all the citizens without exception would have to be good Christians; if by ill hap there should be a single self-seeker or hypocrite, a Catiline or a Cromwell, for instance, he would certainly get the better of his pious compatriots. Christian charity does not readily allow a man to think hardly of his neighbours. As soon as, by some trick, he has discovered the art of imposing on them and getting hold of a share in the public authority, you have a man established in dignity; it is the will of God that he be respected: very soon you have a power; it is God's will that it be obeyed: and if the power is abused by him who wields it, it is the scourge wherewith God punishes His children. There would be scruples about driving out the usurper: public tranquillity would have to be disturbed, violence would have to be employed, and blood spilt; all this accords ill with Christian meekness; and after all, in this vale of sorrows, what does it matter whether we are free men

or serfs? The essential thing is to get to heaven, and resignation is only an additional means of doing so.

If war breaks out with another State, the citizens march readily out to battle; not one of them thinks of flight; they do their duty, but they have no passion for victory; they know better how to die than how to conquer. What does it matter whether they win or lose? Does not Providence know better than they what is meet for them? Only think to what account a proud, impetuous and passionate enemy could turn their stoicism⁽¹¹⁾! Set over against them those generous peoples who were devoured by ardent love of glory and of their country, imagine your Christian republic face to face with Sparta or Rome: the pious Christians will be beaten, crushed and destroyed, before they know where they are, or will owe their safety only to the contempt their enemy will conceive for them. It was to my mind a fine oath that was taken by the soldiers of Fabius⁽¹²⁾, who swore, not to conquer or die, but to come back victorious—and kept their oath. Christians would never have taken such an oath; they would have looked on it as tempting God.

But I am mistaken in speaking of a Christian republic; the terms are mutually exclusive. Christianity preaches only servitude and dependence. Its spirit is so favourable to tyranny that it always profits by such a *régime*. True Christians are made to be slaves, and they know it and do not much mind: this short life counts for too little in their eyes.

I shall be told that Christian troops are excellent. I deny it. Show me an instance. For my part, I know of no Christian troops. I shall be told of the Crusades. Without disputing the valour of the Crusaders, I answer that, so far from being Christians, they were the priests' soldiery, citizens of the Church. They fought for their spiritual country, which the Church had, somehow or other, made temporal. Well understood, this goes back to paganism: as the Gospel sets up no

national religion, a holy war is impossible among Christians.

Under the pagan emperors, the Christian soldiers were brave; every Christian writer affirms it, and I believe it: it was a case of honourable emulation of the pagan troops. As soon as the emperors were Christian, this emulation no longer existed, and, when the Cross had driven out the eagle^[13], Roman valour wholly disappeared.

But, setting aside political considerations, let us come back to what is right, and settle our principles on this important point. The right which the social compact gives the Sovereign over the subjects does not, we have seen, exceed the limits of public expediency.^[13] The subjects then owe the Sovereign an account of their opinions only to such an extent as they matter to the community. Now, it matters very much to the community that each citizen should have a religion. That will make him love his duty; but the dogmas of that religion concern the State and its members only so far as they have reference to morality and to the duties which he who professes them is bound to do to others. Each man may have, over and above, what opinions he pleases, without it being the Sovereign's business to take cognisance of them; for, as the Sovereign has no authority in the other world, whatever the lot of its subjects may be in the life to come, that is not its business, provided they are good citizens in this life.

There is therefore a purely civil profession of faith of which the Sovereign should fix the articles, not exactly as religious dogmas, but as social sentiments without which a man cannot be a good citizen or a faithful subject.^[14] While it can compel no one to believe them, it can banish from the State whoever does not believe them—it can banish him, not for impiety, but as an anti-social being, incapable of truly loving the laws and justice, and of sacrificing, at need, his life to his duty. If any one, after publicly recognising these dogmas, behaves as if he does not believe them, let him be punished by death: he has committed the worst of all crimes, that of lying before the law.

The dogmas of civil religion ought to be few, simple, and exactly worded, without explanation or commentary. The existence of a mighty, intelligent and beneficent Divinity, possessed of foresight and providence, the life to come, the happiness of the just, the punishment of the wicked, the sanctity of the social contract and the laws: these are its positive dogmas. Its negative dogmas I confine to one—intolerance—which is a part of the cults we have rejected.

Those who distinguish civil from theological intolerance are, to my mind, mistaken. The two forms are inseparable. It is impossible to live at peace with those we regard as damned; to love them would be to hate God who punishes them: we positively must either reclaim or torment them. Wherever theological intolerance is admitted, it must inevitably have some civil effect;^[15] and as soon as it has such an effect, the Sovereign is no longer Sovereign even in the temporal sphere: thenceforward priests are the real masters, and kings only their ministers.

Now that there is and can be no longer an exclusive national religion, tolerance should be given to all religions that tolerate others, so long as their dogmas contain nothing contrary to the duties of citizenship. But whoever dares to say: *Outside the Church is no salvation*, ought to be driven from the State, unless the State is the Church, and the prince the pontiff. Such a dogma is good only in a theocratic government; in any other, it is fatal. The reason for which Henry IV is said to have embraced the Roman religion ought to make every honest man leave it, and still more any prince who knows how to reason.

第九章 结语

卢梭表明，通过以上论述，他完成了在开篇时给自己设定的任务，即论述政治权利的原则，并在其基础上建立并非最完美而是合法的政治秩序。同时，他也表明，有关处理对外关系的原则对于国家也非常重要，也应当继续研究，但已不在本书所讨论的范围了。吉尔丁对卢梭的结束语有一个很有意思的解读：这本书以对个人和社会之间的紧张的有力表述开篇，它的结尾使人回想起这种紧张。书的最后一个词是“我”（moi），正如它的第一个词是“我”（je）。卢梭在最后一卷处理了若干不同于主权者又在某种意义上高于主权者的事物，那么，对于卢梭而言，其是否在暗示自身存在着某种东西，不同于主权者又在某种意义上高于主权者？⁽¹⁴⁾既然卢梭也曾亲自告诉读者，要格外小心其作品之间的内在关联，为了寻找答案，我们就应当继续关注卢梭其他几部同样意义非凡的著作。

9 . CONCLUSION

Now that I have laid down the true principles of political right, and tried to give the State a basis of its own to rest on, I ought next to strengthen it by its external relations, which would include the law of nations, commerce, the right of war and conquest, public right, leagues, negotiations, treaties, etc. But all this forms a new subject that is far too vast for my narrow scope. I ought throughout to have kept to a more limited sphere.

位于日内瓦的卢梭铜像：作为卢梭出生地的日内瓦，曾无情地将其驱逐，但最终还是接受了它最伟大的儿子。1835年2月24日，由雕塑家普拉迪埃创作的卢梭塑像被安放在卢梭岛上，雕像的基座上刻着醒目的大字：“日内瓦公民——让·雅克·卢梭”。

(1) 克伦威尔（1599—1658），英国17世纪资产阶级革命新贵族代表人物，后建立军事独裁统治，自任“护国公”。

(2) 波佛公爵（1616—1669），法国国王亨利四世之孙，法国17世纪内战时投石党领袖。

(3) 参见〔美〕吉尔丁著，尚新建、王凌云译：《设计论证——卢梭的〈社会契约论〉》，175页，北京，华夏出版社，2006。

(4) 奥东，罗马皇帝，与维梯留斯争夺皇位失败后自杀。

(5) 维梯留斯，罗马将军，击败奥东后即位，不久为罗马人民推翻。

(6) 复合的行为是指其既包括法律的制定，也包括法律的执行。

(7) 威尼斯共和国成立于公元前5世纪，一直维系到1797年，为拿破仑征服并入意大利王国。

(8) 指曾任保民官的恺撒和屋大维，此后罗马共和国的历史结束，罗马帝国走上历史的舞台。卢梭在《山中来信》第九封中写道，正如苏拉利用元老院那样，恺撒也利用保民官，每个人都利用他认为最便捷最可靠的方式来达到他的目的。

(9) 罗马独裁制创立于公元前501年，于公元前44年废止。可阅读马基雅维利《李维论》。

(10) 罗马监察官制创立于公元前443年，于公元前22年废止。

(11) 斯多葛主义，古希腊四大哲学学派之一，宣扬克制和宿命，是古代自然法思想的起源。

(12) 法比乌斯，公元前3世纪布匿战争中罗马大将。

(13) 意指基督教取代异教成为罗马国教。

(14) 参见〔美〕吉尔丁著，尚新建、王凌云译：《设计论证——卢梭的〈社会契约论〉》，207页，北京，华夏出版社，2006。

[1] This should of course be understood as applying to a free State; for elsewhere family, goods, lack of a refuge, necessity, or violence may detain a man in a country against his will; and then his dwelling there no longer by itself implies his consent to the contract or to its violation.

[2] At Genoa, the word Liberty may be read over the front of the prisons and on the chains of the galley-slaves. This application of the device is good and just. It is indeed only malefactors of all estates who prevent the citizen from being free. In the country in which all such men were in the galleys, the most perfect liberty would be enjoyed.

[3] I say “in the Campus Martius” because it was there that the comitia assembled by centuries; in its two other forms the people assembled in the forum or elsewhere; and then the *capite censi* had as much influence and authority as the foremost citizens.

[4] Custodes, diribitores, rogatores suffragiorum.

[5] The nomination was made secretly by night, as if there were something shameful in setting a man above the laws.

[6] That is what he could not be sure of, if he proposed a dictator; for he dared not nominate himself, and could not be certain that his colleague would nominate him.

[7] I merely call attention in this chapter to a subject with which I have dealt at greater length in my Letter to M. d'Alembert.

[8] They were from another island, which the delicacy of our language forbids me to name on this occasion.

[9] Nonne ea quae possidet Chamos deus tuus, tibi jure debentur? (Judges, 11:24.) Such is the text in the Vulgate. Father de Carrières translates: “Do you not regard yourselves as having a right to what your god possesses?” I do not know the force of the Hebrew text: but I perceive that, in the Vulgate, Jephthah positively recognises the right of the god Chamos, and that the French translator weakened this admission by inserting an “according to you,” which is not in the Latin.

[10] It is quite clear that the Phocian War, which was called “the Sacred War,”

was not a war of religion. Its object was the punishment of acts of sacrilege, and not the conquest of unbelievers.

[11] It should be noted that the clergy find their bond of union not so much in formal assemblies, as in the communion of Churches. Communion and excommunication are the social compact of the clergy, a compact which will always make them masters of peoples and kings. All priests who communicate together are fellow-citizens, even if they come from opposite ends of the earth. This invention is a masterpiece of statesmanship: there is nothing like it among pagan priests; who have therefore never formed a clerical corporate body.

[12] See, for instance, in a letter from Grotius to his brother (April 11, 1643), what that learned man found to praise and to blame in the *De Cive*. It is true that, with a bent for indulgence, he seems to pardon the writer the good for the sake of the bad; but all men are not so forgiving.

[13] "In the republic," says the Marquis d'Argenson, "each man is perfectly free in what does not harm others." This is the invariable limitation, which it is impossible to define more exactly. I have not been able to deny myself the pleasure of occasionally quoting from this manuscript, though it is unknown to the public, in order to do honour to the memory of a good and illustrious man, who had kept even in the Ministry the heart of a good citizen, and views on the government of his country that were sane and right.

[14] Caesar, pleading for Catiline, tried to establish the dogma that the soul is mortal: Cato and Cicero, in refutation, did not waste time in philosophising. They were content to show that Caesar spoke like a bad citizen, and brought forward a doctrine that would have a bad effect on the State. This, in fact, and not a problem of theology, was what the Roman senate had to judge.

[15] Marriage, for instance, being a civil contract, has civil effects without which society cannot even subsist. Suppose a body of clergy should claim the sole right of permitting this act, a right which every intolerant religion must of necessity claim, is it not clear that in establishing the authority of the Church in this respect, it will be destroying that of the prince, who will have thenceforth only as many subjects as the clergy choose to allow him? Being in a position to marry or not to marry people according to their acceptance of such and such a doctrine, their admission or rejection of such and such a formula, their greater or less piety, the Church alone, by the exercise of prudence and firmness, will dispose of all inheritances, offices and citizens, and even of the State itself, which could not subsist if it were composed entirely of bastards? But, I shall be told, there will be appeals on the ground of abuse, summonses and decrees; the temporalities will be seized. How sad! The clergy, however little, I will not say courage, but sense it has, will take no notice and go its way: it will quietly allow appeals, summonses, decrees and seizures, and, in the end, will remain the master. It is not, I think, a great sacrifice to give up a part, when one is sure of securing all.

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切："如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。"今人之于古人的"以意逆志"尚且如此，又遑论国人之于西人？于是王国维先生认为"外国语中之无我国'天'字之相当字，与我国语中之无God之相当字无以异"；经典之妙，"无论何人，不能精密译之"。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出"世界大师原典文库（中文导读插图版）"，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，"世界大师原典文库（中文导读插图版）"会成为各界读者阅读、研究和收藏的精神大餐。

《时间机器》（*The Time Machine*）是一部科幻小说。

一部好的科幻作品，至少应该具有文学与科学两方面的优秀品质。一方面要有较高的文学性，即要用文学的语言及其手法去表达、传递和宣扬作者的理想以及对现实的批评性观念；另一方面要有基本的科学依据，要在现有的科学理论及其实践的基础上去放飞想象，展示一个乃至多个全新的科学现象、事务，甚至展现出一个全新的世界。

《时间机器》正是这样兼具两方面优秀品质的一部出色的科幻小说。这部出版于1895年的小说至今还被人阅读，且被视为经典之作，至少有三方面的原因。第一，作者对他所处时代的批判精神及其真知灼见，至今还具有振聋发聩的作用，值得我们进一步深思和探讨；第二，作者所开创的“时间旅行”（time travel），在科学领域至今仍然是人们心向往之并且还在孜孜不倦地进行着探索的科学现象；第三，作品本身是科幻作品的先驱者之一，为后来科幻小说成为重要的和独特的文学形态作出了贡献。

在21世纪的今天，一部19世纪末出版的科幻作品所想象的现象与世界仍然是科学家努力探索的方向，这本身就说明了《时间机器》作为一部经典作品的价值所在。

《时间机器》的作者是英国著名作家赫伯特·乔治·威尔斯（Herbert George Wells），他1866年出生于英国的伦敦。在青年时期，他上了一所理科师范学校，毕业后做了一名讲授科学课程的老师。在上学期期间，他接受了英国著名的博物学家、达尔文进化论的代表人物赫胥黎（Thomas Henry Huxley）的指导，也接受了他的科学进化论的思想。由此，大概可以解开我们对他何以会写出科幻小说，又何以能够有坚实的科学依据的初步疑惑。1895年《时间机器》成书出版时，威尔斯才29岁。

威尔斯的小说大都是有关未来的，总是把读者带入一个奇妙的世界之中，让人看到人性与大自然的相对黑暗的一面。由此在无形之中，人们会意识到并自然而然地联想到当时流行的物竞天择以及达尔文理论。

其实，威尔斯所写的科幻作品还有很多。在《时间机器》之后出版的《莫罗博士岛》（*The Island of Doctor Moreau*, 1896）、《隐身人》（*The Invisible Man*, 1897）和《星际战争》（*The War of the Worlds*, 1898）等，都在文学史与科学史上留有印迹，也为广大读者所喜闻乐见，并且都产生了良好的社会反响。

但威尔斯最著名的作品，还应该算是《时间机器》了。

一般来说，科幻小说都比较引人入胜。因为人性中的好奇心作用，读者总是能够被科幻小说轻而易举地带到一个全新的世界当中，且往往会从最初的不相信、反对和质疑，过渡到疑惑、被吸引，再过渡到认为有道理，乃至最后被剧中的人物以及事件所打动而沉浸其中，享受进入到一个全新的世界所带来的快感。

《时间机器》就是这样的一部作品。在这里，我们看到了另一个世界，一个世人所想象不到的世界，但却具有相当的可信度。应该说，这正是威尔斯小说创作颇具力度的地方。

从情节上看，《时间机器》大致有两条主线。一条是“时间旅行者”在公元802 701年身处埃洛伊人和莫洛克人世界中的历险故事，而另一条就是时间机器神秘的未来之旅了。

小说的主体部分有12章。自始至终的主要人物有两个。第一个是被称作“时间旅行者”（*The Time Traveller*）的主角。但有趣的是，在小说中，这位主人公一直没有一个真实的姓名，我们只知道他是一位科学家、发明家，痴迷于未来学，家住在伦敦郊区。第二位就是作品的叙述者了——希尔亚先生（*Mr. Hillyer*），他是“时间旅行者”家中的客人，对“时间旅行者”以及“时间旅行”本身怀有极大的兴趣和好奇心。

小说主要以叙述者——希尔亚先生——用直接引语引述“时间旅行者”的话语为主，同时辅之以描述和转述当时聆听的现场情景。像这种采用叙述者（*narrator*）讲述，特别是引用“时间旅行者”原话的方式来讲述一个神奇的故事——尤其是在主要故事发生的阶段——往往会给人以很强的现实感和现场感，读者也会有身临其境之感。

小说的第一、第二章，也就是故事的开始，“时间旅行者”在家中对包括叙述者在内的一群客人讲解科学知识以及自己的发现和发明创造。

他声称，人不仅可以在空间中走动，也可以在时间中穿梭。这样的理论自然引起了在座宾客的困惑、疑问与反对。但令所有人想不到的是，"时间旅行者"说，他已经建造了一艘"时间机器"，并且展示给大家看。他告诉大家，就是这台机器可以保证他在时间中的旅行成为可能。此后，他进入机器，操纵杠杆，转瞬之间就消失在了云层之中。

就科学意义而言，威尔斯在这里大胆地探索了时间的意义。那个时候人们常常讨论的是物体的长度、宽度、高度等，对于空间、距离等也比较敏感，但对时间来说，则重视不够。在威尔斯看来，这第四维正是需要人们去探索的陌生领域。他要在时间中寻找出路。当然，最开始人们抱有怀疑甚至是根本不相信的态度，尽管还是有人相信，在未来人们是能够自由自在地在时间中来回穿梭的——而这，恰恰是科学家所期盼去研究和有所发现并努力的结果。

一周之后，在约定的时间内，客人们来到"时间旅行者"的家中，不久就发现主人踉踉跄跄地走了进来，衣衫凌乱，疲惫不堪。晚饭后，大家坐在一起，开始聆听"时间旅行者"带来的可谓惊心动魄的未来故事。

从第三章开始，"时间旅行者"详细地向客人讲述了自己乘坐着建造的时间机器来到未来后所发生的一切。

当时间机器停下来的时候，已经是公元802 701年了。"时间旅行者"发现自己进入了一个全新的世界。这个世界没有疾病、昆虫、杂草，也没有暴力。他还发现了一种新型的人类，他称之为"埃洛伊人"（Eloi）。"时间旅行者"发现，埃洛伊人柔弱而又乐观，围绕着他这个外来的大玩具笑语欢歌、手舞足蹈，他们就像是一群无忧无虑、毫无邪念的孩子。

但很快，"时间旅行者"又发现了第二个人类——莫洛克人（Morlocks）。他们遍布在山野之间，横行霸道。最令"时间旅行者"惊讶的是，他很快发现，莫洛克人生活在地下，只有在夜晚时分才会从地下爬出来，依靠捕捉并进食埃洛伊人而活。特别是在黑夜到来之时，包括"时间旅行者"在内的人都不得不拼命逃离他们，才能使自己不会成为他们的盘中餐。

不幸的是，他忽然发现自己的"时间机器"被人偷走了。他怀疑是被莫洛克人给偷走的，而且被放在了附近巨大雕塑的基座里面。后来，他救下了一位差点溺水而亡的"埃洛伊"姑娘维娜（Weena）——这应该算是小说中的第三位主人公了。据"时间旅行者"告诉大家，你很难从外表

判断这个维娜究竟是男还是女，但他几乎可以肯定维娜是位女性。维娜对"时间旅行者"很友好，而在"时间旅行者"看来，她更像是个宠物或者一个小孩子。

"时间旅行者"带着维娜来到了莫洛克人的居住地，寻找自己的机器。虽然他发现莫洛克人害怕火，但还是被人赶了出来。他和维娜一起来到一处他称为"绿色瓷器宫殿"（Palace of Green Porcelain）的地方，后来发现是一个博物馆。在这里，"时间旅行者"发现了更多火柴、樟脑，还找到了一个杠杆做武器。后来在穿越一处森林的时候，他无意中点燃了一把火，许多莫洛克人死于大火，而在随后的战斗中，维娜也被杀死了。筋疲力尽的"时间旅行者"飞快地回到了雕像的基座，发现那里的门已经被撬开了。他大踏步地走进去，然后乘上自己的机器，呼啸之间飞离了这块是非之地。

从整个叙述看，小说是采用了故事中套故事的写法。第一和第二章组成了小说的大框架，也就是外部故事。接下来，也就是从第三章开始到结束，才构成了小说的核心故事——也就是发生在"时间旅行者"身上的一切。这种写法，一方面交代了历史背景，另外一方面则制造了一种悬疑氛围。

必须注意的是，作者所描述的时代是英国的维多利亚时代（Victorian Age）。所谓维多利亚时代，是指从1837年6月维多利亚女王统治开始到她1901年1月22日去世为止的60余年的历史。这段时期在英国历史上可谓是秩序安良、繁荣富强、国民充满了自信的时代。从文化上看，这一时期是从理性主义（Rationalism）到浪漫主义（Romanticism）的过渡时期，这一点表现在了宗教、社会价值观与艺术等方方面面。也恰恰是在这样的历史时期，才可以有像书中所描述的那批抽着雪茄的绅士们在认真地讨论时空问题的景象出现。同样，也正是由于在那样的时代，由于人们的乐观，也才会有人相信有时间机器的存在。

然而，《时间机器》毕竟是一部文学作品，作者最感兴趣的话题，还应该是社会问题。因此，也就是从第三章"时间旅行者"的故事一开始，作者就借用"时间旅行者"的故事借题发挥，把矛头直指当时的社会问题。而他对当时社会风行的共产主义和资本主义都心存芥蒂，有所批判。在"时间旅行者"看来，埃洛伊人的弱不禁风，就是因为他们生活在一个无忧无虑的世界之中以及集体的生活状态所导致的。虽然他们都很

漂亮，但却懒惰且缺乏智慧。当时英国的风尚是追逐技术革新和社会安定。很多人都认为进步无疑是不可避免的，也是件好事情。但在威尔斯看来，进步也可能走向不同的方向，如果技术进步使人太过舒适的话，人往往就会变得柔弱不堪。这样的理念，对我们今天的社会也不无启发意义。

第五章是比较长的一章。作者通过“时间旅行者”对埃洛伊人世界的探索，含沙射影地对维多利亚时代英国的社会习俗提出了批评。在他看来，埃洛伊人的世界就是一种反乌托邦（Dystopia）。我们都知道，当有人写一个乌托邦的故事时，往往就会描述一个美满的社会，然后告诉你怎样才能去实现这样的理想。而当一个人写一个反乌托邦故事的时候，就会反其道而行之地告诉你，如果某些方面出了问题，社会就会误入歧途。因此，如果说在上一章中作者通过描述埃洛伊社会的状况而对共产主义提出了批评的话，那么在本章中，他就把埃洛伊人和莫洛克人之间的紧张关系归咎于资本主义了。而当时的伦敦就是当时发达的资本主义的一个缩影，而其紧张的劳资关系也深刻反映了资本主义社会的危机。

到第六和第七章的时候，我们看到“时间旅行者”走入了地下世界，走进了莫洛克人的世界。在这里，作者凸显了自己对莫洛克人吞噬、追逐和恐吓埃洛伊人的反思。他认为，这就像是在资本主义社会中工人在对其主人进行疯狂的报复。由此我们感受到了威尔斯对当时社会制度及其状况的焦虑感。

从第八到第十章，威尔斯所讲述的未来故事基本到此结束了。但在这一段的故事中，有两个因素值得我们注意，一是火，二是暴力。前者在维多利亚时代早已不是什么有力的武器了，但在未来，它却有可能成为一种令人生畏、富有魔力的利器。在故事中，火成为了“时间旅行者”逃出敌人魔掌的关键因素。后者则是类似《时间机器》的科幻故事所不能缺乏的因素，因为只有暴力和骚乱才能迫使主人公急于逃离危险。同时也正因为逃得匆忙，主人公没有带回更多的证据展示给大家去看，这就给故事中的宾客和故事之外的读者留下了神秘莫测、半信半疑的感觉。

在第十一到十二章以及后记当中，离开了埃洛伊人和莫洛克人的世界，威尔斯将故事的焦点从冒险转入到了时间旅行。他在这里讨论了天文学与进化论，字里行间透露着一种愉悦之情。而他的理论与很多当代

的科学理论（如熵理论等）有契合的地方，从一个侧面充分显示了他卓越的科学才能。

由此可见，在这样一部科幻为主的小说中，威尔斯不仅反映了他的社会政治观，表达了他对生活的态度，还充分展示了他对待贫富群体以及差异（特别是他对当时工业化时代劳资关系）的忧虑。这就是在威尔斯身上所体现出来的作家的社会责任感，也是威尔斯不同于乃至高于一般科幻小说家的地方。

《时间机器》属于科幻小说（science fiction），但准确地说，应该算是一部科幻中篇小说（novella），因为篇幅并不算太长，成书后也不厚。以比较常见的大众市场平装本（Mass Market Paperback）1992年版为例，不过区区125页。但该书出版后深受读者的欢迎，它不仅在文学上与科学上意义非凡，在大众中也影响深远。自1895年出版以来，已经被两度改编为同名电影，两度被改编为电视剧，被改写为喜剧故事的版本更是不计其数。

今天，学术界公认的一个基本事实是：《时间机器》是第一部有关时间旅行的作品，“时间机器”（time machine）这个词就是由威尔斯创造出来的，而《时间机器》所讲述的故事也推动了“时间旅行”（time travel）一词在大众中的广泛流行。

《时间机器》中那位无名的“时间旅行者”，可能是你，可能是我，也可能是任何人。我们都要走向未来。而在这走向未来的道路上，我们不仅会看到不同的风景，也会也应该去思考与反省当下及未来的社会和生活状况。

在21世纪的今天，在技术如此发达、人类早已踏上月球的时代，我们更期待着飞向遥远的未来，去探索未知的全新世界。

——这，应该是我们今天依旧热爱《时间机器》的原因所在。

2012年9月

郭英剑，男，英语语言文学博士，美国宾夕法尼亚大学比较文学博士后，现任中央民族大学外语学院院长、教授、博士生导师。郭英剑教授主要从事英美文学、文学翻译、英语教学、比较文学研究和高等教育研究。

编者注：为使读者能更好地感受威尔斯的思想及写作风格，本书将其另外一部科幻小说《隐形人》附在书后，供广大读者欣赏、品读。

The Time Traveller (for so it will be convenient to speak of him) was expounding a recondite matter to us. His grey eyes shone and twinkled, and his usually pale face was flushed and animated. The fire burned brightly, and the soft radiance of the incandescent lights in the lilies of silver caught the bubbles that flashed and passed in our glasses. Our chairs, being his patents, embraced and caressed us rather than submitted to be sat upon, and there was that luxurious after-dinner atmosphere when thought roams gracefully free of the trammels of precision. And he put it to us in this way—marking the points with a lean forefinger—as we sat and lazily admired his earnestness over this new paradox (as we thought it) and his fecundity.

"You must follow me carefully. I shall have to controvert one or two ideas that are almost universally accepted. The geometry, for instance, they taught you at school is founded on a misconception."

"Is not that rather a large thing to expect us to begin upon?" said Filby, an argumentative person with red hair.

"I do not mean to ask you to accept anything without reasonable ground for it. You will soon admit as much as I need from you. You know of course that a mathematical line, a line of thickness *nil*, has no real existence. They taught you that? Neither has a mathematical plane. These things are mere abstractions."

"That is all right," said the Psychologist.

"Nor, having only length, breadth, and thickness, can a cube have a real existence."

"There I object," said Filby. "Of course a solid body may exist. All real things—"

"So most people think. But wait a moment. Can an *instantaneous* cube exist?"

"Don't follow you," said Filby.

"Can a cube that does not last for any time at all, have a real existence?"

Filby became pensive. "Clearly," the Time Traveller proceeded, "any real body must have extension in *four* directions: it must have Length, Breadth, Thickness, and—Duration. But through a natural infirmity of the flesh, which I will explain to you in a moment, we incline to overlook this fact. There are really four dimensions, three which we call the three planes of Space, and a fourth, Time. There is, however, a tendency to draw an unreal distinction between the former three dimensions and the latter, because it happens that our consciousness moves intermittently in one direction along the latter from the beginning to the end of our lives."

"That," said a very young man, making spasmodic efforts to relight his cigar over the lamp; "that ... very clear indeed."

"Now, it is very remarkable that this is so extensively overlooked," continued the Time Traveller, with a slight accession of cheerfulness. "Really this is what is meant by the Fourth Dimension, though some people who talk about the Fourth Dimension do not know they mean it. It is only another way of looking at Time. *There is no difference between Time and any of the three dimensions of Space except that our consciousness moves along it.* But some foolish people have got hold of the wrong side of that idea. You have all heard what they have to say about this Fourth Dimension?"

"I have not," said the Provincial Mayor.

"It is simply this. That Space, as our mathematicians have it, is spoken of as having three dimensions, which one may call Length, Breadth, and Thickness, and is always definable by reference to three planes, each at right angles to the others. But some philosophical people have been asking why *three* dimensions particularly—why not another direction at right angles to the other three?—and have even

tried to construct a Four-Dimension geometry. Professor Simon Newcomb was expounding this to the New York Mathematical Society only a month or so ago. You know how on a flat surface, which has only two dimensions, we can represent a figure of a three-dimensional solid, and similarly they think that by models of three dimensions they could represent one of four—if they could master the perspective of the thing. See?"

"I think so," murmured the Provincial Mayor; and, knitting his brows, he lapsed into an introspective state, his lips moving as one who repeats mystic words. "Yes, I think I see it now," he said after some time, brightening in a quite transitory manner.

"Well, I do not mind telling you I have been at work upon this geometry of Four Dimensions for some time. Some of my results are curious. For instance, here is a portrait of a man at eight years old, another at fifteen, another at seventeen, another at twenty-three, and so on. All these are evidently sections, as it were, Three-Dimensional representations of his Four-Dimensioned being, which is a fixed and unalterable thing.

"Scientific people," proceeded the Time Traveller, after the pause required for the proper assimilation of this, "know very well that Time is only a kind of Space. Here is a popular scientific diagram, a weather record. This line I trace with my finger shows the movement of the barometer. Yesterday it was so high, yesterday night it fell, then this morning it rose again, and so gently upward to here. Surely the mercury did not trace this line in any of the dimensions of Space generally recognized. But certainly it traced such a line, and that line, therefore, we must conclude was along the Time-Dimension."

"But," said the Medical Man, staring hard at a coal in the fire, "if Time is really only a fourth dimension of Space, why is it, and why has it always been, regarded as something different? And why cannot we move in Time as we move about in the other dimensions of Space?"

The Time Traveller smiled. "Are you sure we can move freely in

Space? Right and left we can go, backward and forward freely enough, and men always have done so. I admit we move freely in two dimensions. But how about up and down? Gravitation limits us there."

"Not exactly," said the Medical Man. "There are balloons."

"But before the balloons, save for spasmodic jumping and the inequalities of the surface, man had no freedom of vertical movement."

"Still they could move a little up and down," said the Medical Man.

"Easier, far easier down than up."

"And you cannot move at all in Time, you cannot get away from the present moment."

"My dear sir, that is just where you are wrong. That is just where the whole world has gone wrong. We are always getting away from the present moment. Our mental existences, which are immaterial and have no dimensions, are passing along the Time-Dimension with a uniform velocity from the cradle to the grave. Just as we should travel *down* if we began our existence fifty miles above the earth's surface."

"But the great difficulty is this," interrupted the Psychologist. "You *can* move about in all directions of Space, but you cannot move about in Time."

"That is the germ of my great discovery. But you are wrong to say that we cannot move about in Time. For instance, if I am recalling an incident very vividly I go back to the instant of its occurrence: I become absent-minded, as you say. I jump back for a moment. Of course we have no means of staying back for any length of Time, any more than a savage or an animal has of staying six feet above the ground. But a civilized man is better off than the savage in this respect. He can go up against gravitation in a balloon, and why should he not hope that ultimately he may be able to stop or accelerate his drift along the Time-Dimension, or even turn about and travel the other way?"

"Oh, *this*," began Filby, "is all—"

"Why not?" said the Time Traveller.

"It's against reason," said Filby.

"What reason?" said the Time Traveller.

"You can show black is white by argument," said Filby, "but you will never convince me."

"Possibly not," said the Time Traveller. "But now you begin to see the object of my investigations into the geometry of Four Dimensions. Long ago I had a vague inkling of a machine—"

"To travel through Time!" exclaimed the Very Young Man.

"That shall travel indifferently in any direction of Space and Time, as the driver determines."

Filby contented himself with laughter.

"But I have experimental verification," said the Time Traveller.

"It would be remarkably convenient for the historian," the Psychologist suggested. "One might travel back and verify the accepted account of the Battle of Hastings, for instance!"

"Don't you think you would attract attention?" said the Medical Man. "Our ancestors had no great tolerance for anachronisms."

"One might get one's Greek from the very lips of Homer and Plato," the Very Young Man thought.

"In which case they would certainly plough you for the Little-go. The German scholars have improved Greek so much."

"Then there is the future," said the Very Young Man. "Just think! One might invest all one's money, leave it to accumulate at interest, and hurry on ahead!"

"To discover a society," said I, "erected on a strictly communistic basis."

"Of all the wild extravagant theories!" began the Psychologist.

"Yes, so it seemed to me, and so I never talked of it until—"

"Experimental verification!" cried I. "You are going to verify *that*?"

"The experiment!" cried Filby, who was getting brain-weary.

"Let's see your experiment anyhow," said the Psychologist, "though it's all humbug, you know."

The Time Traveller smiled round at us. Then, still smiling faintly, and with his hands deep in his trousers pockets, he walked slowly out of the room, and we heard his slippers shuffling down the long passage to his laboratory.

The Psychologist looked at us. "I wonder what he's got?"

"Some sleight-of-hand trick or other," said the Medical Man, and Filby tried to tell us about a conjurer he had seen at Burslem; but before he had finished his preface the Time Traveller came back, and Filby's anecdote collapsed.

The thing the Time Traveller held in his hand was a glittering metallic framework, scarcely larger than a small clock, and very delicately made. There was ivory in it, and some transparent crystalline substance. And now I must be explicit, for this that follows—unless his explanation is to be accepted—is an absolutely unaccountable thing. He took one of the small octagonal tables that were scattered about the room, and set it in front of the fire, with two legs on the hearthrug. On this table he placed the mechanism. Then he drew up a chair, and sat down. The only other object on the table was a small shaded lamp, the bright light of which fell upon the model. There were also perhaps a dozen candles about, two in brass candlesticks upon the mantel and several in sconces, so that the room was brilliantly illuminated. I sat in a low arm-chair nearest the fire, and I drew this forward so as to be almost between the Time Traveller and the fireplace. Filby sat behind him, looking over his shoulder. The Medical Man and the Provincial Mayor watched him in profile from the right, the Psychologist from the left. The Very Young Man stood behind the Psychologist. We were all on the alert. It appears incredible to me that any kind of trick, however subtly conceived and however adroitly done, could have been played upon us under these conditions.

The Time Traveller looked at us, and then at the mechanism. "Well?" said the Psychologist.

"This little affair," said the Time Traveller, resting his elbows

upon the table and pressing his hands together above the apparatus, "is only a model. It is my plan for a machine to travel through time. You will notice that it looks singularly askew, and that there is an odd twinkling appearance about this bar, as though it was in some way unreal." He pointed to the part with his finger. "Also, here is one little white lever, and here is another."

The Medical Man got up out of his chair and peered into the thing. "It's beautifully made," he said.

"It took two years to make," retorted the Time Traveller. Then, when we had all imitated the action of the Medical Man, he said: "Now I want you clearly to understand that this lever, being pressed over, sends the machine gliding into the future, and this other reverses the motion. This saddle represents the seat of a time traveller. Presently I am going to press the lever, and off the machine will go. It will vanish, pass into future Time, and disappear. Have a good look at the thing. Look at the table too, and satisfy yourselves there is no trickery. I don't want to waste this model, and then be told I'm a quack."

There was a minute's pause perhaps. The Psychologist seemed about to speak to me, but changed his mind. Then the Time Traveller put forth his finger towards the lever. "No," he said suddenly. "Lend me your hand." And turning to the Psychologist, he took that individual's hand in his own and told him to put out his forefinger. So that it was the Psychologist himself who sent forth the model Time Machine on its interminable voyage. We all saw the lever turn. I am absolutely certain there was no trickery. There was a breath of wind, and the lamp flame jumped. One of the candles on the mantel was blown out, and the little machine suddenly swung round, became indistinct, was seen as a ghost for a second perhaps, as an eddy of faintly glittering brass and ivory; and it was gone—vanished! Save for the lamp the table was bare.

Everyone was silent for a minute. Then Filby said he was damned.

The Psychologist recovered from his stupor, and suddenly looked

under the table. At that the Time Traveller laughed cheerfully. "Well?" he said, with a reminiscence of the Psychologist. Then, getting up, he went to the tobacco jar on the mantel, and with his back to us began to fill his pipe.

We stared at each other. "Look here," said the Medical Man, "are you in earnest about this? Do you seriously believe that that machine has travelled into time?"

"Certainly," said the Time Traveller, stooping to light a spill at the fire. Then he turned, lighting his pipe, to look at the Psychologist's face. (The Psychologist, to show that he was not unhinged, helped himself to a cigar and tried to light it uncut.) "What is more, I have a big machine nearly finished in there"—he indicated the laboratory—"and when that is put together I mean to have a journey on my own account."

"You mean to say that that machine has travelled into the future?" said Filby.

"Into the future or the past—I don't, for certain, know which."

After an interval the Psychologist had an inspiration. "It must have gone into the past if it has gone anywhere," he said.

"Why?" said the Time Traveller.

"Because I presume that it has not moved in space, and if it travelled into the future it would still be here all this time, since it must have travelled through this time."

"But," I said, "If it travelled into the past it would have been visible when we came first into this room; and last Thursday when we were here; and the Thursday before that; and so forth!"

"Serious objections," remarked the Provincial Mayor, with an air of impartiality, turning towards the Time Traveller.

"Not a bit," said the Time Traveller, and, to the Psychologist: "You think. *You* can explain that. It's presentation below the threshold, you know, diluted presentation."

"Of course," said the Psychologist, and reassured us. "That's a simple point of psychology. I should have thought of it. It's plain

enough, and helps the paradox delightfully. We cannot see it, nor can we appreciate this machine, any more than we can the spoke of a wheel spinning, or a bullet flying through the air. If it is travelling through time fifty times or a hundred times faster than we are, if it gets through a minute while we get through a second, the impression it creates will of course be only one-fiftieth or one-hundredth of what it would make if it were not travelling in time. That's plain enough." He passed his hand through the space in which the machine had been. "You see?" he said, laughing.

We sat and stared at the vacant table for a minute or so. Then the Time Traveller asked us what we thought of it all.

"It sounds plausible enough to-night," said the Medical Man; "but wait until to-morrow. Wait for the common sense of the morning."

"Would you like to see the Time Machine itself?" asked the Time Traveller. And therewith, taking the lamp in his hand, he led the way down the long, draughty corridor to his laboratory. I remember vividly the flickering light, his queer, broad head in silhouette, the dance of the shadows, how we all followed him, puzzled but incredulous, and how there in the laboratory we beheld a larger edition of the little mechanism which we had seen vanish from before our eyes. Parts were of nickel, parts of ivory, parts had certainly been filed or sawn out of rock crystal. The thing was generally complete, but the twisted crystalline bars lay unfinished upon the bench beside some sheets of drawings, and I took one up for a better look at it. Quartz it seemed to be.

"Look here," said the Medical Man, "are you perfectly serious? Or is this a trick—like that ghost you showed us last Christmas?"

"Upon that machine," said the Time Traveller, holding the lamp aloft, "I intend to explore time. Is that plain? I was never more serious in my life."

None of us quite knew how to take it.

I caught Filby's eye over the shoulder of the Medical Man, and he winked at me solemnly.

赫伯特·乔治·威尔斯

2

I think that at that time none of us quite believed in the Time Machine. The fact is, the Time Traveller was one of those men who are too clever to be believed: you never felt that you saw all round him; you always suspected some subtle reserve, some ingenuity in ambush, behind his lucid frankness. Had Filby shown the model and explained the matter in the Time Traveller's words, we should have shown *him* far less scepticism. For we should have perceived his motives; a pork butcher could understand Filby. But the Time Traveller had more than a touch of whim among his elements, and we distrusted him. Things that would have made the frame of a less clever man seemed tricks in his hands. It is a mistake to do things too easily. The serious people who took him seriously never felt quite sure of his deportment; they were somehow aware that trusting their reputations for judgment with him was like furnishing a nursery with egg-shell china. So I don't think any of us said very much about time travelling in the interval between that Thursday and the next, though its odd potentialities ran, no doubt, in most of our minds: its plausibility, that is, its practical incredibleness, the curious possibilities of anachronism and of utter confusion it suggested. For my own part, I was particularly preoccupied with the trick of the model. That I remember discussing with the Medical Man, whom I met on Friday at the Linnaean. He said he had seen a similar thing at Tübingen, and laid considerable stress on the blowing out of the candle. But how the trick was done he could not explain.

The next Thursday I went again to Richmond—I suppose I was one of the Time Traveller's most constant guests—and, arriving late, found four or five men already assembled in his drawing-room. The

Medical Man was standing before the fire with a sheet of paper in one hand and his watch in the other. I looked round for the Time Traveller, and—"It's half-past seven now," said the Medical Man. "I suppose we'd better have dinner?"

"Where's—?" said I, naming our host.

"You've just come? It's rather odd. He's unavoidably detained. He asks me in this note to lead off with dinner at seven if he's not back. Says he'll explain when he comes."

"It seems a pity to let the dinner spoil," said the Editor of a well-known daily paper; and thereupon the Doctor rang the bell.

The Psychologist was the only person besides the Doctor and myself who had attended the previous dinner. The other men were Blank, the Editor aforementioned, a certain journalist, and another—a quiet, shy man with a beard—whom I didn't know, and who, as far as my observation went, never opened his mouth all the evening. There was some speculation at the dinner-table about the Time Traveller's absence, and I suggested time travelling, in a half-jocular spirit. The Editor wanted that explained to him, and the Psychologist volunteered a wooden account of the "ingenious paradox and trick" we had witnessed that day week. He was in the midst of his exposition when the door from the corridor opened slowly and without noise. I was facing the door, and saw it first. "Hallo!" I said. "At last!" And the door opened wider, and the Time Traveller stood before us. I gave a cry of surprise. "Good heavens! Man, what's the matter?" cried the Medical Man, who saw him next. And the whole tableful turned towards the door.

He was in an amazing plight. His coat was dusty and dirty, and smeared with green down the sleeves; his hair disordered, and as it seemed to me greyer—either with dust and dirt or because its colour had actually faded. His face was ghastly pale; his chin had a brown cut on it—a cut half healed; his expression was haggard and drawn, as by intense suffering. For a moment he hesitated in the doorway, as if he had been dazzled by the light. Then he came into the room. He

walked with just such a limp as I have seen in footsore tramps. We stared at him in silence, expecting him to speak.

He said not a word, but came painfully to the table, and made a motion towards the wine. The Editor filled a glass of champagne, and pushed it towards him. He drained it, and it seemed to do him good: for he looked round the table, and the ghost of his old smile flickered across his face. "What on earth have you been up to, man?" said the Doctor. The Time Traveller did not seem to hear. "Don't let me disturb you," he said, with a certain faltering articulation. "I'm all right." He stopped, held out his glass for more, and took it off at a draught. "That's good," he said. His eyes grew brighter, and a faint colour came into his cheeks. His glance flickered over our faces with a certain dull approval, and then went round the warm and comfortable room. Then he spoke again, still as it were feeling his way among his words. "I'm going to wash and dress, and then I'll come down and explain things ... Save me some of that mutton. I'm starving for a bit of meat."

He looked across at the Editor, who was a rare visitor, and hoped he was all right. The Editor began a question. "Tell you presently," said the Time Traveller. "I'm—funny! Be all right in a minute."

He put down his glass, and walked towards the staircase door. Again I remarked his lameness and the soft padding sound of his footfall, and standing up in my place, I saw his feet as he went out. He had nothing on them but a pair of tattered, blood-stained socks. Then the door closed upon him. I had half a mind to follow, till I remembered how he detested any fuss about himself. For a minute, perhaps, my mind was wool-gathering. Then, "Remarkable Behaviour of an Eminent Scientist," I heard the Editor say, thinking (after his wont) in headlines. And this brought my attention back to the bright dinnertable.

"What's the game?" said the Journalist. "Has he been doing the Amateur Cadger? I don't follow." I met the eye of the Psychologist, and read my own interpretation in his face. I thought of the Time Traveller limping painfully upstairs. I don't think any one else had

noticed his lameness.

The first to recover completely from this surprise was the Medical Man, who rang the bell—the Time Traveller hated to have servants waiting at dinner—for a hot plate. At that the Editor turned to his knife and fork with a grunt, and the Silent Man followed suit. The dinner was resumed. Conversation was exclamatory for a little while, with gaps of wonderment; and then the Editor got fervent in his curiosity. "Does our friend eke out his modest income with a crossing? Or has he his Nebuchadnezzar phases?" he inquired. "I feel assured it's this business of the Time Machine," I said, and took up the Psychologist's account of our previous meeting. The new guests were frankly incredulous. The Editor raised objections. "What *was* this time travelling? A man couldn't cover himself with dust by rolling in a paradox, could he?" And then, as the idea came home to him, he resorted to caricature. Hadn't they any clothes-brushes in the Future? The Journalist too, would not believe at any price, and joined the Editor in the easy work of heaping ridicule on the whole thing. They were both the new kind of journalist—very joyous, irreverent young men. "Our Special Correspondent in the Day after Tomorrow reports," the Journalist was saying—or rather shouting—when the Time Traveller came back. He was dressed in ordinary evening clothes, and nothing save his haggard look remained of the change that had startled me.

"I say," said the Editor hilariously, "these chaps here say you have been travelling into the middle of next week! Tell us all about little Rosebery, will you? What will you take for the lot?"

The Time Traveller came to the place reserved for him without a word. He smiled quietly, in his old way. "Where's my mutton?" he said. "What a treat it is to stick a fork into meat again!"

"Story!" cried the Editor.

"Story be damned!" said the Time Traveller. "I want something to eat. I won't say a word until I get some peptone into my arteries. Thanks. And the salt."

"One word," said I. "Have you been time travelling?"

"Yes," said the Time Traveller, with his mouth full, nodding his head.

"I'd give a shilling a line for a verbatim note," said the Editor. The Time Traveller pushed his glass towards the Silent Man and rang it with his fingernail; at which the Silent Man, who had been staring at his face, started convulsively, and poured him wine. The rest of the dinner was uncomfortable. For my own part, sudden questions kept on rising to my lips, and I dare say it was the same with the others. The Journalist tried to relieve the tension by telling anecdotes of Hettie Potter. The Time Traveller devoted his attention to his dinner, and displayed the appetite of a tramp. The Medical Man smoked a cigarette, and watched the Time Traveller through his eyelashes. The Silent Man seemed even more clumsy than usual, and drank champagne with regularity and determination out of sheer nervousness. At last the Time Traveller pushed his plate away, and looked round us. "I suppose I must apologize," he said. "I was simply starving. I've had a most amazing time." He reached out his hand for a cigar, and cut the end. "But come into the smoking-room. It's too long a story to tell over greasy plates." And ringing the bell in passing, he led the way into the adjoining room.

"You have told Blank, and Dash, and Chose about the machine?" he said to me, leaning back in his easy-chair and naming the three new guests.

"But the thing's a mere paradox," said the Editor.

"I can't argue to-night. I don't mind telling you the story, but I can't argue. I will," he went on, "tell you the story of what has happened to me, if you like, but you must refrain from interruptions. I want to tell it. Badly. Most of it will sound like lying. So be it! It's true—every word of it, all the same. I was in my laboratory at four o'clock, and since then ... I've lived eight days ... such days as no human being ever lived before! I'm nearly worn out, but I shan't sleep till I've told this thing over to you. Then I shall go to bed. But no

interruptions! Is it agreed?"

"Agreed," said the Editor, and the rest of us echoed "Agreed." And with that the Time Traveller began his story as I have set it forth. He sat back in his chair at first, and spoke like a weary man. Afterwards he got more animated. In writing it down I feel with only too much keenness the inadequacy of pen and ink—and, above all, my own inadequacy—to express its quality. You read, I will suppose, attentively enough; but you cannot see the speaker's white, sincere face in the bright circle of the little lamp, nor hear the intonation of his voice. You cannot know how his expression followed the turns of his story! Most of us hearers were in shadow, for the candles in the smoking-room had not been lighted, and only the face of the Journalist and the legs of the Silent Man from the knees downward were illuminated. At first we glanced now and again at each other. After a time we ceased to do that, and looked only at the Time Traveller's face.

3

"I told some of you last Thursday of the principles of the Time Machine, and showed you the actual thing itself, incomplete in the workshop. There it is now, a little travel-worn, truly; and one of the ivory bars is cracked, and a brass rail bent; but the rest of it's sound enough. I expected to finish it on Friday, but on Friday, when the putting together was nearly done, I found that one of the nickel bars was exactly one inch too short, and this I had to get remade; so that the thing was not complete until this morning. It was at ten o'clock to-day that the first of all Time Machines began its career. I gave it a last tap, tried all the screws again, put one more drop of oil on the quartz rod, and sat myself in the saddle. I suppose a suicide who holds a pistol to his skull feels much the same wonder at what will come next as I felt then. I took the starting lever in one hand and the stopping one in the other, pressed the first, and almost immediately the second. I seemed to reel; I felt a nightmare sensation of falling; and, looking round, I saw the laboratory exactly as before. Had anything happened? For a moment I suspected that my intellect had tricked me. Then I noted the clock. A moment before, as it seemed, it had stood at a minute or so past ten; now it was nearly half-past three!

"I drew a breath, set my teeth, gripped the starting lever with both hands, and went off with a thud. The laboratory got hazy and went dark. Mrs. Watchett came in and walked, apparently without seeing me, towards the garden door. I suppose it took her a minute or so to traverse the place, but to me she seemed to shoot across the room like a rocket. I pressed the lever over to its extreme position. The night came like the turning out of a lamp, and in another moment came to-morrow. The laboratory grew faint and hazy, then fainter and

ever fainter. To-morrow night came black, then day again, night again, day again, faster and faster still. An eddying murmur filled my ears, and a strange, dumb confusedness descended on my mind.

"I am afraid I cannot convey the peculiar sensations of time travelling. They are excessively unpleasant. There is a feeling exactly like that one has upon a switchback—of a helpless headlong motion! I felt the same horrible anticipation, too, of an imminent smash. As I put on pace, night followed day like the flapping of a black wing. The dim suggestion of the laboratory seemed presently to fall away from me, and I saw the sun hopping swiftly across the sky, leaping it every minute, and every minute marking a day. I supposed the laboratory had been destroyed and I had come into the open air. I had a dim impression of scaffolding, but I was already going too fast to be conscious of any moving things. The slowest snail that ever crawled dashed by too fast for me. The twinkling succession of darkness and light was excessively painful to the eye. Then, in the intermittent darkneses, I saw the moon spinning swiftly through her quarters from new to full, and had a faint glimpse of the circling stars. Presently, as I went on, still gaining velocity, the palpitation of night and day merged into one continuous greyness; the sky took on a wonderful deepness of blue, a splendid luminous color like that of early twilight; the jerking sun became a streak of fire, a brilliant arch, in space; the moon a fainter fluctuating band; and I could see nothing of the stars, save now and then a brighter circle flickering in the blue.

"The landscape was misty and vague. I was still on the hill-side upon which this house now stands, and the shoulder rose above me grey and dim. I saw trees growing and changing like puffs of vapour, now brown, now green; they grew, spread, shivered, and passed away. I saw huge buildings rise up faint and fair, and pass like dreams. The whole surface of the earth seemed changed—melting and flowing under my eyes. The little hands upon the dials that registered my speed raced round faster and faster. Presently I noted that the sun belt swayed up and down, from solstice to solstice, in a minute or less, and

that consequently my pace was over a year a minute; and minute by minute the white snow flashed across the world, and vanished, and was followed by the bright, brief green of spring.

"The unpleasant sensations of the start were less poignant now. They merged at last into a kind of hysterical exhilaration. I remarked indeed a clumsy swaying of the machine, for which I was unable to account. But my mind was too confused to attend to it, so with a kind of madness growing upon me, I flung myself into futurity. At first I scarce thought of stopping, scarce thought of anything but these new sensations. But presently a fresh series of impressions grew up in my mind—a certain curiosity and therewith a certain dread—until at last they took complete possession of me. What strange developments of humanity, what wonderful advances upon our rudimentary civilization, I thought, might not appear when I came to look nearly into the dim elusive world that raced and fluctuated before my eyes! I saw great and splendid architecture rising about me, more massive than any buildings of our own time, and yet, as it seemed, built of glimmer and mist. I saw a richer green flow up the hill-side, and remain there, without any wintry intermission. Even through the veil of my confusion the earth seemed very fair. And so my mind came round to the business of stopping.

"The peculiar risk lay in the possibility of my finding some substance in the space which I, or the machine, occupied. So long as I travelled at a high velocity through time, this scarcely mattered; I was, so to speak, attenuated—was slipping like a vapour through the interstices of intervening substances! But to come to a stop involved the jamming of myself, molecule by molecule, into whatever lay in my way; meant bringing my atoms into such intimate contact with those of the obstacle that a profound chemical reaction—possibly a far-reaching explosion—would result, and blow myself and my apparatus out of all possible dimensions—into the Unknown. This possibility had occurred to me again and again while I was making the machine; but then I had cheerfully accepted it as an unavoidable risk—one of the

risks a man has got to take! Now the risk was inevitable, I no longer saw it in the same cheerful light. The fact is that, insensibly, the absolute strangeness of everything, the sickly jarring and swaying of the machine, above all, the feeling of prolonged falling, had absolutely upset my nerve. I told myself that I could never stop, and with a gust of petulance I resolved to stop forthwith. Like an impatient fool, I lugged over the lever, and incontinently the thing went reeling over, and I was flung headlong through the air.

"There was the sound of a clap of thunder in my ears. I may have been stunned for a moment. A pitiless hail was hissing round me, and I was sitting on soft turf in front of the overset machine. Everything still seemed grey, but presently I remarked that the confusion in my ears was gone. I looked round me. I was on what seemed to be a little lawn in a garden, surrounded by rhododendron bushes, and I noticed that their mauve and purple blossoms were dropping in a shower under the beating of the hailstones. The rebounding, dancing hail hung in a cloud over the machine, and drove along the ground like smoke. In a moment I was wet to the skin. "Fine hospitality," said I, 'to a man who has travelled innumerable years to see you.'

"Presently I thought what a fool I was to get wet. I stood up and looked round me. A colossal figure, carved apparently in some white stone, loomed indistinctly beyond the rhododendrons through the hazy downpour. But all else of the world was invisible.

"My sensations would be hard to describe. As the columns of hail grew thinner, I saw the white figure more distinctly. It was very large, for a silver birch tree touched its shoulder. It was of white marble, in shape something like a winged sphinx, but the wings, instead of being carried vertically at the sides, were spread so that it seemed to hover. The pedestal, it appeared to me, was of bronze, and was thick with verdigris. It chanced that the face was towards me; the sightless eyes seemed to watch me; there was the faint shadow of a smile on the lips. It was greatly weather-worn, and that imparted an unpleasant suggestion of disease. I stood looking at it for a little space—half a

minute, perhaps, or half an hour. It seemed to advance and to recede as the hail drove before it denser or thinner. At last I tore my eyes from it for a moment and saw that the hail curtain had worn threadbare, and that the sky was lightening with the promise of the sun.

"I looked up again at the crouching white shape, and the full temerity of my voyage came suddenly upon me. What might appear when that hazy curtain was altogether withdrawn? What might not have happened to men? What if cruelty had grown into a common passion? What if in this interval the race had lost its manliness and had developed into something inhuman, unsympathetic, and overwhelmingly powerful? I might seem some old-world savage animal, only the more dreadful and disgusting for our common likeness—a foul creature to be incontinently slain.

"Already I saw other vast shapes—huge buildings with intricate parapets and tall columns, with a wooded hill-side dimly creeping in upon me through the lessening storm. I was seized with a panic fear. I turned frantically to the Time Machine, and strove hard to readjust it. As I did so the shafts of the sun smote through the thunderstorm. The grey downpour was swept aside and vanished like the trailing garments of a ghost. Above me, in the intense blue of the summer sky, some faint brown shreds of cloud whirled into nothingness. The great buildings about me stood out clear and distinct, shining with the wet of the thunderstorm, and picked out in white by the unmelted hailstones piled along their courses. I felt naked in a strange world. I felt as perhaps a bird may feel in the clear air, knowing the hawk wings above and will swoop. My fear grew to frenzy. I took a breathing space, set my teeth, and again grappled fiercely, wrist and knee, with the machine. It gave under my desperate onset and turned over. It struck my chin violently. One hand on the saddle, the other on the lever, I stood panting heavily in attitude to mount again.

"But with this recovery of a prompt retreat my courage recovered. I looked more curiously and less fearfully at this world of the remote

future. In a circular opening, high up in the wall of the nearer house, I saw a group of figures clad in rich soft robes. They had seen me, and their faces were directed towards me.

"Then I heard voices approaching me. Coming through the bushes by the White Sphinx were the heads and shoulders of men running. One of these emerged in a pathway leading straight to the little lawn upon which I stood with my machine. He was a slight creature—perhaps four feet high—clad in a purple tunic, girdled at the waist with a leather belt. Sandals or buskins—I could not clearly distinguish which—were on his feet; his legs were bare to the knees, and his head was bare. Noticing that, I noticed for the first time how warm the air was.

"He struck me as being a very beautiful and graceful creature, but indescribably frail. His flushed face reminded me of the more beautiful kind of consumptive—that hectic beauty of which we used to hear so much. At the sight of him I suddenly regained confidence. I took my hands from the machine.

4

"In another moment we were standing face to face, I and this fragile thing out of futurity. He came straight up to me and laughed into my eyes. The absence from his bearing of any sign of fear struck me at once. Then he turned to the two others who were following him and spoke to them in a strange and very sweet and liquid tongue.

"There were others coming, and presently a little group of perhaps eight or ten of these exquisite creatures were about me. One of them addressed me. It came into my head, oddly enough, that my voice was too harsh and deep for them. So I shook my head, and, pointing to my ears, shook it again. He came a step forward, hesitated, and then touched my hand. Then I felt other soft little tentacles upon my back and shoulders. They wanted to make sure I was real. There was nothing in this at all alarming. Indeed, there was something in these pretty little people that inspired confidence—a graceful gentleness, a certain childlike ease. And besides, they looked so frail that I could fancy myself flinging the whole dozen of them about like nine-pins. But I made a sudden motion to warn them when I saw their little pink hands feeling at the Time Machine. Happily then, when it was not too late, I thought of a danger I had hitherto forgotten, and reaching over the bars of the machine I unscrewed the little levers that would set it in motion, and put these in my pocket. Then I turned again to see what I could do in the way of communication.

"And then, looking more nearly into their features, I saw some further peculiarities in their Dresden-china type of prettiness. Their hair, which was uniformly curly, came to a sharp end at the neck and cheek; there was not the faintest suggestion of it on the face, and their ears were singularly minute. The mouths were small, with bright red,

rather thin lips, and the little chins ran to a point. The eyes were large and mild; and—this may seem egotism on my part—I fancied even that there was a certain lack of the interest I might have expected in them.

"As they made no effort to communicate with me, but simply stood round me smiling and speaking in soft cooing notes to each other, I began the conversation. I pointed to the Time Machine and to myself. Then hesitating for a moment how to express time, I pointed to the sun. At once a quaintly pretty little figure in chequered purple and white followed my gesture, and then astonished me by imitating the sound of thunder.

"For a moment I was staggered, though the import of his gesture was plain enough. The question had come into my mind abruptly: were these creatures fools? You may hardly understand how it took me. You see I had always anticipated that the people of the year Eight Hundred and Two Thousand odd would be incredibly in front of us in knowledge, art, everything. Then one of them suddenly asked me a question that showed him to be on the intellectual level of one of our five-year-old children—asked me, in fact, if I had come from the sun in a thunderstorm! It let loose the judgment I had suspended upon their clothes, their frail light limbs, and fragile features. A flow of disappointment rushed across my mind. For a moment I felt that I had built the Time Machine in vain.

"I nodded, pointed to the sun, and gave them such a vivid rendering of a thunderclap as startled them. They all withdrew a pace or so and bowed. Then came one laughing towards me, carrying a chain of beautiful flowers altogether new to me, and put it about my neck. The idea was received with melodious applause; and presently they were all running to and fro for flowers, and laughingly flinging them upon me until I was almost smothered with blossom. You who have never seen the like can scarcely imagine what delicate and wonderful flowers countless years of culture had created. Then someone suggested that their plaything should be exhibited in the

nearest building, and so I was led past the sphinx of white marble, which had seemed to watch me all the while with a smile at my astonishment, towards a vast grey edifice of fretted stone. As I went with them the memory of my confident anticipations of a profoundly grave and intellectual posterity came, with irresistible merriment, to my mind.

"The building had a huge entry, and was altogether of colossal dimensions. I was naturally most occupied with the growing crowd of little people, and with the big open portals that yawned before me shadowy and mysterious. My general impression of the world I saw over their heads was a tangled waste of beautiful bushes and flowers, a long neglected and yet weedless garden. I saw a number of tall spikes of strange white flowers, measuring a foot perhaps across the spread of the waxen petals. They grew scattered, as if wild, among the variegated shrubs, but, as I say, I did not examine them closely at this time. The Time Machine was left deserted on the turf among the rhododendrons.

"The arch of the doorway was richly carved, but naturally I did not observe the carving very narrowly, though I fancied I saw suggestions of old Phoenician decorations as I passed through, and it struck me that they were very badly broken and weather-worn. Several more brightly clad people met me in the doorway, and so we entered, I, dressed in dingy nineteenth-century garments, looking grotesque enough, garlanded with flowers, and surrounded by an eddying mass of bright, soft-colored robes and shining white limbs, in a melodious whirl of laughter and laughing speech.

"The big doorway opened into a proportionately great hall hung with brown. The roof was in shadow, and the windows, partially glazed with coloured glass and partially unglazed, admitted a tempered light. The floor was made up of huge blocks of some very hard white metal, not plates nor slabs—blocks, and it was so much worn, as I judged by the going to and fro of past generations, as to be deeply channelled along the more frequented ways. Transverse to the

length were innumerable tables made of slabs of polished stone, raised perhaps a foot from the floor, and upon these were heaps of fruits. Some I recognized as a kind of hypertrophied raspberry and orange, but for the most part they were strange.

"Between the tables were scattered a great number of cushions. Upon these my conductors seated themselves, signing for me to do likewise. With a pretty absence of ceremony they began to eat the fruit with their hands, flinging peel and stalks, and so forth, into the round openings in the sides of the tables. I was not loath to follow their example, for I felt thirsty and hungry. As I did so I surveyed the hall at my leisure.

"And perhaps the thing that struck me most was its dilapidated look. The stained-glass windows, which displayed only a geometrical pattern, were broken in many places, and the curtains that hung across the lower end were thick with dust. And it caught my eye that the corner of the marble table near me was fractured. Nevertheless, the general effect was extremely rich and picturesque. There were, perhaps, a couple of hundred people dining in the hall, and most of them, seated as near to me as they could come, were watching me with interest, their little eyes shining over the fruit they were eating. All were clad in the same soft and yet strong, silky material.

"Fruit, by the by, was all their diet. These people of the remote future were strict vegetarians, and while I was with them, in spite of some carnal cravings, I had to be frugivorous also. Indeed, I found afterwards that horses, cattle, sheep, dogs, had followed the Ichthyosaurus into extinction. But the fruits were very delightful; one, in particular, that seemed to be in season all the time I was there—a floury thing in a three-sided husk—was especially good, and I made it my staple. At first I was puzzled by all these strange fruits, and by the strange flowers I saw, but later I began to perceive their import.

"However, I am telling you of my fruit dinner in the distant future now. So soon as my appetite was a little checked, I determined to make a resolute attempt to learn the speech of these new men of mine.

Clearly that was the next thing to do. The fruits seemed a convenient thing to begin upon, and holding one of these up I began a series of interrogative sounds and gestures. I had some considerable difficulty in conveying my meaning. At first my efforts met with a stare of surprise or inextinguishable laughter, but presently a fair-haired little creature seemed to grasp my intention and repeated a name. They had to chatter and explain the business at great length to each other, and my first attempts to make the exquisite little sounds of their language caused an immense amount of amusement. However, I felt like a schoolmaster amidst children, and persisted, and presently I had a score of noun substantives at least at my command; and then I got to demonstrative pronouns, and even the verb "to eat." But it was slow work, and the little people soon tired and wanted to get away from my interrogations, so I determined, rather of necessity, to let them give their lessons in little doses when they felt inclined. And very little doses I found they were before long, for I never met people more indolent or more easily fatigued.

"A queer thing I soon discovered about my little hosts, and that was their lack of interest. They would come to me with eager cries of astonishment, like children, but like children they would soon stop examining me and wander away after some other toy. The dinner and my conversational beginnings ended, I noted for the first time that almost all those who had surrounded me at first were gone. It is odd, too, how speedily I came to disregard these little people. I went out through the portal into the sunlit world again as soon as my hunger was satisfied. I was continually meeting more of these men of the future, who would follow me a little distance, chatter and laugh about me, and, having smiled and gesticulated in a friendly way, leave me again to my own devices.

"The calm of evening was upon the world as I emerged from the great hall, and the scene was lit by the warm glow of the setting sun. At first things were very confusing. Everything was so entirely different from the world I had known—even the flowers. The big

building I had left was situated on the slope of a broad river valley, but the Thames had shifted perhaps a mile from its present position. I resolved to mount to the summit of a crest, perhaps a mile and a half away, from which I could get a wider view of this our planet in the year Eight Hundred and Two Thousand Seven Hundred and One A.D. For that, I should explain, was the date the little dials of my machine recorded.

"As I walked I was watching for every impression that could possibly help to explain the condition of ruinous splendour in which I found the world—for ruinous it was. A little way up the hill, for instance, was a great heap of granite, bound together by masses of aluminium, a vast labyrinth of precipitous walls and crumpled heaps, amidst which were thick heaps of very beautiful pagoda-like plants—nettles possibly—but wonderfully tinted with brown about the leaves, and incapable of stinging. It was evidently the derelict remains of some vast structure, to what end built I could not determine. It was here that I was destined, at a later date, to have a very strange experience—the first intimation of a still stranger discovery—but of that I will speak in its proper place.

"Looking round with a sudden thought, from a terrace on which I rested for a while, I realized that there were no small houses to be seen. Apparently the single house, and possibly even the household, had vanished. Here and there among the greenery were palace-like buildings, but the house and the cottage, which form such characteristic features of our own English landscape, had disappeared.

"'Communism,' said I to myself.

"And on the heels of that came another thought. I looked at the half-dozen little figures that were following me. Then, in a flash, I perceived that all had the same form of costume, the same soft hairless visage, and the same girlish rotundity of limb. It may seem strange, perhaps, that I had not noticed this before. But everything was so strange. Now, I saw the fact plainly enough. In costume, and in all the differences of texture and bearing that now mark off the sexes

from each other, these people of the future were alike. And the children seemed to my eyes to be but the miniatures of their parents. I judged, then, that the children of that time were extremely precocious, physically at least, and I found afterwards abundant verification of my opinion.

"Seeing the ease and security in which these people were living, I felt that this close resemblance of the sexes was after all what one would expect; for the strength of a man and the softness of a woman, the institution of the family, and the differentiation of occupations are mere militant necessities of an age of physical force; where population is balanced and abundant, much childbearing becomes an evil rather than a blessing to the State; where violence comes but rarely and offspring are secure, there is less necessity—indeed there is no necessity—for an efficient family, and the specialization of the sexes with reference to their children's needs disappears. We see some beginnings of this even in our own time, and in this future age it was complete. This, I must remind you, was my speculation at the time. Later, I was to appreciate how far it fell short of the reality.

"While I was musing upon these things, my attention was attracted by a pretty little structure, like a well under a cupola. I thought in a transitory way of the oddness of wells still existing, and then resumed the thread of my speculations. There were no large buildings towards the top of the hill, and as my walking powers were evidently miraculous, I was presently left alone for the first time. With a strange sense of freedom and adventure I pushed on up to the crest.

"There I found a seat of some yellow metal that I did not recognize, corroded in places with a kind of pinkish rust and half smothered in soft moss, the arm-rests cast and filed into the resemblance of griffins' heads. I sat down on it, and I surveyed the broad view of our old world under the sunset of that long day. It was as sweet and fair a view as I have ever seen. The sun had already gone below the horizon and the west was flaming gold, touched with some horizontal bars of purple and crimson. Below was the valley of the

Thames, in which the river lay like a band of burnished steel. I have already spoken of the great palaces dotted about among the variegated greenery, some in ruins and some still occupied. Here and there rose a white or silvery figure in the waste garden of the earth, here and there came the sharp vertical line of some cupola or obelisk. There were no hedges, no signs of proprietary rights, no evidences of agriculture; the whole earth had become a garden.

"So watching, I began to put my interpretation upon the things I had seen, and as it shaped itself to me that evening, my interpretation was something in this way. (Afterwards I found I had got only a half-truth—or only a glimpse of one facet of the truth.)

"It seemed to me that I had happened upon humanity upon the wane. The ruddy sunset set me thinking of the sunset of mankind. For the first time I began to realize an odd consequence of the social effort in which we are at present engaged. And yet, come to think, it is a logical consequence enough. Strength is the outcome of need; security sets a premium on feebleness. The work of ameliorating the conditions of life—the true civilizing process that makes life more and more secure—had gone steadily on to a climax. One triumph of a united humanity over Nature had followed another. Things that are now mere dreams had become projects deliberately put in hand and carried forward. And the harvest was what I saw!

"After all, the sanitation and the agriculture of today are still in the rudimentary stage. The science of our time has attacked but a little department of the field of human disease, but even so, it spreads its operations very steadily and persistently. Our agriculture and horticulture destroy a weed just here and there and cultivate perhaps a score or so of wholesome plants, leaving the greater number to fight out a balance as they can. We improve our favourite plants and animals—and how few they are—gradually by selective breeding; now a new and better peach, now a seedless grape, now a sweeter and larger flower, now a more convenient breed of cattle. We improve them gradually, because our ideals are vague and tentative, and our

knowledge is very limited; because Nature, too, is shy and slow in our clumsy hands. Some day all this will be better organized, and still better. That is the drift of the current in spite of the eddies. The whole world will be intelligent, educated, and cooperating; things will move faster and faster towards the subjugation of Nature. In the end, wisely and carefully we shall readjust the balance of animal and vegetable life to suit our human needs.

"This adjustment, I say, must have been done, and done well; done indeed for all Time, in the space of Time across which my machine had leaped. The air was free from gnats, the earth from weeds or fungi; everywhere were fruits and sweet and delightful flowers; brilliant butterflies flew hither and thither. The ideal of preventive medicine was attained. Diseases had been stamped out. I saw no evidence of any contagious diseases during all my stay. And I shall have to tell you later that even the processes of putrefaction and decay had been profoundly affected by these changes.

"Social triumphs, too, had been effected. I saw mankind housed in splendid shelters, gloriously clothed, and as yet I had found them engaged in no toil. There were no signs of struggle, neither social nor economical struggle. The shop, the advertisement, traffic, all that commerce which constitutes the body of our world, was gone. It was natural on that golden evening that I should jump at the idea of a social paradise. The difficulty of increasing population had been met, I guessed, and population had ceased to increase.

"But with this change in condition comes inevitably adaptations to the change. What, unless biological science is a mass of errors, is the cause of human intelligence and vigour? Hardship and freedom: conditions under which the active, strong, and subtle survive and the weaker go to the wall; conditions that put a premium upon the loyal alliance of capable men, upon self-restraint, patience, and decision. And the institution of the family, and the emotions that arise therein, the fierce jealousy, the tenderness for offspring, parental self-devotion, all found their justification and support in the imminent dangers of

the young. Now, where are these imminent dangers? There is a sentiment arising, and it will grow, against connubial jealousy, against fierce maternity, against passion of all sorts; unnecessary things now, and things that make us uncomfortable, savage survivals, discords in a refined and pleasant life.

"I thought of the physical slightness of the people, their lack of intelligence, and those big abundant ruins, and it strengthened my belief in a perfect conquest of Nature. For after the battle comes Quiet. Humanity had been strong, energetic, and intelligent, and had used all its abundant vitality to alter the conditions under which it lived. And now came the reaction of the altered conditions.

"Under the new conditions of perfect comfort and security, that restless energy, that with us is strength, would become weakness. Even in our own time certain tendencies and desires, once necessary to survival, are a constant source of failure. Physical courage and the love of battle, for instance, are no great help—may even be hindrances—to a civilized man. And in a state of physical balance and security, power, intellectual as well as physical, would be out of place. For countless years I judged there had been no danger of war or solitary violence, no danger from wild beasts, no wasting disease to require strength of constitution, no need of toil. For such a life, what we should call the weak are as well equipped as the strong, are indeed no longer weak. Better equipped indeed they are, for the strong would be fretted by an energy for which there was no outlet. No doubt the exquisite beauty of the buildings I saw was the outcome of the last surgings of the now purposeless energy of mankind before it settled down into perfect harmony with the conditions under which it lived—the flourish of that triumph which began the last great peace. This has ever been the fate of energy in security; it takes to art and to eroticism, and then come languor and decay.

"Even this artistic impetus would at last die away—had almost died in the Time I saw. To adorn themselves with flowers, to dance, to sing in the sunlight: so much was left of the artistic spirit, and no

more. Even that would fade in the end into a contented inactivity. We are kept keen on the grindstone of pain and necessity, and, it seemed to me, that here was that hateful grindstone broken at last!

"As I stood there in the gathering dark I thought that in this simple explanation I had mastered the problem of the world—mastered the whole secret of these delicious people. Possibly the checks they had devised for the increase of population had succeeded too well, and their numbers had rather diminished than kept stationary. That would account for the abandoned ruins. Very simple was my explanation, and plausible enough—as most wrong theories are!

5

"As I stood there musing over this too perfect triumph of man, the full moon, yellow and gibbous, came up out of an overflow of silver light in the northeast. The bright little figures ceased to move about below, a noiseless owl flitted by, and I shivered with the chill of the night. I determined to descend and find where I could sleep.

"I looked for the building I knew. Then my eye travelled along to the figure of the White Sphinx upon the pedestal of bronze, growing distinct as the light of the rising moon grew brighter. I could see the silver birch against it. There was the tangle of rhododendron bushes, black in the pale light, and there was the little lawn. I looked at the lawn again. A queer doubt chilled my complacency. "No," said I stoutly to myself, "that was not the lawn."

"But it was the lawn. For the white leprous face of the sphinx was towards it. Can you imagine what I felt as this conviction came home to me? But you cannot. The Time Machine was gone!

"At once, like a lash across the face, came the possibility of losing my own age, of being left helpless in this strange new world. The bare thought of it was an actual physical sensation. I could feel it grip me at the throat and stop my breathing. In another moment I was in a passion of fear and running with great leaping strides down the slope. Once I fell headlong and cut my face; I lost no time in stanching the blood, but jumped up and ran on, with a warm trickle down my cheek and chin. All the time I ran I was saying to myself: 'They have moved it a little, pushed it under the bushes out of the way.' Nevertheless, I ran with all my might. All the time, with the certainty that sometimes comes with excessive dread, I knew that such assurance was folly, knew instinctively that the machine was removed out of my reach. My

breath came with pain. I suppose I covered the whole distance from the hill crest to the little lawn, two miles perhaps, in ten minutes. And I am not a young man. I cursed aloud, as I ran, at my confident folly in leaving the machine, wasting good breath thereby. I cried aloud, and none answered. Not a creature seemed to be stirring in that moonlit world.

"When I reached the lawn my worst fears were realized. Not a trace of the thing was to be seen. I felt faint and cold when I faced the empty space among the black tangle of bushes. I ran round it furiously, as if the thing might be hidden in a corner, and then stopped abruptly, with my hands clutching my hair. Above me towered the sphinx, upon the bronze pedestal, white, shining, leprous, in the light of the rising moon. It seemed to smile in mockery of my dismay.

"I might have consoled myself by imagining the little people had put the mechanism in some shelter for me, had I not felt assured of their physical and intellectual inadequacy. That is what dismayed me: the sense of some hitherto unsuspected power, through whose intervention my invention had vanished. Yet, for one thing I felt assured: unless some other age had produced its exact duplicate, the machine could not have moved in time. The attachment of the levers—I will show you the method later—prevented any one from tampering with it in that way when they were removed. It had moved, and was hid, only in space. But then, where could it be?

"I think I must have had a kind of frenzy. I remember running violently in and out among the moonlit bushes all round the sphinx, and startling some white animal that, in the dim light, I took for a small deer. I remember, too, late that night, beating the bushes with my clenched fist until my knuckles were gashed and bleeding from the broken twigs. Then, sobbing and raving in my anguish of mind, I went down to the great building of stone. The big hall was dark, silent, and deserted. I slipped on the uneven floor, and fell over one of the malachite tables, almost breaking my shin. I lit a match and went on

past the dusty curtains, of which I have told you.

"There I found a second great hall covered with cushions, upon which, perhaps, a score or so of the little people were sleeping. I have no doubt they found my second appearance strange enough, coming suddenly out of the quiet darkness with inarticulate noises and the splutter and flare of a match. For they had forgotten about matches. 'Where is my Time Machine?' I began, bawling like an angry child, laying hands upon them and shaking them up together. It must have been very queer to them. Some laughed, most of them looked sorely frightened. When I saw them standing round me, it came into my head that I was doing as foolish a thing as it was possible for me to do under the circumstances, in trying to revive the sensation of fear. For, reasoning from their daylight behaviour, I thought that fear must be forgotten.

"Abruptly, I dashed down the match, and, knocking one of the people over in my course, went blundering across the big dining-hall again, out under the moonlight. I heard cries of terror and their little feet running and stumbling this way and that. I do not remember all I did as the moon crept up the sky. I suppose it was the unexpected nature of my loss that maddened me. I felt hopelessly cut off from my own kind—a strange animal in an unknown world. I must have raved to and fro, screaming and crying upon God and Fate. I have a memory of horrible fatigue, as the long night of despair wore away; of looking in this impossible place and that; of groping among moon-lit ruins and touching strange creatures in the black shadows; at last, of lying on the ground near the sphinx and weeping with absolute wretchedness. I had nothing left but misery. Then I slept, and when I woke again it was full day, and a couple of sparrows were hopping round me on the turf within reach of my arm.

"I sat up in the freshness of the morning, trying to remember how I had got there, and why I had such a profound sense of desertion and despair. Then things came clear in my mind. With the plain, reasonable daylight, I could look my circumstances fairly in the face. I

saw the wild folly of my frenzy overnight, and I could reason with myself. 'Suppose the worst?' I said. 'Suppose the machine altogether lost—perhaps destroyed? It behoves me to be calm and patient, to learn the way of the people, to get a clear idea of the method of my loss, and the means of getting materials and tools; so that in the end, perhaps, I may make another.' That would be my only hope, perhaps, but better than despair. And, after all, it was a beautiful and curious world.

"But probably, the machine had only been taken away. Still, I must be calm and patient, find its hiding-place, and recover it by force or cunning. And with that I scrambled to my feet and looked about me, wondering where I could bathe. I felt weary, stiff, and travel-soiled. The freshness of the morning made me desire an equal freshness. I had exhausted my emotion. Indeed, as I went about my business, I found myself wondering at my intense excitement overnight. I made a careful examination of the ground about the little lawn. I wasted some time in futile questionings, conveyed, as well as I was able, to such of the little people as came by. They all failed to understand my gestures; some were simply stolid, some thought it was a jest and laughed at me. I had the hardest task in the world to keep my hands off their pretty laughing faces. It was a foolish impulse, but the devil begotten of fear and blind anger was ill curbed and still eager to take advantage of my perplexity. The turf gave better counsel. I found a groove ripped in it, about midway between the pedestal of the sphinx and the marks of my feet where, on arrival, I had struggled with the overturned machine. There were other signs of removal about, with queer narrow footprints like those I could imagine made by a sloth. This directed my closer attention to the pedestal. It was, as I think I have said, of bronze. It was not a mere block, but highly decorated with deep framed panels on either side. I went and rapped at these. The pedestal was hollow. Examining the panels with care I found them discontinuous with the frames. There were no handles or keyholes, but possibly the panels, if they were

doors, as I supposed, opened from within. One thing was clear enough to my mind. It took no very great mental effort to infer that my Time Machine was inside that pedestal. But how it got there was a different problem.

"I saw the heads of two orange-clad people coming through the bushes and under some blossom-covered apple-trees towards me. I turned smiling to them and beckoned them to me. They came, and then, pointing to the bronze pedestal, I tried to intimate my wish to open it. But at my first gesture towards this they behaved very oddly. I don't know how to convey their expression to you. Suppose you were to use a grossly improper gesture to a delicate-minded woman—it is how she would look. They went off as if they had received the last possible insult. I tried a sweet-looking little chap in white next, with exactly the same result. Somehow, his manner made me feel ashamed of myself. But, as you know, I wanted the Time Machine, and I tried him once more. As he turned off, like the others, my temper got the better of me. In three strides I was after him, had him by the loose part of his robe round the neck, and began dragging him towards the sphinx. Then I saw the horror and repugnance of his face, and all of a sudden I let him go.

"But I was not beaten yet. I banged with my fist at the bronze panels. I thought I heard something stir inside—to be explicit, I thought I heard a sound like a chuckle—but I must have been mistaken. Then I got a big pebble from the river, and came and hammered till I had flattened a coil in the decorations, and the verdigris came off in powdery flakes. The delicate little people must have heard me hammering in gusty outbreaks a mile away on either hand, but nothing came of it. I saw a crowd of them upon the slopes, looking furtively at me. At last, hot and tired, I sat down to watch the place. But I was too restless to watch long; I am too Occidental for a long vigil. I could work at a problem for years, but to wait inactive for twenty-four hours—that is another matter.

"I got up after a time, and began walking aimlessly through the

bushes towards the hill again. 'Patience,' said I to myself. 'If you want your machine again you must leave that sphinx alone. If they mean to take your machine away, it's little good your wrecking their bronze panels, and if they don't, you will get it back as soon as you can ask for it. To sit among all those unknown things before a puzzle like that is hopeless. That way lies monomania. Face this world. Learn its ways, watch it, be careful of too hasty guesses at its meaning. In the end you will find clues to it all.' Then suddenly the humour of the situation came into my mind: the thought of the years I had spent in study and toil to get into the future age, and now my passion of anxiety to get out of it. I had made myself the most complicated and the most hopeless trap that ever a man devised. Although it was at my own expense, I could not help myself. I laughed aloud.

"Going through the big palace, it seemed to me that the little people avoided me. It may have been my fancy, or it may have had something to do with my hammering at the gates of bronze. Yet I felt tolerably sure of the avoidance. I was careful, however, to show no concern and to abstain from any pursuit of them, and in the course of a day or two things got back to the old footing. I made what progress I could in the language, and in addition I pushed my explorations here and there. Either I missed some subtle point or their language was excessively simple—almost exclusively composed of concrete substantives and verbs. There seemed to be few, if any, abstract terms, or little use of figurative language. Their sentences were usually simple and of two words, and I failed to convey or understand any but the simplest propositions. I determined to put the thought of my Time Machine and the mystery of the bronze doors under the sphinx as much as possible in a corner of memory, until my growing knowledge would lead me back to them in a natural way. Yet a certain feeling, you may understand, tethered me in a circle of a few miles round the point of my arrival.

"So far as I could see, all the world displayed the same exuberant richness as the Thames valley. From every hill I climbed I saw the

same abundance of splendid buildings, endlessly varied in material and style, the same clustering thickets of evergreens, the same blossom-laden trees and tree-ferns. Here and there water shone like silver, and beyond, the land rose into blue undulating hills, and so faded into the serenity of the sky. A peculiar feature, which presently attracted my attention, was the presence of certain circular wells, several, as it seemed to me, of a very great depth. One lay by the path up the hill, which I had followed during my first walk. Like the others, it was rimmed with bronze, curiously wrought, and protected by a little cupola from the rain. Sitting by the side of these wells, and peering down into the shafted darkness, I could see no gleam of water, nor could I start any reflection with a lighted match. But in all of them I heard a certain sound: a thud—thud—thud, like the beating of some big engine; and I discovered, from the flaring of my matches, that a steady current of air set down the shafts. Further, I threw a scrap of paper into the throat of one, and, instead of fluttering slowly down, it was at once sucked swiftly out of sight.

"After a time, too, I came to connect these wells with tall towers standing here and there upon the slopes; for above them there was often just such a flicker in the air as one sees on a hot day above a sun-scorched beach. Putting things together, I reached a strong suggestion of an extensive system of subterranean ventilation, whose true import it was difficult to imagine. I was at first inclined to associate it with the sanitary apparatus of these people. It was an obvious conclusion, but it was absolutely wrong.

"And here I must admit that I learned very little of drains and bells and modes of conveyance, and the like conveniences, during my time in this real future. In some of these visions of Utopias and coming times which I have read, there is a vast amount of detail about building, and social arrangements, and so forth. But while such details are easy enough to obtain when the whole world is contained in one's imagination, they are altogether inaccessible to a real traveller amid such realities as I found here. Conceive the tale of London which a

negro, fresh from Central Africa, would take back to his tribe! What would he know of railway companies, of social movements, of telephone and telegraph wires, of the Parcels Delivery Company, and postal orders and the like? Yet we, at least, should be willing enough to explain these things to him! And even of what he knew, how much could he make his untravelled friend either apprehend or believe? Then, think how narrow the gap between a negro and a white man of our own times, and how wide the interval between myself and these of the Golden Age! I was sensible of much which was unseen, and which contributed to my comfort; but save for a general impression of automatic organization, I fear I can convey very little of the difference to your mind.

"In the matter of sepulture, for instance, I could see no signs of crematoria nor anything suggestive of tombs. But it occurred to me that, possibly, there might be cemeteries (or crematoria) somewhere beyond the range of my explorings. This, again, was a question I deliberately put to myself, and my curiosity was at first entirely defeated upon the point. The thing puzzled me, and I was led to make a further remark, which puzzled me still more: that aged and infirm among this people there were none.

"I must confess that my satisfaction with my first theories of an automatic civilization and a decadent humanity did not long endure. Yet I could think of no other. Let me put my difficulties. The several big palaces I had explored were mere living places, great dining-halls and sleeping apartments. I could find no machinery, no appliances of any kind. Yet these people were clothed in pleasant fabrics that must at times need renewal, and their sandals, though undecorated, were fairly complex specimens of metalwork. Somehow such things must be made. And the little people displayed no vestige of a creative tendency. There were no shops, no workshops, no sign of importations among them. They spent all their time in playing gently, in bathing in the river, in making love in a half-playful fashion, in eating fruit and sleeping. I could not see how things were kept going.

"Then, again, about the Time Machine: something, I knew not what, had taken it into the hollow pedestal of the White Sphinx. *Why?* For the life of me I could not imagine. Those waterless wells, too, those flickering pillars. I felt I lacked a clue. I felt—how shall I put it? Suppose you found an inscription, with sentences here and there in excellent plain English, and interpolated therewith, others made up of words, of letters even, absolutely unknown to you? Well, on the third day of my visit, that was how the world of Eight Hundred and Two Thousand Seven Hundred and One presented itself to me!

"That day, too, I made a friend—of a sort. It happened that, as I was watching some of the little people bathing in a shallow, one of them was seized with cramp and began drifting downstream. The main current ran rather swiftly, but not too strongly for even a moderate swimmer. It will give you an idea, therefore, of the strange deficiency in these creatures, when I tell you that none made the slightest attempt to rescue the weakly crying little thing which was drowning before their eyes. When I realized this, I hurriedly slipped off my clothes, and, wading in at a point lower down, I caught the poor mite and drew her safe to land. A little rubbing of the limbs soon brought her round, and I had the satisfaction of seeing she was all right before I left her. I had got to such a low estimate of her kind that I did not expect any gratitude from her. In that, however, I was wrong.

"This happened in the morning. In the afternoon I met my little woman, as I believe it was, as I was returning towards my centre from an exploration, and she received me with cries of delight and presented me with a big garland of flowers—evidently made for me and me alone. The thing took my imagination. Very possibly I had been feeling desolate. At any rate I did my best to display my appreciation of the gift. We were soon seated together in a little stone arbour, engaged in conversation, chiefly of smiles. The creature's friendliness affected me exactly as a child's might have done. We passed each other flowers, and she kissed my hands. I did the same to

hers. Then I tried talk, and found that her name was Weena, which, though I don't know what it meant, somehow seemed appropriate enough. That was the beginning of a queer friendship which lasted a week, and ended—as I will tell you!

"She was exactly like a child. She wanted to be with me always. She tried to follow me everywhere, and on my next journey out and about it went to my heart to tire her down, and leave her at last, exhausted and calling after me rather plaintively. But the problems of the world had to be mastered. I had not, I said to myself, come into the future to carry on a miniature flirtation. Yet her distress when I left her was very great, her expostulations at the parting were sometimes frantic, and I think, altogether, I had as much trouble as comfort from her devotion. Nevertheless she was, somehow, a very great comfort. I thought it was mere childish affection that made her cling to me. Until it was too late, I did not clearly know what I had inflicted upon her when I left her. Nor until it was too late did I clearly understand what she was to me. For, by merely seeming fond of me, and showing in her weak, futile way that she cared for me, the little doll of a creature presently gave my return to the neighbourhood of the White Sphinx almost the feeling of coming home; and I would watch for her tiny figure of white and gold so soon as I came over the hill.

"It was from her, too, that I learned that fear had not yet left the world. She was fearless enough in the daylight, and she had the oddest confidence in me; for once, in a foolish moment, I made threatening grimaces at her, and she simply laughed at them. But she dreaded the dark, dreaded shadows, dreaded black things. Darkness to her was the one thing dreadful. It was a singularly passionate emotion, and it set me thinking and observing. I discovered then, among other things, that these little people gathered into the great houses after dark, and slept in droves. To enter upon them without a light was to put them into a tumult of apprehension. I never found one out of doors, or one sleeping alone within doors, after dark. Yet I was

still such a blockhead that I missed the lesson of that fear, and in spite of Weena's distress I insisted upon sleeping away from these slumbering multitudes.

"It troubled her greatly, but in the end her odd affection for me triumphed, and for five of the nights of our acquaintance, including the last night of all, she slept with her head pillowed on my arm. But my story slips away from me as I speak of her. It must have been the night before her rescue that I was awakened about dawn. I had been restless, dreaming most disagreeably that I was drowned, and that sea anemones were feeling over my face with their soft palps. I woke with a start, and with an odd fancy that some greyish animal had just rushed out of the chamber. I tried to get to sleep again, but I felt restless and uncomfortable. It was that dim grey hour when things are just creeping out of darkness, when everything is colourless and clear cut, and yet unreal. I got up, and went down into the great hall, and so out upon the flagstones in front of the palace. I thought I would make a virtue of necessity, and see the sunrise.

"The moon was setting, and the dying moonlight and the first pallor of dawn were mingled in a ghastly half-light. The bushes were inky black, the ground a sombre grey, the sky colourless and cheerless. And up the hill I thought I could see ghosts. There several times, as I scanned the slope, I saw white figures. Twice I fancied I saw a solitary white, ape-like creature running rather quickly up the hill, and once near the ruins I saw a leash of them carrying some dark body. They moved hastily. I did not see what became of them. It seemed that they vanished among the bushes. The dawn was still indistinct, you must understand. I was feeling that chill, uncertain, early-morning feeling you may have known. I doubted my eyes.

"As the eastern sky grew brighter, and the light of the day came on and its vivid colouring returned upon the world once more, I scanned the view keenly. But I saw no vestige of my white figures. They were mere creatures of the half light. 'They must have been ghosts,' I said; 'I wonder whence they dated.' For a queer notion of

Grant Alien's came into my head, and amused me. If each generation die and leave ghosts, he argued, the world at last will get overcrowded with them. On that theory they would have grown innumerable some Eight Hundred Thousand Years hence, and it was no great wonder to see four at once. But the jest was unsatisfying, and I was thinking of these figures all the morning, until Weena's rescue drove them out of my head. I associated them in some indefinite way with the white animal I had startled in my first passionate search for the Time Machine. But Weena was a pleasant substitute. Yet all the same, they were soon destined to take far deadlier possession of my mind.

"I think I have said how much hotter than our own was the weather of this Golden Age. I cannot account for it. It may be that the sun was hotter, or the earth nearer the sun. It is usual to assume that the sun will go on cooling steadily in the future. But people, unfamiliar with such speculations as those of the younger Darwin, forget that the planets must ultimately fall back one by one into the parent body. As these catastrophes occur, the sun will blaze with renewed energy; and it may be that some inner planet had suffered this fate. Whatever the reason, the fact remains that the sun was very much hotter than we know it.

"Well, one very hot morning—my fourth, I think—as I was seeking shelter from the heat and glare in a colossal ruin near the great house where I slept and fed, there happened this strange thing: Clambering among these heaps of masonry, I found a narrow gallery, whose end and side windows were blocked by fallen masses of stone. By contrast with the brilliancy outside, it seemed at first impenetrably dark to me. I entered it groping, for the change from light to blackness made spots of colour swim before me. Suddenly I halted spellbound. A pair of eyes, luminous by reflection against the daylight without, was watching me out of the darkness.

"The old instinctive dread of wild beasts came upon me. I clenched my hands and steadfastly looked into the glaring eyeballs. I was afraid to turn. Then the thought of the absolute security in which

humanity appeared to be living came to my mind. And then I remembered that strange terror of the dark. Overcoming my fear to some extent, I advanced a step and spoke. I will admit that my voice was harsh and ill-controlled. I put out my hand and touched something soft. At once the eyes darted sideways, and something white ran past me. I turned with my heart in my mouth, and saw a queer little ape-like figure, its head held down in a peculiar manner, running across the sunlit space behind me. It blundered against a block of granite, staggered aside, and in a moment was hidden in a black shadow beneath another pile of ruined masonry.

"My impression of it is, of course, imperfect; but I know it was a dull white, and had strange large greyish-red eyes; also that there was flaxen hair on its head and down its back. But, as I say, it went too fast for me to see distinctly. I cannot even say whether it ran on all-fours, or only with its forearms held very low. After an instant's pause I followed it into the second heap of ruins. I could not find it at first; but, after a time in the profound obscurity, I came upon one of those round well-like openings of which I have told you, half closed by a fallen pillar. A sudden thought came to me. Could this Thing have vanished down the shaft? I lit a match, and, looking down, I saw a small, white, moving creature, with large bright eyes which regarded me steadfastly as it retreated. It made me shudder. It was so like a human spider! It was clambering down the wall, and now I saw for the first time a number of metal foot and hand rests forming a kind of ladder down the shaft. Then the light burned my fingers and fell out of my hand, going out as it dropped, and when I had lit another the little monster had disappeared.

"I do not know how long I sat peering down that well. It was not for some time that I could succeed in persuading myself that the thing I had seen was human. But, gradually, the truth dawned on me: that Man had not remained one species, but had differentiated into two distinct animals: that my graceful children of the Upper-world were not the sole descendants of our generation, but that this bleached,

obscene, nocturnal Thing, which had flashed before me, was also heir to all the ages.

"I thought of the flickering pillars and of my theory of an underground ventilation. I began to suspect their true import. And what, I wondered, was this Lemur doing in my scheme of a perfectly balanced organization? How was it related to the indolent serenity of the beautiful Upper-worlders? And what was hidden down there, at the foot of that shaft? I sat upon the edge of the well telling myself that, at any rate, there was nothing to fear, and that there I must descend for the solution of my difficulties. And withal I was absolutely afraid to go! As I hesitated, two of the beautiful Upper-world people came running in their amorous sport across the daylight in the shadow. The male pursued the female, flinging flowers at her as he ran.

"They seemed distressed to find me, my arm against the overturned pillar, peering down the well. Apparently it was considered bad form to remark these apertures; for when I pointed to this one, and tried to frame a question about it in their tongue, they were still more visibly distressed and turned away. But they were interested by my matches, and I struck some to amuse them. I tried them again about the well, and again I failed. So presently I left them, meaning to go back to Weena, and see what I could get from her. But my mind was already in revolution; my guesses and impressions were slipping and sliding to a new adjustment. I had now a clue to the import of these wells, to the ventilating towers, to the mystery of the ghosts; to say nothing of a hint at the meaning of the bronze gates and the fate of the Time Machine! And very vaguely there came a suggestion towards the solution of the economic problem that had puzzled me.

"Here was the new view. Plainly, this second species of Man was subterranean. There were three circumstances in particular which made me think that its rare emergence above ground was the outcome of a long-continued underground habit. In the first place, there was

the bleached look common in most animals that live largely in the dark—the white fish of the Kentucky caves, for instance. Then, those large eyes, with that capacity for reflecting light, are common features of nocturnal things—witness the owl and the cat. And last of all, that evident confusion in the sunshine, that hasty yet fumbling awkward flight towards dark shadow, and that peculiar carriage of the head while in the light—all reinforced the theory of an extreme sensitiveness of the retina.

"Beneath my feet, then, the earth must be tunnelled enormously, and these tunnellings were the habitat of the new race. The presence of ventilating shafts and wells along the hill slopes—everywhere, in fact, except along the river valley—showed how universal were its ramifications. What so natural, then, as to assume that it was in this artificial Under-world that such work as was necessary to the comfort of the daylight race was done? The notion was so plausible that I at once accepted it, and went on to assume the how of this splitting of the human species. I dare say you will anticipate the shape of my theory; though, for myself, I very soon felt that it fell far short of the truth.

"At first, proceeding from the problems of our own age, it seemed clear as daylight to me that the gradual widening of the present merely temporary and social difference between the Capitalist and the Labourer, was the key to the whole position. No doubt it will seem grotesque enough to you—and wildly incredible!—and yet even now there are existing circumstances to point that way. There is a tendency to utilize underground space for the less ornamental purposes of civilization; there is the Metropolitan Railway in London, for instance, there are new electric railways, there are subways, there are underground workrooms and restaurants, and they increase and multiply. Evidently, I thought, this tendency had increased till Industry had gradually lost its birthright in the sky. I mean that it had gone deeper and deeper into larger and ever larger underground factories, spending a still-increasing amount of its time therein, till, in

the end—! Even now, does not an East-end worker live in such artificial conditions as practically to be cut off from the natural surface of the earth?

"Again, the exclusive tendency of richer people—due, no doubt, to the increasing refinement of their education, and the widening gulf between them and the rude violence of the poor—is already leading to the closing, in their interest, of considerable portions of the surface of the land. About London, for instance, perhaps half the prettier country is shut in against intrusion. And this same widening gulf—which is due to the length and expense of the higher educational process and the increased facilities for and temptations towards refined habits on the part of the rich—will make that exchange between class and class, that promotion by intermarriage which at present retards the splitting of our species along lines of social stratification, less and less frequent. So, in the end, above ground you must have the Haves, pursuing pleasure and comfort and beauty, and below ground the Have-nots, the Workers getting continually adapted to the conditions of their labour. Once they were there, they would no doubt have to pay rent, and not a little of it, for the ventilation of their caverns; and if they refused, they would starve or be suffocated for arrears. Such of them as were so constituted as to be miserable and rebellious would die; and, in the end, the balance being permanent, the survivors would become as well adapted to the conditions of underground life, and as happy in their way, as the Upper-world people were to theirs. As it seemed to me, the refined beauty and the etiolated pallor followed naturally enough.

"The great triumph of Humanity I had dreamed of took a different shape in my mind. It had been no such triumph of moral education and general cooperation as I had imagined. Instead, I saw a real aristocracy, armed with a perfected science and working to a logical conclusion the industrial system of today. Its triumph had not been simply a triumph over Nature, but a triumph over Nature and the fellowman. This, I must warn you, was my theory at the time. I had no

convenient cicerone in the pattern of the Utopian books. My explanation may be absolutely wrong. I still think it is the most plausible one. But even on this supposition the balanced civilization that was at last attained must have long since passed its zenith, and was now far fallen into decay. The too-perfect security of the Upper-worlders had led them to a slow movement of degeneration, to a general dwindling in size, strength, and intelligence. That I could see clearly enough already. What had happened to the Under-grounders I did not yet suspect; but from what I had seen of the Morlocks—that, by the by, was the name by which these creatures were called—I could imagine that the modification of the human type was even far more profound than among the 'Eloi,' the beautiful race that I already knew.

"Then came troublesome doubts. Why had the Morlocks taken my Time Machine? For I felt sure it was they who had taken it. Why, too, if the Eloi were masters, could they not restore the machine to me? And why were they so terribly afraid of the dark? I proceeded, as I have said, to question Weena about this Under-world, but here again I was disappointed. At first she would not understand my questions, and presently she refused to answer them. She shivered as though the topic was unendurable. And when I pressed her, perhaps a little harshly, she burst into tears. They were the only tears, except my own, I ever saw in that Golden Age. When I saw them I ceased abruptly to trouble about the Morlocks, and was only concerned in banishing these signs of the human inheritance from Weena's eyes. And very soon she was smiling and clapping her hands, while I solemnly burned a match.

6

"It may seem odd to you, but it was two days before I could follow up the new-found clue in what was manifestly the proper way. I felt a peculiar shrinking from those pallid bodies. They were just the half-bleached colour of the worms and things one sees preserved in spirit in a zoological museum. And they were filthily cold to the touch. Probably my shrinking was largely due to the sympathetic influence of the Eloi, whose disgust of the Morlocks I now began to appreciate.

"The next night I did not sleep well. Probably my health was a little disordered. I was oppressed with perplexity and doubt. Once or twice I had a feeling of intense fear for which I could perceive no definite reason. I remember creeping noiselessly into the great hall where the little people were sleeping in the moonlight—that night Weena was among them—and feeling reassured by their presence. It occurred to me even then, that in the course of a few days the moon must pass through its last quarter, and the nights grow dark, when the appearances of these unpleasant creatures from below, these whitened Lemurs, this new vermin that had replaced the old, might be more abundant. And on both these days I had the restless feeling of one who shirks an inevitable duty. I felt assured that the Time Machine was only to be recovered by boldly penetrating these under-ground mysteries. Yet I could not face the mystery. If only I had had a companion it would have been different. But I was so horribly alone, and even to clamber down into the darkness of the well appalled me. I don't know if you will understand my feeling, but I never felt quite safe at my back.

"It was this restlessness, this insecurity, perhaps, that drove me

further and further afield in my exploring expeditions. Going to the south-westward towards the rising country that is now called Combe Wood, I observed far off, in the direction of nineteenth-century Banstead, a vast green structure, different in character from any I had hitherto seen. It was larger than the largest of the palaces or ruins I knew, and the facade had an Oriental look: the face of it having the lustre, as well as the pale green tint, a kind of bluish-green, of a certain type of Chinese porcelain. This difference in aspect suggested a difference in use, and I was minded to push on and explore. But the day was growing late, and I had come upon the sight of the place after a long and tiring circuit; so I resolved to hold over the adventure for the following day, and I returned to the welcome and the caresses of little Weena. But next morning I perceived clearly enough that my curiosity regarding the Palace of Green Porcelain was a piece of self-deception, to enable me to shirk, by another day, an experience I dreaded. I resolved I would make the descent without further waste of time, and started out in the early morning towards a well near the ruins of granite and aluminium.

"Little Weena ran with me. She danced beside me to the well, but when she saw me lean over the mouth and look downward, she seemed strangely disconcerted. "Goodbye, little Weena," I said, kissing her; and then putting her down, I began to feel over the parapet for the climbing hooks. Rather hastily, I may as well confess, for I feared my courage might leak away! At first she watched me in amazement. Then she gave a most piteous cry, and running to me, she began to pull at me with her little hands. I think her opposition nerved me rather to proceed. I shook her off, perhaps a little roughly, and in another moment I was in the throat of the well. I saw her agonized face over the parapet, and smiled to reassure her. Then I had to look down at the unstable hooks to which I clung.

"I had to clamber down a shaft of perhaps two hundred yards. The descent was effected by means of metallic bars projecting from the sides of the well, and these being adapted to the needs of a creature

much smaller and lighter than myself, I was speedily cramped and fatigued by the descent. And not simply fatigued! One of the bars bent suddenly under my weight, and almost swung me off into the blackness beneath. For a moment I hung by one hand, and after that experience I did not dare to rest again. Though my arms and back were presently acutely painful, I went on clambering down the sheer descent with as quick a motion as possible. Glancing upward, I saw the aperture, a small blue disk, in which a star was visible, while little Weena's head showed as a round black projection. The thudding sound of a machine below grew louder and more oppressive. Everything save that little disk above was profoundly dark, and when I looked up again Weena had disappeared.

"I was in an agony of discomfort. I had some thought of trying to go up the shaft again, and leave the Under-world alone. But even while I turned this over in my mind I continued to descend. At last, with intense relief, I saw dimly coming up, a foot to the right of me, a slender loophole in the wall. Swinging myself in, I found it was the aperture of a narrow horizontal tunnel in which I could lie down and rest. It was not too soon. My arms ached, my back was cramped, and I was trembling with the prolonged terror of a fall. Besides this, the unbroken darkness had had a distressing effect upon my eyes. The air was full of the throb and hum of machinery pumping air down the shaft.

"I do not know how long I lay. I was roused by a soft hand touching my face. Starting up in the darkness I snatched at my matches and, hastily striking one, I saw three stooping white creatures similar to the one I had seen above ground in the ruin, hastily retreating before the light. Living, as they did, in what appeared to me impenetrable darkness, their eyes were abnormally large and sensitive, just as are the pupils of the abysmal fishes, and they reflected the light in the same way. I have no doubt they could see me in that rayless obscurity, and they did not seem to have any fear of me apart from the light. But, so soon as I struck a match in order to see

them, they fled incontinently, vanishing into dark gutters and tunnels, from which their eyes glared at me in the strangest fashion.

"I tried to call to them, but the language they had was apparently different from that of the Over-world people; so that I was left to my own unaided efforts, and the thought of flight before exploration was even then in my mind. But I said to myself, "You are in for it now," and, feeling my way along the tunnel, I found the noise of machinery grow louder. Presently the walls fell away from me, and I came to a large open space, and striking another match, saw that I had entered a vast arched cavern, which stretched into utter darkness beyond the range of my light. The view I had of it was as much as one could see in the burning of a match.

"Necessarily my memory is vague. Great shapes like big machines rose out of the dimness, and cast grotesque black shadows, in which dim spectral Morlocks sheltered from the glare. The place, by the by, was very stuffy and oppressive, and the faint halitus of freshly shed blood was in the air. Some way down the central vista was a little table of white metal, laid with what seemed a meal. The Morlocks at any rate were carnivorous! Even at the time, I remember wondering what large animal could have survived to furnish the red joint I saw. It was all very indistinct: the heavy smell, the big unmeaning shapes, the obscene figures lurking in the shadows, and only waiting for the darkness to come at me again! Then the match burned down, and stung my fingers, and fell, a wriggling red spot in the blackness.

"I have thought since how particularly ill-equipped I was for such an experience. When I had started with the Time Machine, I had started with the absurd assumption that the men of the Future would certainly be infinitely ahead of ourselves in all their appliances. I had come without arms, without medicine, without anything to smoke—at times I missed tobacco frightfully—even without enough matches. If only I had thought of a Kodak! I could have flashed that glimpse of the Under-world in a second, and examined it at leisure. But, as it was, I stood there with only the weapons and the powers that Nature

had endowed me with—hands, feet, and teeth; these, and four safety-matches that still remained to me.

"I was afraid to push my way in among all this machinery in the dark, and it was only with my last glimpse of light I discovered that my store of matches had run low. It had never occurred to me until that moment that there was any need to economize them, and I had wasted almost half the box in astonishing the Upper-worlders, to whom fire was a novelty. Now, as I say, I had four left, and while I stood in the dark, a hand touched mine, lank fingers came feeling over my face, and I was sensible of a peculiar unpleasant odour. I fancied I heard the breathing of a crowd of those dreadful little beings about me. I felt the box of matches in my hand being gently disengaged, and other hands behind me plucking at my clothing. The sense of these unseen creatures examining me was indescribably unpleasant. The sudden realization of my ignorance of their ways of thinking and doing came home to me very vividly in the darkness. I shouted at them as loudly as I could. They started away, and then I could feel them approaching me again. They clutched at me more boldly, whispering odd sounds to each other. I shivered violently, and shouted again—rather discordantly. This time they were not so seriously alarmed, and they made a queer laughing noise as they came back at me. I will confess I was horribly frightened. I determined to strike another match and escape under the protection of its glare. I did so, and eking out the flicker with a scrap of paper from my pocket, I made good my retreat to the narrow tunnel. But I had scarce entered this when my light was blown out and in the blackness I could hear the Morlocks rustling like wind among leaves, and pattering like the rain, as they hurried after me.

"In a moment I was clutched by several hands, and there was no mistaking that they were trying to haul me back. I struck another light, and waved it in their dazzled faces. You can scarce imagine how nauseatingly inhuman they looked—those pale, chinless faces and great, lidless, pinkish-grey eyes!—as they stared in their blindness and

bewilderment. But I did not stay to look, I promise you: I retreated again, and when my second match had ended, I struck my third. It had almost burned through when I reached the opening into the shaft. I lay down on the edge, for the throb of the great pump below made me giddy. Then I felt sideways for the projecting hooks, and, as I did so, my feet were grasped from behind, and I was violently tugged backward. I lit my last match ... and it incontinently went out. But I had my hand on the climbing bars now, and, kicking violently, I disengaged myself from the clutches of the Morlocks and was speedily clambering up the shaft, while they stayed peering and blinking up at me: all but one little wretch who followed me for some way, and well-nigh secured my boot as a trophy.

"That climb seemed interminable to me. With the last twenty or thirty feet of it a deadly nausea came upon me. I had the greatest difficulty in keeping my hold. The last few yards was a frightful struggle against this faintness. Several times my head swam, and I felt all the sensations of falling. At last, however, I got over the well-mouth somehow, and staggered out of the ruin into the blinding sunlight. I fell upon my face. Even the soil smelt sweet and clean. Then I remember Weena kissing my hands and ears, and the voices of others among the Eloi. Then, for a time, I was insensible.

7

"Now, indeed, I seemed in a worse case than before. Hitherto, except during my night's anguish at the loss of the Time Machine, I had felt a sustaining hope of ultimate escape, but that hope was staggered by these new discoveries. Hitherto I had merely thought myself impeded by the childish simplicity of the little people, and by some unknown forces which I had only to understand to overcome; but there was an altogether new element in the sickening quality of the Morlocks—a something inhuman and malign. Instinctively I loathed them. Before, I had felt as a man might feel who had fallen into a pit: my concern was with the pit and how to get out of it. Now I felt like a beast in a trap, whose enemy would come upon him soon.

"The enemy I dreaded may surprise you. It was the darkness of the new moon. Weena had put this into my head by some at first incomprehensible remarks about the Dark Nights. It was not now such a very difficult problem to guess what the coming Dark Nights might mean. The moon was on the wane: each night there was a longer interval of darkness. And I now understood to some slight degree at least the reason of the fear of the little Upper-world people for the dark. I wondered vaguely what foul villainy it might be that the Morlocks did under the new moon. I felt pretty sure now that my second hypothesis was all wrong. The Upper-world people might once have been the favoured aristocracy, and the Morlocks their mechanical servants: but that had long since passed away. The two species that had resulted from the evolution of man were sliding down towards, or had already arrived at, an altogether new relationship. The Eloi, like the Carolingian kings, had decayed to a mere beautiful futility. They still possessed the earth on sufferance: since the

Morlocks, subterranean for innumerable generations, had come at last to find the daylight surface intolerable. And the Morlocks made their garments, I inferred, and maintained them in their habitual needs, perhaps through the survival of an old habit of service. They did it as a standing horse paws with his foot, or as a man enjoys killing animals in sport: because ancient and departed necessities had impressed it on the organism. But, clearly, the old order was already in part reversed. The Nemesis of the delicate ones was creeping on apace. Ages ago, thousands of generations ago, man had thrust his brother man out of the ease and the sunshine. And now that brother was coming back changed! Already the Eloi had begun to learn one old lesson anew. They were becoming reacquainted with Fear. And suddenly there came into my head the memory of the meat I had seen in the Underworld. It seemed odd how it floated into my mind: not stirred up as it were by the current of my meditations, but coming in almost like a question from outside. I tried to recall the form of it. I had a vague sense of something familiar, but I could not tell what it was at the time.

"Still, however helpless the little people in the presence of their mysterious Fear, I was differently constituted. I came out of this age of ours, this ripe prime of the human race, when Fear does not paralyze and mystery has lost its terrors. I at least would defend myself. Without further delay I determined to make myself arms and a fastness where I might sleep. With that refuge as a base, I could face this strange world with some of that confidence I had lost in realizing to what creatures night by night I lay exposed. I felt I could never sleep again until my bed was secure from them. I shuddered with horror to think how they must already have examined me.

"I wandered during the afternoon along the valley of the Thames, but found nothing that commended itself to my mind as inaccessible. All the buildings and trees seemed easily practicable to such dexterous climbers as the Morlocks, to judge by their wells, must be. Then the tall pinnacles of the Palace of Green Porcelain and the polished gleam

of its walls came back to my memory; and in the evening, taking Weena like a child upon my shoulder, I went up the hills towards the south-west. The distance, I had reckoned, was seven or eight miles, but it must have been nearer eighteen. I had first seen the place on a moist afternoon when distances are deceptively diminished. In addition, the heel of one of my shoes was loose, and a nail was working through the sole—they were comfortable old shoes I wore about indoors—so that I was lame. And it was already long past sunset when I came in sight of the palace, silhouetted black against the pale yellow of the sky.

"Weena had been hugely delighted when I began to carry her, but after a while she desired me to let her down, and ran along by the side of me, occasionally darting off on either hand to pick flowers to stick in my pockets. My pockets had always puzzled Weena, but at the last she had concluded that they were an eccentric kind of vase for floral decoration. At least she utilized them for that purpose. And that reminds me! In changing my jacket I found..."

The Time Traveller paused, put his hand into his pocket, and silently placed two withered flowers, not unlike very large white mallows, upon the little table. Then he resumed his narrative.

"As the hush of evening crept over the world and we proceeded over the hill crest towards Wimbledon, Weena grew tired and wanted to return to the house of grey stone. But I pointed out the distant pinnacles of the Palace of Green Porcelain to her, and contrived to make her understand that we were seeking a refuge there from her Fear. You know that great pause that comes upon things before the dusk? Even the breeze stops in the trees. To me there is always an air of expectation about that evening stillness. The sky was clear, remote, and empty save for a few horizontal bars far down in the sunset. Well, that night the expectation took the colour of my fears. In that darkling calm my senses seemed preternaturally sharpened. I fancied I could even feel the hollowness of the ground beneath my feet: could, indeed, almost see through it the Morlocks on their ant-hill going hither and

thither and waiting for the dark. In my excitement I fancied that they would receive my invasion of their burrows as a declaration of war. And why had they taken my Time Machine?

"So we went on in the quiet, and the twilight deepened into night. The clear blue of the distance faded, and one star after another came out. The ground grew dim and the trees black. Weena's fears and her fatigue grew upon her. I took her in my arms and talked to her and caressed her. Then, as the darkness grew deeper, she put her arms round my neck, and, closing her eyes, tightly pressed her face against my shoulder. So we went down a long slope into a valley, and there in the dimness I almost walked into a little river. This I waded, and went up the opposite side of the valley, past a number of sleeping houses, and by a statue—a Faun, or some such figure, minus the head. Here too were acacias. So far I had seen nothing of the Morlocks, but it was yet early in the night, and the darker hours before the old moon rose were still to come.

"From the brow of the next hill I saw a thick wood spreading wide and black before me. I hesitated at this. I could see no end to it, either to the right or the left. Feeling tired—my feet, in particular, were very sore—I carefully lowered Weena from my shoulder as I halted, and sat down upon the turf. I could no longer see the Palace of Green Porcelain, and I was in doubt of my direction. I looked into the thickness of the wood and thought of what it might hide. Under that dense tangle of branches one would be out of sight of the stars. Even were there no other lurking danger—a danger I did not care to let my imagination loose upon—there would still be all the roots to stumble over and the tree-boles to strike against.

"I was very tired, too, after the excitements of the day; so I decided that I would not face it, but would pass the night upon the open hill.

"Weena, I was glad to find, was fast asleep. I carefully wrapped her in my jacket, and sat down beside her to wait for the moonrise. The hillside was quiet and deserted, but from the black of the wood

there came now and then a stir of living things. Above me shone the stars, for the night was very clear. I felt a certain sense of friendly comfort in their twinkling. All the old constellations had gone from the sky, however: that slow movement which is imperceptible in a hundred human lifetimes, had long since rearranged them in unfamiliar groupings. But the Milky Way, it seemed to me, was still the same tattered streamer of stardust as of yore. Southward (as I judged it) was a very bright red star that was new to me; it was even more splendid than our own green Sirius. And amid all these scintillating points of light one bright planet shone kindly and steadily like the face of an old friend.

"Looking at these stars suddenly dwarfed my own troubles and all the gravities of terrestrial life. I thought of their unfathomable distance, and the slow inevitable drift of their movements out of the unknown past into the unknown future. I thought of the great precessional cycle that the pole of the earth describes. Only forty times had that silent revolution occurred during all the years that I had traversed. And during these few revolutions all the activity, all the traditions, the complex organizations, the nations, languages, literatures, aspirations, even the mere memory of Man as I knew him, had been swept out of existence. Instead were these frail creatures who had forgotten their high ancestry, and the white Things of which I went in terror. Then I thought of the Great Fear that was between the two species, and for the first time, with a sudden shiver, came the clear knowledge of what the meat I had seen might be. Yet it was too horrible! I looked at little Weena sleeping beside me, her face white and starlike under the stars, and forthwith dismissed the thought.

"Through that long night I held my mind off the Morlocks as well as I could, and whiled away the time by trying to fancy I could find signs of the old constellations in the new confusion. The sky kept very clear, except for a hazy cloud or so. No doubt I dozed at times. Then, as my vigil wore on, came a faintness in the eastward sky, like the reflection of some colourless fire, and the old moon rose, thin and

peaked and white. And close behind, and overtaking it, and overflowing it, the dawn came, pale at first, and then growing pink and warm. No Morlocks had approached us. Indeed, I had seen none upon the hill that night. And in the confidence of renewed day it almost seemed to me that my fear had been unreasonable. I stood up and found my foot with the loose heel swollen at the ankle and painful under the heel; so I sat down again, took off my shoes, and flung them away.

"I awakened Weena, and we went down into the wood, now green and pleasant instead of black and forbidding. We found some fruit wherewith to break our fast. We soon met others of the dainty ones, laughing and dancing in the sunlight as though there was no such thing in nature as the night. And then I thought once more of the meat that I had seen. I felt assured now of what it was, and from the bottom of my heart I pitied this last feeble rill from the great flood of humanity. Clearly, at some time in the Long-Ago of human decay the Morlocks' food had run short. Possibly they had lived on rats and such-like vermin. Even now man is far less discriminating and exclusive in his food than he was—far less than any monkey. His prejudice against human flesh is no deep-seated instinct. And so these inhuman sons of men—! I tried to look at the thing in a scientific spirit. After all, they were less human and more remote than our cannibal ancestors of three or four thousand years ago. And the intelligence that would have made this state of things a torment had gone. Why should I trouble myself? These Eloi were mere fatted cattle, which the ant-like Morlocks preserved and preyed upon—probably saw to the breeding of. And there was Weena dancing at my side!

"Then I tried to preserve myself from the horror that was coming upon me, by regarding it as a rigorous punishment of human selfishness. Man had been content to live in ease and delight upon the labours of his fellow-man, had taken Necessity as his watchword and excuse, and in the fullness of time Necessity had come home to him. I even tried a Carlyle-like scorn of this wretched aristocracy in decay.

But this attitude of mind was impossible. However great their intellectual degradation, the Eloi had kept too much of the human form not to claim my sympathy, and to make me perforce a sharer in their degradation and their Fear."

"I had at that time very vague ideas as to the course I should pursue. My first was to secure some safe place of refuge, and to make myself such arms of metal or stone as I could contrive. That necessity was immediate. In the next place, I hoped to procure some means of fire, so that I should have the weapon of a torch at hand, for nothing, I knew, would be more efficient against these Morlocks. Then I wanted to arrange some contrivance to break open the doors of bronze under the White Sphinx. I had in mind a battering ram. I had a persuasion that if I could enter those doors and carry a blaze of light before me I should discover the Time Machine and escape. I could not imagine the Morlocks were strong enough to move it far away. Weena I had resolved to bring with me to our own time. And turning such schemes over in my mind I pursued our way towards the building which my fancy had chosen as our dwelling."

8

"I found the Palace of Green Porcelain, when we approached it about noon, deserted and falling into ruin. Only ragged vestiges of glass remained in its windows, and great sheets of the green facing had fallen away from the corroded metallic framework. It lay very high upon a turfy down, and looking north-eastward before I entered it, I was surprised to see a large estuary, or even creek, where I judged Wandsworth and Battersea must once have been. I thought then—though I never followed up the thought—of what might have happened, or might be happening, to the living things in the sea.

"The material of the Palace proved on examination to be indeed porcelain, and along the face of it I saw an inscription in some unknown character. I thought, rather foolishly, that Weena might help me to interpret this, but I only learned that the bare idea of writing had never entered her head. She always seemed to me, I fancy, more human than she was, perhaps because her affection was so human.

"Within the big valves of the door—which were open and broken—we found, instead of the customary hall, a long gallery lit by many side windows. At the first glance I was reminded of a museum. The tiled floor was thick with dust, and a remarkable array of miscellaneous objects was shrouded in the same grey covering. Then I perceived, standing strange and gaunt in the centre of the hall, what was clearly the lower part of a huge skeleton. I recognized by the oblique feet that it was some extinct creature after the fashion of the Megatherium. The skull and the upper bones lay beside it in the thick dust, and in one place, where rainwater had dropped through a leak in the roof, the thing itself had been worn away. Further in the gallery was the huge skeleton barrel of a Brontosaurus. My museum

hypothesis was confirmed. Going towards the side I found what appeared to be sloping shelves, and clearing away the thick dust, I found the old familiar glass cases of our own time. But they must have been airtight to judge from the fair preservation of some of their contents.

"Clearly we stood among the ruins of some latter-day South Kensington! Here, apparently, was the Palaeontological Section, and a very splendid array of fossils it must have been, though the inevitable process of decay that had been staved off for a time, and had, through the extinction of bacteria and fungi, lost ninety-nine hundredths of its force, was nevertheless, with extreme sureness if with extreme slowness at work again upon all its treasures. Here and there I found traces of the little people in the shape of rare fossils broken to pieces or threaded in strings upon reeds. And the cases had in some instances been bodily removed—by the Morlocks as I judged. The place was very silent. The thick dust deadened our footsteps. Weena, who had been rolling a sea urchin down the sloping glass of a case, presently came, as I stared about me, and very quietly took my hand and stood beside me.

"And at first I was so much surprised by this ancient monument of an intellectual age, that I gave no thought to the possibilities it presented. Even my preoccupation about the Time Machine receded a little from my mind.

"To judge from the size of the place, this Palace of Green Porcelain had a great deal more in it than a Gallery of Palaeontology; possibly historical galleries; it might be, even a library! To me, at least in my present circumstances, these would be vastly more interesting than this spectacle of old-time geology in decay. Exploring, I found another short gallery running transversely to the first. This appeared to be devoted to minerals, and the sight of a block of sulphur set my mind running on gunpowder. But I could find no saltpeter; indeed, no nitrates of any kind. Doubtless they had deliquesced ages ago. Yet the sulphur hung in my mind, and set up a train of thinking. As for the

rest of the contents of that gallery, though on the whole they were the best preserved of all I saw, I had little interest. I am no specialist in mineralogy, and I went on down a very ruinous aisle running parallel to the first hall I had entered. Apparently this section had been devoted to natural history, but everything had long since passed out of recognition. A few shrivelled and blackened vestiges of what had once been stuffed animals, desiccated mummies in jars that had once held spirit, a brown dust of departed plants: that was all! I was sorry for that, because I should have been glad to trace the patent readjustments by which the conquest of animated nature had been attained. Then we came to a gallery of simply colossal proportions, but singularly ill-lit, the floor of it running downward at a slight angle from the end at which I entered. At intervals white globes hung from the ceiling—many of them cracked and smashed—which suggested that originally the place had been artificially lit. Here I was more in my element, for rising on either side of me were the huge bulks of big machines, all greatly corroded and many broken down, but some still fairly complete. You know I have a certain weakness for mechanism, and I was inclined to linger among these; the more so as for the most part they had the interest of puzzles, and I could make only the vaguest guesses at what they were for. I fancied that if I could solve their puzzles I should find myself in possession of powers that might be of use against the Morlocks.

"Suddenly Weena came very close to my side. So suddenly that she startled me. Had it not been for her I do not think I should have noticed that the floor of the gallery sloped at all.^[1] The end I had come in at was quite above ground, and was lit by rare slit-like windows. As you went down the length, the ground came up against these windows, until at last there was a pit like the 'area' of a London house before each, and only a narrow line of daylight at the top. I went slowly along, puzzling about the machines, and had been too intent upon them to notice the gradual diminution of the light, until Weena's increasing apprehensions drew my attention. Then I saw that

the gallery ran down at last into a thick darkness. I hesitated, and then, as I looked round me, I saw that the dust was less abundant and its surface less even. Further away towards the dimness, it appeared to be broken by a number of small narrow footprints. My sense of the immediate presence of the Morlocks revived at that. I felt that I was wasting my time in the academic examination of machinery. I called to mind that it was already far advanced in the afternoon, and that I had still no weapon, no refuge, and no means of making a fire. And then down in the remote blackness of the gallery I heard a peculiar pattering, and the same odd noises I had heard down the well.

"I took Weena's hand. Then, struck with a sudden idea, I left her and turned to a machine from which projected a lever not unlike those in a signal-box. Clambering upon the stand, and grasping this lever in my hands, I put all my weight upon it sideways. Suddenly Weena, deserted in the central aisle, began to whimper. I had judged the strength of the lever pretty correctly, for it snapped after a minute's strain, and I rejoined her with a mace in my hand more than sufficient, I judged, for any Morlock skull I might encounter. And I longed very much to kill a Morlock or so. Very inhuman, you may think, to want to go killing one's own descendants! But it was impossible, somehow, to feel any humanity in the things. Only my disinclination to leave Weena, and a persuasion that if I began to slake my thirst for murder my Time Machine might suffer, restrained me from going straight down the gallery and killing the brutes I heard.

"Well, mace in one hand and Weena in the other, I went out of that gallery and into another and still larger one, which at the first glance reminded me of a military chapel hung with tattered flags. The brown and charred rags that hung from the sides of it, I presently recognized as the decaying vestiges of books. They had long since dropped to pieces, and every semblance of print had left them. But here and there were warped boards and cracked metallic clasps that told the tale well enough. Had I been a literary man I might, perhaps, have moralized upon the futility of all ambition. But as it was, the

thing that struck me with keenest force was the enormous waste of labour to which this sombre wilderness of rotting paper testified. At the time I will confess that I thought chiefly of the *Philosophical Transactions* and my own seventeen papers upon physical optics.

"Then, going up a broad staircase, we came to what may once have been a gallery of technical chemistry. And here I had not a little hope of useful discoveries. Except at one end where the roof had collapsed, this gallery was well preserved. I went eagerly to every unbroken case. And at last, in one of the really airtight cases, I found a box of matches. Very eagerly I tried them. They were perfectly good. They were not even damp. I turned to Weena. 'Dance,' I cried to her in her own tongue. For now I had a weapon indeed against the horrible creatures we feared. And so, in that derelict museum, upon the thick soft carpeting of dust, to Weena's huge delight, I solemnly performed a kind of composite dance, whistling *The Land of the Leal* as cheerfully as I could. In part it was a modest *cancan*, in part a step dance, in part a skirt-dance (so far as my tailcoat permitted), and in part original. For I am naturally inventive, as you know.

"Now, I still think that for this box of matches to have escaped the wear of time for immemorial years was a most strange, as for me it was a most fortunate thing. Yet, oddly enough, I found a far unlikelier substance, and that was camphor. I found it in a sealed jar, that by chance, I suppose, had been really hermetically sealed. I fancied at first that it was paraffin wax, and smashed the glass accordingly. But the odour of camphor was unmistakable. In the universal decay this volatile substance had chanced to survive, perhaps through many thousands of centuries. It reminded me of a sepia painting I had once seen done from the ink of a fossil Belemnite that must have perished and become fossilized millions of years ago. I was about to throw it away, but I remembered that it was inflammable and burned with a good bright flame—was, in fact, an excellent candle—and I put it in my pocket. I found no explosives, however, nor any means of breaking down the bronze doors. As yet my iron crowbar was the most helpful

thing I had chanced upon. Nevertheless I left that gallery greatly elated.

"I cannot tell you all the story of that long afternoon. It would require a great effort of memory to recall my explorations in at all the proper order. I remember a long gallery of rusting stands of arms, and how I hesitated between my crowbar and a hatchet or a sword. I could not carry both, however, and my bar of iron promised best against the bronze gates. There were numbers of guns, pistols, and rifles. The most were masses of rust, but many were of some new metal, and still fairly sound. But any cartridges or powder there may once have been had rotted into dust. One corner I saw was charred and shattered; perhaps, I thought, by an explosion among the specimens. In another place was a vast array of idols—Polynesian, Mexican, Grecian, Phoenician, every country on earth I should think. And here, yielding to an irresistible impulse, I wrote my name upon the nose of a steatite monster from South America that particularly took my fancy.

"As the evening drew on, my interest waned. I went through gallery after gallery, dusty, silent, often ruinous, the exhibits sometimes mere heaps of rust and lignite, sometimes fresher. In one place I suddenly found myself near the model of a tin-mine, and then by the merest accident I discovered, in an airtight case, two dynamite cartridges! I shouted 'Eureka!' and smashed the case with joy. Then came a doubt. I hesitated. Then, selecting a little side gallery, I made my essay. I never felt such a disappointment as I did in waiting five, ten, fifteen minutes for an explosion that never came. Of course the things were dummies, as I might have guessed from their presence. I really believe that had they not been so, I should have rushed off incontinently and blown Sphinx, bronze doors, and (as it proved) my chances of finding the Time Machine, all together into non-existence.

"It was after that, I think, that we came to a little open court within the palace. It was turfed, and had three fruit-trees. So we rested and refreshed ourselves. Towards sunset I began to consider our position. Night was creeping upon us, and my inaccessible hiding-

place had still to be found. But that troubled me very little now. I had in my possession a thing that was, perhaps, the best of all defences against the Morlocks—I had matches! I had the camphor in my pocket, too, if a blaze were needed. It seemed to me that the best thing we could do would be to pass the night in the open, protected by a fire. In the morning there was the getting of the Time Machine. Towards that, as yet, I had only my iron mace. But now, with my growing knowledge, I felt very differently towards those bronze doors. Up to this, I had refrained from forcing them, largely because of the mystery on the other side. They had never impressed me as being very strong, and I hoped to find my bar of iron not altogether inadequate for the work.

[1]It may be, of course, that the floor did not slope, but that the museum was built into the side of a hill.—ED.

9

"We emerged from the palace while the sun was still in part above the horizon. I was determined to reach the White Sphinx early the next morning, and ere the dusk I purposed pushing through the woods that had stopped me on the previous journey. My plan was to go as far as possible that night, and then, building a fire, to sleep in the protection of its glare. Accordingly, as we went along I gathered any sticks or dried grass I saw, and presently had my arms full of such litter. Thus loaded, our progress was slower than I had anticipated, and besides Weena was tired. And I began to suffer from sleepiness too; so that it was full night before we reached the wood. Upon the shrubby hill of its edge Weena would have stopped, fearing the darkness before us; but a singular sense of impending calamity, that should indeed have served me as a warning, drove me onward. I had been without sleep for a night and two days, and I was feverish and irritable. I felt sleep coming upon me, and the Morlocks with it.

"While we hesitated, among the black bushes behind us, and dim against their blackness, I saw three crouching figures. There was scrub and long grass all about us, and I did not feel safe from their insidious approach. The forest, I calculated, was rather less than a mile across. If we could get through it to the bare hill-side, there, as it seemed to me, was an altogether safer resting-place; I thought that with my matches and my camphor I could contrive to keep my path illuminated through the woods. Yet it was evident that if I was to flourish matches with my hands I should have to abandon my firewood; so, rather reluctantly, I put it down. And then it came into my head that I would amaze our friends behind by lighting it. I was to discover the atrocious folly of this proceeding, but it came to my mind

as an ingenious move for covering our retreat.

"I don't know if you have ever thought what a rare thing flame must be in the absence of man and in a temperate climate. The sun's heat is rarely strong enough to burn, even when it is focused by dewdrops, as is sometimes the case in more tropical districts. Lightning may blast and blacken, but it rarely gives rise to widespread fire. Decaying vegetation may occasionally smoulder with the heat of its fermentation, but this rarely results in flame. In this decadence, too, the art of fire-making had been forgotten on the earth. The red tongues that went licking up my heap of wood were an altogether new and strange thing to Weena.

"She wanted to run to it and play with it. I believe she would have cast herself into it had I not restrained her. But I caught her up, and in spite of her struggles, plunged boldly before me into the wood. For a little way the glare of my fire lit the path. Looking back presently, I could see, through the crowded stems, that from my heap of sticks the blaze had spread to some bushes adjacent, and a curved line of fire was creeping up the grass of the hill. I laughed at that, and turned again to the dark trees before me. It was very black, and Weena clung to me convulsively, but there was still, as my eyes grew accustomed to the darkness, sufficient light for me to avoid the stems. Overhead it was simply black, except where a gap of remote blue sky shone down upon us here and there. I struck none of my matches because I had no hand free. Upon my left arm I carried my little one, in my right hand I had my iron bar.

"For some way I heard nothing but the crackling twigs under my feet, the faint rustle of the breeze above, and my own breathing and the throb of the blood-vessels in my ears. Then I seemed to know of a pattering about me. I pushed on grimly. The pattering grew more distinct, and then I caught the same queer sound and voices I had heard in the Under-world. There were evidently several of the Morlocks, and they were closing in upon me. Indeed, in another minute I felt a tug at my coat, then something at my arm. And Weena

shivered violently, and became quite still.

"It was time for a match. But to get one I must put her down. I did so, and, as I fumbled with my pocket, a struggle began in the darkness about my knees, perfectly silent on her part and with the same peculiar cooing sounds from the Morlocks. Soft little hands, too, were creeping over my coat and back, touching even my neck. Then the match scratched and fizzed. I held it flaring, and saw the white backs of the Morlocks in flight amid the trees. I hastily took a lump of camphor from my pocket, and prepared to light it as soon as the match should wane. Then I looked at Weena. She was lying clutching my feet and quite motionless, with her face to the ground. With a sudden fright I stooped to her. She seemed scarcely to breathe. I lit the block of camphor and flung it to the ground, and as it split and flared up and drove back the Morlocks and the shadows, I knelt down and lifted her. The wood behind seemed full of the stir and murmur of a great company!

"She seemed to have fainted. I put her carefully upon my shoulder and rose to push on, and then there came a horrible realization. In manoeuvring with my matches and Weena, I had turned myself about several times, and now I had not the faintest idea in what direction lay my path. For all I knew, I might be facing back towards the Palace of Green Porcelain. I found myself in a cold sweat. I had to think rapidly what to do. I determined to build a fire and encamp where we were. I put Weena, still motionless, down upon a turfy bole, and very hastily, as my first lump of camphor waned, I began collecting sticks and leaves. Here and there out of the darkness round me the Morlocks' eyes shone like carbuncles.

"The camphor flickered and went out. I lit a match, and as I did so, two white forms that had been approaching Weena dashed hastily away. One was so blinded by the light that he came straight for me, and I felt his bones grind under the blow of my fist. He gave a whoop of dismay, staggered a little way, and fell down. I lit another piece of camphor, and went on gathering my bonfire. Presently I noticed how

dry was some of the foliage above me, for since my arrival on the Time Machine, a matter of a week, no rain had fallen. So, instead of casting about among the trees for fallen twigs, I began leaping up and dragging down branches. Very soon I had a choking smoky fire of green wood and dry sticks, and could economize my camphor. Then I turned to where Weena lay beside my iron mace. I tried what I could to revive her, but she lay like one dead. I could not even satisfy myself whether or not she breathed.

"Now, the smoke of the fire beat over towards me, and it must have made me heavy of a sudden. Moreover, the vapour of camphor was in the air. My fire would not need replenishing for an hour or so. I felt very weary after my exertion, and sat down. The wood, too, was full of a slumbrous murmur that I did not understand. I seemed just to nod and open my eyes. But all was dark, and the Morlocks had their hands upon me. Flinging off their clinging fingers I hastily felt in my pocket for the match-box, and—it had gone! Then they gripped and closed with me again. In a moment I knew what had happened. I had slept, and my fire had gone out, and the bitterness of death came over my soul. The forest seemed full of the smell of burning wood. I was caught by the neck, by the hair, by the arms, and pulled down. It was indescribably horrible in the darkness to feel all these soft creatures heaped upon me. I felt as if I was in a monstrous spider's web. I was overpowered, and went down. I felt little teeth nipping at my neck. I rolled over, and as I did so my hand came against my iron lever. It gave me strength. I struggled up, shaking the human rats from me, and, holding the bar short, I thrust where I judged their faces might be. I could feel the succulent giving of flesh and bone under my blows, and for a moment I was free.

"The strange exultation that so often seems to accompany hard fighting came upon me. I knew that both I and Weena were lost, but I determined to make the Morlocks pay for their meat. I stood with my back to a tree, swinging the iron bar before me. The whole wood was full of the stir and cries of them. A minute passed. Their voices

seemed to rise to a higher pitch of excitement, and their movements grew faster. Yet none came within reach. I stood glaring at the blackness. Then suddenly came hope. What if the Morlocks were afraid? And close on the heels of that came a strange thing. The darkness seemed to grow luminous. Very dimly I began to see the Morlocks about me—three battered at my feet—and then I recognized, with incredulous surprise, that the others were running, in an incessant stream, as it seemed, from behind me, and away through the wood in front. And their backs seemed no longer white, but reddish. As I stood agape, I saw a little red spark go drifting across a gap of starlight between the branches, and vanish. And at that I understood the smell of burning wood, the slumbrous murmur that was growing now into a gusty roar, the red glow, and the Morlocks' flight.

"Stepping out from behind my tree and looking back, I saw, through the black pillars of the nearer trees, the flames of the burning forest. It was my first fire coming after me. With that I looked for Weena, but she was gone. The hissing and crackling behind me, the explosive thud as each fresh tree burst into flame, left little time for reflection. My iron bar still gripped, I followed in the Morlocks' path. It was a close race. Once the flames crept forward so swiftly on my right as I ran that I was outflanked and had to strike off to the left. But at last I emerged upon a small open space, and as I did so, a Morlock came blundering towards me, and past me, and went on straight into the fire!

"And now I was to see the most weird and horrible thing, I think, of all that I beheld in that future age. This whole space was as bright as day with the reflection of the fire. In the centre was a hillock or tumulus, surmounted by a scorched hawthorn. Beyond this was another arm of the burning forest, with yellow tongues already writhing from it, completely encircling the space with a fence of fire. Upon the hill-side were some thirty or forty Morlocks, dazzled by the light and heat, and blundering hither and thither against each other in their bewilderment. At first I did not realize their blindness, and

struck furiously at them with my bar, in a frenzy of fear, as they approached me, killing one and crippling several more. But when I had watched the gestures of one of them groping under the hawthorn against the red sky, and heard their moans, I was assured of their absolute helplessness and misery in the glare, and I struck no more of them.

"Yet every now and then one would come straight towards me, setting loose a quivering horror that made me quick to elude him. At one time the flames died down somewhat, and I feared the foul creatures would presently be able to see me. I was thinking of beginning the fight by killing some of them before this should happen; but the fire burst out again brightly, and I stayed my hand. I walked about the hill among them and avoided them, looking for some trace of Weena. But Weena was gone.

"At last I sat down on the summit of the hillock, and watched this strange incredible company of blind things groping to and fro, and making uncanny noises to each other, as the glare of the fire beat on them. The coiling uprush of smoke streamed across the sky, and through the rare tatters of that red canopy, remote as though they belonged to another universe, shone the little stars. Two or three Morlocks came blundering into me, and I drove them off with blows of my fists, trembling as I did so.

"For the most part of that night I was persuaded it was a nightmare. I bit myself and screamed in a passionate desire to awake. I beat the ground with my hands, and got up and sat down again, and wandered here and there, and again sat down. Then I would fall to rubbing my eyes and calling upon God to let me awake. Thrice I saw Morlocks put their heads down in a kind of agony and rush into the flames. But, at last, above the subsiding red of the fire, above the streaming masses of black smoke and the whitening and blackening tree stumps, and the diminishing numbers of these dim creatures, came the white light of the day.

"I searched again for traces of Weena, but there were none. It was

plain that they had left her poor little body in the forest. I cannot describe how it relieved me to think that it had escaped the awful fate to which it seemed destined. As I thought of that, I was almost moved to begin a massacre of the helpless abominations about me, but I contained myself. The hillock, as I have said, was a kind of island in the forest. From its summit I could now make out through a haze of smoke the Palace of Green Porcelain, and from that I could get my bearings for the White Sphinx. And so, leaving the remnant of these damned souls still going hither and thither and moaning, as the day grew clearer, I tied some grass about my feet and limped on across smoking ashes and among black stems, that still pulsed internally with fire, towards the hiding-place of the Time Machine. I walked slowly, for I was almost exhausted, as well as lame, and I felt the intensest wretchedness for the horrible death of little Weena. It seemed an overwhelming calamity. Now, in this old familiar room, it is more like the sorrow of a dream than an actual loss. But that morning it left me absolutely lonely again—terribly alone. I began to think of this house of mine, of this fireside, of some of you, and with such thoughts came a longing that was pain.

"But as I walked over the smoking ashes under the bright morning sky, I made a discovery. In my trouser pocket were still some loose matches. The box must have leaked before it was lost.

10

"About eight or nine in the morning I came to the same seat of yellow metal from which I had viewed the world upon the evening of my arrival. I thought of my hasty conclusions upon that evening and could not refrain from laughing bitterly at my confidence. Here was the same beautiful scene, the same abundant foliage, the same splendid palaces and magnificent ruins, the same silver river running between its fertile banks. The gay robes of the beautiful people moved hither and thither among the trees. Some were bathing in exactly the place where I had saved Weena, and that suddenly gave me a keen stab of pain. And like blots upon the landscape rose the cupolas above the ways to the Under-world. I understood now what all the beauty of the Over-world people covered. Very pleasant was their day, as pleasant as the day of the cattle in the field. Like the cattle, they knew of no enemies and provided against no needs. And their end was the same.

"I grieved to think how brief the dream of the human intellect had been. It had committed suicide. It had set itself steadfastly towards comfort and ease, a balanced society with security and permanency as its watchword, it had attained its hopes—to come to this at last. Once, life and property must have reached almost absolute safety. The rich had been assured of his wealth and comfort, the toiler assured of his life and work. No doubt in that perfect world there had been no unemployed problem, no social question left unsolved. And a great quiet had followed.

"It is a law of nature we overlook, that intellectual versatility is the compensation for change, danger, and trouble. An animal perfectly in harmony with its environment is a perfect mechanism. Nature

never appeals to intelligence until habit and instinct are useless. There is no intelligence where there is no change and no need of change. Only those animals partake of intelligence that have to meet a huge variety of needs and dangers.

"So, as I see it, the Upper-world man had drifted towards his feeble prettiness, and the Under-world to mere mechanical industry. But that perfect state had lacked one thing even for mechanical perfection—absolute permanency. Apparently as time went on, the feeding of the Under-world, however it was effected, had become disjointed. Mother Necessity, who had been staved off for a few thousand years, came back again, and she began below. The Under-world being in contact with machinery, which, however perfect, still needs some little thought outside habit, had probably retained perforce rather more initiative, if less of every other human character, than the Upper. And when other meat failed them, they turned to what old habit had hitherto forbidden. So I say I saw it in my last view of the world of Eight Hundred and Two Thousand Seven Hundred and One. It may be as wrong an explanation as mortal wit could invent. It is how the thing shaped itself to me, and as that I give it to you.

"After the fatigues, excitements, and terrors of the past days, and in spite of my grief, this seat and the tranquil view and the warm sunlight were very pleasant. I was very tired and sleepy, and soon my theorizing passed into dozing. Catching myself at that, I took my own hint, and spreading myself out upon the turf I had a long and refreshing sleep.

"I awoke a little before sunseting. I now felt safe against being caught napping by the Morlocks, and, stretching myself, I came on down the hill towards the White Sphinx. I had my crowbar in one hand, and the other hand played with the matches in my pocket.

"And now came a most unexpected thing. As I approached the pedestal of the sphinx I found the bronze valves were open. They had slid down into grooves.

"At that I stopped short before them, hesitating to enter.

"Within was a small apartment, and on a raised place in the corner of this was the Time Machine. I had the small levers in my pocket. So here, after all my elaborate preparations for the siege of the White Sphinx, was a meek surrender. I threw my iron bar away, almost sorry not to use it.

"A sudden thought came into my head as I stooped towards the portal. For once, at least, I grasped the mental operations of the Morlocks. Suppressing a strong inclination to laugh, I stepped through the bronze frame and up to the Time Machine. I was surprised to find it had been carefully oiled and cleaned. I have suspected since that the Morlocks had even partially taken it to pieces while trying in their dim way to grasp its purpose.

"Now as I stood and examined it, finding a pleasure in the mere touch of the contrivance, the thing I had expected happened. The bronze panels suddenly slid up and struck the frame with a clang. I was in the dark—trapped. So the Morlocks thought. At that I chuckled gleefully.

"I could already hear their murmuring laughter as they came towards me. Very calmly I tried to strike the match. I had only to fix on the levers and depart then like a ghost. But I had overlooked one little thing. The matches were of that abominable kind that light only on the box.

"You may imagine how all my calm vanished. The little brutes were close upon me. One touched me. I made a sweeping blow in the dark at them with the levers, and began to scramble into the saddle of the machine. Then came one hand upon me and then another. Then I had simply to fight against their persistent fingers for my levers, and at the same time feel for the studs over which these fitted. One, indeed, they almost got away from me. As it slipped from my hand, I had to butt in the dark with my head—I could hear the Morlock's skull ring—to recover it. It was a nearer thing than the fight in the forest, I think, this last scramble.

"But at last the lever was fitted and pulled over. The clinging hands slipped from me. The darkness presently fell from my eyes. I found myself in the same grey light and tumult I have already described.

奥拉夫·斯塔普雷顿（1886—1950），英国哲学家、科幻作家，深受威尔斯影响。

11

"I have already told you of the sickness and confusion that comes with time travelling. And this time I was not seated properly in the saddle, but sideways and in an unstable fashion. For an indefinite time I clung to the machine as it swayed and vibrated, quite unheeding how I went, and when I brought myself to look at the dials again I was amazed to find where I had arrived. One dial records days, and another thousands of days, another millions of days, and another thousands of millions. Now, instead of reversing the levers, I had pulled them over so as to go forward with them, and when I came to look at these indicators I found that the thousands hand was sweeping round as fast as the seconds hand of a watch—into futurity.

"As I drove on, a peculiar change crept over the appearance of things. The palpitating greyness grew darker; then—though I was still travelling with prodigious velocity—the blinking succession of day and night, which was usually indicative of a slower pace, returned, and grew more and more marked. This puzzled me very much at first. The alternations of night and day grew slower and slower, and so did the passage of the sun across the sky, until they seemed to stretch through centuries. At last a steady twilight brooded over the earth, a twilight only broken now and then when a comet glared across the darkling sky. The band of light that had indicated the sun had long since disappeared; for the sun had ceased to set—it simply rose and fell in the west, and grew ever broader and more red. All trace of the moon had vanished. The circling of the stars, growing slower and slower, had given place to creeping points of light. At last, some time before I stopped, the sun, red and very large, halted motionless upon the horizon, a vast dome glowing with a dull heat, and now and then

suffering a momentary extinction. At one time it had for a little while glowed more brilliantly again, but it speedily reverted to its sullen red heat. I perceived by this slowing down of its rising and setting that the work of the tidal drag was done. The earth had come to rest with one face to the sun, even as in our own time the moon faces the earth. Very cautiously, for I remembered my former headlong fall, I began to reverse my motion. Slower and slower went the circling hands until the thousands one seemed motionless and the daily one was no longer a mere mist upon its scale. Still slower, until the dim outlines of a desolate beach grew visible.

"I stopped very gently and sat upon the Time Machine, looking round. The sky was no longer blue. North-eastward it was inky black, and out of the blackness shone brightly and steadily the pale white stars. Overhead it was a deep Indian red and starless, and south-eastward it grew brighter to a glowing scarlet where, cut by the horizon, lay the huge hull of the sun, red and motionless. The rocks about me were of a harsh reddish colour, and all the trace of life that I could see at first was the intensely green vegetation that covered every projecting point on their south-eastern face. It was the same rich green that one sees on forest moss or on the lichen in caves: plants which like these grow in a perpetual twilight.

"The machine was standing on a sloping beach. The sea stretched away to the south-west, to rise into a sharp bright horizon against the wan sky. There were no breakers and no waves, for not a breath of wind was stirring. Only a slight oily swell rose and fell like a gentle breathing, and showed that the eternal sea was still moving and living. And along the margin where the water sometimes broke was a thick incrustation of salt—pink under the lurid sky. There was a sense of oppression in my head, and I noticed that I was breathing very fast. The sensation reminded me of my only experience of mountaineering, and from that I judged the air to be more rarefied than it is now.

"Far away up the desolate slope I heard a harsh scream, and saw a thing like a huge white butterfly go slanting and fluttering up into the

sky and, circling, disappear over some low hillocks beyond. The sound of its voice was so dismal that I shivered and seated myself more firmly upon the machine. Looking round me again, I saw that, quite near, what I had taken to be a reddish mass of rock was moving slowly towards me. Then I saw the thing was really a monstrous crab-like creature. Can you imagine a crab as large as yonder table, with its many legs moving slowly and uncertainly, its big claws swaying, its long antennae, like carters' whips, waving and feeling, and its stalked eyes gleaming at you on either side of its metallic front? Its back was corrugated and ornamented with ungainly bosses, and a greenish incrustation blotched it here and there. I could see the many palps of its complicated mouth flickering and feeling as it moved.

"As I stared at this sinister apparition crawling towards me, I felt a tickling on my cheek as though a fly had lighted there. I tried to brush it away with my hand, but in a moment it returned, and almost immediately came another by my ear. I struck at this, and caught something threadlike. It was drawn swiftly out of my hand. With a frightful qualm, I turned, and I saw that I had grasped the antenna of another monster crab that stood just behind me. Its evil eyes were wriggling on their stalks, its mouth was all alive with appetite, and its vast ungainly claws, smeared with an algal slime, were descending upon me. In a moment my hand was on the lever, and I had placed a month between myself and these monsters. But I was still on the same beach, and I saw them distinctly now as soon as I stopped. Dozens of them seemed to be crawling here and there, in the sombre light, among the foliated sheets of intense green.

"I cannot convey the sense of abominable desolation that hung over the world. The red eastern sky, the northward blackness, the salt Dead Sea, the stony beach crawling with these foul, slow-stirring monsters, the uniform poisonous-looking green of the lichenous plants, the thin air that hurts one's lungs: all contributed to an appalling effect. I moved on a hundred years, and there was the same red sun—a little larger, a little duller—the same dying sea, the same

chill air, and the same crowd of earthy crustacea creeping in and out among the green weed and the red rocks. And in the westward sky, I saw a curved pale line like a vast new moon.

"So I travelled, stopping ever and again, in great strides of a thousand years or more, drawn on by the mystery of the earth's fate, watching with a strange fascination the sun grow larger and duller in the westward sky, and the life of the old earth ebb away. At last, more than thirty million years hence, the huge red-hot dome of the sun had come to obscure nearly a tenth part of the darkling heavens. Then I stopped once more, for the crawling multitude of crabs had disappeared, and the red beach, save for its livid green liverworts and lichens, seemed lifeless. And now it was flecked with white. A bitter cold assailed me. Rare white flakes ever and again came eddying down. To the north-eastward, the glare of snow lay under the starlight of the sable sky and I could see an undulating crest of hillocks pinkish white. There were fringes of ice along the sea margin, with drifting masses further out; but the main expanse of that salt ocean, all bloody under the eternal sunset, was still unfrozen.

"I looked about me to see if any traces of animal life remained. A certain indefinable apprehension still kept me in the saddle of the machine. But I saw nothing moving, in earth or sky or sea. The green slime on the rocks alone testified that life was not extinct. A shallow sandbank had appeared in the sea and the water had receded from the beach. I fancied I saw some black object flopping about upon this bank, but it became motionless as I looked at it, and I judged that my eye had been deceived, and that the black object was merely a rock. The stars in the sky were intensely bright and seemed to me to twinkle very little.

"Suddenly I noticed that the circular westward outline of the sun had changed; that a concavity, a bay, had appeared in the curve. I saw this grow larger. For a minute perhaps I stared aghast at this blackness that was creeping over the day, and then I realized that an eclipse was beginning. Either the moon or the planet Mercury was passing across

the sun's disk. Naturally, at first I took it to be the moon, but there is much to incline me to believe that what I really saw was the transit of an inner planet passing very near to the earth.

"The darkness grew apace; a cold wind began to blow in freshening gusts from the east, and the showering white flakes in the air increased in number. From the edge of the sea came a ripple and whisper. Beyond these lifeless sounds the world was silent. Silent? It would be hard to convey the stillness of it. All the sounds of man, the bleating of sheep, the cries of birds, the hum of insects, the stir that makes the background of our lives—all that was over. As the darkness thickened, the eddying flakes grew more abundant, dancing before my eyes; and the cold of the air more intense. At last, one by one, swiftly, one after the other, the white peaks of the distant hills vanished into blackness. The breeze rose to a moaning wind. I saw the black central shadow of the eclipse sweeping towards me. In another moment the pale stars alone were visible. All else was rayless obscurity. The sky was absolutely black.

"A horror of this great darkness came on me. The cold, that smote to my marrow, and the pain I felt in breathing, overcame me. I shivered, and a deadly nausea seized me. Then like a red-hot bow in the sky appeared the edge of the sun. I got off the machine to recover myself. I felt giddy and incapable of facing the return journey. As I stood sick and confused I saw again the moving thing upon the shoal—there was no mistake now that it was a moving thing—against the red water of the sea. It was a round thing, the size of a football perhaps, or, it may be, bigger, and tentacles trailed down from it; it seemed black against the weltering blood-red water, and it was hopping fitfully about. Then I felt I was fainting. But a terrible dread of lying helpless in that remote and awful twilight sustained me while I clambered upon the saddle.

12

"So I came back. For a long time I must have been insensible upon the machine. The blinking succession of the days and nights was resumed, the sun got golden again, the sky blue. I breathed with greater freedom. The fluctuating contours of the land ebbed and flowed. The hands spun backward upon the dials. At last I saw again the dim shadows of houses, the evidences of decadent humanity. These, too, changed and passed, and others came. Presently, when the million dial was at zero, I slackened speed. I began to recognize our own petty and familiar architecture, the thousands hand ran back to the starting-point, the night and day flapped slower and slower. Then the old walls of the laboratory came round me. Very gently, now, I slowed the mechanism down.

"I saw one little thing that seemed odd to me. I think I have told you that when I set out, before my velocity became very high, Mrs. Watchett had walked across the room, travelling, as it seemed to me, like a rocket. As I returned, I passed again across that minute when she traversed the laboratory. But now her every motion appeared to be the exact inversion of her previous ones. The door at the lower end opened, and she glided quietly up the laboratory, back foremost, and disappeared behind the door by which she had previously entered. Just before that I seemed to see Hillyer for a moment; but he passed like a flash.

"Then I stopped the machine, and saw about me again the old familiar laboratory, my tools, my appliances just as I had left them. I got off the thing very shakily, and sat down upon my bench. For several minutes I trembled violently. Then I became calmer. Around me was my old workshop again, exactly as it had been. I might have

slept there, and the whole thing have been a dream.

"And yet, not exactly! The thing had started from the south-east corner of the laboratory. It had come to rest again in the north-west, against the wall where you saw it. That gives you the exact distance from my little lawn to the pedestal of the White Sphinx, into which the Morlocks had carried my machine.

"For a time my brain went stagnant. Presently I got up and came through the passage here, limping, because my heel was still painful, and feeling sorely begrimed. I saw the *Pall Mall Gazette* on the table by the door. I found the date was indeed today, and looking at the timepiece, saw the hour was almost eight o'clock. I heard your voices and the clatter of plates. I hesitated—I felt so sick and weak. Then I sniffed good wholesome meat, and opened the door on you. You know the rest. I washed, and dined, and now I am telling you the story.

"I know," he said, after a pause, "that all this will be absolutely incredible to you. To me the one incredible thing is that I am here to-night in this old familiar room looking into your friendly faces and telling you these strange adventures."

He looked at the Medical Man. "No. I cannot expect you to believe it. Take it as a lie—or a prophecy. Say I dreamed it in the workshop. Consider I have been speculating upon the destinies of our race until I have hatched this fiction. Treat my assertion of its truth as a mere stroke of art to enhance its interest. And taking it as a story, what do you think of it?"

He took up his pipe, and began, in his old accustomed manner, to tap with it nervously upon the bars of the grate. There was a momentary stillness. Then chairs began to creak and shoes to scrape upon the carpet. I took my eyes off the Time Traveller's face, and looked round at his audience. They were in the dark, and little spots of colour swam before them. The Medical Man seemed absorbed in the contemplation of our host. The Editor was looking hard at the end of his cigar—the sixth. The Journalist fumbled for his watch. The others, as far as I remember, were motionless.

The Editor stood up with a sigh. "What a pity it is you're not a writer of stories!" he said, putting his hand on the Time Traveller's shoulder.

"You don't believe it?"

"Well——"

"I thought not."

The Time Traveller turned to us. "Where are the matches?" he said. He lit one and spoke over his pipe, puffing. "To tell you the truth ... I hardly believe it myself... . And yet..."

His eye fell with a mute inquiry upon the withered white flowers upon the little table. Then he turned over the hand holding his pipe, and I saw he was looking at some half-healed scars on his knuckles.

The Medical Man rose, came to the lamp, and examined the flowers. "The gynaecium's odd," he said. The Psychologist leant forward to see, holding out his hand for a specimen.

"I'm hanged if it isn't a quarter to one," said the Journalist. "How shall we get home?"

"Plenty of cabs at the station," said the Psychologist.

"It's a curious thing," said the Medical Man; "but I certainly don't know the natural order of these flowers. May I have them?"

The Time Traveller hesitated. Then suddenly: "Certainly not."

"Where did you really get them?" said the Medical Man.

The Time Traveller put his hand to his head. He spoke like one who was trying to keep hold of an idea that eluded him. "They were put into my pocket by Weena, when I travelled into Time." He stared round the room. "I'm damned if it isn't all going. This room and you and the atmosphere of every day is too much for my memory. Did I ever make a Time Machine, or a model of a Time Machine? Or is it all only a dream? They say life is a dream, a precious poor dream at times—but I can't stand another that won't fit. It's madness. And where did the dream come from? ... I must look at that machine. If there is one!"

He caught up the lamp swiftly, and carried it, flaring red, through

the door into the corridor. We followed him. There in the flickering light of the lamp was the machine sure enough, squat, ugly, and askew; a thing of brass, ebony, ivory, and translucent glimmering quartz. Solid to the touch—for I put out my hand and felt the rail of it—and with brown spots and smears upon the ivory, and bits of grass and moss upon the lower parts, and one rail bent awry.

The Time Traveller put the lamp down on the bench, and ran his hand along the damaged rail. "It's all right now," he said. "The story I told you was true. I'm sorry to have brought you out here in the cold." He took up the lamp, and, in an absolute silence, we returned to the smoking-room.

He came into the hall with us and helped the Editor on with his coat. The Medical Man looked into his face and, with a certain hesitation, told him he was suffering from overwork, at which he laughed hugely. I remember him standing in the open doorway, bawling good night.

I shared a cab with the Editor. He thought the tale a "gaudy lie." For my own part I was unable to come to a conclusion. The story was so fantastic and incredible, the telling so credible and sober. I lay awake most of the night thinking about it. I determined to go next day and see the Time Traveller again. I was told he was in the laboratory, and being on easy terms in the house, I went up to him. The laboratory, however, was empty. I stared for a minute at the Time Machine and put out my hand and touched the lever. At that the squat substantial-looking mass swayed like a bough shaken by the wind. Its instability startled me extremely, and I had a queer reminiscence of the childish days when I used to be forbidden to meddle. I came back through the corridor. The Time Traveller met me in the smoking-room. He was coming from the house. He had a small camera under one arm and a knapsack under the other. He laughed when he saw me, and gave me an elbow to shake. "I'm frightfully busy," said he, "with that thing in there."

"But is it not some hoax?" I said. "Do you really travel through

time?"

"Really and truly I do." And he looked frankly into my eyes. He hesitated. His eye wandered about the room. "I only want half an hour," he said. "I know why you came, and it's awfully good of you. There're some magazines here. If you'll stop to lunch I'll prove you this time travelling up to the hilt, specimen and all. If you'll forgive my leaving you now?"

I consented, hardly comprehending then the full import of his words, and he nodded and went on down the corridor. I heard the door of the laboratory slam, seated myself in a chair, and took up a daily paper. What was he going to do before lunch-time? Then suddenly I was reminded by an advertisement that I had promised to meet Richardson, the publisher, at two. I looked at my watch, and saw that I could barely save that engagement. I got up and went down the passage to tell the Time Traveller.

As I took hold of the handle of the door I heard an exclamation, oddly truncated at the end, and a click and a thud. A gust of air whirled round me as I opened the door, and from within came the sound of broken glass falling on the floor. The Time Traveller was not there. I seemed to see a ghostly, indistinct figure sitting in a whirling mass of black and brass for a moment—a figure so transparent that the bench behind with its sheets of drawings was absolutely distinct; but this phantasm vanished as I rubbed my eyes. The Time Machine had gone. Save for a subsiding stir of dust, the further end of the laboratory was empty. A pane of the skylight had, apparently, just been blown in.

I felt an unreasonable amazement. I knew that something strange had happened, and for the moment could not distinguish what the strange thing might be. As I stood staring, the door into the garden opened, and the man-servant appeared.

We looked at each other. Then ideas began to come. "Has Mr. — gone out that way?" said I.

"No, sir. No one has come out this way. I was expecting to find

him here."

At that I understood. At the risk of disappointing Richardson I stayed on, waiting for the Time Traveller; waiting for the second, perhaps still stranger story, and the specimens and photographs he would bring with him. But I am beginning now to fear that I must wait a lifetime. The Time Traveller vanished three years ago. And, as everybody knows now, he has never returned.

13

Epilogue

One cannot choose but wonder. Will he ever return? It may be that he swept back into the past, and fell among the blood-drinking, hairy savages of the Age of Unpolished Stone; into the abysses of the Cretaceous Sea; or among the grotesque saurians, the huge reptilian brutes of the Jurassic times. He may even now—if I may use the phrase—be wandering on some plesiosaurus-haunted Oolitic coral reef, or beside the lonely saline lakes of the Triassic Age. Or did he go forward, into one of the nearer ages, in which men are still men, but with the riddles of our own time answered and its wearisome problems solved? Into the manhood of the race: for I, for my own part, cannot think that these latter days of weak experiment, fragmentary theory, and mutual discord are indeed man's culminating time! I say, for my own part. He, I know—for the question had been discussed among us long before the Time Machine was made—thought but cheerlessly of the Advancement of Mankind, and saw in the growing pile of civilization only a foolish heaping that must inevitably fall back upon and destroy its makers in the end. If that is so, it remains for us to live as though it were not so. But to me the future is still black and blank—is a vast ignorance, lit at a few casual places by the memory of his story. And I have by me, for my comfort, two strange white flowers—shrivelled now, and brown and flat and brittle—to witness that even when mind and strength had gone, gratitude and a mutual tenderness still lived on in the heart of man.

Appendix

Wells apparently edited this chapter (Chapter 11 in this Signet Classic edition) for the first book publication of *The Time Machine*. He maintained his cuts in the version published in the Atlantic Edition of his collected works, considered the standard and authoritative text. Nevertheless, there is sufficient interest in the Time Traveller's adventures to include this longer, more detailed version as an appendix.

Wells goes into fascinating detail about the future evolution of the human race. We will not read anything on human evolution more radical until Olaf Stapledon's *Last and First Men*, published in 1930.

The Further Vision

"I HAVE ALREADY told you of the sickness and confusion that comes with time travelling. And this time I was not seated properly in the saddle, but side-ways and in an unstable fashion. For an indefinite time I clung to the machine as it swayed and vibrated, quite unheeding how I went, and when I brought myself to look at the dials again I was amazed to find where I had arrived. One dial records days, another thousands of days, another millions of days, and another thousands of millions. Now, instead of reversing the levers I had pulled them over so as to go forward with them, and when I came to look at these indicators I found that the thousands hand was sweeping round as fast as the seconds hands of a watch—into futurity. Very cautiously, for I remembered my former headlong fall, I began to reverse my motion. Slower and slower went the circling hands until the thousands one seemed motionless and the daily one was no longer a mere mist upon its scale. Still slower, until the grey haze around me became distincter and dim outlines of an undulating waste grew visible.

"I stopped. I was on a bleak moorland, covered with a sparse vegetation, and grey with a thin hoarfrost. The time was midday, the orange sun, shorn of its effulgence, brooded near the meridian in a sky of drabby grey. Only a few black bushes broke the monotony of the scene. The great buildings of the decadent men among whom, it seemed to me, I had been so recently, had vanished and left no trace: not a mound even marked their position. Hill and valley, sea and river—all, under the wear and work of the rain and frost, had melted into

new forms. No doubt, too, the rain and snow had long since washed out the Morlock tunnels. A nipping breeze stung my hands and face. So far as I could see there were neither hills, nor trees, nor rivers: only an uneven stretch of cheerless plateau.

"Then suddenly a dark bulk rose out of the moor, something that gleamed like a serrated row of iron plates, and vanished almost immediately in a depression. And then I became aware of a number of faint grey things, coloured to almost the exact tint of the frostbitten soil, which were browsing here and there upon its scanty grass, and running to and fro. I saw one jump with a sudden start, and then my eye detected perhaps a score of them. At first I thought they were rabbits, or some small breed of kangaroo. Then, as one came hopping near me, I perceived that it belonged to neither of these groups. It was plantigrade, its hind legs rather the longer; it was tailless, and covered with a straight greyish hair that thickened about the head into a Skye terrier's mane. As I had understood that in the Golden Age man had killed out almost all the other animals, sparing only a few of the more ornamental, I was naturally curious about the creatures. They did not seem afraid of me, but browsed on, much as rabbits would do in a place unfrequented by men; and it occurred to me that I might perhaps secure a specimen.

"I got off the machine, and picked up a big stone. I had scarcely done so when one of the little creatures came within easy range. I was so lucky as to hit it on the head, and it rolled over at once and lay motionless. I ran to it at once. It remained still, almost as if it were killed. I was surprised to see that the thing had five feeble digits to both its fore and hind feet—the fore feet, indeed, were almost as human as the fore feet of a frog. It had, moreover, a roundish head, with a projecting forehead and forward-looking eyes, obscured by its lank hair. A disagreeable apprehension flashed across my mind. As I knelt down and seized my capture, intending to examine its teeth and other anatomical points which might show human characteristics, the metallic-looking object, to which I have already alluded, reappeared

above a ridge in the moor, coming towards me and making a strange clattering sound as it came. Forthwith the grey animals about me began to answer with a short, weak yelping as if of terror—and bolted off in a direction opposite to that from which this new creature approached. They must have hidden in burrows or behind bushes and tussocks, for in a moment not one of them was visible.

"I rose to my feet, and stared at this grotesque monster. I can only describe it by comparing it to a centipede. It stood about three feet high, and had a long segmented body, perhaps thirty feet long, with curiously overlapping greenish-black plates. It seemed to crawl upon a multitude of feet, looping its body as it advanced. Its blunt round head, with a polygonal arrangement of black eye spots, carried two flexible, writhing, horn-like antenna. It was coming along, I should judge, at a pace of about eight or ten miles an hour, and it left me little time for thinking. Leaving my grey animal, or grey man, whichever it was, on the ground, I set off for the machine. Halfway I paused, regretting that abandonment, but a glance over my shoulder destroyed any such regret. When I gained the machine the monster was scarce fifty yards away. It was certainly not a vertebrated animal. It had no snout, and its mouth was fringed with jointed dark-coloured plates. But I did not care for a nearer view.

"I traversed one day and stopped again, hoping to find the colossus gone and some vestige of my victim; but, I should judge, the giant centipede did not trouble itself about bones. At any rate both had vanished. The faintly human touch of these little creatures perplexed me greatly. If you come to think, there is no reason why a degenerate humanity should not come at last to differentiate into as many species as the descendants of the mud fish who fathered all the land vertebrates. I saw no more of any insect colossus, as to my thinking the segmented creature must have been. Evidently the physiological difficulty that at present keeps all the insects small had been surmounted at last, and this division of the animal kingdom had arrived at the long-awaited supremacy which its enormous energy and

vitality deserve. I made several attempts to kill or capture another of the greyish vermin, but none of my missiles were so successful as my first; and, after perhaps a dozen disappointing throws, that left my arm aching, I felt a gust of irritation at my folly in coming so far into futurity without weapons or equipment. I resolved to run on for one glimpse of the still remoter future—one peep into the deeper abysm of time—and then to return to you and my own epoch. Once more I remounted the machine, and once more the world grew hazy and grey.

"As I drove on, a peculiar change crept over the appearance of things. The palpitating greyness grew darker; then—though I was still travelling with prodigious velocity—the blinking succession of day and night, which was usually indicative of a slower pace, returned, and grew more and more marked. This puzzled me very much at first. The alternations of night and day grew slower and slower, and so did the passage of the sun across the sky, until they seemed to stretch through centuries. At last a steady twilight brooded over the earth, a twilight only broken now and then when a comet glared across the darkling sky. The band of light that had indicated the sun had long since disappeared; for the sun had ceased to set—it simply rose and fell in the west, and grew ever broader and more red. All trace of the moon had vanished. The circling of the stars, growing slower and slower, had given place to creeping points of light. At last, some time before I stopped, the sun, red and very large, halted motionless upon the horizon, a vast dome glowing with a dull heat, and now and then suffering a momentary extinction. At one time it had for a little while glowed more brilliantly again, but it speedily reverted to its sullen red-heat. I perceived by this slowing down of its rising and setting that the work of the tidal drag was done. The earth had come to rest with one face to the sun, even as in our own time the moon faces the earth. Very cautiously, for I remembered my former headlong fall, I began to reverse my motion. Slower and slower went the circling hands until the thousands one seemed motionless, and the daily one was no longer

a mere mist upon its scale. Still slower, until the dim outlines of a desolate beach grew visible.

"I stopped very gently and sat upon the Time Machine, looking round. The sky was no longer blue. North-eastward it was inky black, and out of the blackness shone brightly and steadily the pale white stars. Overhead it was a deep Indian red and starless, and southeastward it grew brighter to a glowing scarlet where, cut by the horizon, lay the huge hull of the sun, red and motionless. The rocks about me were of a harsh reddish colour, and all the trace of life that I could see at first was the intensely green vegetation that covered every projecting point on their south-eastern face. It was the same rich green that one sees on forest moss or on the lichen in caves: plants which like these grow in a perpetual twilight.

"The machine was standing on a sloping beach. The sea stretched away to the southwest, to rise into a sharp bright horizon against the wan sky. There were no breakers and no waves, for not a breath of wind was stirring. Only a slight oily swell rose and fell like a gentle breathing, and showed that the eternal sea was still moving and living. And along the margin where the water sometimes broke was a thick incrustation of salt-pink under the lurid sky. There was a sense of oppression in my head, and I noticed that I was breathing very fast. The sensation reminded me of my only experience of mountaineering, and from that I judged the air to be more rarefied than it is now.

"Far away up the desolate slope I heard a harsh scream, and saw a thing like a huge white butterfly go slanting and fluttering up into the sky and, circling, disappear over some low hillocks beyond. The sound of its voice was so dismal that I shivered and seated myself more firmly upon the machine. Looking round me again, I saw that, quite near, what I had taken to be a reddish mass of rock was moving slowly towards me. Then I saw the thing was really a monstrous crab-like creature. Can you imagine a crab as large as yonder table, with its many legs moving slowly and uncertainly, its big claws swaying, its long antenna, like carters' whips, waving and feeling, and its stalked

eyes gleaming at you on either side of its metallic front? Its back was corrugated and ornamented with ungainly bosses, and a greenish incrustation blotched it here and there. I could see the many palps of its complicated mouth flickering and feeling as it moved.

"As I stared at this sinister apparition crawling towards me, I felt a tickling on my cheek as though a fly had lighted there. I tried to brush it away with my hand, but in a moment it returned, and almost immediately came another by my ear. I struck at this, and caught something threadlike. It was drawn swiftly out of my hand. With a frightful qualm, I turned, and saw that I had grasped the antenna of another monster crab that stood just behind me. Its evil eyes were wriggling on their stalks, its mouth was all alive with appetite, and its vast ungainly claws, smeared with an algal slime, were descending upon me. In a moment my hand was on the lever, and I had placed a month between myself and these monsters. But I was still on the same beach, and I saw them distinctly now as soon as I stopped. Dozens of them seemed to be crawling here and there, in the sombre light, among the foliated sheets of intense green.

"I cannot convey the sense of abominable desolation that hung over the world. The red eastern sky, the northward blackness, the salt Dead Sea, the stony beach crawling with these foul, slow-stirring monsters, the uniform poisonous-looking green of the lichenous plants, the thin air that hurts one's lungs: all contributed to an appalling effect. I moved on a hundred years, and there was the same red sun—a little larger, a little duller—the same dying sea, the same chill air, and the same crowd of earthy crustacea creeping in and out among the green weed and the red rocks. And in the westward sky I saw a curved pale line like a vast new moon.

"So I travelled, stopping ever and again, in great strides of a thousand years or more, drawn on by the mystery of the earth's fate, watching with a strange fascination the sun grow larger and duller in the west-ward sky, and the life of the old earth ebb away. At last, more than thirty million years hence, the huge red-hot dome of the

sun had come to obscure nearly a tenth part of the darkling heavens. Then I stopped once more, for the crawling multitude of crabs had disappeared, and the red beach, save for its livid green liverworts and lichens, seemed lifeless. And now it was flecked with white. A bitter cold assailed me. Rare white flakes ever and again came eddying down. To the north-eastward, the glare of snow lay under the starlight of the sable sky, and I could see an undulating crest of hillocks pinkish-white. There were fringes of ice along the sea margin, with drifting masses further out; but the main expanse of that salt ocean, all bloody under the eternal sunset, was still unfrozen."

I looked about me to see if any traces of animal-life remained. A certain indefinable apprehension still kept me in the saddle of the machine. But I saw nothing moving, in earth or sky or sea. The green slime on the rocks alone testified that life was not extinct. A shallow sandbank had appeared in the sea and the water had receded from the beach. I fancied I saw some black object flopping about upon this bank, but it became motionless as I looked at it, and I judged that my eye had been deceived, and that the black object was merely a rock. The stars in the sky were intensely bright and seemed to me to twinkle very little.

"Suddenly I noticed that the circular westward outline of the sun had changed; that a concavity, a bay, had appeared in the curve. I saw this grow larger. For a minute perhaps I stared aghast at this blackness that was creeping over the day, and then I realized that an eclipse was beginning. Either the moon or the planet Mercury was passing across the sun's disk. Naturally, at first I took it to be the moon, but there is much to incline me to believe that what I really saw was the transit of an inner planet passing very near to the earth.

"The darkness grew apace; a cold wind began to blow in freshening gusts from the east, and the showering white flakes in the air increased in number. From the edge of the sea came a ripple and whisper. Beyond these lifeless sounds the world was silent. Silent? It would be hard to convey the stillness of it. All the sounds of man, the

bleating of sheep, the cries of birds, the hum of insects, the stir that makes the background of our lives—all that was over. As the darkness thickened, the eddying flakes grew more abundant, dancing before my eyes; and the cold of the air more intense. At last, one by one, swiftly, one after the other, the white peaks of the distant hills vanished into blackness. The breeze rose to a moaning wind. I saw the black central shadow of the eclipse sweeping towards me. In another moment the pale stars alone were visible. All else was rayless obscurity. The sky was absolutely black.

"A horror of this great darkness came on me. The cold, that smote to my marrow, and the pain I felt in breathing overcame me. I shivered, and a deadly nausea seized me. Then like a red-hot bow in the sky appeared the edge of the sun. I got off the machine to recover myself. I felt giddy and incapable of facing the return journey. As I stood sick and confused I saw again the moving thing upon the shoal—there was no mistake now that it was a moving thing—against the red water of the sea. It was a round thing, the size of a football perhaps, or, it may be, bigger, and tentacles trailed down from it; it seemed black against the weltering blood-red water, and it was hopping fitfully about. Then I felt I was fainting. But a terrible dread of lying helpless in that remote and awful twilight sustained me while I clambered upon the saddle."

Chapter 1

The Strange Man's Arrival

The stranger came early in February, one wintry day, through a biting wind and a driving snow, the last snowfall of the year, over the down, walking as it seemed from Bramblehurst railway station, and carrying a little black portmanteau in his thickly gloved hand. He was wrapped up from head to foot, and the brim of his soft felt hat hid every inch of his face but the shiny tip of his nose; the snow had piled itself against his shoulders and chest, and added a white crest to the burden he carried. He staggered into the Coach and Horses, more dead than alive as it seemed, and flung his portmanteau down. "A fire," he cried, "in the name of human charity! A room and a fire!" He stamped and shook the snow from off himself in the bar, and followed Mrs. Hall into her guest parlour to strike his bargain. And with that much introduction, that and a ready acquiescence to terms and a couple of sovereigns flung upon the table, he took up his quarters in the inn.

Mrs. Hall lit the fire and left him there while she went to prepare him a meal with her own hands. A guest to stop at Iping in the wintertime was an unheard-of piece of luck, let alone a guest who was no "haggler," and she was resolved to show herself worthy of her good fortune. As soon as the bacon was well under way, and Millie, her lymphatic aid, had been brisked up a bit by a few deftly chosen expressions of contempt, she carried the cloth, plates, and glasses into the parlour and began to lay them with the utmost éclat. Although the fire was burning up briskly, she was surprised to see that her visitor still wore his hat and coat, standing with his back to her and staring out of the window at the falling snow in the yard. His gloved hands

were clasped behind him, and he seemed to be lost in thought. She noticed that the melted snow that still sprinkled his shoulders dripped upon her carpet. "Can I take your hat and coat, sir," she said, "and give them a good dry in the kitchen?"

"No," he said without turning.

She was not sure she had heard him, and was about to repeat her question.

He turned his head and looked at her over his shoulder. "I prefer to keep them on," he said with emphasis and she noticed that he wore big blue spectacles with sidelights and had a bushy sidewhisker over his coatcollar that completely hid his cheeks and face.

"Very well, sir," she said. "As you like. In a bit the room will be warmer."

He made no answer and had turned his face away from her again; and Mrs. Hall, feeling that her conversational advances were ill-timed, laid the rest of the table things in a quick staccato and whisked out of the room. When she returned he was still standing there like a man of stone, his back hunched, his collar turned up, his dripping hatbrim turned down, hiding his face and ears completely. She put down the eggs and bacon with considerable emphasis, and called rather than said to him, "Your lunch is served, sir."

"Thank you," he said at the same time, and did not stir until she was closing the door. Then he swung round and approached the table with a certain eager quickness.

As she went behind the bar to the kitchen she heard a sound repeated at regular intervals. Chirk, chirk, chirk, it went, the sound of a spoon being rapidly whisked round a basin. "That girl!" she said. "There! I clean forgot it. It's her being so long!" And while she herself finished mixing the mustard, she gave Millie a few verbal stabs for her excessive slowness. She had cooked the ham and eggs, laid the table, and done everything, while Millie (help indeed!) had only succeeded in delaying the mustard. And him a new guest and wanting to stay! Then she filled the mustard pot, and I putting it with a certain

stateliness upon a gold and black teatray, carried it into the parlour.

She rapped and entered promptly. As she did so her visitor moved quickly, so that she got but a glimpse of a white object disappearing behind the table. It would seem he was picking something from the floor. She rapped down the mustard pot on the table, and then she noticed the overcoat and hat had been taken off and put over a chair in front of the fire, and a pair of wet boots threatened rust to her steel fender. She went to these things resolutely. "I suppose I may have them to dry now," she said in a voice that brooked no denial.

"Leave the hat," said her visitor, in a muffled voice, and turning she saw he had raised his head and was sitting and looking at her.

For a moment she stood gaping at him, too surprised to speak.

He held a white cloth—it was a serviette he had brought with him—over the lower part of his face, so that his mouth and jaws were completely hidden, and that was the reason for his muffled voice. But it was not that which startled Mrs. Hall. It was the fact that all his forehead above his blue glasses was covered by a white bandage, and that another covered his ears, leaving not a scrap of his face exposed excepting only his pink, peaked nose. It was bright pink, and shiny just as it had been at first. He wore a dark-brown velvet jacket with a high, black, linen lined collar turned up about his neck. The thick black hair, escaping as it could below and between the cross bandages, projected in curious tails and horns, giving him the strangest appearance conceivable. This muffled and bandaged head was so unlike what she had anticipated, that for a moment she was rigid.

He did not remove the serviette, but remained holding it, as she saw now, with a brown gloved hand, and regarding her with his inscrutable blue glasses. "Leave the hat," he said, speaking very distinctly through the white cloth.

Her nerves began to recover from the shock they had received. She placed the hat on the chair again by the fire. "I didn't know, sir," she began, "that—" and she stopped embarrassed.

"Thank you," he said drily, glancing from her to the door and then at her again.

"I'll have them nicely dried, sir, at once," she said, and carried his clothes out of the room. She glanced at his whiteswathed head and blue goggles again as she was going out of the door; but his napkin was still in front of his face. She shivered a little as she closed the door behind her, and her face was eloquent of her surprise and perplexity. "I never," she whispered. "There!" She went quite softly to the kitchen, and was too preoccupied to ask Millie what she was messing about with now, when she got there.

The visitor sat and listened to her retreating feet. He glanced inquiringly at the window before he removed his serviette, and resumed his meal. He took a mouthful, glanced suspiciously at the window, took another mouthful, then rose and, taking the serviette in his hand, walked across the room and pulled the blind down to the top of the white muslin that obscured the lower panes. This left the room in twilight. This done, he returned with an easier air to the table and his meal.

"The poor soul's had an accident or an operation or something," said Mrs. Hall. "What a turn them bandages did give me, to be sure!"

She put on some more coal, unfolded the clotheshorse, and extended the traveller's coat upon this. "And they goggles! Why, he looked more like a divin' helmet than a human man!" She hung his muffler on a corner of the horse. "And holding that handkerchief over his mouth all the time. Talkin' through it! ... Perhaps his mouth was hurt too—maybe."

She turned round, as one who suddenly remembers. "Bless my soul alive!" she said, going off at a tangent; "ain't you done them taters yet, Millie?"

When Mrs. Hall went to clear away the stranger's lunch, her idea that his mouth must also have been cut or disfigured in the accident she supposed him to have suffered, was confirmed, for he was smoking a pipe, and all the time that she was in the room he never

loosened the silk muffler he had wrapped round the lower part of his face to put the mouthpiece to his lips. Yet it was not forgetfulness, for she saw he glanced at it as it smouldered out. He sat in the corner with his back to the windowblind and spoke now, having eaten and drunk and being comfortably warmed through, with less aggressive brevity than before. The reflection of the fire lent a kind of red animation to his big spectacles they had lacked hitherto.

"I have some luggage," he said, "at Bramblehurst station," and he asked her how he could have it sent. He bowed his bandaged head quite politely in acknowledgement of her explanation. "Tomorrow!" he said. "There is no speedier delivery?" and seemed quite disappointed when she answered, "No." Was she quite sure? No man with a trap who would go over?

Mrs. Hall, nothing loath, answered his questions and developed a conversation. "It's a steep road by the down, sir," she said in answer to the question about a trap; and then, snatching at an opening, said, "It was there a carriage was upsettled, a year ago and more, A gentleman killed, besides his coachman. Accidents, sir, happens in a moment, don't they?"

But the visitor was not to be drawn so easily. "They do," he said through his muffler, eyeing her quietly through his impenetrable glasses.

"But they take long enough to get well, sir, Don't they? ... There was my sister's son, Tom, jest cut his arm with a scythe, tumbled on it in the 'ayfield, and, bless me! He was three months tied up, sir. You'd hardly believe it. It's regular given me a dread of a scythe, sir."

"I can quite understand that," said the visitor.

"He was afraid, one time, that he'd have to have an op'ration—he was that bad, sir."

The visitor laughed abruptly, a bark of a laugh that he seemed to bite and kill in his mouth. "Was he?" he said.

"He was, sir. And no laughing matter to them as had the doing for him, as I had—my sister being took up with her little ones so much.

There was bandages to do, sir, and bandages to undo. So that if I may make so bold as to say it, sir—"

"Will you get me some matches?" said the visitor, quite abruptly. "My pipe is out."

Mrs. Hall was pulled up suddenly. It was certainly rude of him, after telling him all she had done. She gasped at him for a moment, and remembered the two sovereigns. She went for the matches.

"Thanks," he said concisely, as she put them down, and turned his shoulder upon her and stared out of the window again. It was altogether too discouraging. Evidently he was sensitive on the topic of operations and bandages. She did not "make so bold as to say," however, after all. But his snubbing way had irritated her, and Millie had a hot time of it that afternoon.

The visitor remained in the parlour until four o'clock, without giving the ghost of an excuse for an intrusion. For the most part he was quite still during that time; it would seem he sat in the growing darkness smoking in the firelight, perhaps dozing.

Once or twice a curious listener might have heard him at the coals, and for the space of five minutes he was audible pacing the room. He seemed to be talking to himself. Then the armchair creaked as he sat down again.

Chapter 2

Mr. Teddy Henfrey's First Impressions

At four o'clock, when it was fairly dark and Mrs. Hall was screwing up her courage to go in and ask her visitor if he would take some tea, Teddy Henfrey, the clockjobber, came into the bar. "My sakes! Mrs. Hall," said he, "but this is terrible weather for thin boots!" The snow outside was falling faster.

Mrs. Hall agreed, and then noticed he had his bag with him. "Now you're here, Mr. Teddy," said she, "I'd be glad if you'd give th' old clock in the parlour a bit of a look. 'Tis going, and it strikes well and hearty; but the hourhand won't do nuthin' but point at six."

And leading the way, she went across to the parlour door and rapped and entered.

Her visitor, she saw as she opened the door, was seated in the armchair before the fire, dozing it would seem, with his bandaged head drooping on one side. The only light in the room was the red glow from the fire—which lit his eyes like adverse railway signals, but left his downcast face in darkness—and the scanty vestiges of the day that came in through the open door. Everything was ruddy, shadowy, and indistinct to her, the more so since she had just been lighting the bar lamp, and her eyes were dazzled. But for a second it seemed to her that the man she looked at had an enormous mouth wide open—a vast and incredible mouth that swallowed the whole of the lower portion of his face. It was the sensation of a moment: the whitebound head, the monstrous goggle eyes, and this huge yawn below it. Then he stirred, started up in his chair, put up his hand. She opened the door

wide, so that the room was lighter, and she saw him more clearly, with the muffler held up to his face just as she had seen him hold the serviette before. The shadows, she fancied, had tricked her.

"Would you mind, sir, this man a-coming to look at the clock, sir?" she said, recovering from the momentary shock.

"Look at the clock?" he said, staring round in a drowsy manner, and speaking over his hand, and then, getting more fully awake, "certainly."

Mrs. Hall went away to get a lamp, and he rose and stretched himself. Then came the light, and Mr. Teddy Henfrey, entering, was confronted by this bandaged person. He was, he says, "taken aback."

"Good afternoon," said the stranger, regarding him—as Mr. Henfrey says, with a vivid sense of the dark spectacles—"like a lobster."

"I hope," said Mr. Henfrey, "that it's no intrusion."

"None whatever," said the stranger. "Though, I understand," he said turning to Mrs. Hall, "that this room is really to be mine for my own private use."

"I thought, sir," said Mrs. Hall, "you'd prefer the clock—"

"Certainly," said the stranger, "certainly—but, as a rule, I like to be alone and undisturbed."

"But I'm really glad to have the clock seen to," he said, seeing a certain hesitation in Mr. Henfrey's manner. "Very glad." Mr. Henfrey had intended to apologise and withdraw, but this anticipation reassured him. The stranger turned round with his back to the fireplace and put his hands behind his back. "And presently," he said, "when the clockmending is over, I think I should like to have some tea. But not till the clockmending is over."

Mrs. Hall was about to leave the room—she made no conversational advances this time, because she did not want to be snubbed in front of Mr. Henfrey—when her visitor asked her if she had made any arrangements about his boxes at Bramblehurst. She told him she had mentioned the matter to the postman, and that the

carrier could bring them over on the morrow. "You are certain that is the earliest?" he said.

She was certain, with a marked coldness.

"I should explain," he added, "what I was really too cold and fatigued to do before, that I am an experimental investigator."

"Indeed, sir," said Mrs. Hall, much impressed.

"And my baggage contains apparatus and appliances."

"Very useful things indeed they are, sir," said Mrs. Hall.

"And I'm very naturally anxious to get on with my inquiries."

"Of course, sir."

"My reason for coming to Iping," he proceeded, with a certain deliberation of manner, "was ... a desire for solitude. I do not wish to be disturbed in my work. In addition to my work, an accident—"

"I thought as much," said Mrs. Hall to herself.

"—necessitates a certain retirement. My eyes—are sometimes so weak and painful that I have to shut myself up in the dark for hours together. Lock myself up. Sometimes—now and then. Not at present, certainly. At such times the slightest disturbance, the entry of a stranger into the room, is a source of excruciating annoyance to me—it is well these things should be understood."

"Certainly, sir," said Mrs. Hall. "And if I might make so bold as to ask—"

"That, I think, is all," said the stranger, with that quietly irresistible air of finality he could assume at will. Mrs. Hall reserved her question and sympathy for a better occasion.

After Mrs. Hall had left the room, he remained standing in front of the fire, glaring, so Mr. Henfrey puts it, at the clock-mending. Mr. Henfrey not only took off the hands of the clock, and the face, but extracted the works; and he tried to work in as slow and quiet and unassuming a manner as possible. He worked with the lamp close to him, and the green shade threw a brilliant light upon his hands, and upon the frame and wheels, and left the rest of the room shadowy. When he looked up, coloured patches swam in his eyes. Being

constitutionally of a curious nature, he had removed the works—a quite unnecessary proceeding—with the idea of delaying his departure and perhaps falling into conversation with the stranger. But the stranger stood there, perfectly silent and still. So still, it got on Henfrey's nerves. He felt alone in the room and looked up, and there, grey and dim, was the bandaged head and huge blue lenses staring fixedly, with a mist of green spots drifting in front of them. It was so uncanny-looking to Henfrey that for a minute they remained staring blankly at one another. Then Henfrey looked down again. Very uncomfortable position! One would like to say something. Should he remark that the weather was very cold for the time of year?

He looked up as if to take aim with that introductory shot. "The weather—" he began.

"Why don't you finish and go?" said the rigid figure, evidently in a state of painfully suppressed rage. "All you've got to do is to fix the hourhand on its axle. You're simply humbugging—"

"Certainly, sir—one minute more, sir. I overlooked—" And Mr. Henfrey finished and went.

But he went off feeling excessively annoyed. "Damn it!" said Mr. Henfrey to himself, trudging down the village through the thawing snow; "a man must do a clock at times, sure-lie."

And again: "Can't a man look at you?—Ugly!"

And yet again: "Seemingly not. If the police was wanting you you couldn't be more wrapped and bandaged."

At Gleeson's corner he saw Hall, who had recently married the stranger's hostess at the Coach and Horses, and who now drove the Iping conveyance, when occasional people required it, to Sidderbridge Junction, coming towards him on his return from that place. Hall had evidently been "stopping a bit" at Sidderbridge, to judge by his driving. "Ow do, Teddy?" he said, passing.

"You got a rum un up home!" said Teddy.

Hall very sociably pulled up. "What's that?" he asked.

"Rumlooking customer stopping at the Coach and Horses," said

Teddy. "My sakes!"

And he proceeded to give Hall a vivid description of his grotesque guest. "Looks a bit like a disguise, don't it? I'd like to see a man's face if I had him stopping in my place," said Henfrey. "But women are that trustful, —where strangers are concerned. He's took your rooms and he ain't even given a name, Hall."

"You don't say so!" said Hall, who was a man of sluggish apprehension.

"Yes," said Teddy. "By the week. Whatever he is, you can't get rid of him under the week. And he's got a lot of luggage coming tomorrow, so he says. Let's hope it won't be stones in boxes, Hall."

He told Hall how his aunt at Hastings had been swindled by a stranger with empty portmanteaux. Altogether he left Hall vaguely suspicious. "Get up, old girl," said Hall. "I s'pose I must see 'bout this."

Teddy trudged on his way with his mind considerably relieved.

Instead of "seeing 'bout it," however, Hall on his return was severely rated by his wife on the length of time he had spent in Sidderbridge, and his mild inquiries were answered snappishly and in a manner not to the point. But the seed of suspicion Teddy had sown germinated in the mind of Mr. Hall in spite of these discouragements. "You wim' don't know everything," said Mr. Hall, resolved to ascertain more about the personality of his guest at the earliest possible opportunity. And after the stranger had gone to bed, which he did about half past nine, Mr. Hall went aggressively into the parlour and looked very hard at his wife's furniture, just to show that the stranger wasn't master there, and scrutinised closely and a little contemptuously a sheet of mathematical computation the stranger had left. When retiring for the night he instructed Mrs. Hall to look very closely at the stranger's luggage when it came next day.

"You mind your own business, Hall," said Mrs. Hall, "and I'll mind mine."

She was all the more inclined to snap at Hall because the stranger was undoubtedly an unusually strange sort of stranger, and she was by

no means assured about him in her own mind. In the middle of the night she woke up dreaming of huge white heads like turnips, that came trailing after her at the end of interminable necks, and with vast black eyes. But being a sensible woman, she subdued her terrors and turned over and went to sleep again.

Chapter 3

The Thousand and One Bottles

Thus it was that on the ninth day of February, at the beginning of the thaw, this singular person fell out of infinity into Iping Village. Next day his luggage arrived through the slush. And very remarkable luggage it was. There were a couple of trunks indeed, such as a rational man might need, but in addition there were a box of books—big, fat books, of which some were just in an incomprehensible handwriting, —and a dozen or more crates, boxes, and cases, containing objects packed in straw, as it seemed to Hall, tugging with a casual curiosity at the straw—glass bottles. The stranger, muffled in hat, coat, gloves, and wrapper, came out impatiently to meet Fearenside's cart, while Hall was having a word or so of gossip preparatory to helping being them in. Out he came, not noticing Fearenside's dog, who was sniffing in a dilettante spirit at Hall's legs. "Come along with those boxes," he said. "I've been waiting long enough."

And he came down the steps towards the tail of the cart as if to lay hands on the smaller crate.

No sooner had Fearenside's dog caught sight of him, however, than it began to bristle and growl savagely, and when he rushed down the steps it gave an undecided hop, and then sprang straight at his hand. "Whup!" cried Hall, jumping back, for he was no hero with dogs, and Fearenside howled, "Lie down!" and snatched his whip.

They saw the dog's teeth had slipped the hand, heard a kick, saw the dog execute a flanking jump and get home on the stranger's leg, and heard the rip of his trousering. Then the finer end of Fearenside's

whip reached his property, and the dog, yelping with dismay, retreated under the wheels of the waggon. It was all the business of a half-minute. No one spoke, everyone shouted. The stranger glanced swiftly at his torn glove and at his leg, made as if he would stoop to the latter, then turned and rushed up the steps into the inn. They heard him go headlong across the passage and up the uncarpeted stairs to his bedroom.

"You brute, you!" said Fearenside, climbing off the waggon with his whip in his hand, while the dog watched him through the wheel. "Come here," said Fearenside—"You'd better."

Hall had stood gaping. "He wuz bit," said Hall. "I'd better go and see to en," and he trotted after the stranger. He met Mrs. Hall in the passage. "Carrier's darg," he said "bit en."

He went straight upstairs, and the stranger's door being ajar, he pushed it open and was entering without any ceremony, being of a naturally sympathetic turn of mind.

The blind was down and the room dim. He caught a glimpse of a most singular thing, what seemed a handless arm waving towards him, and a face of three huge indeterminate spots on white, very like the face of a pale pansy. Then he was struck violently in the chest, hurled back, and the door slammed in his face and locked, all so rapidly that he had no time to observe. A waving of indecipherable shapes, a blow, and a concussion. There he stood on the dark little landing, wondering what it might be that he had seen.

After a couple of minutes, he rejoined the little group that had formed outside the Coach and Horses. There was Fearenside telling about it all over again for the second time; there was Mrs. Hall saying his dog didn't have no business to bite her guests; there was Huxter, the general dealer from over the road, interrogative; and Sandy Wadgers from the forge, judicial; besides women and children, —all of them saying fatuities: "Wouldn't let en bite me, I knows"; "Tasn't right have such dargs"; "Whad 'e bite 'n for, then?" and so forth.

Mr. Hall, staring at them from the steps and listening, found it

incredible that he had seen anything very remarkable happen upstairs. Besides, his vocabulary was altogether too limited to express his impressions.

"He don't want no help, he says," he said in answer to his wife's inquiry. "We'd better be a takin' of his luggage in."

"He ought to have it cauterised at once," said Mr. Huxter; "especially if it's at all inflamed."

"I'd shoot en, that's what I'd do," said a lady in the group.

Suddenly the dog began growling again.

"Come along," cried an angry voice in the doorway, and there stood the muffled stranger with his collar turned up, and his hatbrim bent down. "The sooner you get those things in the better I'll be pleased." It is stated by an anonymous bystander that his trousers and gloves had been changed.

"Was you hurt, sir?" said Fearenside. "I'm rare sorry the darg—"

"Not a bit," said the stranger. "Never broke the skin. Hurry up with those things."

He then swore to himself, so Mr. Hall asserts.

Directly the first crate was carried into the parlour, in accordance with his directions, the stranger flung himself upon it with extraordinary eagerness, and began to unpack it, scattering the straw with an utter disregard of Mrs. Hall's carpet. And from it he began to produce bottles—little fat bottles containing powders, small and slender bottles containing coloured and white fluids, fluted blue bottles labelled Poison, bottles with round bodies and slender necks, large green-glass bottles, large white-glass bottles, bottles with glass stoppers and frosted labels, bottles with fine corks, bottles with bungs, bottles with wooden caps, wine bottles, salad-oil bottles—putting them in rows on the chiffonnier, on the mantel, on the table under the window, round the floor, on the bookshelf—everywhere. The chemist's shop in Bramblehurst could not boast half so many. Quite a sight it was. Crate after crate yielded bottles, until all six were empty and the table high with straw; the only things that came out of these

crates besides the bottles were a number of test-tubes and a carefully packed balance.

And directly the crates were unpacked, the stranger went to the window and set to work, not troubling in the least about the litter of straw, the fire which had gone out, the box of books outside, nor for the trunks and other luggage that had gone upstairs.

When Mrs. Hall took his dinner in to him, he was already so absorbed in his work, pouring little drops out of the bottles into test-tubes, that he did not hear her until she had swept away the bulk of the straw and put the tray on the table, with some little emphasis perhaps, seeing the state that the floor was in. Then he half turned his head and immediately turned it away again. But she saw he had removed his glasses; they were beside him on the table, and it seemed to her that his eye sockets were extraordinarily hollow. He put on his spectacles again, and then turned and faced her. She was about to complain of the straw on the floor when he anticipated her.

"I wish you wouldn't come in without knocking," he said in the tone of abnormal exasperation that seemed so characteristic of him.

"I knocked, but seemingly—"

"Perhaps you did. But in my investigations—my really very urgent and necessary investigations—the slightest disturbance, the jar of a door—I must ask you—"

"Certainly, sir. You can turn the lock if you're like that, you know—any time."

"A very good idea," said the stranger.

"This stor, sir, if I might make so bold as to remark—"

"Don't. If the straw makes trouble put it down in the bill." And he mumbled at her—words suspiciously like curses.

He was so odd, standing there, so aggressive and explosive, bottle in one hand and test-tube in the other, that Mrs. Hall was quite alarmed. But she was a resolute woman. "In which case, I should like to know, sir, what you consider—"

"A shilling. Put down a shilling. Surely a shilling's enough?"

"So be it," said Mrs. Hall, taking up the tablecloth and beginning to spread it over the table. "If you're satisfied, of course—"

He turned and sat down, with his coatcollar towards her.

All the afternoon he worked with the door locked and, as Mrs. Hall testifies, for the most part in silence. But once there was a concussion and a sound of bottles ringing together as though the table had been hit, and the smash of a bottle flung violently down, and then a rapid pacing athwart the room. Fearing "something was the matter," she went to the door and listened, not caring to knock.

"I can't go on," he was raving. "I can't go on. Three hundred thousand, four hundred thousand! The huge multitude! Cheated! All my life it may take me! Patience! Patience indeed! Fool and liar!"

There was a noise of hobnails on the bricks in the bar, and Mrs. Hall very reluctantly had to leave the rest of his soliloquy. When she returned the room was silent again, save for the faint crepitation of his chair and the occasional clink of a bottle. It was all over. The stranger had resumed work.

When she took in his tea she saw broken glass in the corner of the room under the concave mirror, and a golden stain that had been carelessly wiped. She called attention to it.

"Put it down in the bill," snapped her visitor. "For God's sake don't worry me. If there's damage done, put it down in the bill"; and he went on ticking a list in the exercise book before him.

"I'll tell you something," said Fearenside mysteriously. It was late in the afternoon, and they were in the little beershop of Iping Hanger.

"Well?" said Teddy Henfrey.

"This chap you're speaking of, what my dog bit. Well—he's black. Leastways, his legs are. I seed through the tear of his trousers and the tear of his glove. You'd have expected a sort of pinky to show, wouldn't you? Well—there wasn't none. Just blackness. I tell you, he's as black as my hat."

"My sakes!" said Henfrey. "It's a rummy case altogether. Why, his nose is as pink as paint!"

"That's true," said Fearenside. "I knows that. And I tell 'ee what I'm thinking. That marn's a piebald, Teddy. Black here and white there—in patches. And he's ashamed of it. He's a kind of half-breed, and the colour's come off patchy instead of mixing. I've heard of such things before. And it's the common way with horses, as anyone can see."

Chapter 4

Mr. Cuss Interviews the Stranger

I have told the circumstances of the stranger's arrival in Iping with a certain fulness of detail, in order that the curious impression he created may be understood by the reader. But excepting two odd incidents, the circumstances of his stay until the extraordinary day of the Club Festival may be passed over very cursorily. There were a number of skirmishes with Mrs. Hall on matters of domestic discipline, but in every case until late in April, when the first signs of penury began, he overrode her by the easy expedient of an extra payment. Hall did not like him, and whenever he dared he talked of the advisability of getting rid of him; but he showed his dislike chiefly by concealing it ostentatiously, and avoiding his visitor as much as possible. "Wait till the summer," said Mrs. Hall, sagely, "when the artists are beginning to come. Then we'll see. He may be a bit overbearing, but bills settled punctual is bills settled punctual, whatever you'd like to say."

The stranger did not go to church, and indeed made no difference between Sunday and the irreligious days, even in costume. He worked, as Mrs. Hall thought, very fitfully. Some days he would come down early and be continuously busy. On others he would rise late, pace his room, fretting audibly for hours together, smoke, sleep in the armchair by the fire. Communication with the world beyond the village he had none. His temper continued very uncertain; for the most part his manner was that of a man suffering under almost unendurable provocation, and once or twice things were snapped, torn, crushed, or broken in spasmodic gusts of violence. He seemed

under a chronic irritation of the greatest intensity. His habit of talking to himself in a low voice grew steadily upon him, but though Mrs. Hall listened conscientiously she could make neither head nor tail of what she heard.

He rarely went abroad by daylight, but at twilight he would go out muffled up enormously, whether the weather were cold or not, and he chose the loneliest paths and those most overshadowed by trees and banks. His goggling spectacles and ghastly bandaged face under the penthouse of his hat, came with a disagreeable suddenness out of the darkness upon one or two homegoing labourers; and Teddy Henfrey, tumbling out of the "Scarlet Coat" one night at half past nine, was scared shamefully by the stranger's skull-like head (he was walking hat in hand) lit by the sudden light of the opened door. Such children as saw him at nightfall dreamt of bogies, and it seemed doubtful whether he disliked boys more than they disliked him, or the reverse—but there was certainly a vivid enough dislike on either side.

It was inevitable that a person of so remarkable an appearance and bearing should form a frequent topic in such a village as Iping. Opinion was greatly divided about his occupation. Mrs. Hall was sensitive on the point. When questioned, she explained very carefully that he was an "experimental investigator," going gingerly over the syllables as one who dreads pitfalls. When asked what an experimental investigator was, she would say with a touch of superiority that most educated people knew such things as that, and would then explain that he "discovered things." Her visitor had had an accident, she said, which temporarily discoloured his face and hands; and being of a sensitive disposition, he was averse to any public notice of the fact.

Out of her hearing there was a view largely entertained that he was a criminal trying to escape from justice by wrapping himself up so as to conceal himself altogether from the eye of the police. This idea sprang from the brain of Mr. Teddy Henfrey. No crime of any magnitude dating from the middle or end of February was known to

have occurred. Elaborated in the imagination of Mr. Gould, the probationary assistant in the National School, this theory took the form that the stranger was an Anarchist in disguise, preparing explosives, and he resolved to undertake such detective operations as his time permitted. These consisted for the most part in looking very hard at the stranger whenever they met, or in asking people who had never seen the stranger, leading questions about him. But he detected nothing.

Another school of opinion followed Mr. Fearenside, and either accepted the piebald view or some modification of it; as, for instance, Silas Durgan, who was heard to assert that "if he choses to show enself at fairs he'd make his fortune in no time," and being a bit of a theologian, compared the stranger to the man with the one talent. Yet another view explained the entire matter by regarding the stranger as a harmless lunatic. That had the advantage of accounting for everything straight away.

Between these main groups there were waverers and compromisers. Sussex folk have few superstitions, and it was only after the events of early April that the thought of the supernatural was first whispered in the village. Even then it was only credited among the women folk.

But whatever they thought of him, people in Iping on the whole agreed in disliking him. His irritability, though it might have been comprehensible to an urban brainworker, was an amazing thing to these quiet Sussex villagers. The frantic gesticulations they surprised now and then, the headlong pace after nightfall that swept him upon them round quiet corners, the inhuman bludgeoning of all tentative advances of curiosity, the taste for twilight that led to the closing of doors, the pulling down of blinds, the extinction of candles and lamps—who could agree with such goings on? They drew aside as he passed down the village, and when he had gone by, young humourists would up with coatcollars and down with hatbrims, and go pacing nervously after him in imitation of his occult bearing. There was a song popular

at that time called the "Bogey Man"; Miss Statchell sang it at the schoolroom concert (in aid of the church lamps), and thereafter whenever one or two of the villagers were gathered together and the stranger appeared, a bar or so of this tune, more or less sharp or flat, was whistled in the midst of them. Also belated little children would call "Bogey Man!" after him, and make off tremulously elated.

Cuss, the general practitioner, was devoured by curiosity. The bandages excited his professional interest, the report of the thousand and one bottles aroused his jealous regard. All through April and May he coveted an opportunity of talking to the stranger, and at last, towards Whitsuntide, he could stand it no longer, but hit upon the subscription-list for a village nurse as an excuse. He was surprised to find that Mr. Hall did not know his guest's name. "He give a name," said Mrs. Hall—an assertion which was quite unfounded—"but I didn't rightly hear it." She thought it seemed so silly not to know the man's name.

Cuss rapped at the parlour door and entered. There was a fairly audible imprecation from within. "Pardon my intrusion," said Cuss, and then the door closed and cut Mrs. Hall off from the rest of the conversation.

She could hear the murmur of voices for the next ten minutes, then a cry of surprise, a stirring of feet, a chair flung aside, a bark of laughter, quick steps to the door, and Cuss appeared, his face white, his eyes staring over his shoulder. He left the door open behind him, and without looking at her strode across the hall and went down the steps, and she heard his feet hurrying along the road. He carried his hat in his hand. She stood behind the door, looking at the open door of the parlour. Then she heard the stranger laughing quietly, and then his footsteps came across the room. She could not see his face where she stood. The parlour door slammed, and the place was silent again.

Cuss went straight up the village to Bunting the vicar. "Am I mad?" Cuss began abruptly, as he entered the shabby little study. "Do I look like an insane person?"

"What's happened?" said the vicar, putting the ammonite on the loose sheets of his forthcoming sermon.

"That chap at the inn—"

"Well?"

"Give me something to drink," said Cuss, and he sat down. When his nerves had been steadied by a glass of cheap sherry—the only drink the good vicar had available—he told him of the interview he had just had. "Went in," he gasped, "and began to demand a subscription for that Nurse Fund. He'd stuck his hands in his pockets as I came in, and he sat down lumpily in his chair. Sniffed. I told him I'd heard he took an interest in scientific things. He said yes. Sniffed again. Kept on sniffing all the time; evidently recently caught an infernal cold. No wonder, wrapped up like that! I developed the nurse idea, and all the while kept my eyes open. Bottles—chemicals—everywhere. Balance, test-tubes in stands, and a smell of—evening primrose. Would he subscribe? Said he'd consider it. Asked him, point-blank, was he researching. Said he was. A long research? Got quite cross. 'A damnable long research,' said he, blowing the cork out, so to speak. 'Oh,' said I. And out came the grievance. The man was just on the boil, and my question boiled him over. He had been given a prescription, most valuable prescription—what for he wouldn't say. Was it medical? 'Damn you! What are you fishing after?' I apologised. Dignified sniff and cough. He resumed. He'd read it. Five ingredients. Put it down; turned his head. Draught of air from window lifted the paper. Swish, rustle. He was working in a room with an open fireplace, he said. Saw a flicker, and there was the prescription burning and lifting chimneyward. Rushed towards it just as it whisked up chimney. So! Just at that point, to illustrate his story, out came his arm."

"Well?"

"No hand—just an empty sleeve. Lord! I thought, that's a deformity! Got a cork arm, I suppose, and has taken it off. Then, I thought, there's something odd in that. What the devil keeps that

sleeve up and open, if there's nothing in it? There was nothing in it, I tell you. Nothing down it, right down to the joint. I could see right down it to the elbow, and there was a glimmer of light shining through a tear of the cloth. 'Good God!' I said. Then he stopped. Stared at me with those black goggles of his, and then at his sleeve."

"Well?"

"That's all. He never said a word; just glared, and put his sleeve back in his pocket quickly. 'I was saying,' said he, 'that there was the prescription burning, wasn't I?' Interrogative cough. 'How the devil,' said I, 'can you move an empty sleeve like that?' 'Empty sleeve?' 'Yes,' said I, 'an empty sleeve.'

"It's an empty sleeve, is it? You saw it was an empty sleeve?' He stood up right away. I stood up too. He came towards me in three very slow steps, and stood quite close. Sniffed venomously. I didn't flinch, though I'm hanged if that bandaged knob of his, and those blinkers, aren't enough to unnerve any one, coming quietly up to you.

"You said it was an empty sleeve?' he said. 'Certainly,' I said. At staring and saying nothing a barefaced man, unspectacled, starts scratch. Then very quietly he pulled his sleeve out of his pocket again, and raised his arm towards me as though he would show it to me again. He did it very, very slowly. I looked at it. Seemed an age. 'Well?' said I, clearing my throat, 'there's nothing in it.' 'Had to say something. I was beginning to feel frightened. I could see right down it. He extended it straight towards me, slowly, slowly—just like that—until the cuff was six inches from my face. Queer thing to see an empty sleeve come at you like that! And then—"

"Well?"

"Something—exactly like a finger and thumb it felt—nipped my nose."

Bunting began to laugh.

"There wasn't anything there!" said Cuss, his voice running up into a shriek at the "there." "It's all very well for you to laugh, but I tell you I was so startled, I hit his cuff hard, and turned around, and cut

out of the room—I left him—"

Cuss stopped. There was no mistaking the sincerity of his panic. He turned round in a helpless way and took a second glass of the excellent vicar's very inferior sherry. "When I hit his cuff," said Cuss, "I tell you, it felt exactly like hitting an arm. And there wasn't an arm! There wasn't the ghost of an arm!"

Mr. Bunting thought it over. He looked suspiciously at Cuss. "It's a most remarkable story," he said. He looked very wise and grave indeed. "It's really," said Mr. Bunting with judicial emphasis, "a most remarkable story."

Chapter 5

The Burglary at the Vicarage

The facts of the burglary at the vicarage came to us chiefly through the medium of the vicar and his wife. It occurred in the small hours of Whit-Monday—the day devoted in Iping to the Club festivities. Mrs. Bunting, it seems, woke up suddenly in the stillness that comes before the dawn, with the strong impression that the door of their bedroom had opened and closed. She did not arouse her husband at first, but sat up in bed listening. She then distinctly heard the pad, pad, pad of bare feet coming out of the adjoining dressing room and walking along the passage towards the staircase. As soon as she felt assured of this, she aroused the Rev. Mr. Bunting as quietly as possible. He did not strike a light, but putting on his spectacles, her dressing gown, and his bath slippers, he went out on the landing to listen. He heard quite distinctly a fumbling going on at his study desk downstairs, and then a violent sneeze.

At that he returned to his bedroom, armed himself with the most obvious weapon, the poker, and descended the staircase as noiselessly as possible. Mrs. Bunting came out on the landing.

The hour was about four, and the ultimate darkness of the night was past. There was a faint shimmer of light in the hall, but the study doorway yawned impenetrably black. Everything was still except the faint creaking of the stairs under Mr. Bunting's tread, and the slight movements in the study. Then something snapped, the drawer was opened, and there was a rustle of papers. Then came an imprecation, and a match was struck and the study was flooded with yellow light. Mr. Bunting was now in the hall, and through the crack of the door he

could see the desk and the open drawer and a candle burning on the desk. But the robber he could not see. He stood there in the hall undecided what to do, and Mrs. Bunting, her face white and intent, crept slowly downstairs after him. One thing kept up Mr. Bunting's courage; the persuasion that this burglar was a resident in the village.

They heard the chink of money, and realised that the robber had found the housekeeping reserve of gold—two pounds ten in half sovereigns altogether. At that sound Mr. Bunting was nerved to abrupt action. Gripping the poker firmly, he rushed into the room, closely followed by Mrs. Bunting. "Surrender!" cried Mr. Bunting, fiercely, and then stooped amazed. Apparently the room was perfectly empty.

Yet their conviction that they had, that very moment, heard somebody moving in the room had amounted to a certainty. For half a minute, perhaps, they stood gaping, then Mrs. Bunting went across the room and looked behind the screen, while Mr. Bunting, by a kindred impulse, peered under the desk. Then Mrs. Bunting turned back the window-curtains, and Mr. Bunting looked up the chimney and probed it with the poker. Then Mrs. Bunting scrutinised the waste-paper basket and Mr. Bunting opened the lid of the coal-scuttle. Then they came to a stop and stood with eyes interrogating each other.

"I could have sworn—" said Mr. Bunting.

"The candle!" said Mr. Bunting. "Who lit the candle?"

"The drawer!" said Mrs. Bunting. "And the money's gone!"

She went hastily to the doorway.

"Of all the extraordinary occurrences—"

There was a violent sneeze in the passage. They rushed out, and as they did so the kitchen door slammed. "Bring the candle," said Mr. Bunting, and led the way. They both heard a sound of bolts being hastily shot back.

As he opened the kitchen door he saw through the scullery that the back door was just opening, and the faint light of early dawn displayed the dark masses of the garden beyond. He is certain that nothing went out of the door. It opened, stood open for a moment,

and then closed with a slam. As it did so, the candle Mrs. Bunting was carrying from the study flickered and flared. It was a minute or more before they entered the kitchen.

The place was empty. They refastened the back door, examined the kitchen, pantry, and scullery thoroughly, and at last went down into the cellar. There was not a soul to be found in the house, search as they would.

Daylight found the vicar and his wife, a quaintly-costumed little couple, still marvelling about on their own ground floor by the unnecessary light of a guttering candle.

Chapter 6

The Furniture That Went Mad

Now it happened that in the early hours of Whit-Monday, before Millie was hunted out for the day, Mr. Hall and Mrs. Hall both rose and went noiselessly down into the cellar. Their business there was of a private nature, and had something to do with the specific gravity of their beer. They had hardly entered the cellar when Mrs. Hall found she had forgotten to bring down a bottle of sarsaparilla from their jointroom. As she was the expert and principal operator in this affair, Hall very properly went upstairs for it.

On the landing he was surprised to see that the stranger's door was ajar. He went on into his own room and found the bottle as he had been directed.

But returning with the bottle, he noticed that the bolts of the front door had been shot back, that the door was in fact simply on the latch. And with a flash of inspiration he connected this with the stranger's room upstairs and the suggestions of Mr. Teddy Henfrey. He distinctly remembered holding the candle while Mrs. Hall shot these bolts overnight. At the sight he stopped, gaping, then with the bottle still in his hand went upstairs again. He rapped at the stranger's door. There was no answer. He rapped again; then pushed the door wide open and entered.

It was as he expected. The bed, the room also, was empty. And what was stranger, even to his heavy intelligence, on the bedroom chair and along the rail of the bed were scattered the garments, the only garments so far as he knew, and the bandages of their guest. His big slouch hat even was cocked jauntily over the bedpost.

As Hall stood there he heard his wife's voice coming out of the depth of the cellar, with that rapid telescoping of the syllables and interrogative cocking up of the final words to a high note, by which the West Sussex villager is wont to indicate a brisk impatience. "George! You gart whad a wand?"

At that he turned and hurried down to her. "Janny," he said, over the rail of the cellar steps, "'tas the truth what Henfrey sez.' E's not in uz room, 'e ent. And the front door's onbolted."

At first Mrs. Hall did not understand, and as soon as she did she resolved to see the empty room for herself. Hall, still holding the bottle, went first. "If 'e ent there," he said, "his close are. And what's 'e doin' without his close, then? 'Tas a most curious basness."

As they came up the cellar steps they both, it was afterwards ascertained, fancied they heard the front door open and shut, but seeing it closed and nothing there, neither said a word to the other about it at the time. Mrs. Hall passed her husband in the passage and ran on first upstairs. Someone sneezed on the staircase. Hall, following six steps behind, thought that he heard her sneeze. She, going on first, was under the impression that Hall was sneezing. She flung open the door and stood regarding the room. "Of all the curious!" she said.

She heard a sniff close behind her head as it seemed, and, turning, was surprised to see Hall a dozen feet off on the topmost stair. But in another moment he was beside her. She bent forward and put her hand on the pillow and then under the clothes.

"Cold," she said. "He's been up this hour or more."

As she did so, a most extraordinary thing happened—the bedclothes gathered themselves together, leapt up suddenly into a sort of peak, and then jumped headlong over the bottom rail. It was exactly as if a hand had clutched them in the centre and flung them aside. Immediately after, the stranger's hat hopped off the bedpost, describing a whirling flight in the air through the better part of a circle, and then dashed straight at Mrs. Hall's face. Then as swiftly came the sponge from the washstand; and then the chair, flinging the

stranger's coat and trousers carelessly aside, and laughing drily in a voice singularly like the stranger's, turned itself up with its four legs at Mrs. Hall, seemed to take aim at her for a moment, and charged at her. She screamed and turned, and then the chair legs came gently but firmly against her back and impelled her and Hall out of the room. The door slammed violently and was locked. The chair and bed seemed to be executing a dance of triumph for a moment, and then abruptly everything was still.

Mrs. Hall was left almost in a fainting condition in Mr. Hall's arms on the landing. It was with the greatest difficulty that Mr. Hall and Millie, who had been roused by her scream of alarm, succeeded in getting her downstairs, and applying the restoratives customary in such cases.

"'Tas sperits," said Mrs. Hall. "I know 'tas sperrits. I've read in papers of en. Tables and chairs leaping and dancing—!"

"Take a drop more, Janny," said Hall. "'Twill steady ye."

"Lock him out," said Mrs. Hall. "Don't let him come in again. I half guessed—I might ha' known. With them goggling eyes and bandaged head, and never going to church of a Sunday. And all they bottles—more'n it's right for any one to have. He's put the sperrits into the furniture. My good old furniture! 'Twas in that very chair my poor dear mother used to sit when I was a little girl. To think it should rise up against me now!"

"Just a drop more, Janny," said Hall. "Your nerves is all upset."

They sent Millie across the street through the golden five o'clock sunshine to rouse up Mr. Sandy Wadgers, the blacksmith. Mr. Hall's compliments and the furniture upstairs was behaving most extraordinary. Would Mr. Wadgers come round? He was a knowing man, was Mr. Wadgers, and very resourceful. He took quite a grave view of the case. "Arm darmed ef thet ent witchcraft," was the view of Mr. Sandy Wadgers. "You warnt horseshoes for such gentry as he."

He came round greatly concerned. They wanted him to lead the way upstairs to the room, but he didn't seem to be in any hurry. He

preferred to talk in the passage. Over the way Huxter's apprentice came out and began taking down the shutters of the tobacco window. He was called over to join the discussion. Mr. Huxter naturally followed in the course of a few minutes. The Anglo-Saxon genius for parliamentary government asserted itself; there was a great deal of talk and no decisive action. "Let's have the facts first," insisted Mr. Sandy Wadgers. "Let's be sure we'd be acting perfectly right in bustin' that there door open. A door onbust is always open to bustin', but ye can't onbust a door once you've busted en."

And suddenly and most wonderfully the door of the room upstairs opened of its own accord, and as they looked up in amazement, they saw descending the stairs the muffled figure of the stranger staring more blackly and blankly than ever with those unreasonably large blue glass eyes of his. He came down stiffly and slowly, staring all the time; he walked across the passage staring, then stopped.

"Look there!" he said, and their eyes followed the direction of his gloved finger and saw a bottle of sarsaparilla hard by the cellar door. Then he entered the parlour, and suddenly, swiftly, viciously, slammed the door in their faces.

Not a word was spoken until the last echoes of the slam had died away. They stared at one another. "Well, if that don't lick everything!" said Mr. Wadgers, and left the alternative unsaid.

"I'd go in and ask'n 'bout it," said Wadgers, to Mr. Hall. "I'd d'mand an explanation."

It took some time to bring the landlady's husband up to that pitch. At last he rapped, opened the door, and got as far as, "Excuse me—"

"Go to the devil!" said the stranger in a tremendous voice, and "Shut that door after you." So that brief interview terminated.

Chapter 7

The Unveiling of the Stranger

The stranger went into the little parlour of the Coach and Horses about half past five in the morning, and there he remained until near midday, the blinds down, the door shut, and none, after Hall's repulse, venturing near him.

All that time he must have fasted. Thrice he rang his bell, the third time furiously and continuously, but no one answered him. "Him and his 'go to the devil' indeed!" said Mrs. Hall. Presently came an imperfect rumour of the burglary at the vicarage, and two and two were put together. Hall, assisted by Wadgers, went off to find Mr. Shuckleforth, the magistrate, and take his advice. No one ventured upstairs. How the stranger occupied himself is unknown. Now and then he would stride violently up and down, and twice came an outburst of curses, a tearing of paper, and a violent smashing of bottles.

The little group of scared but curious people increased. Mrs. Huxter came over; some gay young fellows resplendent in black ready-made jackets and piqu paper ties, for it was Whit-Monday, joined the group with confused interrogations. Young Archie Harker distinguished himself by going up the yard and trying to peep under the windowblinds. He could see nothing, but gave reason for supposing that he did, and others of the Iping youth presently joined him.

It was the finest of all possible Whit-Mondays, and down the village street stood a row of nearly a dozen booths and a shooting gallery, and on the grass by the forge were three yellow and chocolate

waggon and some picturesque strangers of both sexes putting up a coconut shy. The gentlemen wore blue jerseys, the ladies white aprons and quite fashionable hats with heavy plumes. Wodger, of the Purple Fawn, and Mr. Jaggers, the cobbler, who also sold old second-hand ordinary bicycles, were stretching a string of union-jacks and royal ensigns (which had originally celebrated the Jubilee) across the road...

And inside, in the artificial darkness of the parlour, into which only one thin jet of sunlight penetrated, the stranger, hungry we must suppose, and fearful, hidden in his uncomfortable hot wrappings, pored through his dark glasses upon his paper or chinked his dirty little bottles, and occasionally swore savagely at the boys, audible if invisible, outside the windows. In the corner by the fireplace lay the fragments of half a dozen smashed bottles, and a pungent tang of chlorine tainted the air. So much we know from what was heard at the time and from what was subsequently seen in the room.

About noon he suddenly opened his parlour door and stood glaring fixedly at the three or four people in the bar. "Mrs. Hall," he said. Somebody went sheepishly and called for Mrs. Hall.

Mrs. Hall appeared after an interval, a little short of breath, but all the fiercer for that. Hall was still out. She had deliberated over this scene, and she came holding a little tray with an unsettled bill upon it. "Is it your bill you're wanting, sir?" she said.

"Why wasn't my breakfast laid? Why haven't you prepared my meals and answered my bell? Do you think I live without eating?"

"Why isn't my bill paid?" said Mrs. Hall. "That's what I want to know."

"I told you three days ago I was awaiting a remittance—"

"I told you two days ago I wasn't going to await no remittances. You can't grumble if your breakfast waits a bit, if my bill's been waiting these five days, can you?"

The stranger swore briefly but vividly.

"Nar, nar!" from the bar.

"And I'd thank you kindly, sir, if you'd keep your swearing to

yourself, sir," said Mrs. Hall.

The stranger stood looking more like an angry diving-helmet than ever. It was universally felt in the bar that Mrs. Hall had the better of him. His next words showed as much.

"Look here, my good woman—" he began.

"Don't good woman me," said Mrs. Hall.

"I've told you my remittance hasn't come—"

"Remittance indeed!" said Mrs. Hall.

"Still, I daresay in my pocket—"

"You told me two days ago that you hadn't anything but a sovereign's worth of silver upon you—"

"Well, I've found some more—"

"Ul-lo!" from the bar.

"I wonder where you found it," said Mrs. Hall.

That seemed to annoy the stranger very much. He stamped his foot. "What do you mean?" he said.

"That I wonder where you found it," said Mrs. Hall. "And before I take any bills or get any breakfasts, or do any such things whatsoever, you got to tell me one or two things I don't understand, and what nobody don't understand, and what everybody is very anxious to understand. I want to know what you have been doing t'my chair upstairs, and I want to know how 'tis your room was empty, and how you got in again. Them as stops in this house comes in by the doors—that's the rule of the house, and that you didn't do, and what I want to know is how you did come in. And I want to know—"

Suddenly the stranger raised his gloved hands clenched, stamped his foot, and said, "Stop!" with such extraordinary violence that he silenced her instantly.

"You don't understand," he said, "who I am or what I am. I'll show you. By Heaven! I'll show you." Then he put his open palm over his face and withdrew it. The centre of his face became a black cavity. "Here," he said. He stepped forward and handed Mrs. Hall something which she, staring at his metamorphosed face, accepted automatically.

Then, when she saw what it was, she screamed loudly, dropped it, and staggered back. The nose—it was the stranger's nose! pink and shining—rolled on the floor.

Then he removed his spectacles, and everyone in the bar gasped. He took off his hat, and with a violent gesture tore at his whiskers and bandages. For a moment they resisted him. A flash of horrible anticipation passed through the bar. "Oh, my Gard!" said someone. Then off they came.

It was worse than anything. Mrs. Hall, standing open-mouthed and horror-struck, shrieked at what she saw, and made for the door of the house. Everyone began to move. They were prepared for scars, disfigurements, tangible horrors, but nothing! The bandages and false hair flew across the passage into the bar, making a hobbledehoy jump to avoid them. Everyone tumbled on everyone else down the steps. For the man who stood there shouting some incoherent explanation, was a solid gesticulating figure up to the coatcollar of him, and then—nothingness, no visible thing at all!

People down the village heard shouts and shrieks, and looking up the street saw the Coach and Horses violently firing out its humanity. They saw Mrs. Hall fall down and Mr. Teddy Henfrey jump to avoid tumbling over her, and then they heard the frightful screams of Millie, who, emerging suddenly from the kitchen at the noise of the tumult, had come upon the headless stranger from behind.

Forthwith everyone all down the street, the sweet-stuff seller, cocoanut shy proprietor and his assistant, the swing man, little boys and girls, rustic dandies, smart wenches, smocked elders and aproned gipsies, began running towards the inn; and in a miraculously short space of time a crowd of perhaps forty people, and rapidly increasing, swayed and hooted and inquired and exclaimed and suggested, in front of Mrs. Hall's establishment. Everyone seemed eager to talk at once, and the result was babel. A small group supported Mrs. Hall, who was picked up in a state of collapse. There was a conference, and the incredible evidence of a vociferous eyewitness. "O Bogey!" "What's

he been doin', then?" "Ain't hurt the girl, 'as 'e?" "Run at en with a knife, I believe." "No 'ed, I tell ye. I don't mean no manner of speaking. I mean marn without a 'ed!" "Narnsense! 'tas some conjuring trick." "Fetched off 'is wrapping, 'e did—"

In its struggles to see in through the open door, the crowd formed itself into a straggling wedge, with the more adventurous apex nearest the inn. "He stood for a moment, I heerd the gal scream, and he turned. I saw her skirts whisk, and he went after her. Didn't take ten seconds. Back he comes with a knife in uz hand and a loaf; stood just as if he was staring. Not a moment ago. Went in that there door. I tell 'e, 'e ain't gart no 'ed 't all. You just missed en—"

There was a disturbance behind, and the speaker stopped to step aside for a little procession that was marching very resolutely towards the house—first Mr. Hall, very red and determined, then Mr. Bobby Jaffers, the village constable, and then the wary Mr. Wadgers. They had come now armed with a warrant.

People shouted conflicting information of the recent circumstances. "'Ed or no 'ed," said Jaffers, "I got to 'rest en, and 'rest en I will."

Mr. Hall marched up the steps, marched straight to the door of the parlour and flung it open. "Constable," he said, "do your duty."

Jaffers marched in. Hall next, Wadgers last. They saw in the dim light the headless figure facing them, with a gnawed crust of bread in one gloved hand and a chunk of cheese in the other.

"That's him!" said Hall.

"What the devil's this?" came in a tone of angry expostulation from above the collar of the figure.

"You're a damned rum customer, mister," said Mr. Jaffers. "But 'ed or no 'ed, the warrant says 'body,' and duty's duty—"

"Keep off!" said the figure, starting back.

Abruptly he whipped down the bread and cheese, and Mr. Hall just grasped the knife on the table in time to save it. Off came the stranger's left glove and was slapped in Jaffers' face. In another

moment Jaffers, cutting short some statement concerning a warrant, had gripped him by the handleless wrist and caught his invisible throat. He got a sounding kick on the shin that made him shout, but he kept his grip. Hall sent the knife sliding along the table to Wadgers, who acted as goalkeeper for the offensive, so to speak, and then stepped forward as Jaffers and the stranger swayed and staggered towards him, clutching and hitting in. A chair stood in the way, and went aside with a crash as they came down together.

"Get the feet," said Jaffers between his teeth.

Mr. Hall, endeavouring to act on instructions, received a sounding kick in the ribs that disposed of him for a moment, and Mr. Wadgers, seeing the decapitated stranger had rolled over and got the upper side of Jaffers, retreated towards the door, knife in hand, and so collided with Mr. Huxter and the Siddermorton carter coming to the rescue of law and order. At the same moment down came three or four bottles from the chiffonnier and shot a web of pungency into the air of the room.

"I'll surrender," cried the stranger, though he had Jaffers down, and in another moment he stood up panting, a strange figure, headless and handleless—for he had pulled off his right glove now as well as his left. "It's no good," he said, as if sobbing for breath.

It was the strangest thing in the world to hear that voice coming as if out of empty space, but the Sussex peasants are perhaps the most matter-of-fact people under the sun. Jaffers got up also and produced a pair of handcuffs. Then he started.

"I say!" said Jaffers, brought up short by a dim realization of the incongruity of the whole business, "Darm it! Can't use 'em as I can see."

The stranger ran his arm down his waistcoat, and as if by a miracle the buttons to which his empty sleeve pointed became undone. Then he said something about his shin, and stooped down. He seemed to be fumbling with his shoes and socks.

"Why!" said Huxter, suddenly, "that's not a man at all. It's just

empty clothes. Look! You can see down his collar and the linings of his clothes. I could put my arm—"

He extended his hand; it seemed to meet something in midair, and he drew it back with a sharp exclamation. "I wish you'd keep your fingers out of my eye," said the aerial voice, in a tone of savage expostulation. "The fact is, I'm all here: head, hands, legs, and all the rest of it, but it happens I'm invisible. It's a confounded nuisance, but I am. That's no reason why I should be poked to pieces by every stupid bumpkin in Iping, is it?"

The suit of clothes, now all unbuttoned and hanging loosely upon its unseen supports, stood up, arms akimbo.

Several other of the men folks had now entered the room, so that it was closely crowded. "Invisible, eigh?" said Huxter, ignoring the stranger's abuse. "Who ever heard the likes of that?"

"It's strange, perhaps, but it's not a crime. Why am I assaulted by a policeman in this fashion?"

"Ah! that's a different matter," said Jaffers. "No doubt you are a bit difficult to see in this light, but I got a warrant, and it's all correct. What I'm after ain't no invisibility—it's burglary. There's a house been broke into and money took."

"Well?"

"And circumstances certainly point—"

"Stuff and nonsense!" said the Invisible Man. "I hope so, sir; but I've got my instructions."

"Well," said the stranger, "I'll come. I'll come. But no handcuffs." "It's the regular thing," said Jaffers.

"No handcuffs," stipulated the stranger.

"Pardon me," said Jaffers.

Abruptly the figure sat down, and before anyone could realise what was being done, the slippers, socks, and trousers had been kicked off under the table. Then he sprang up again and flung off his coat.

"Here, stop that," said Jaffers, suddenly realising what was

happening. He gripped the waist-coat; it struggled, and the shirt slipped out of it and left it limp and empty in his hand. "Hold him!" said Jaffers, loudly. "Once he gets the things off—!"

"Hold him!" cried everyone, and there was a rush at the fluttering white shirt which was now all that was visible of the stranger.

The shirt-sleeve planted a shrewd blow in Hall's face that stopped his open-armed advance, and sent him backward into old Toothsome the sexton, and in another moment the garment was lifted up and became convulsed and vacantly flapping about the arms, even as a shirt that is being thrust over a man's head. Jaffers clutched at it, and only helped to pull it off; he was struck in the mouth out of the air, and incontinently drew his truncheon and smote Teddy Henfrey savagely upon the crown of his head.

"Look out!" said everybody, fencing at random and hitting at nothing. "Hold him! Shut the door! Don't let him loose! I got something! Here he is!" A perfect babel of noises they made. Everybody, it seemed, was being hit all at once, and Sandy Wadgers, knowing as ever and his wits sharpened by a frightful blow in the nose, reopened the door and led the rout. The others, following incontinently, were jammed for a moment in the corner by the doorway. The hitting continued. Phipps, the Unitarian, had a front tooth broken, and Henfrey was injured in the cartilage of his ear. Jaffers was struck under the jaw, and, turning, caught at something that intervened between him and Huxter in the *mêlée*, and prevented their coming together. He felt a muscular chest, and in another moment the whole mass of struggling, excited men shot out into the crowded hall.

"I got him!" shouted Jaffers, choking and reeling through them all, and wrestling with purple face and swelling veins against his unseen enemy.

Men staggered right and left as the extraordinary conflict swayed swiftly towards the house door, and went spinning down the half-dozen steps of the inn. Jaffers cried in a strangled voice—holding

tight, nevertheless, and making play with his knee—spun round, and fell heavily undermost with his head on the gravel. Only then did his fingers relax.

There were excited cries of "Hold him!" "Invisible!" and so forth, and a young fellow, a stranger in the place whose name did not come to light, rushed in at once, caught something, missed his hold, and fell over the constable's prostrate body. Halfway across the road a woman screamed as something pushed by her; a dog, kicked apparently, yelped and ran howling into Huxter's yard, and with that the transit of the Invisible Man was accomplished. For a space people stood amazed and gesticulating, and then came panic, and scattered them abroad through the village as a gust scatters dead leaves.

But Jaffers lay quite still, face upward and knees bent.

Chapter 8

In Transit

The eighth chapter is exceedingly brief, and relates that Gibbins, the amateur naturalist of the district, while lying out on the spacious open downs without a soul within a couple of miles of him, as he thought, and almost dozing, heard close to him the sound as of a man coughing, sneezing, and then swearing savagely to himself; and looking, beheld nothing. Yet the voice was indisputable. It continued to swear with that breadth and variety that distinguishes the swearing of a cultivated man. It grew to a climax, diminished again, and died away in the distance, going as it seemed to him in the direction of Adderdean. It lifted to a spasmodic sneeze and ended. Gibbins had heard nothing of the morning's occurrences, but the phenomenon was so striking and disturbing that his philosophical tranquility vanished; he got up hastily, and hurried down the steepness of the hill towards the village, as fast as he could go.

Chapter 9

Mr. Thomas Marvel

You must picture Mr. Thomas Marvel as a person of copious, flexible visage, a nose of cylindrical protrusion, a liquorish, ample, fluctuating mouth, and a beard of bristling eccentricity. His figure inclined to embonpoint; his short limbs accentuated this inclination. He wore a furry silk hat, and the frequent substitution of twine and shoe-laces for buttons, apparent at critical points of his costume, marked a man essentially bachelor.

Mr. Thomas Marvel was sitting with his feet in a ditch by the roadside over the down towards Adderdean, about a mile and a half out of Iping. His feet, save for socks of irregular openwork, were bare, his big toes were broad, and pricked like the ears of a watchful dog. In a leisurely manner—he did everything in a leisurely manner—he was contemplating trying on a pair of boots. They were the soundest boots he had come across for a long time, but too large for him; whereas the ones he had were, in dry weather, a very comfortable fit, but too thin-soled for damp. Mr. Thomas Marvel hated roomy shoes, but then he hated damp. He had never properly thought out which he hated most, and it was a pleasant day, and there was nothing better to do. So he put the four shoes in a graceful group on the turf and looked at them. And seeing them there among the grass and springing agrimony, it suddenly occurred to him that both pairs were exceedingly ugly to see. He was not at all startled by a voice behind him.

"They're boots, anyhow," said the voice.

"They are—charity boots," said Mr. Thomas Marvel, with his head on one side regarding them distastefully; "and which is the ugliest pair

in the whole blessed universe, I'm darned if I know!"

"H'm," said the voice.

"I've worn worse—in fact, I've worn none. But none so owdacious ugly—if you'll allow the expression. I've been cadging boots—in particular—for days. Because I was sick of them. They're sound enough, of course. But a gentleman on tramp sees such a thundering lot of his boots. And if you'll believe me, I've raised nothing in the whole blessed county, try as I would, but them. Look at 'em! And a good county for boots, too, in a general way. But it's just my promiscuous luck. I've got my boots in this county ten years or more. And then they treat you like this."

"It's a beast of a county," said the voice. "And pigs for people."

"Ain't it?" said Mr. Thomas Marvel. "Lord! But them boots! It beats it."

He turned his head over his shoulder to the right, to look at the boots of his interlocutor with a view to comparisons, and lo! where the boots of his interlocutor should have been were neither legs nor boots. He turned his head less than 5 letters over his shoulder to the left, and there also were neither leys nor boots. He was irradiated by the dawn of a great amazement. "Where are yar?" said Mr. Thomas Marvel over his shoulder and coming round on all fours. He saw a stretch of empty downs with the wind swaying the remote green-pointed furze bushes.

"Am I drunk?" said Mr. Marvel. "Have I had visions? Was I talking to myself? What the—"

"Don't be alarmed," said a voice.

"None of your ventriloquising me," said Mr. Thomas Marvel, rising sharply to his feet. "Where are yer? Alarmed, indeed!"

"Don't be alarmed," repeated the voice.

"You'll be alarmed in a minute, you silly fool," said Mr. Thomas Marvel. "Where are yer? Lemme get my mark on yer—"

"Are you buried?" said Mr. Thomas Marvel, after an interval.

There was no answer. Mr. Thomas Marvel stood bootless and

amazed, his jacket nearly thrown off.

"Peewit," said a peewit, very remote.

"Peewit, indeed!" said Mr. Thomas Marvel. "This ain't no time for foolery." The down was desolate, east and west, north and south; the road with its shallow ditches and white bordering stakes, ran smooth and empty north and south and, save for that peewit, the blue sky was empty too. "So help me," said Mr. Thomas Marvel, shuffling his coat on to his shoulders again. "It's the drink! I might ha' known."

"It's not the drink," said the voice. "You keep your nerves steady." "Ow!" said Mr. Marvel, and his face grew white amidst its patches. "It's the drink," his lips repeated noiselessly. He remained staring about him, rotating slowly backwards. "I could have sworn I heard a voice," he whispered.

"Of course you did."

"It's there again," said Mr. Marvel, closing his eyes and clasping his hand on his brow with a tragic gesture. He was suddenly taken by the collar and shaken violently and left more dazed than ever. "Don't be a fool," said the voice.

"I'm—off—my—blooming—chump," said Mr. Marvel. "It's no good. It's fretting about them blarsted boots. I'm off my blessed blooming chump. Or it's spirits."

"Neither one thing nor the other," said the voice. "Listen!"

"Chump," said Mr. Marvel.

"One minute," said the voice penetratingly, —tremulous with self-control.

"Well?" said Mr. Thomas Marvel, with a strange feeling of having been dug in the chest by a finger.

"You think I'm just imagination? Just imagination?"

"What else can you be?" said Mr. Thomas Marvel, rubbing the back of his neck.

"Very well," said the voice, in a tone of relief. "Then I'm going to throw flints at you till you think differently."

"But where are yer?"

The voice made no answer. Whizz came a flint, apparently out of the air, and missed Mr. Marvel's shoulder by a hair's breadth. Mr. Marvel, turning, saw a flint jerk up into the air, trace a complicated path, hang for a moment, and then fling at his feet with almost invisible rapidity. He was too amazed to dodge. Whizz it came, and ricocheted from a bare toe into the ditch. Mr. Thomas Marvel jumped a foot and howled aloud. Then he started to run, tripped over an unseen obstacle, and came head over heels into a sitting position.

"Now," said the voice, as a third stone curved upward and hung in the air above the tramp. "Am I imagination?"

Mr. Marvel by way of reply struggled to his feet, and was immediately rolled over again. He lay quiet for a moment. "If you struggle any more," said the voice, "I shall throw the flint at your head."

"It's a fair do," said Mr. Thomas Marvel, sitting up, taking his wounded toe in hand and fixing his eye on the third missile. "I don't understand it. Stones flinging themselves. Stones talking. Put yourself down. Rot away. I'm done."

The third flint fell.

"It's very simple," said the voice. "I'm an invisible man."

"Tell us something I don't know," said Mr. Marvel, gasping with pain. "Where you've hid—how you do it—I don't know. I'm beat."

"That's all," said the voice. "I'm invisible. That's what I want you to understand."

"Anyone could see that. There is no need for you to be so confounded impatient, mister. Now then. Give us a notion. How are you hid?"

"I'm invisible. That's the great point. And what I want you to understand is this—"

"But whereabouts?" interrupted Mr. Marvel.

"Here! Six yards in front of you."

"Oh, come! I ain't blind. You'll be telling me next you're just thin air. I'm not one of your ignorant tramps—"

"Yes, I am—thin air. You're looking through me."

"What! Ain't there any stuff to you. Vox et—what is it?—jabber. Is it that?"

"I am just a human being—solid, needing food and drink, needing covering too—But I'm invisible. You see? Invisible. Simple idea. Invisible."

"What, real like?"

"Yes, real."

"Let's have a hand of you," said Marvel, "if you are real. It won't be so darn out-of-the-way like, then—Lord!" he said, "how you made me jump!—gripping me like that!"

He felt the hand that had closed round his wrist with his disengaged fingers, and his fingers went timorously up the arm, patted a muscular chest, and explored a bearded face. Marvel's face was astonishment.

"I'm dashed!" he said. "If this don't beat cockfighting! Most remarkable!—And there I can see a rabbit clean through you, 'arf a mile away! Not a bit of you visible—except—"

He scrutinised the apparently empty space keenly. "You 'aven't been eatin' bread and cheese?" he asked, holding the invisible arm.

"You're quite right, and it's not quite assimilated into the system."

"Ah!" said Mr. Marvel. "Sort of ghostly, though."

"Of course, all this isn't so wonderful as you think."

"It's quite wonderful enough for my modest wants," said Mr. Thomas Marvel. "Howjer manage it! How the dooce is it done?"

"It's too long a story. And besides—"

"I tell you, the whole business fair beats me," said Mr. Marvel.

"What I want to say at present is this: I need help. I have come to that—I came upon you suddenly. I was wandering, mad with rage, naked, impotent. I could have murdered. And I saw you—"

"Lord!" said Mr. Marvel.

"I came up behind you—hesitated—went on—"

Mr. Marvel's expression was eloquent.

"—then stopped. 'Here,' I said, 'is an outcast like myself. This is the man for me.' So I turned back and came to you—you. And—"

"Lord!" said Mr. Marvel. "But I'm all in a dizzy. May I ask—How is it? And what you may be requiring in the way of help?—Invisible!"

"I want you to help me get clothes—and shelter—and then, with other things. I've left them long enough. If you won't—well! But you will—must."

"Look here," said Mr. Marvel. "I'm too flabbergasted. Don't knock me about any more. And leave me go. I must get steady a bit. And you've pretty near broken my toe. It's all so unreasonable. Empty downs, empty sky. Nothing visible for miles except the bosom of Nature. And then comes a voice. A voice out of heaven! And stones! And a fist—Lord!"

"Pull yourself together," said the voice, "for you have to do the job I've chosen for you."

Mr. Marvel blew out his cheeks, and his eyes were round.

"I've chosen you," said the voice. "You are the only man except some of those fools down there, who knows there is such a thing as an invisible man. You have to be my helper. Help me—and I will do great things for you. An invisible man is a man of power." He stopped for a moment to sneeze violently.

"But if you betray me," he said, "if you fail to do as I direct you—"

He paused and tapped Mr. Marvel's shoulder smartly. Mr. Marvel gave a yelp of terror at the touch. "I don't want to betray you," said Mr. Marvel, edging away from the direction of the fingers. "Don't you go a-thinking that, whatever you do. All I want to do is to help you—just tell me what I got to do. (Lord!) Whatever you want done, that I'm most willing to do."

Chapter 10

Mr. Marvel's Visit to Iping

After the first gusty panic had spent itself Iping became argumentative. Scepticism suddenly reared its head—rather nervous scepticism, not at all assured of its back, but scepticism nevertheless. It is so much easier not to believe in an invisible man; and those who had actually seen him dissolve into air, or felt the strength of his arm, could be counted on the fingers of two hands. And of these witnesses Mr. Wadgers was presently missing, having retired impregnably behind the bolts and bars of his own house, and Jaffers was lying stunned in the parlour of the Coach and Horses. Great and strange ideas transcending experience often have less effect upon men and women than smaller, more tangible considerations. Iping was gay with bunting, and everybody was in gala dress. Whit-Monday had been looked forward to for a month or more. By the afternoon even those who believed in the Unseen were beginning to resume their little amusements in a tentative fashion, on the supposition that he had quite gone away, and with the sceptics he was already a jest. But people, sceptics and believers alike, were remarkably sociable all that day.

Haysman's meadow was gay with a tent, in which Mrs. Bunting and other ladies were preparing tea, while, without, the Sunday-school children ran races and played games under the noisy guidance of the curate and the Misses Cuss and Sackbut. No doubt there was a slight uneasiness in the air, but people for the most part had the sense to conceal whatever imaginative qualms they experienced. On the village green an inclined string, down which, clinging the while to a

pulley-swung handle, one could be hurled violently against a sack at the other end, came in for considerable favour among the adolescent. There were swings and cocoanut shies and promenading, and the steam organ attached to the swings filled the air with a pungent flavour of oil and with equally pungent music. Members of the Club, who had attended church in the morning, were splendid in badges of pink and green, and some of the gayer-minded had also adorned their bowler hats with brilliant-coloured favours of ribbon. Old Fletcher, whose conceptions of holiday-making were severe, was visible through the jasmine about his window or through the open door (whichever way you chose to look), poised delicately on a plank supported on two chairs, and whitewashing the ceiling of his front room.

About four o'clock a stranger entered the village from the direction of the downs. He was a short, stout person in an extraordinarily shabby top hat, and he appeared to be very much out of breath. His cheeks were alternately limp and tightly puffed. His mottled face was apprehensive, and he moved with a sort of reluctant alacrity. He turned the corner of the church, and directed his way to the "Coach and Horses." Among others old Fletcher remembers seeing him, and indeed the old gentleman was so struck by his peculiar agitation that he inadvertently allowed a quantity of whitewash to run down the brush into the sleeve of his coat while regarding him.

This stranger, to the perceptions of the proprietor of the cocoanut shy, appeared to be talking to himself, and Mr. Huxter remarked the same thing. He stopped at the foot of the Coach and Horses steps, and, according to Mr. Huxter, appeared to undergo a severe internal struggle before he could induce himself to enter the house. Finally he marched up the steps, and was seen by Mr. Huxter to turn to the left and open the door of the parlour. Mr. Huxter heard voices from within the room and from the bar apprising the man of his error. "That room's private!" said Hall, and the stranger shut the door clumsily and went into the bar.

In the course of a few minutes he reappeared, wiping his lips with the back of his hand with an air of quiet satisfaction that somehow impressed Mr. Huxter as assumed. He stood looking about him for some moments, and then Mr. Huxter saw him walk in an oddly furtive manner towards the gates of the yard, upon which the parlour window opened. The stranger, after some hesitation, leant against one of the gate-posts, produced a short clay pipe, and prepared to fill it. His fingers trembled while doing so. He lit it clumsily, and folding his arms began to smoke in a languid attitude, an attitude which his occasional quick glances up the yard altogether belied.

All this Mr. Huxter saw over the canisters of the tobacco window, and the singularity of the man's behaviour prompted him to maintain his observation.

Presently the stranger stood up abruptly and put his pipe in his pocket. Then he vanished into the yard. Forthwith Mr. Huxter, conceiving he was witness of some petty larceny, leapt round his counter and ran out into the road to intercept the thief. As he did so, Mr. Marvel reappeared, his hat askew, a big bundle in a blue tablecloth in one hand, and three books tied together—as it proved afterwards with the Vicar's braces—in the other. Directly he saw Huxter he gave a sort of gasp, and turning sharply to the left, began to run. "Stop, thief!" cried Huxter, and set off after him. Mr. Huxter's sensations were vivid but brief. He saw the man just before him and spurting briskly for the church corner and the hill road. He saw the village flags and festivities beyond, and a face or so turned towards him. He bawled, "Stop!" again. He had hardly gone ten strides before his shin was caught in some mysterious fashion, and he was no longer running, but flying with inconceivable rapidity through the air. He saw the ground suddenly close to his face. The world seemed to splash into a million whirling specks of light, and subsequent proceedings interested him no more.

Chapter 11

In the Coach and Horses

Now in order clearly to understand what had happened in the inn, it is necessary to go back to the moment when Mr. Marvel first came into view of Mr. Huxter's window. At that precise moment Mr. Cuss and Mr. Bunting were in the parlour. They were seriously investigating the strange occurrences of the morning, and were, with Mr. Hall's permission, making a thorough examination of the Invisible Man's belongings. Jaffers had partially recovered from his fall and had gone home in the charge of his sympathetic friends. The stranger's scattered garments had been removed by Mrs. Hall and the room tidied up. And on the table under the window where the stranger had been wont to work, Cuss had hit almost at once on three big books in manuscript labelled "Diary."

"Diary!" said Cuss, putting the three books on the table. "Now, at any rate, we shall learn something." The Vicar stood with his hands on the table.

"Diary," repeated Cuss, sitting down, putting two volumes to support the third, and opening it. "H'm—no name on the fly-leaf. Bother!—cypher. And figures."

The Vicar came round to look over his shoulder.

Cuss turned the pages over with a face suddenly disappointed. "I'm—dear me! It's all cypher, Bunting."

"There are no diagrams?" asked Mr. Bunting. "No illustrations throwing light—"

"See for yourself," said Mr. Cuss. "Some of it's mathematical and some of it's Russian or some such language (to judge by the letters),

and some of it's Greek. Now the Greek I thought you—"

"Of course," said Mr. Bunting, taking out and wiping his spectacles and feeling suddenly very uncomfortable, —for he had no Greek left in his mind worth talking about; "yes—the Greek, of course, may furnish a clue."

"I'll find you a place."

"I'd rather glance through the volumes first," said Mr. Bunting, still wiping. "A general impression first, Cuss, and then, you know, we can go looking for clues."

He coughed, put on his glasses, arranged them fastidiously, coughed again, and wished something would happen to avert the seemingly inevitable exposure. Then he took the volume Cuss handed him in a leisurely manner. And then something did happen.

The door opened suddenly.

Both gentlemen started violently, looked round, and were relieved to see a sporadically rosy face beneath a furry silk hat. "Tap?" asked the face, and stood staring.

"No," said both gentlemen at once.

"Over the other side, my man," said Mr. Bunting. And "Please shut that door," said Mr. Cuss, irritably.

"All right," said the intruder, as it seemed in a low voice curiously different from the huskiness of its first inquiry. "Right you are," said the intruder in the former voice. "Stand clear!" and he vanished and closed the door.

"A sailor, I should judge," said Mr. Bunting. "Amusing fellows they are. Stand clear! indeed. A nautical term, referring to his getting back out of the room, I suppose."

"I daresay so," said Cuss. "My nerves are all loose today. It quite made me jump—the door opening like that."

Mr. Bunting smiled as if he had not jumped. "And now," he said with a sigh, "these books."

"One minute," said Cuss, and went and locked the door. "Now I think we are safe from interruption."

Someone sniffed as he did so.

"One thing is indisputable," said Bunting, drawing up a chair next to that of Cuss. "There certainly have been very strange things happen in Iping during the last few days—very strange. I cannot of course believe in this absurd invisibility story—"

"It's incredible," said Cuss, "—incredible. But the fact remains that I saw—I certainly saw right down his sleeve—"

"But did you—are you sure? Suppose a mirror, for instance, — hallucinations are so easily produced. I don't know if you have ever seen a really good conjuror—"

"I won't argue again," said Cuss. "We've thrashed that out, Bunting. And just now there's these books—Ah! here's some of what I take to be Greek! Greek letters certainly."

He pointed to the middle of the page. Mr. Bunting flushed slightly and brought his face nearer, apparently finding some difficulty with his glasses. Suddenly he became aware of a strange feeling at the nape of his neck. He tried to raise his head, and encountered an immovable resistance. The feeling was a curious pressure, the grip of a heavy, firm hand, and it bore his chin irresistibly to the table. "Don't move, little men," whispered a voice, "or I'll brain you both!" He looked into the face of Cuss, close to his own, and each saw a horrified reflection of his own sickly astonishment.

"I'm sorry to handle you roughly," said the Voice, "but it's unavoidable."

"Since when did you learn to pry into an investigator's private memoranda?" said the voice; and two chins struck the table simultaneously, and two sets of teeth rattled.

"Since when did you learn to invade the private rooms of a man in misfortune?" and the concussion was repeated.

"Where have they put my clothes?"

"Listen," said the Voice. "The windows are fastened and I've taken the key out of the door. I am a fairly strong man, and I have the poker handy—besides being invisible. There's not the slightest doubt that I

could kill you both and get away quite easily if I wanted to—do you understand? Very well. If I let you go will you promise not to try any nonsense and do what I tell you?"

The Vicar and the Doctor looked at one another, and the Doctor pulled a face. "Yes," said Mr. Bunting, and the Doctor repeated it. Then the pressure on the necks relaxed, and the Doctor and the Vicar sat up, both very red in the face and wriggling their heads.

"Please keep sitting where you are," said the Invisible Man. "Here's the poker, you see."

"When I came into this room," continued the Invisible Man, after presenting the poker to the tip of the nose of each of his visitors, "I did not expect to find it occupied, and I expected to find, in addition to my books of memoranda, an outfit of clothing. Where is it? No, — don't rise. I can see it's gone. Now, just at present, though the days are quite warm enough for an invisible man to run about stark, the evenings are chilly. I want clothing—and other accommodation; and I must also have those three books."

Chapter 12

The Invisible Man Loses His Temper

It is unavoidable that at this point the narrative should break off again, for a certain very painful reason that will presently be apparent. While these things were going on in the parlour, and while Mr. Huxter was watching Mr. Marvel smoking his pipe against the gate, not a dozen yards away were Mr. Hall and Teddy Henfrey discussing in a state of cloudy puzzlement the one Iping topic.

Suddenly there came a violent thud against the door of the parlour, a sharp cry, and then—silence.

"Hul—lo!" said Teddy Henfrey.

"Hul—lo!" from the Tap.

Mr. Hall took things in slowly but surely. "That ain't right," he said, and came round from behind the bar towards the parlour door.

He and Teddy approached the door together, with intent faces. Their eyes considered. "Summat wrong," said Hall, and Henfrey nodded agreement. Whiffs of an unpleasant chemical odour met them, and there was a muffled sound of conversation, very rapid and subdued.

"You all raight thur?" asked Hall, rapping.

The muttered conversation ceased abruptly, for a moment silence, then the conversation was resumed, in hissing whispers, then a sharp cry of "No! no, you don't!" There came a sudden motion and the oversetting of a chair, a brief struggle. Silence again.

"What the dooce?" exclaimed Henfrey, sotto voce.

"You—all—raight—thur?" asked Mr. Hall sharply, again.

The Vicar's voice answered with a curious jerking intonation: "Quite ri—ght. Please don't—interrupt."

"Odd!" said Mr. Henfrey.

"Odd!" said Mr. Hall.

"Says, 'Don't interrupt,'" said Henfrey.

"I heerd'n," said Hall.

"And a sniff," said Henfrey.

They remained listening. The conversation was rapid and subdued. "I can't," said Mr. Bunting, his voice rising; "I tell you, sir, I will not."

"What was that?" asked Henfrey.

"Says he wi' nart," said Hall. "Warn't speaking, to us, wuz he?"

"Disgraceful!" said Mr. Bunting, within.

"Disgraceful," said Mr. Henfrey. "I heard it—distinct."

"Who's that speaking now?" asked Henfrey.

"Mr. Cuss, I s'pose," said Hall. "Can you hear—anything?"

Silence. The sounds within indistinct and perplexing. "Sounds like throwing the tablecloth about," said Hall.

Mrs. Hall appeared behind the bar. Hall made gestures of silence and invitation. This roused Mrs. Hall's wifely opposition. "What yer listenin' there for, Hall?" she asked. "Ain't you nothin' better to do—busy day like this?"

Hall tried to convey everything by grimaces and dumb show, but Mrs. Hall was obdurate. She raised her voice. So Hall and Henfrey, rather crestfallen, tip-toed back to the bar, gesticulating to explain to her.

At first she refused to see anything in what they had heard at all. Then she insisted on Hall keeping silence, while Henfrey told her his story. She was inclined to think the whole business nonsense—perhaps they were just moving the furniture about. "I heerd'n say 'disgraceful'; that I did," said Hall.

"I heerd that, Mrs. Hall," said Henfrey.

"Like as not—" began Mrs. Hall.

"Hsh!" said Mr. Teddy Henfrey. "Didn't I hear the window?"

"What window?" asked Mrs. Hall.

"Parlour window," said Henfrey.

Everyone stood listening intently. Mrs. Hall's eyes, directed straight before her, saw without seeing the brilliant oblong of the inn door, the road white and vivid, and Huxter's shop-front blistering in the June sun. Abruptly Huxter's door opened and Huxter appeared, eyes staring with excitement, arms gesticulating. "Yap!" cried Huxter. "Stop thief!" and he ran obliquely across the oblong towards the yard gates, and vanished.

Simultaneously came a tumult from the parlour, and a sound of windows being closed.

Hall, Henfrey, and the human contents of the Tap rushed out at once pell-mell into the street. They saw someone whisk round the corner towards the road, and Mr. Huxter executing a complicated leap in the air that ended on his face and shoulder. Down the street people were standing astonished or running towards them.

Mr. Huxter was stunned. Henfrey stopped to discover this, but Hall and the two labourers from the Tap rushed at once to the corner, shouting incoherent things, and saw Mr. Marvel vanishing by the corner of the church wall. They appear to have jumped to the impossible conclusion that this was the Invisible Man suddenly become visible, and set off at once along the lane in pursuit. But Hall had hardly run a dozen yards before he gave a loud shout of astonishment and went flying headlong sideways, clutching one of the labourers and bringing him to the ground. He had been charged just as one charges a man at football. The second labourer came round in a circle, stared, and conceiving that Hall had tumbled over of his own accord, turned to resume the pursuit, only to be tripped by the ankle just as Huxter had been. Then, as the first labourer struggled to his feet, he was kicked sideways by a blow that might have felled an ox.

As he went down, the rush from the direction of the village green came round the corner. The first to appear was the proprietor of the

coconut shy, a burly man in a blue jersey. He was astonished to see the lane empty save for three men sprawling absurdly on the ground. And then something happened to his rear-most foot, and he went headlong and rolled sideways just in time to graze the feet of his brother and partner, following headlong. The two were then kicked, knelt on, fallen over, and cursed by quite a number of overhasty people.

Now when Hall and Henfrey and the labourers ran out of the house, Mrs. Hall, who had been disciplined by years of experience, remained in the bar next the till. And suddenly the parlour door was opened, and Mr. Cuss appeared, and without glancing at her rushed at once down the steps toward the corner. "Hold him!" he cried. "Don't let him drop that parcel. You can see him so long as he holds the parcel." He knew nothing of the existence of Marvel. For the Invisible Man had handed over the books and bundle in the yard. The face of Mr. Cuss was angry and resolute, but his costume was defective, a sort of limp white kilt that could only have passed muster in Greece. "Hold him!" he bawled. "He's got my trousers! And every stitch of the Vicar's clothes!"

"Tend to him in a minute!" he cried to Henfrey as he passed the prostrate Huxter, and coming round the corner to join the tumult, was promptly knocked off his feet into an indecorous sprawl. Somebody in full flight trod heavily on his finger. He yelled, struggled to regain his feet, was knocked against and thrown on all fours again, and became aware that he was involved not in a capture, but a rout. Everyone was running back to the village. He rose again and was hit severely behind the ear. He staggered and set off back to the Coach and Horses forthwith, leaping over the deserted Huxter, who was now sitting up, on his way.

Behind him as he was halfway up the inn steps he heard a sudden yell of rage, rising sharply out of the confusion of cries, and a sounding smack in someone's face. He recognised the voice as that of the Invisible Man, and the note was that of a man suddenly infuriated

by a painful blow.

In another moment Mr. Cuss was back in the parlour. "He's coming back, Bunting!" he said, rushing in. "Save yourself! He's gone mad!"

Mr. Bunting was standing in the window engaged in an attempt to clothe himself in the hearth-rug and a West Surrey Gazette. "Who's coming?" he said, so startled that his costume narrowly escaped disintegration.

"Invisible Man," said Cuss, and rushed to the window. "We'd better clear out from here! He's fighting mad! Mad!"

In another moment he was out in the yard.

"Good heavens!" said Mr. Bunting, hesitating between two horrible alternatives. He heard a frightful struggle in the passage of the inn, and his decision was made. He clambered out of the window, adjusted his costume hastily, and fled up the village as fast as his fat little legs would carry him.

From the moment when the Invisible Man screamed with rage and Mr. Bunting made his memorable flight up the village, it became impossible to give a consecutive account of affairs in Iping. Possibly the Invisible Man's original intention was simply to cover Marvel's retreat with the clothes and books. But his temper, at no time very good, seems to have gone completely at some chance blow, and forthwith he set to smiting and overthrowing, for the mere satisfaction of hurting.

You must figure the street full of running figures, of doors slamming and fights for hiding-places. You must figure the tumult suddenly striking on the unstable equilibrium of old Fletcher's planks and two chairs, —with cataclysmic results. You must figure an appalled couple caught dismally in a swing. And then the whole tumultuous rush has passed and the Iping street with its gauds and flags is deserted save for the still raging Unseen, and littered with coconuts, overthrown canvas screens, and the scattered stock in trade of a sweetstuff stall. Everywhere there is a sound of closing shutters

and shoving bolts, and the only visible humanity is an occasional flitting eye under a raised eyebrow in the corner of a window pane.

The Invisible Man amused himself for a little while by breaking all the windows in the Coach and Horses, and then he thrust a street lamp through the parlour window of Mrs. Gribble. He it must have been who cut the telegraph wire to Adderdean just beyond Higgins' cottage on the Adderdean road. And after that, as his peculiar qualities allowed, he passed out of human perceptions altogether, and he was neither heard, seen, nor felt in Iping any more. He vanished absolutely.

But it was the best part of two hours before any human being ventured out again into the desolation of Iping Street.

Chapter 13

Mr. Marvel Discusses His Resignation

When the dusk was gathering and Iping was just beginning to peep timorously forth again upon the shattered wreckage of its Bank Holiday, a short, thick-set man in a shabby silk hat was marching painfully through the twilight behind the beechwoods on the road to Bramblehurst. He carried three books bound together by some sort of ornamental elastic ligature, and a bundle wrapped in a blue tablecloth. His rubicund face expressed consternation and fatigue; he appeared to be in a spasmodic sort of hurry. He was accompanied by a Voice other than his own, and ever and again he winced under the touch of unseen hands.

"If you give me the slip again," said the Voice, "if you attempt to give me the slip again—"

"Lord!" said Mr. Marvel. "That shoulder's a mass of bruises as it is."

"—On my honour," said the Voice, "I will kill you."

"I didn't try to give you the slip," said Marvel, in a voice that was not far remote from tears. "I swear I didn't. I didn't know the blessed turning, that was all! How the devil was I to know the blessed turning? As it is, I've been knocked about—"

"You'll get knocked about a great deal more if you don't mind," said the Voice, and Mr. Marvel abruptly became silent. He blew out his cheeks, and his eyes were eloquent of despair.

"It's bad enough to let these floundering yokels explode my little secret, without your cutting off with my books. It's lucky for some of

them they cut and ran when they did! Here am I—No one knew I was invisible! And now what am I to do?"

"What am I to do?" asked Marvel, sotto voce.

"It's all about. It will be in the papers! Everybody will be looking for me; everyone on their guard—" The Voice broke off into vivid curses and ceased.

The despair of Mr. Marvel's face deepened, and his pace slackened.

"Go on!" said the Voice.

Mr. Marvel's face assumed a greyish tint between the ruddier patches.

"Don't drop those books, stupid," said the Voice, sharply—overtaking him.

"The fact is," said the Voice, "I shall have to make use of you. You're a poor tool, but I must."

"I'm a miserable tool," said Marvel.

"You are," said the Voice.

"I'm the worst possible tool you could have," said Marvel.

"I'm not strong," he said after a discouraging silence.

"I'm not over strong," he repeated.

"No?"

"And my heart's weak. That little business—I pulled it through, of course—but bless you! I could have dropped."

"Well?"

"I haven't the nerve and strength for the sort of thing you want."

"I'll stimulate you."

"I wish you wouldn't. I wouldn't like to mess up your plans, you know. But I might, —out of sheer funk and misery."

"You'd better not," said the Voice, with quiet emphasis.

"I wish I was dead," said Marvel.

"It ain't justice," he said; "you must admit—It seems to me I've a perfect right—"

"Get on!" said the Voice.

Mr. Marvel mended his pace, and for a time they went in silence again.

"It's devilish hard," said Mr. Marvel.

This was quite ineffectual. He tried another tack.

"What do I make by it?" he began again in a tone of unendurable wrong.

"Oh! shut up!" said the Voice, with sudden amazing vigour. "I'll see to you all right. You do what you're told. You'll do it all right. You're a fool and all that, but you'll do—"

"I tell you, sir, I'm not the man for it. Respectfully—but it is so—"

"If you don't shut up I shall twist your wrist again," said the Invisible Man. "I want to think."

Presently two oblongs of yellow light appeared through the trees, and the square tower of a church loomed through the gloaming. "I shall keep my hand on your shoulder," said the Voice, "all through the village. Go straight through and try no foolery. It will be the worse for you if you do."

"I know that," sighed Mr. Marvel, "I know all that."

The unhappy-looking figure in the obsolete silk hat passed up the street of the little village with his burdens, and vanished into the gathering darkness beyond the lights of the windows.

Chapter 14

At Port Stowe

Ten o'clock the next morning found Mr. Marvel, unshaven, dirty, and travel-stained, sitting with the books beside him and his hands deep in his pockets, looking very weary, nervous, and uncomfortable, and inflating his cheeks at frequent intervals, on the bench outside a little inn on the outskirts of Port Stowe. Beside him were the books, but now they were tied with string. The bundle had been abandoned in the pinewoods beyond Bramblehurst, in accordance with a change in the plans of the Invisible Man. Mr. Marvel sat on the bench, and although no one took the slightest notice of him, his agitation remained at fever heat. His hands would go ever and again to his various pockets with a curious nervous fumbling.

When he had been sitting for the best part of an hour, however, an elderly mariner, carrying a newspaper, came out of the inn and sat down beside him. "Pleasant day," said the mariner.

Mr. Marvel glanced about him with something very like terror. "Very," he said.

"Just seasonable weather for the time of year," said the mariner, taking no denial.

"Quite," said Mr. Marvel.

The mariner produced a toothpick, and (saving his regard) was engrossed thereby for some minutes. His eyes meanwhile were at liberty to examine Mr. Marvel's dusty figure and the books beside him. As he had approached Mr. Marvel he had heard a sound like the dropping of coins into a pocket. He was struck by the contrast of Mr. Marvel's appearance with this suggestion of opulence. Thence his

mind wandered back again to a topic that had taken a curiously firm hold of his imagination.

"Books?" he said suddenly, noisily finishing with the toothpick.

Mr. Marvel started and looked at them. "Oh, yes," he said. "Yes, they're books."

"There's some extraordinary things in books," said the mariner.

"I believe you," said Mr. Marvel.

"And some extraordinary things out of 'em," said the mariner.

"True likewise," said Mr. Marvel. He eyed his interlocutor, and then glanced about him.

"There's some extraordinary things in newspapers, for example," said the mariner.

"There are."

"In this newspaper," said the mariner.

"Ah!" said Mr. Marvel.

"There's a story," said the mariner, fixing Mr. Marvel with an eye that was firm and deliberate; "there's a story about an Invisible Man, for instance."

Mr. Marvel pulled his mouth askew and scratched his cheek and felt his ears glowing. "What will they be writing next?" he asked faintly. "Ostria, or America?"

"Neither," said the mariner. "Here."

"Lord!" said Mr. Marvel, starting.

"When I say here," said the mariner, to Mr. Marvel's intense relief, "I don't of course mean here in this place, —I mean hereabouts."

"An Invisible Man!" said Mr. Marvel. "And what's he been up to?" "Everything," said the mariner, controlling Marvel with his eye, and then amplifying, "Every Blessed Thing."

"I ain't seen a paper these four days," said Marvel.

"Iping's the place he started at," said the mariner.

"Indeed!" said Mr. Marvel.

"He started there. And where he came from, nobody don't seem to know. Here it is: Peculiar Story from Iping. And it says in this paper

that the evidence is extraordinary strong—extraordinary."

"Lord!" said Mr. Marvel.

"But then, it's an extraordinary story. There is a clergyman and a medical gent witnesses, —saw 'im all right and proper—or leastways, didn't see 'im. He was staying, it says, at the Coach an' Horses, and no one don't seem to have been aware of his misfortune, it says, aware of his misfortune, until in an Alteration in the inn, it says, his bandages on his head was torn off. It was then observed that his head was invisible. Attempts were At Once made to secure him, but casting off his garments, it says, he succeeded in escaping, but not until after a desperate struggle, in which he had inflicted serious injuries, it says, on our worthy and able constable, Mr. J. A. Jaffers. Pretty straight story, eh? Names and everything."

"Lord!" said Mr. Marvel, looking nervously about him, trying to count the money in his pockets by his unaided sense of touch, and full of a strange and novel idea. "It sounds most astonishing."

"Don't it? Extraordinary, I call it. Never heard tell of Invisible Men before, I haven't, but nowadays one hears such a lot of extraordinary things—that—"

"That all he did?" asked Marvel, trying to seem at his ease.

"It's enough, ain't it?" said the mariner.

"Didn't go Back by any chance?" asked Marvel. "Just escaped and that's all, eh?"

"All!" said the mariner. "Why!—ain't it enough?"

"Quite enough," said Marvel.

"I should think it was enough," said the mariner. "I should think it was enough."

"He didn't have any pals—it don't say he had any pals, does it?" asked Mr. Marvel, anxious.

"Ain't one of a sort enough for you?" asked the mariner. "No, thank Heaven, as one might say, he didn't."

He nodded his head slowly. "It makes me regular uncomfortable, the bare thought of that chap running about the country! He is at

present At Large, and from certain evidence it is supposed that he has—taken—took, I suppose they mean—the road to Port Stowe. You see we're right in it! None of your American wonders, this time. And just think of the things he might do! Where'd you be, if he took a drop over and above, and had a fancy to go for you? Suppose he wants to rob—who can prevent him? He can trespass, he can burgle, he could walk through a cordon of policemen as easy as me or you could give the slip to a blind man! Easier! For these here blind chaps hear uncommon sharp, I'm told. And wherever there was liquor he fancied —"

"He's got a tremendous advantage, certainly," said Marvel. "And—well."

"You're right," said the mariner. "He has."

All this time Mr. Marvel had been glancing about him intently, listening for faint footfalls, trying to detect imperceptible movements. He seemed on the point of some great resolution. He coughed behind his hand.

He looked about him again, listened, bent towards the mariner, and lowered his voice: "The fact of it is—I happen—to know just a thing or two about this Invisible Man. From private sources."

"Oh!" said the mariner, interested. "You?"

"Yes," said Mr. Marvel. "Me."

"Indeed!" said the mariner. "And may I ask—"

"You'll be astonished," said Mr. Marvel behind his hand. "It's tremendous."

"Indeed!" said the mariner.

"The fact is," began Mr. Marvel eagerly in a confidential undertone. Suddenly his expression changed marvellously. "Ow!" he said. He rose stiffly in his seat. His face was eloquent of physical suffering. "Wow!" he said.

"What's up?" said the mariner, concerned.

"Toothache," said Mr. Marvel, and put his hand to his ear. He caught hold of his books. "I must be getting on, I think," he said. He

edged in a curious way along the seat away from his interlocutor. "But you was just agoing to tell me about this here Invisible Man!" protested the mariner. Mr. Marvel seemed to consult with himself. "Hoax," said a Voice. "It's a hoax," said Mr. Marvel.

"But it's in the paper," said the mariner.

"Hoax all the same," said Marvel. "I know the chap that started the lie. There ain't no Invisible Man whatsoever—Blimey."

"But how 'bout this paper? D'you mean to say—?"

"Not a word of it," said Marvel, stoutly.

The mariner stared, paper in hand. Mr. Marvel jerkily faced about. "Wait a bit," said the mariner, rising and speaking slowly, "D'you mean to say—?"

"I do," said Mr. Marvel.

"Then why did you let me go on and tell you all this blarsted stuff, then? What d'yer mean by letting a man make a fool of himself like that for? Eigh?"

Mr. Marvel blew out his cheeks. The mariner was suddenly very red indeed; he clenched his hands. "I been talking here this ten minutes," he said; "and you, you little pot-bellied, leathery-faced son of an old boot, couldn't have the elementary manners—"

"Don't you come bandying words with me," said Mr. Marvel.

"Bandyng words! I'm a jolly good mind—"

"Come up," said a Voice, and Mr. Marvel was suddenly whirled about and started marching off in a curious spasmodic manner. "You'd better move on," said the mariner. "Who's moving on?" said Mr. Marvel. He was receding obliquely with a curious hurrying gait, with occasional violent jerks forward. Some way along the road he began a muttered monologue, protests and recriminations.

"Silly devil!" said the mariner, legs wide apart, elbows akimbo, watching the receding figure. "I'll show you, you silly ass, —hoaxing me! It's here—on the paper!"

Mr. Marvel retorted incoherently and, receding, was hidden by a bend in the road, but the mariner still stood magnificent in the midst

of the way, until the approach of a butcher's cart dislodged him. Then he turned himself towards Port Stowe. "Full of extraordinary asses," he said softly to himself. "Just to take me down a bit—that was his silly game—It's on the paper!"

And there was another extraordinary thing he was presently to hear, that had happened quite close to him. And that was a vision of a "fist full of money" (no less) travelling without visible agency, along by the wall at the corner of St. Michael's Lane. A brother mariner had seen this wonderful sight that very morning. He had snatched at the money forthwith and had been knocked headlong, and when he had got to his feet the butterfly money had vanished. Our mariner was in the mood to believe anything, he declared, but that was a bit too stiff. Afterwards, however, he began to think things over.

The story of the flying money was true. And all about that neighbourhood, even from the august London and Country Banking Company, from the tills of shops and inns—doors standing that sunny weather entirely open—money had been quietly and dexterously making off that day in handfuls and rouleaux, floating quietly along by walls and shady places, dodging quickly from the approaching eyes of men. And it had, though no man had traced it, invariably ended its mysterious flight in the pocket of that agitated gentleman in the obsolete silk hat, sitting outside the little inn on the outskirts of Port Stowe.

Chapter 15

The Man Who Was Running

In the early evening time Doctor Kemp was sitting in his study in the belvederer on the hill overlooking Burdock. It was a pleasant little room, with three windows, north, west, and south—and bookshelves crowded with books and scientific publications, and a broad writing-table, and, under the north window, a microscope, glass slips, minute instruments, some cultures, and scattered bottles of reagents. Doctor Kemp's solar lamp was lit, albeit the sky was still bright with the sunset light, and his blinds were up because there was no offence of peering outsiders to require them pulled down. Doctor Kemp was a tall and slender young man, with flaxen hair and a moustache almost white, and the work he was upon would earn him, he hoped, the fellowship of the Royal Society, so highly did he think of it.

And his eye presently wandering from his work caught the sunset blazing at the back of the hill that is over against his own. For a minute perhaps he sat, pen in mouth, admiring the rich golden colour above the crest, and then his attention was attracted by the little figure of a man, inky black, running over the hill-brow towards him. He was a shortish little man, and he wore a high hat, and he was running so fast that his legs verily twinkled.

"Another of those fools," said Doctor Kemp. "Like that ass who ran into me this morning round a corner, with his 'Visible Man acoming, sir!' I can't imagine what possesses people. One might think we were in the thirteenth century."

He got up, went to the window, and stared at the dusky hillside and the dark little figure tearing down it. "He seems in a confounded

hurry," said Doctor Kemp, "but he doesn't seem to be getting on. If his pockets were full of lead, he couldn't run heavier."

"Spurting, sir," said Doctor Kemp.

In another moment the higher of the villas that had clambered up the hill from Burdock had occulted the running figure. He was visible again for a moment, and again, and then again, three times between the three detached houses that came next, and then the terrace hid him.

"Asses!" said Doctor Kemp, swinging round on his heel and walking back to his writing-table.

But those who saw the fugitive nearer, and perceived the abject terror on his perspiring face, being themselves in the open roadway, did not share in the doctor's contempt. By the man pounded, and as he ran he chinked like a well-filled purse that is tossed to and fro. He looked neither to the right nor the left, but his dilated eyes stared straight downhill to where the lamps were being lit, and the people were crowded in the street. And his illshaped mouth fell apart, and a glairy foam lay on his lips, and his breath came hoarse and noisy. All he passed stopped and began staring up the road and down, and interrogating one another with an inkling of discomfort for the reason of his haste.

And then presently, far up the hill, a dog playing in the road yelped and ran under a gate, and as they still wondered something—a wind—a pad, pad, pad,—a sound like a panting breathing, —rushed by.

People screamed. People sprang off the pavement: It passed in shouts, it passed by instinct down the hill. They were shouting in the street before Marvel was halfway there. They were bolting into houses and slamming the doors behind them, with the news. He heard it and made one last desperate spurt. Fear came striding by, rushed ahead of him, and in a moment had seized the town.

"The Invisible Man is coming! The Invisible Man!"

Chapter 16

In the "Jolly Cricketers"

The "Jolly Cricketers" is just at the bottom of the hill, where the tram-lines begin. The barman leant his fat red arms on the counter and talked of horses with an anaemic cabman, while a black-bearded man in grey snapped up biscuit and cheese, drank Burton, and conversed in American with a policeman off duty.

"What's the shouting about?" said the anaemic cabman going off at a tangent, trying to see up the hill over the dirty yellow blind in the low window of the inn. Somebody ran by outside. "Fire, perhaps," said the barman.

Footsteps approached, running heavily, the door was pushed open violently, and Marvel, weeping and dishevelled, his hat gone, the neck of his coat torn open, rushed in, made a convulsive turn, and attempted to shut the door. It was held half open by a strap.

"Coming!" he bawled, his voice shrieking with terror. "He's coming. The 'Visible Man! After me! For Gawd's sake! Elp! Elp! Elp!"

"Shut the doors," said the policeman. "Who's coming? What's the row?" He went to the door, released the strap, and it slammed. The American closed the other door.

"Lemme go inside," said Marvel, staggering and weeping, but still clutching the books. "Lemme go inside. Lock me in—somewhere. I tell you he's after me. I give him the slip. He said he'd kill me and he will."

"You're safe," said the man with the black beard. "The door's shut. What's it all about?"

"Lemme go inside," said Marvel, and shrieked aloud as a blow suddenly made the fastened door shiver and was followed by a

hurried rapping and a shouting outside. "Hullo," cried the policeman, "who's there?" Mr. Marvel began to make frantic dives at panels that looked like doors. "He'll kill me—he's got a knife or something. For Gawd's sake—!"

"Here you are," said the barman. "Come in here." And he held up the flap of the bar.

Mr. Marvel rushed behind the bar as the summons outside was repeated. "Don't open the door," he screamed. "Please don't open the door. Where shall I hide?"

"This, this Invisible Man, then?" asked the man with the black beard, with one hand behind him. "I guess it's about time we saw him."

The window of the inn was suddenly smashed in, and there was a screaming and running to and fro in the street. The policeman had been standing on the settee staring out, craning to see who was at the door. He got down with raised eyebrows. "It's that," he said. The barman stood in front of the bar-parlour door which was now locked on Mr. Marvel, stared at the smashed window and came round to the two other men.

Everything was suddenly quiet. "I wish I had my truncheon," said the policeman, going irresolutely to the door. "Once we open, in he comes. There's no stopping him."

"Don't you be in too much hurry about that door," said the anaemic cabman, anxiously.

"Draw the bolts," said the man with the black beard, "and if he comes—" He showed a revolver in his hand.

"That won't do," said the policeman; "that's murder."

"I know what country I'm in," said the man with the beard. "I'm going to let off at his legs. Draw the bolts."

"Not with that thing going off behind me," said the barman, craning over the blind.

"Very well," said the man with the black beard, and stooping down, revolver ready, drew them himself. Barman, cabman, and

policeman faced about.

"Come in," said the bearded man in an undertone, standing back and facing the unbolted doors with his pistol behind him. No one came in, the door remained closed. Five minutes afterwards when a second cabman pushed his head in cautiously, they were still waiting, and an anxious face peered out of the bar-parlour and supplied information. "Are all the doors of the house shut?" asked Marvel. "He's going round—prowling round. He's as artful as the devil."

"Good Lord!" said the burly barman. "There's the back! Just watch them doors! I say—!" He looked about him helplessly. The bar-parlour door slammed and they heard the key turn. "There's the yard door and the private door. The yard door—"

He rushed out of the bar.

In a minute he reappeared with a carving-knife in his hand. "The yard door was open!" he said, and his fat underlip dropped. "He may be in the house now!" said the first cabman.

"He's not in the kitchen," said the barman. "There's two women there, and I've stabbed every inch of it with this little beef slicer. And they don't think he's come in. They haven't noticed—"

"Have you fastened it?" asked the first cabman.

"I'm out of frocks," said the barman.

The man with the beard replaced his revolver. And even as he did so the flap of the bar was shut down and the bolt clicked, and then with a tremendous thud the catch of the door snapped and the bar-parlour door burst open. They heard Marvel squeal like a caught leveret, and forthwith they were clambering over the bar to his rescue. The bearded man's revolver cracked and the looking-glass at the back of the parlour was starred brightly and came smashing and tinkling down.

As the barman entered the room he saw Marvel, curiously crumpled up and struggling against the door that led to the yard and kitchen. The door flew open while the barman hesitated, and Marvel was dragged into the kitchen. There was a scream and a clatter of

pans. Marvel, head down, and lugging back obstinately, was forced to the kitchen door, and the bolts were drawn.

Then the policeman, who had been trying to pass the barman, rushed in, followed by one of the cabmen, gripped the wrist of the invisible hand that collared Marvel, was hit in the face and went reeling back. The door opened, and Marvel made a frantic effort to obtain a lodgment behind it.

Then the cabman clutched something. "I got him," said the cabman. The barman's red hands came clawing at the unseen. "Here he is!" said the barman.

Mr. Marvel, released, suddenly dropped to the ground and made an attempt to crawl behind the legs of the fighting men. The struggle blundered round the edge of the door. The voice of the Invisible Man was heard for the first time, yelling out sharply, as the policeman trod on his foot. Then he cried out passionately and his fists flew round like flails. The cabman suddenly whooped and doubled up, kicked under the diaphragm. The door into the bar-parlour from the kitchen slammed and covered Mr. Marvel's retreat. The men in the kitchen found themselves clutching at and struggling with empty air.

"Where's he gone?" cried the man with the beard. "Out?"

"This way," said the policeman, stepping into the yard and stopping.

A piece of tile whizzed by his head and smashed among the crockery on the kitchen table.

"I'll show him," shouted the man with the black beard, and suddenly a steel barrel shone over the policeman's shoulder, and five bullets had followed one another into the twilight whence the missile had come. As he fired, the man with the beard moved his hand in a horizontal curve, so that his shots radiated out into the narrow yard like spokes from a wheel.

A silence followed. "Five cartridges," said the man with the black beard. "That's the best of all. Four aces and the joker. Get a lantern, someone, and come and feel about for his body."

Chapter 17

Doctor Kemp's Visitor

Doctor Kemp had continued writing in his study until the shots aroused him. Crack, crack, crack, they came one after the other.

"Hello!" said Doctor Kemp, putting his pen into his mouth again and listening. "Who's letting off revolvers in Burdock? What are the asses at now?"

He went to the south window, threw it up, and leaning out stared down on the network of windows, beaded gas-lamps and shops with black interstices of roof and yard that made up the town at night. "Looks like a crowd down the hill," he said, "by the Cricketers," and remained watching. Thence his eyes wandered over the town to far away where the ships' lights shone, and the pier glowed, a little illuminated pavilion like a gem of yellow light. The moon in its first quarter hung over the western hill, and the stars were clear and almost tropically bright.

After five minutes, during which his mind had travelled into a remote speculation of social conditions of the future, and lost itself at last over the time dimension, Doctor Kemp roused himself with a sigh, pulled down the window again, and returned to his writing desk.

It must have been about an hour after this that the frontdoor bell rang. He had been writing slackly and with intervals of abstraction, since the shots. He sat listening. He heard the servant answer the door, and waited for her feet on the staircase, but she did not come. "Wonder what that was," said Doctor Kemp.

He tried to resume his work, failed, got up, went downstairs from his study to the landing, rang, and called over the balustrade to the

housemaid as she appeared in the hall below. "Was that a letter?" he asked.

"Only a runaway ring, sir," she answered.

"I'm restless tonight," he said to himself. He went back to his study, and this time attacked his work resolutely. In a little while he was hard at work again, and the only sounds in the room were the ticking of the clock and the subdued shrillness of his quill, hurrying in the very centre of the circle of light his lampshade threw on his table.

It was two o'clock before Doctor Kemp had finished his work for the night. He rose, yawned, and went downstairs to bed. He had already removed his coat and vest, when he noticed that he was thirsty. He took a candle and went down to the dinin-groom in search of a syphon and whiskey.

Doctor Kemp's scientific pursuits had made him a very observant man, and as he recrossed the hall, he noticed a dark spot on the linoleum near the mat at the foot of the stairs. He went on upstairs, and then it suddenly occurred to him to ask himself what the spot on the linoleum might be. Apparently some subconscious element was at work. At any rate, he turned with his burden, went back to the hall, put down the syphon and whisky, and bending down, touched the spot. Without any great surprise he found it had the stickiness and colour of drying blood.

He took up his burden again, and returned upstairs, looking about him and trying to account for the blood-spot. On the landing he saw something and stopped astonished. The door-handle of his own room was blood-stained.

He looked at his own hand. It was quite clean, and then he remembered that the door of his room had been open when he came down from his study, and that consequently he had not touched the handle at all. He went straight into his room, his face quite calm—perhaps a trifle more resolute than usual. His glance, wandering inquisitively, fell on the bed. On the counterpane was a mess of blood, and the sheet had been torn. He had not noticed this before because

he had walked straight to the dressing-table. On the further side the bed-clothes were depressed as if someone had been recently sitting there.

Then he had an odd impression that he had heard a loud voice say, "Good Heavens!—Kemp!" But Doctor Kemp was no believer in voices.

He stood staring at the tumbled sheets. Was that really a voice? He looked about again, but noticed nothing further than the disordered and blood-stained bed. Then he distinctly heard a movement across the room, near the washhand stand. All men, however highly educated, retain some superstitious inklings. The feeling that is called "eerie" came upon him. He closed the door of the room, came forward to the dressingtable, and put down his burdens. Suddenly, with a start, he perceived a coiled and bloodstained bandage of linen rag hanging in mid-air, between him and the wash-hand stand.

He stared at this in amazement. It was an empty bandage, a bandage properly tied but quite empty. He would have advanced to grasp it, but a touch arrested him, and a voice speaking quite close to him.

"Kemp!" said the Voice.

"Eigh?" said Kemp, with his mouth open.

"Keep your nerve," said the Voice. "I'm an Invisible Man."

Kemp made no answer for a space, simply stared at the bandage. "Invisible Man," he said.

"I am an Invisible Man," repeated the Voice.

The story he had been active to ridicule only that morning rushed through Kemp's brain. He does not appear to have been either very much frightened or very greatly surprised at the moment. Realisation came later.

"I thought it was all a lie," he said. The thought uppermost in his mind was the reiterated arguments of the morning. "Have you a bandage on?" he asked.

"Yes," said the Invisible Man.

"Oh!" said Kemp, and then roused himself. "I say!" he said. "But this is nonsense. It's some trick." He stepped forward suddenly, and his hand, extended towards the bandage, met invisible fingers.

He recoiled at the touch and his colour changed.

"Keep steady, Kemp, for God's sake! I want help badly. Stop!"

The hand gripped his arm. He struck at it.

"Kemp!" cried the Voice. "Kemp! Keep steady!" and the grip tightened. A frantic desire to free himself took possession of Kemp. The hand of the bandaged arm gripped his shoulder, and he was suddenly tripped and flung backwards upon the bed. He opened his mouth to shout, and the corner of the sheet was thrust between his teeth. The Invisible Man had him down grimly, but his arms were free and he struck and tried to kick savagely.

"Listen to reason, will you?" said the Invisible Man, sticking to him in spite of a pounding in the ribs. "By Heaven! You'll madden me in a minute!"

"Lie still, you fool!" bawled the Invisible Man in Kemp's ear.

Kemp struggled for another moment and then lay still.

"If you shout, I'll smash your face," said the Invisible Man, relieving his mouth.

"I'm an Invisible Man. It's no foolishness, and no magic. I really am an Invisible Man. And I want your help. I don't want to hurt you, but if you behave like a frantic rustic, I must. Don't you remember me, Kemp—Griffin, of University College?"

"Let me get up," said Kemp. "I'll stop where I am. And let me sit quiet for a minute."

He sat up and felt his neck.

"I am Griffin, of University College, and I have made myself invisible. I am just an ordinary man—a man you have known—made invisible."

"Griffin?" said Kemp.

"Griffin," answered the Voice—"a younger student, almost an

albino, six feet high, and broad, with a pink and white face and red eyes—who won the medal for chemistry."

"I am confused," said Kemp. "My brain is rioting. What has this to do with Griffin?"

"I am Griffin."

Kemp thought. "It's horrible," he said. "But what devilry must happen to make a man invisible?"

"It's no devilry. It's a process, sane and intelligible enough—"

"It's horrible!" said Kemp. "How on earth—?"

"It's horrible enough. But I'm wounded and in pain, and tired—Great God! Kemp, you are a man. Take it steady. Give me some food and drink, and let me sit down here."

Kemp stared at the bandage as it moved across the room, then saw a basket chair dragged across the floor and come to rest near the bed. It creaked, and the seat was depressed the quarter of an inch or so. He rubbed his eyes and felt his neck again. "This beats ghosts," he said, and laughed stupidly.

"That's better. Thank Heaven, you're getting sensible!"

"Or silly," said Kemp, and knuckled his eyes.

"Give me some whiskey. I'm near dead."

"It didn't feel so. Where are you? If I get up shall I run into you? There! all right. Whiskey? Here. Where shall I give it to you?"

The chair creaked and Kemp felt the glass drawn away from him. He let go by an effort; his instinct was all against it. It came to rest poised twenty inches above the front edge of the seat of the chair. He stared at it in infinite perplexity. "This is—this must be—hypnotism. You have suggested you are invisible."

"Nonsense," said the Voice.

"It's frantic."

"Listen to me."

"I demonstrated conclusively this morning," began Kemp, "that invisibility—"

"Never mind what you've demonstrated!—I'm starving," said the

Voice, "and the night is—chilly to a man without clothes."

"Food?" said Kemp.

The tumbler of whiskey tilted itself. "Yes," said the Invisible Man, rapping it down. "Have you a dressing gown?"

Kemp made some exclamation in an undertone. He walked to a wardrobe and produced a robe of dingy scarlet. "This do?" he asked. It was taken from him. It hung limp for a moment in mid-air, fluttered weirdly, stood full and decorous buttoning itself, and sat down in his chair. "Drawers, socks, slippers would be a comfort," said the Unseen, curtly. "And food."

"Anything. But this is the insanest thing I ever was in, in my life!"

He turned out his drawers for the articles, and then went downstairs to ransack his larder. He came back with some cold cutlets and bread, pulled up a light table, and placed them before his guest. "Never mind knives," said his visitor, and a cutlet hung in mid-air, with a sound of gnawing.

"Invisible!" said Kemp, and sat down on a bedroom chair.

"I always like to get something about me before I eat," said the Invisible Man, with a full mouth, eating greedily. "Queer fancy!"

"I suppose that wrist is all right," said Kemp.

"Trust me," said the Invisible Man.

"Of all the strange and wonderful—"

"Exactly. But it's odd I should blunder into your house to get my bandaging. My first stroke of luck! Anyhow I meant to sleep in this house tonight. You must stand that! It's a filthy nuisance, my blood showing, isn't it? Quite a clot over there. Gets visible as it coagulates, I see. I've been in the house three hours."

"But how's it done?" began Kemp, in a tone of exasperation. "Confound it! The whole business—it's unreasonable from beginning to end."

"Quite reasonable," said the Invisible Man. "Perfectly reasonable."

He reached over and secured the whiskey bottle. Kemp stared at the devouring dressing gown. A ray of candle-light penetrating a torn

patch—in the right shoulder, made a triangle of light under the left ribs. "What were the shots?" he asked. "How did the shooting begin?"

"There was a fool of a man—a sort of confederate of mine—curse him!—who tried to steal my money. Has done so."

"Is he invisible too?"

"No."

"Well?"

"Can't I have some more to eat before I tell you all that? I'm hungry—in pain. And you want me to tell stories!"

Kemp got up. "You didn't do any shooting?" he asked.

"Not me," said his visitor. "Some fool I'd never seen fired at random. A lot of them got scared. They all got scared at me. Curse them!—I say—I want more to eat than this, Kemp."

"I'll see what there is more to eat downstairs," said Kemp. "Not much, I'm afraid."

After he had done eating, and he made a heavy meal, the Invisible Man demanded a cigar. He bit the end savagely before Kemp could find a knife, and cursed when the outer leaf loosened. It was strange to see him smoking; his mouth, and throat, pharynx and nares, became visible as a sort of whirling smoke cast.

"This blessed gift of smoking!" he said, and puffed vigorously. "I'm lucky to have fallen upon you, Kemp. You must help me. Fancy tumbling on you just now! I'm in a devilish scrape. I've been mad, I think. The things I have been through! But we will do things yet. Let me tell you—"

He helped himself to more whiskey and soda. Kemp got up, looked about him, and fetched himself a glass from his spare room. "It's wild—but I suppose I may drink."

"You haven't changed much, Kemp, these dozen years. You fair men don't. Cool and methodical—after the first collapse. I must tell you. We will work together!"

"But how was it all done?" said Kemp, "and how did you get like this?"

"For God's sake, let me smoke in peace for a little while! And then I will begin to tell you."

But the story was not told that night. The Invisible Man's wrist was growing painful, he was feverish, exhausted, and his mind came round to brood upon his chase down the hill and the struggle about the inn. He spoke in fragments of Marvel, he smoked faster, his voice grew angry. Kemp tried to gather what he could.

"He was afraid of me, I could see he was afraid of me," said the Invisible Man many times over. "He meant to give me the slip—he was always casting about! What a fool I was!"

"The cur!

"I should have killed him!"

"Where did you get the money?" asked Kemp, abruptly.

The Invisible Man was silent for a space. "I can't tell you tonight," he said.

He groaned suddenly and leant forward, supporting his invisible head on invisible hands. "Kemp," he said, "I've had no sleep for near three days, except a couple of dozes of an hour or so. I must sleep soon."

"Well, have my room—have this room."

"But how can I sleep? If I sleep—he will get away. Ugh! What does it matter?"

"What's the shot wound?" asked Kemp, abruptly.

"Nothing—scratch and blood. Oh, God! How I want sleep!"

"Why not?"

The Invisible Man appeared to be regarding Kemp. "Because I've a particular objection to being caught by my fellowmen," he said slowly.

Kemp started.

"Fool that I am!" said the Invisible Man, striking the table smartly. "I've put the idea into your head."

Chapter 18

The Invisible Man Sleeps

Exhausted and wounded as the Invisible Man was, he refused to accept Kemp's word that his freedom should be respected. He examined the two windows of the bedroom, drew up the blinds and opened the sashes to confirm Kemp's statement that a retreat by them would be possible. Outside the night was very quiet and still, and the new moon was setting over the down. Then he examined the keys of the bedroom and the two dressing-room doors, to satisfy himself that these also could be made an assurance of freedom. Finally he expressed himself satisfied. He stood on the hearth rug and Kemp heard the sound of a yawn.

"I'm sorry," said the Invisible Man, "if I cannot tell you all that I have done tonight. But I am worn out. It's grotesque, no doubt. It's horrible! But believe me, Kemp, it is quite a possible thing. I have made a discovery. I meant to keep it to myself. I can't. I must have a partner. And you—We can do such things—But tomorrow. Now, Kemp, I feel as though I must sleep or perish."

Kemp stood in the middle of the room staring at the headless garment. "I suppose I must leave you," he said. "It's—incredible. Three things happening like this, overturning all my preconceptions, would make me insane. But it's real! Is there anything more that I can get you?"

"Only bid me goodnight," said Griffin.

"Goodnight," said Kemp, and shook an invisible hand. He walked sideways to the door. Suddenly the dressing-gown walked quickly towards him. "Understand me!" said the dressing-gown. "No attempts

to hamper me, or capture me! Or—"

Kemp's face changed a little. "I thought I gave you my word," he said.

Kemp closed the door softly behind him, and the key was turned upon him forthwith. Then, as he stood with an expression of passive amazement on his face, the rapid feet came to the door of the dressing room and that too was locked. Kemp slapped his brow with his hand. "Am I dreaming? Has the world gone mad—or have I?"

He laughed, and put his hand to the locked door. "Barred out of my own bedroom, by a flagrant absurdity!" he said.

He walked to the head of the staircase, turned, and stared at the locked doors. "It's fact," he said. He put his fingers to his slightly bruised neck. "Undeniable fact!

"But—"

He shook his head hopelessly, turned, and went downstairs.

He lit the dining-room lamp, got out a cigar, and began pacing the room, ejaculating. Now and then he would argue with himself.

"Invisible!" he said.

"Is there such a thing as an invisible animal? In the sea, yes. Thousands! millions. All the larvae, all the little nauplii and tornarias, all the microscopic things, the jellyfish. In the sea there are more things invisible than visible! I never thought of that before. And in the ponds too! All those little pondlife things—specks of colourless translucent jelly! But in air? No!

"It can't be.

"But after all—why not?

"If a man was made of glass he would still be visible."

His meditation became profound. The bulk of three cigars had passed into the invisible or diffused as a white ash over the carpet before he spoke again. Then it was merely an exclamation. He turned aside, walked out of the room, and went into his little consulting-room and lit the gas there. It was a little room, because Dr. Kemp did not live by practice, and in it were the day's newspapers. The morning's

paper lay carelessly opened and thrown aside. He caught it up, turned it over, and read the account of a "Strange Story from Iping" that the mariner at Port Stowe had spelt over so painfully to Mr. Marvel. Kemp read it swiftly.

"Wrapped up!" said Kemp. "Disguised! Hiding it! 'No one seems to have been aware of his misfortune.' What the devil is his game?"

He dropped the paper, and his eye went seeking. "Ah!" he said, and caught up the St. James' Gazette, lying folded up as it arrived. "Now we shall get at the truth," said Dr. Kemp. He rent the paper open; a couple of columns confronted him. "An Entire Village in Sussex Goes Mad" was the heading.

"Good Heavens!" said Kemp, reading eagerly an incredulous account of the events in Iping the previous afternoon, that have already been described. Over the leaf the report in the morning paper had been reprinted.

He reread it. "Ran through the streets striking right and left. Jaffers insensible. Mr. Huxter in great pain—still unable to describe what he saw. Painful humiliation—vicar. Woman ill with terror! Windows smashed. This extraordinary story probably a fabrication. Too good not to print—cum grano!"

He dropped the paper and stared blankly in front of him. "Probably a fabrication!"

He caught up the paper again, and reread the whole business. "But when does the Tramp come in? Why the deuce was he chasing a Tramp?"

He sat down abruptly on the surgical couch. "He's not only invisible," he said, "but he's mad! Homicidal!"

When dawn came to mingle its pallor with the lamp-light and cigar smoke of the dining-room, Kemp was still pacing up and down, trying to grasp the incredible.

He was altogether too excited to sleep. His servants, descending sleepily, discovered him, and were inclined to think that overstudy had worked this ill on him. He gave them extraordinary but quite

explicit instructions to lay breakfast for two in the belvedere study—and then to confine themselves to the basement and groundfloor. Then he continued to pace the dining-room until the morning's paper came. That had much to say and little to tell, beyond the confirmation of the evening before and a very badly written account of another remarkable tale from Port Burdock. This gave Kemp the essence of the happenings at the Jolly Cricketers, and the name of Marvel. "He has made me keep with him twenty-four hours," Marvel testified. Certain minor facts were added to the Iping story, notably the cutting of the village telegraph-wire. But there was nothing to throw light on the connexion between the Invisible Man and the Tramp; for Mr. Marvel had supplied no information about the three books, or the money with which he was lined. The incredulous tone had vanished and a shoal of reporters and inquirers were already at work elaborating the matter.

Kemp read every scrap of the report and sent his housemaid out to get everyone of the morning papers she could. These also he devoured.

"He is invisible!" he said. "And it reads like rage growing to mania! The things he may do! The things he may do! And he's upstairs free as the air. What on earth ought I to do?"

"For instance, would it be a breach of faith if—? No."

He went to a little untidy desk in the corner, and began a note. He tore this up half written, and wrote another. He read it over and considered it. Then he took an envelope and addressed it to "Colonel Adye, Port Burdock."

The Invisible Man awoke even as Kemp was doing this. He awoke in an evil temper, and Kemp, alert for every sound, heard his pattering feet rush suddenly across the bedroom overhead. Then a chair was flung over and the washhand stand tumbler smashed. Kemp hurried upstairs and rapped eagerly.

Chapter 19

Certain First Principles

"What's the matter?" asked Kemp, when the Invisible Man admitted him. "Nothing," was the answer.

"But, confound it! The smash?"

"Fit of temper," said the Invisible Man. "Forgot this arm; and it's sore." "You're rather liable to that sort of thing."

"I am."

Kemp walked across the room and picked up the fragments of broken glass. "All the facts are out about you," said Kemp, standing up with the glass in his hand; "all that happened in Iping, and down the hill. The world has become aware of its invisible citizen. But no one knows you are here."

The Invisible Man swore.

"The secret's out. I gather it was a secret. I don't know what your plans are, but of course I'm anxious to help you."

The Invisible Man sat down on the bed.

"There's breakfast upstairs," said Kemp, speaking as easily as possible, and he was delighted to find his strange guest rose willingly. Kemp led the way up the narrow staircase to the belvedere.

"Before we can do anything else," said Kemp, "I must understand a little more about this invisibility of yours." He had sat down, after one nervous glance out of the window, with the air of a man who has talking to do. His doubts of the sanity of the entire business flashed and vanished again as he looked across to where Griffin sat at the breakfast-table, —a headless, handless dressing-gown, wiping unseen lips on a miraculously held serviette.

"It's simple enough—and credible enough," said Griffin, putting the serviette aside and leaning the invisible head on an invisible hand.

"No doubt, to you, but—" Kemp laughed.

"Well, yes; to me it seemed wonderful at first, no doubt. But now, great God! —But we will do great things yet! I came on the stuff first at Chesilstowe."

"Chesilstowe?"

"I went there after I left London. You know I dropped medicine and took up physics? No? —well, I did. Light—fascinated me."

"Ah!"

"Optical density! The whole subject is a network of riddles—a network with solutions glimmering elusively through. And being but two-and-twenty and full of enthusiasm, I said, 'I will devote my life to this. This is worthwhile.' You know what fools we are at two-and-twenty?"

"Fools then or fools now," said Kemp.

"As though knowing could be any satisfaction to a man!"

"But I went to work—like a nigger. And I had hardly worked and thought about the matter six months before light came through one of the meshes suddenly—blindingly! I found a general principle of pigments and refraction, —a formula, a geometrical expression involving four dimensions. Fools, common men, even common mathematicians, do not know anything of what some general expression may mean to the student of molecular physics. In the books—the books that Tramp has hidden—there are marvels, miracles! But this was not a method, it was an idea that might lead to a method by which it would be possible, without changing any other property of matter, —except, in some instances, colours—to lower the refractive index of a substance, solid or liquid, to that of air—so far as all practical purposes are concerned."

"Phew!" said Kemp. "That's odd! But still I don't see quite—I can understand that thereby you could spoil a valuable stone, but personal invisibility is a far cry."

"Precisely," said Griffin. "But consider: Visibility depends on the action of the visible bodies on light. Either a body absorbs light, or it reflects or refracts it, or does all these things. If it neither reflects nor refracts nor absorbs light, it cannot of itself be visible. You see an opaque red box, for instance, because the colour absorbs some of the light and reflects the rest, all the red part of the light, to you. If it did not absorb any particular part of the light, but reflected it all, then it would be a shining white box. Silver! A diamond box would neither absorb much of the light nor reflect much from the general surface, but just here and there where the surfaces were favourable the light would be reflected and refracted, so that you would get a brilliant appearance of flashing reflections and translucencies, —a sort of skeleton of light. A glass box would not be so brilliant, not so clearly visible, as a diamond box, because there would be less refraction and reflection. See that? From certain points of view you would see quite clearly through it. Some kinds of glass would be more visible than others, a box of flint glass would be brighter than a box of ordinary window glass. A box of very thin common glass would be hard to see in a bad light, because it would absorb hardly any light and refract and reflect very little. And if you put a sheet of common white glass in water, still more if you put it in some denser liquid than water, it would vanish almost altogether, because light passing from water to glass is only slightly refracted or reflected or indeed affected in any way. It is almost as invisible as a jet of coal gas or hydrogen is in air. And for precisely the same reason!"

"Yes," said Kemp, "that is pretty plain sailing."

"And here is another fact you will know to be true. If a sheet of glass is smashed, Kemp, and beaten into a powder, it becomes much more visible while it is in the air; it becomes at last an opaque white powder. This is because the powdering multiplies the surfaces of the glass at which refraction and reflection occur. In the sheet of glass there are only two surfaces; in the powder the light is reflected or refracted by each grain it passes through, and very little gets right

through the powder. But if the white powdered glass is put into water, it forthwith vanishes. The powdered glass and water have much the same refractive index; that is, the light undergoes very little refraction or reflection in passing from one to the other.

"You make the glass invisible by putting it into a liquid of nearly the same refractive index; a transparent thing becomes invisible if it is put in any medium of almost the same refractive index. And if you will consider only a second, you will see also that the powder of glass might be made to vanish in air, if its refractive index could be made the same as that of air; for then there would be no refraction or reflection as the light passed from glass to air."

"Yes, yes," said Kemp. "But a man's not powdered glass!"

"No," said Griffin. "He's more transparent!"

"Nonsense!"

"That from a doctor! How one forgets! Have you already forgotten your physics, in ten years? Just think of all the things that are transparent and seem not to be so. Paper, for instance, is made up of transparent fibres, and it is white and opaque only for the same reason that a powder of glass is white and opaque. Oil white paper, fill up the interstices between the particles with oil so that there is no longer refraction or reflection except at the surfaces, and it becomes as transparent as glass. And not only paper, but cotton fibre, linen fibre, wool fibre, woody fibre, and bone, Kemp, flesh, hair, nails and nerves, Kemp, in fact the whole fabric of a man except the red of his blood and the black pigment of hair, are all made up of transparent, colourless tissue. So little suffices to make us visible one to the other. For the most part the fibres of a living creature are no more opaque than water."

"Great Heavens!" cried Kemp. "Of course, of course! I was thinking only last night of the sea larvae and all jellyfish!"

"Now you have me! And all that I knew and had in mind a year after I left London—six years ago. But I kept it to myself. I had to do my work under frightful disadvantages. Oliver, my professor, was a

scientific bounder, a journalist by instinct, a thief of ideas, —he was always prying! And you know the knavish system of the scientific world. I simply would not publish, and let him share my credit. I went on working. I got nearer and nearer making my formula into an experiment, a reality. I told no living soul, because I meant to flash my work upon the world with crushing effect, —to become famous at a blow. I took up the question of pigments to fill up certain gaps. And suddenly, not by design but by accident, I made a discovery in physiology."

"Yes?"

"You know the red colouring matter of blood; it can be made white—colourless—and remain with all the functions it has now!"

Kemp gave a cry of incredulous amazement.

The Invisible Man rose and began pacing the little study. "You may well exclaim. I remember that night. It was late at night,—in the daytime one was bothered with the gaping, silly students,—and I worked then sometimes till dawn. It came suddenly, splendid and complete into my mind. I was alone; the laboratory was still, with the tall lights burning brightly and silently. In all my great moments I have been alone. 'One could make an animal—a tissue—transparent! One could make it invisible! All except the pigments. I could be invisible' I said, suddenly realising what it meant to be an albino with such knowledge. It was overwhelming. I left the filtering I was doing, and went and stared out of the great window at the stars. 'I could be invisible!' I repeated.

"To do such a thing would be to transcend magic. And I beheld, unclouded by doubt, a magnificent vision of all that invisibility might mean to a man, —the mystery, the power, the freedom. Drawbacks I saw none. You have only to think! And I, a shabby, poverty-struck, hemmed-in demonstrator, teaching fools in a provincial college, might suddenly become—this. I ask you, Kemp if you—Anyone, I tell you, would have flung himself upon that research. And I worked three years, and every mountain of difficulty I toiled over showed another

from its summit. The infinite details! And the exasperation, —a professor, a provincial professor, always prying. 'When are you going to publish this work of yours?' was his everlasting question. And the students, the cramped means! Three years I had of it—

"And after three years of secrecy and exasperation, I found that to complete it was impossible, —impossible."

"How?" asked Kemp.

"Money," said the Invisible Man, and went again to stare out of the window.

He turned around abruptly. "I robbed the old man—robbed my father.

"The money was not his, and he shot himself."

Chapter 20

At the House in Great Portland Street

For a moment Kemp sat in silence, staring at the back of the headless figure at the window. Then he started, struck by a thought, rose, took the Invisible Man's arm, and turned him away from the outlook.

"You are tired," he said, "and while I sit, you walk about. Have my chair."

He placed himself between Griffin and the nearest window.

For a space Griffin sat silent, and then he resumed abruptly:

"I had left the Chesilstowe cottage already," he said, "when that happened. It was last December. I had taken a room in London, a large unfurnished room in a big ill-managed lodging-house in a slum near Great Portland Street. The room was soon full of the appliances I had bought with his money; the work was going on steadily, successfully, drawing near an end. I was like a man emerging from a thicket, and suddenly coming on some unmeaning tragedy. I went to bury him. My mind was still on this research, and I did not lift a finger to save his character. I remember the funeral, the cheap hearse, the scant ceremony, the windy frost-bitten hillside, and the old college friend of his who read the service over him, —a shabby, black, bent old man with a snivelling cold.

"I remember walking back to the empty home, through the place that had once been a village and was now patched and tinkered by the jerry builders into the ugly likeness of a town. Every way the roads ran out at last into the desecrated fields and ended in rubble heaps

and rank wet weeds. I remember myself as a gaunt black figure, going along the slippery, shiny pavement, and the strange sense of detachment I felt from the squalid respectability, the sordid commercialism of the place.

"I did not feel a bit sorry for my father. He seemed to me to be the victim of his own foolish sentimentality. The current cant required my attendance at his funeral, but it was really not my affair.

"But going along the High Street, my old life came back to me for a space, for I met the girl I had known ten years since. Our eyes met.

"Something moved me to turn back and talk to her. She was a very ordinary person.

"It was all like a dream, that visit to the old places. I did not feel then that I was lonely, that I had come out from the world into a desolate place. I appreciated my loss of sympathy, but I put it down to the general inanity of things. Reentering my room seemed like the recovery of reality. There were the things I knew and loved. There stood the apparatus, the experiments arranged and waiting. And now there was scarcely a difficulty left, beyond the planning of details.

"I will tell you, Kemp, sooner or later, all the complicated processes. We need not go into that now. For the most part, saving certain gaps I chose to remember, they are written in cypher in those books that tramp has hidden. We must hunt him down. We must get those books again. But the essential phase was to place the transparent object whose refractive index was to be lowered between two radiating centres of a sort of ethereal vibration, of which I will tell you more fully later. No, not those Röntgen vibrations—I don't know that these others of mine have been described. Yet they are obvious enough. I needed two little dynamos, and these I worked with a cheap gas engine. My first experiment was with a bit of white wool fabric. It was the strangest thing in the world to see it in the flicker of the flashes soft and white, and then to watch it fade like a wreath of smoke and vanish.

"I could scarcely believe I had done it. I put my hand into the

emptiness, and there was the thing as solid as ever. I felt it awkwardly, and threw it on the floor. I had a little trouble finding it again.

"And then came a curious experience. I heard a miaow behind me, and turning, saw a lean white cat, very dirty, on the cistern cover outside the window. A thought came into my head. 'Everything ready for you,' I said, and went to the window, opened it, and called softly. She came in, purring, —the poor beast was starving, —and I gave her some milk. All my food was in a cupboard in the corner of the room. After that she went smelling round the room, —evidently with the idea of making herself at home. The invisible rag upset her a bit; you should have seen her spit at it! But I made her comfortable on the pillow of my truckle-bed. And I gave her butter to get her to wash."

"And you processed her?"

"I processed her. But giving drugs to a cat is no joke, Kemp! And the process failed."

"Failed!"

"In two particulars. These were the claws and the pigment stuff—what is it?—at the back of the eye in a cat. You know?"

"Tapetum."

"Yes, the tapetum. It didn't go. After I'd given the stuff to bleach the blood and done certain other things to her, I gave the beast opium, and put her and the pillow she was sleeping on, on the apparatus. And after all the rest had faded and vanished, there remained two little ghosts of her eyes."

"Odd!"

"I can't explain it. She was bandaged and clamped, of course, —so I had her safe; but she woke while she was still misty, and miaowed dismally, and someone came knocking. It was an old woman from downstairs, who suspected me of vivisection, —a drink-sodden old creature, with only a white cat to care for in all the world. I whipped out some chloroform, and applied it, and answered the door. 'Did I hear a cat?' she asked.

'My cat?' 'Not here,' said I, very politely. She was a little doubtful and tried to peer past me into the room; strange enough to her no doubt, —bare walls, uncurtained windows, truckle-bed, with the gas engine vibrating, and the seethe of the radiant points, and that faint ghastly stinging of chloroform in the air. She had to be satisfied at last and went away again."

"How long did it take?" asked Kemp.

"Three or four hours—the cat. The bones and sinews and the fat were the last to go, and the tips of the coloured hairs. And, as I say, the back part of the eye, tough iridescent stuff it is, wouldn't go at all.

"It was night outside long before the business was over, and nothing was to be seen but the dim eyes and the claws. I stopped the gas engine, felt for and stroked the beast, which was still insensible, and then, being tired, left it sleeping on the invisible pillow and went to bed. I found it hard to sleep. I lay awake thinking weak aimless stuff, going over the experiment over and over again, or dreaming feverishly of things growing misty and vanishing about me, until everything, the ground I stood on, vanished, and so I came to that sickly falling nightmare one gets. About two, the cat began miaowing about the room. I tried to hush it by talking to it, and then I decided to turn it out. I remember the shock I had when striking a light—there were just the round eyes shining green—and nothing round them. I would have given it milk, but I hadn't any. It wouldn't be quiet, it just sat down and miaowed at the door. I tried to catch it, with an idea of putting it out of the window, but it wouldn't be caught, it vanished. Then it began miaowing in different parts of the room. At last I opened the window and made a bustle. I suppose it went out at last. I never saw any more of it.

"Then—Heaven knows why—I fell thinking of my father's funeral again, and the dismal windy hillside, until the day had come. I found sleeping was hopeless, and, locking my door after me, wandered out into the morning streets."

"You don't mean to say there's an invisible cat at large!" said

Kemp.

"If it hasn't been killed," said the Invisible Man. "Why not?"

"Why not?" said Kemp. "I didn't mean to interrupt."

"It's very probably been killed," said the Invisible Man. "It was alive four days after, I know, and down a grating in Great Titchfield Street; because I saw a crowd round the place, trying to see whence the miaowing came."

He was silent for the best part of a minute. Then he resumed abruptly:

"I remember that morning before the change very vividly. I must have gone up Great Portland Street. I remember the barracks in Albany Street, and the horse soldiers coming out, and at last I found myself sitting in the sunshine and feeling very ill and strange, on the summit of Primrose Hill. It was a sunny day in January, —one of those sunny, frosty days that came before the snow this year. My weary brain tried to formulate the position, to plot out a plan of action.

"I was surprised to find, now that my prize was within my grasp, how inconclusive its attainment seemed. As a matter of fact I was worked out; the intense stress of nearly four years' continuous work left me incapable of any strength of feeling. I was apathetic, and I tried in vain to recover the enthusiasm of my first inquiries, the passion of discovery that had enabled me to compass even the downfall of my father's grey hairs. Nothing seemed to matter. I saw pretty clearly this was a transient mood, due to overwork and want of sleep, and that either by drugs or rest it would be possible to recover my energies.

"All I could think clearly was that the thing had to be carried through; the fixed idea still ruled me. And soon, for the money I had was almost exhausted. I looked about me at the hillside, with children playing and girls watching them, and tried to think of all the fantastic advantages an invisible man would have in the world. After a time I crawled home, took some food and a strong dose of strychnine, and

went to sleep in my clothes on my unmade bed. Strychnine is a grand tonic, Kemp, to take the flabbiness out of a man."

"It's the devil," said Kemp. "It's the palaeolithic in a bottle."

"I awoke vastly invigorated and rather irritable. You know?"

"I know the stuff."

"And there was someone rapping at the door. It was my landlord with threats and inquiries, an old Polish Jew in a long grey coat and greasy slippers. I had been tormenting a cat in the night he was sure, —the old woman's tongue had been busy. He insisted on knowing all about it. The laws in this country against vivisection were very severe, —he might be liable. I denied the cat. Then the vibration of the little gas engine could be felt all over the house, he said. That was true, certainly. He edged round me into the room, peering about over his Germans-silver spectacles, and a sudden dread came into my mind that he might carry away something of my secret. I tried to keep between him and the concentrating apparatus I had arranged, and that only made him more curious. What was I doing? Why was I always alone and secretive? Was it legal? Was it dangerous? I paid nothing but the usual rent. His had always been a most respectable house—in a disreputable neighbourhood. Suddenly my temper gave way. I told him to get out. He began to protest, to jabber of his right of entry. In a moment I had him by the collar; something ripped, and he went spinning out into his own passage. I slammed and locked the door and sat down quivering.

"He made a fuss outside, which I disregarded, and after a time he went away.

"But this brought matters to a crisis. I did not know what he would do, nor even what he had the power to do. To move to fresh apartments would have meant delay; altogether I had barely twenty pounds left in the world, —for the most part in a bank, —and I could not afford that. Vanish! It was irresistible. Then there would be an inquiry, the sacking of my room—

"At the thought of the possibility of my work being exposed or

interrupted at its very climax, I became angry and active. I hurried out with my three books of notes, my cheque-book, —the tramp has them now, —and directed them from the nearest Post Office to a house of call for letters and parcels in Great Portland Street. I tried to go out noiselessly. Coming in, I found my landlord going quietly upstairs; he had heard the door close, I suppose. You would have laughed to see him jump aside on the landing as came tearing after him. He glared at me as I went by him, and I made the house quiver with the slamming of my door. I heard him come shuffling up to my floor, hesitate, and go down. I set to work upon my preparations forthwith.

"It was all done that evening and night. While I was still sitting under the sickly, drowsy influence of the drugs that decolourise blood, there came a repeated knocking at the door. It ceased, footsteps went away and returned, and the knocking was resumed. There was an attempt to push something under the door—a blue paper. Then in a fit of irritation I rose and went and flung the door wide open. 'Now then?' said I.

"It was my landlord, with a notice of ejectment or something. He held it out to me, saw something odd about my hands, I expect, and lifted his eyes to my face.

"For a moment he gaped. Then he gave a sort of inarticulate cry, dropped candle and writ together, and went blundering down the dark passage to the stairs. I shut the door, locked it, and went to the looking-glass. Then I understood his terror. My face was white—like white stone.

"But it was all horrible. I had not expected the suffering. A night of racking anguish, sickness and fainting. I set my teeth, though my skin was presently afire, all my body afire; but I lay there like grim death. I understood now how it was the cat had howled until I chloroformed it. Lucky it was I lived alone and untended in my room. There were times when I sobbed and groaned and talked. But I stuck to it. I became insensible and woke languid in the darkness.

"The pain had passed. I thought I was killing myself and I did not

care. I shall never forget that dawn, and the strange horror of seeing that my hands had become as clouded glass, and watching them grow clearer and thinner as the day went by, until at last I could see the sickly disorder of my room through them, though I closed my transparent eyelids. My limbs became glassy, the bones and arteries faded, vanished, and the little white nerves went last. I ground my teeth and stayed there to the end. At last only the dead tips of the fingernails remained, pallid and white, and the brown stain of some acid upon my fingers.

"I struggled up. At first I was as incapable as a swathed infant—stepping with limbs I could not see. I was weak and very hungry. I went and stared at nothing in my shaving-glass, at nothing save where an attenuated pigment still remained behind the retina of my eyes, fainter than mist. I had to hang on to the table and press my forehead to the glass.

"It was only by a frantic effort of will that I dragged myself back to the apparatus and completed the process.

"I slept during the forenoon, pulling the sheet over my eyes to shut out the light, and about midday I was awakened again by a knocking. My strength had returned. I sat up and listened and heard a whispering. I sprang to my feet and as noiselessly as possible began to detach the connections of my apparatus, and to distribute it about the room, so as to destroy the suggestions of its arrangement. Presently the knocking was renewed and voices called, first my landlord's, and then two others. To gain time I answered them. The invisible rag and pillow came to hand and I opened the window and pitched them out on to the cistern cover. As the window opened, a heavy crash came at the door. Someone had charged it with the idea of smashing the lock. But the stout bolts I had screwed up some days before stopped him. That startled me, made me angry. I began to tremble and do things hurriedly.

"I tossed together some loose paper, straw, packing paper and so forth, in the middle of the room, and turned on the gas. Heavy blows

began to rain upon the door. I could not find the matches. I beat my hands on the wall with rage. I turned down the gas again, stepped out of the window on the cistern cover, very softly lowered the sash, and sat down, secure and invisible, but quivering with anger, to watch events. They split a panel, I saw, and in another moment they had broken away the staples of the bolts and stood in the open doorway. It was the landlord and his two stepsons, sturdy young men of three or four and twenty. Behind them fluttered the old hag of a woman from downstairs.

"You may imagine their astonishment on finding the room empty. One of the younger men rushed to the window at once, flung it up and stared out. His staring eyes and thick-lipped bearded face came a foot from my face. I was half minded to hit his silly countenance, but I arrested my doubled fist. He stared right through me. So did the others as they joined him. The old man went and peered under the bed, and then they all made a rush for the cupboard. They had to argue about it at length in Yiddish and Cockney English. They concluded I had not answered them, that their imagination had deceived them. A feeling of extraordinary elation took the place of my anger as I sat outside, the window and watched these four people—for the old lady came in, glancing suspiciously about her like a cat, trying to understand the riddle of my behaviour.

"The old man, so far as I could understand his patois, agreed with the old lady that I was a vivisectionist. The sons protested in garbled English that I was an electrician, and appealed to the dynamos and radiators. They were all nervous against my arrival, although I found subsequently that they had bolted the front door. The old lady peered into the cupboard and under the bed, and one of the young men pushed up the register and stared up the chimney. One of my fellow lodgers, a costermonger who shared the opposite room with a butcher, appeared on the landing, and he was called in and told incoherent things.

"It occurred to me that the radiators, if they fell into the hands of

some acute well-educated person, would give me away too much, and watching my opportunity, I came into the room and tilted one of the little dynamos off its fellow on which it was standing, and smashed both apparatus. Then, while they were trying to explain the smash, I dodged out of the room and went softly downstairs.

"I went into one of the sitting-rooms and waited until they came down, still speculating and argumentative, all a little disappointed at finding no 'horrors,' and all a little puzzled how they stood with regard to me. Then I slipped up again with a box of matches, fired my heap of paper and rubbish, put the chairs and bedding thereby, led the gas to the affair, by means of an india-rubber tube, and waving a farewell to the room left it for the last time."

"You fired the house!" exclaimed Kemp.

"Fired the house. It was the only way to cover my trail—and no doubt it was insured. I slipped the bolts of the front door quietly and went out into the street. I was invisible, and I was only just beginning to realise the extraordinary advantage my invisibility gave me. My head was already teeming with plans of all the wild and wonderful things I had now impunity to do."

Chapter 21

In Oxford Street

"In going downstairs the first time I found an unexpected difficulty because I could not see my feet; indeed I stumbled twice, and there was an unaccustomed clumsiness in gripping the bolt. By not looking down, however, I managed to walk on the level passably well.

"My mood, I say, was one of exaltation. I felt as a seeing man might do, with padded feet and noiseless clothes, in a city of the blind. I experienced a wild impulse to jest, to startle people, to clap men on the back, fling people's hats astray, and generally revel in my extraordinary advantage.

"But hardly had I emerged upon Great Portland Street, however (my lodging was close to the big draper's shop there), when I heard a clashing concussion and was hit violently behind, and turning saw a man carrying a basket of soda-water syphons, and looking in amazement at his burden. Although the blow had really hurt me, I found something so irresistible in his astonishment that I laughed aloud. 'The devil's in the basket,' I said, and suddenly twisted it out of his hand. He let go incontinently, and I swung the whole weight into the air.

"But a fool of a cabman, standing outside a public house, made a sudden rush for this, and his extending fingers took me with excruciating violence under the ear. I let the whole down with a smash on the cabman, and then, with shouts and the clatter of feet about me, people coming out of shops, vehicles pulling up, I realised what I had done for myself, and cursing my folly, backed against a

shop window and prepared to dodge out of the confusion. In a moment I should be wedged into a crowd and inevitably discovered. I pushed by a butcher boy, who luckily did not turn to see the nothingness that shoved him aside, and dodged behind the cabman's four wheeler. I do not know how they settled the business. I hurried straight across the road, which was happily clear, and hardly heeding which way I went, in the fright of detection the incident had given, plunged into the afternoon throng of Oxford Street.

"I tried to get into the stream of people, but they were too thick for me, and in a moment my heels were being trodden upon. I took to the gutter, the roughness of which I found painful to my feet, and forthwith the shaft of a crawling hansom dug me forcibly under the shoulder blade, reminding me that I was already bruised severely. I staggered out of the way of the cab, avoided a perambulator by a convulsive movement, and found myself behind the hansom. A happy thought saved me, and as this drove slowly along I followed in its immediate wake, trembling and astonished at the turn of my adventure. And not only trembling, but shivering. It was a bright day in January and I was stark naked and the thin slime of mud that covered the road was freezing. Foolish as it seems to me now, I had not reckoned that, transparent or not, I was still amenable to the weather and all its consequences.

"Then suddenly a bright idea came into my head. I ran round and got into the cab. And so, shivering, scared, and sniffing with the first intimations of a cold, and with the bruises in the small of my back growing upon my attention. I drove slowly along Oxford Street and past Tottenham Court Road. My mood was as different from that in which I had sallied forth ten minutes ago as it is possible to imagine. This invisibility indeed! The one thought that possessed me was—how was I to get out of the scrape I was in.

"We crawled past Mudie's, and there a tall woman with five or six yellow-labelled books hailed my cab, and I sprang out just in time to escape her, shaving a railway van narrowly in my flight. I made off up

the roadway to Bloomsbury Square, intending to strike north past the Museum and so get into the quiet district. I was not cruelly chilled, and the strangeness of my situation so unnerved me that I whimpered as I ran. At the northward corner of the Square a little white dog ran out of the Pharmaceutical Society's offices, and incontinently made for me, nose down.

"I had never realised it before, but the nose is to the mind of a dog what the eye is to the mind of a seeing man. Dogs perceive the scent of a man moving as men perceive his vision. This brute began barking and leaping, showing, as it seemed to me, only too plainly that he was aware of me. I crossed Great Russell Street, glancing over my shoulder as I did so, and went some way along Montague Street before I realised what I was running towards.

"Then I became aware of a blare of music, and looking along the street saw a number of people advancing out of Russell Square, red shirts, and the banner of the Salvation Army to the fore. Such a crowd, chanting in the roadway and scoffing on the pavement, I could not hope to penetrate, and dreading to go back and farther from home again, and deciding on the spur of the moment, I ran up the white steps of a house facing the Museum railings, and stood there until the crowd should have passed. Happily the dog stopped at the noise of the band too, hesitated, and turned tail, running back to Bloomsbury Square again.

"On came the band, bawling with unconscious irony some hymn about 'When shall we see His face?' and it seemed an interminable time to me before the tide of the crowd washed along the pavement by me. Thud, thud, thud, came the drum with a vibrating resonance, and for the moment I did not notice two urchins stopping at the railings by me. 'See 'era,' said one. 'See what?' said the other. 'Why—them footmarks—bare. Like what you makes in mud.'

"I looked down and saw the youngsters had stopped and were gaping at the muddy footmarks I had left behind me up the newly whitened steps. The passing people elbowed and jostled them, but

their confounded intelligence was arrested. 'Thud, thud, thud, when, thud, shall we see, thud, his face, thud, thud.' 'There's a barefoot man gone up them steps, or I don't know nothing,' said one. 'And he ain't never come down again. And his foot was ableeding.'

"The thick of the crowd had already passed. 'Looky there, Ted,' quoth the younger of the detectives, with the sharpness of surprise in his voice, and pointed straight to my feet. I looked down and saw at once the dim suggestion of their outline sketched in splashes of mud. For a moment I was paralysed.

"'Why, that's rum,' said the elder. 'Dashed rum! It's just like the ghost of a foot, ain't it?' He hesitated and advanced with outstretched hand. A man pulled up short to see what he was catching, and then a girl. In another moment he would have touched me. Then I saw what to do. I made a step, the boy started back with an exclamation, and with a rapid movement I swung myself over into the portico of the next house. But the smaller boy was sharp-eyed enough to follow the movement and before I was well down the steps and upon the pavement, he had recovered from his momentary astonishment and was shouting out that the feet had gone over the wall.

"They rushed round and saw my new footmarks flash into being on the lower step and upon the pavement. 'What's up?' asked someone. 'Feet! Look! Feet running!'

"Everybody in the road, except my three pursuers, was pouring along after the Salvation Army, and this not only impeded me but them. There was an eddy of surprise and interrogation. At the cost of bowling over one young fellow I got through, and in another moment I was rushing headlong round the circuit of Russell Square, with six or seven astonished people following my footmarks. There was no time for explanation, or else the whole host would have been after me.

"Twice I doubled round corners, thrice I crossed the road and came back upon my tracks, and then, as my feet grew hot and dry, the damp impressions began to fade. At last I had a breathing space and rubbed my feet clean with my hands, and so got away altogether. The

last I saw of the chase was a little group of a dozen people perhaps, studying with infinite perplexity a slowly drying footprint that had resulted from a puddle in Travistock Square—a footprint as isolated and incomprehensible to them as Crusoe's solitary discovery.

"This running warmed me to a certain extent, and I went on with a better courage through the maze of less frequented roads that runs hereabouts. My back had now become very stiff and sore, my tonsils were painful from the cabman's fingers, and the skin of my neck had been scratched by his nails; my feet hurt exceedingly and I was lame from a little cut on one foot. I saw in time a blind man approaching me, and fled limping, for I feared his subtle intuitions. Once or twice accidental collisions occurred and I left people amazed, with unaccountable curses ringing in their ears. Then came something silent and quiet against my face, and across the Square fell a thin veil of slowly falling flakes of snow. I had caught a cold, and do as I would I could not avoid an occasional sneeze. And every dog that came in sight, with its pointing nose and curious sniffing, was a terror to me.

"Then came men and boys running, first one and then others, and shouting as they ran. It was a fire. They ran in the direction of my lodging, and looking back down a street I saw a mass of black smoke streaming up above the roofs and telephone wires. It was my lodging burning; my clothes, my apparatus, all my resources indeed, except my chequebook and the three volumes of memoranda that awaited me in Great Portland Street, were there. Burning! I had burnt my boats—if ever a man did! The place was blazing."

The Invisible Man paused and thought. Kemp glanced nervously out of the window. "Yes?" he said. "Go on."

Chapter 22

In the Emporium

"So last January, with the beginning of a snowstorm in the air about me—and if it settled on me it would betray me!—weary, cold, painful, inexpressibly wretched, and still but half convinced of my invisible quality, I began this new life to which I am committed. I had no refuge, no appliances, no human being in the world in whom I could confide. To have told my secret would have given me away—made a mere show and rarity of me. Nevertheless, I was half-minded to accost some passer-by and throw myself upon his mercy. But I knew too clearly the terror and brutal cruelty my advances would evoke. I made no plans in the street. My sole object was to get shelter from the snow, to get myself covered and warm; then I might hope to plan. But even to me, an Invisible Man, the rows of London houses stood latched, barred, and bolted impregably.

"Only one thing could I see clearly before me, the cold exposure and misery of the snowstorm and the night.

"And then I had a brilliant idea. I turned down one of the roads leading from Gower Street to Tottenham Court Road, and found myself outside Omniums, the big establishment where everything is to be bought—you know the place—meat, grocery, linen, furniture, clothing, oil paintings even—a huge meandering collection of shops rather than a shop. I had thought I should find the doors open, but they were closed, and as I stood in the wide entrance a carriage stopped outside, and a man in uniform—you know the kind of personage with 'Omnium' on his cap—flung open the door. I contrived to enter, and walking down the shop—it was a department where they

were selling ribbons and gloves and stockings and that kind of thing—came to a more spacious region devoted to picnic baskets and wicker furniture.

"I did not feel safe there, however; people were going to and fro, and I prowled restlessly about until I came upon a huge section in an upper floor containing scores and hundreds of bedsteads, and beyond these, and found a restingplace at last among a huge pile of folded flock mattresses. The place was already lit up and agreeably warm, and I decided to remain where I was, keeping a cautious eye on the two or three sets of shopmen and customers who were meandering through the place, until closing time came. Then I should be able, I thought, to rob the place for food and clothing, and disguised, prowl through it and examine its resources, perhaps sleep on some of the bedding. That seemed an acceptable plan. My idea was to procure clothing to make myself a muffled but acceptable figure, to get money, and then to recover my books and parcels where they awaited me, take a lodging somewhere and elaborate plans for the complete realisation of the advantages my invisibility gave me (as I still imagined) over my fellowmen.

"Closing time arrived quickly enough; it could not have been more than an hour after I took up my position on the mattresses before I noticed the blinds of the windows being drawn, and customers being marched doorward. And then a number of brisk young men began with remarkable alacrity to tidy up the goods that remained disturbed. I left my lair as the crowds diminished, and prowled cautiously out into the less desolate parts of the shop. I was really surprised to observe how rapidly the young men and women whipped away the goods displayed for sale during the day. All the boxes of goods, the hanging fabrics, the festoons of lace, the boxes of sweets in the grocery section, the displays of this and that, were being whipped down, folded up, slapped into tidy receptacles, and everything that could not be taken down and put away had sheets of some coarse stuff like sacking flung over it. Finally all the chairs were

turned up on to the counters, leaving the floor clear. Directly each of these young people had done, he or she made promptly for the door with such an expression of animation as I have rarely observed in a shop assistant before. Then came a lot of youngsters scattering sawdust and carrying pails and brooms. I had to dodge to get out of the way, and as it was, my ankle got stung with the sawdust. For some time, wandering through the swathed and darkened departments, I could hear the brooms at work. And at last a good hour or more after the shop had been closed, came a noise of locking doors. Silence came upon the place, and I found myself wandering through the vast and intricate shops, galleries, and showrooms of the place, alone. It was very still; in one place I remember passing near one of the Tottenham Court Road entrances and listening to the tapping of bootheels of the passers-by.

"My first visit was to the place where I had seen stockings and gloves for sale. It was dark, and I had the devil of a hunt after matches, which I found at last in the drawer of the little cash desk. Then I had to get a candle. I had to tear down wrappings and ransack a number of boxes and drawers, but at last I managed to turn out what I sought; the box label called them lambswool pants, and lambswool vests. Then socks, a thick comforter, and then I went to the clothing place and got trousers, a lounge jacket, an overcoat and a slouch hat—a clerical sort of hat with the brim turned down. I began to feel a human being again, and my next thought was food.

"Upstairs was a refreshment department, and there I got cold meat. There was coffee still in the urn, and I lit the gas and warmed it up again, and altogether I did not do badly. Afterwards, prowling through the place in search of blankets—I had to put up at last with a heap of down quilts—I came upon a grocery section with a lot of chocolate and candied fruits, more than was good for me indeed—and some white burgundy. And near that was a toy department, and I had a brilliant idea. I found some artificial noses—dummy noses, you know, and I thought of dark spectacles. But Omniums had no optical

department. My nose had been a difficulty indeed—I had thought of paint. But the discovery set my mind running on wigs and masks and the like. Finally I went to sleep in a heap of down quilts, very warm and comfortable.

"My last thoughts before sleeping were the most agreeable I had had since the change. I was in a state of physical serenity, and that was reflected in my mind. I thought that I should be able to slip out unobserved in the morning with my clothes upon me, muffling my face with a white wrapper I had taken, purchase, with the money I had taken, spectacles and so forth, and so complete my disguise. I lapsed into disorderly dreams of all the fantastic things that had happened during the last few days. I saw the ugly little Jew of a landlord vociferating in his rooms; I saw his two sons marvelling, and the wrinkled old woman's gnarled face as she asked for her cat. I experienced again the strange sensation of seeing the cloth disappear, and so I came round to the windy hillside and the sniffing old clergyman mumbling 'Dust to dust, earth to earth,' and my father's open grave.

"You also,' said a voice, and suddenly I was being forced towards the grave. I struggled, shouted, appealed to the mourners, but they continued stonily following the service; the old clergyman, too, never faltered droning and sniffing through the ritual. I realised I was invisible and inaudible, that overwhelming forces had their grip on me. I struggled in vain, I was forced over the brink, the coffin rang hollow as I fell upon it, and the gravel came flying after me in spadefuls. Nobody heeded me, nobody was aware of me. I made convulsive struggles and awoke.

"The pale London dawn had come, the place was full of a chilly grey light that filtered round the edges of the window blinds. I sat up, and for a time I could not think where this ample apartment, with its counters, its piles of rolled stuff, its heaps of quilts and cushions, its iron pillars, might be. Then, as recollection came back to me, I heard voices in conversation.

"Then far down the place, in the brighter light of some department which had already raised its blinds, I saw two men approaching. I scrambled to my feet, looking about me for some way of escape, and even as I did so the sound of my movement made them aware of me. I suppose they saw merely a figure moving quietly and quickly away. 'Who's that?' cried one, and 'Stop there,' shouted the other. I dashed around a corner and came full tilt—a faceless figure, mind you!—on a lanky lad of fifteen. He yelled and I bowled him over, rushed past him, turned another corner, and by a happy inspiration threw myself flat behind a counter. In another moment feet went running past and I heard voices shouting, 'All hands to the doors!' asking what was 'up,' and giving one another advice how to catch me.

"Lying on the ground, I felt scared out of my wits. But—odd as it may seem—it did not occur to me at the moment to take off my clothes as I should have done. I had made up my mind, I suppose, to get away in them, and that ruled me. And then down the vista of the counters came a bawling of 'Here he is!'

"I sprang to my feet, whipped a chair off the counter, and sent it whirling at the fool who had shouted, turned, came into another round a corner, sent him spinning, and rushed up the stairs. He kept his footing, gave a view hallo, and came up the staircase hot after me. Up the staircase were piled a multitude of those bright-coloured pot things—what are they?"

"Art pots," suggested Kemp.

"That's it! Art pots. Well, I turned at the top step and swung round, plucked one out of a pile and smashed it on his silly head as he came at me. The whole pile of pots went headlong, and I heard shouting and footsteps running from all parts. I made a mad rush for the refreshment place, and there was a man in white like a man cook, who took up the chase. I made one last desperate turn and found myself among lamps and ironmongery. I went behind the counter of this, and waited for my cook, and as he bolted in at the head of the

chase, I doubled him up with a lamp. Down he went, and I crouched behind the counter and began whipping off my clothes as fast as I could. Coat, jacket, trousers, shoes were all right, but a lambswool vest fits a man like a skin. I heard more men coming, my cook was lying quiet on the other side of the counter, stunned or scared speechless, and I had to make another dash for it, like a rabbit hunted out of a wood-pile.

"This way, policeman!" I heard someone shouting. I found myself in my bedstead storeroom again, and at the end of a wilderness of wardrobes. I rushed among them, went flat, got rid of my vest after infinite wriggling, and stood a free man again, panting and scared, as the policeman and three of the shopmen came round the corner. They made a rush for the vest and pants, and collared the trousers. 'He's dropping his plunder,' said one of the young men. 'He must be somewhere here.'

"But they did not find me all the same.

"I stood watching them hunt for me for a time, and cursing my ill-luck in losing the clothes. Then I went into the refreshment-room, drank a little milk I found there, and sat down by the fire to consider my position.

"In a little while two assistants came and began to talk over the business very excitedly and like the fools they were. I heard a magnified account of my depredations, and other speculations as to my whereabouts. Then I fell to scheming again. The insurmountable difficulty of the place, especially now it was alarmed, was to get any plunder out of it. I went down into the warehouse to see if there was any chance of packing and addressing a parcel, but I could not understand the system of checking. About eleven o'clock, the snow having thawed as it fell, and the day being finer and a little warmer than the previous one, I decided that the Emporium was hopeless, and went out again, exasperated at my want of success, with only the vaguest plans of action in my mind."

Chapter 23

In Drury Lane

"But you begin to realise now," said the Invisible Man, "the full disadvantage of my condition. I had no shelter, no covering. To get clothing was to forego all my advantage, to make of myself a strange and terrible thing. I was fasting; for to eat, to fill myself with unassimilated matter, would be to become grotesquely visible again."

"I never thought of that," said Kemp.

"Nor had I. And the snow had warned me of other dangers. I could not go abroad in snow—it would settle on me and expose me. Rain, too, would make me a watery outline, a glistening surface of a man—a bubble. And fog—I should be like a fainter bubble in a fog, a surface, a greasy glimmer of humanity. Moreover, as I went abroad—in the London air—I gathered dirt about my ankles, floating smuts and dust upon my skin. I did not know how long it would be before I should become visible from that cause also. But I saw clearly it could not be for long.

"Not in London at any rate.

"I went into the slums towards Great Portland Street, and found myself at the end of the street in which I had lodged. I did not go that way, because of the crowd halfway down it opposite to the still smoking ruins of the house I had fired. My most immediate problem was to get clothing. What to do with my face puzzled me. Then I saw in one of those little miscellaneous shops—news, sweets, toys, stationery, belated Christmas tomfoolery, and so forth—an array of masks and noses. I realised that problem was solved. In a flash I saw my course. I turned about, no longer aimless, and went—circuitously

in order to avoid the busy ways, towards the back streets north of the Strand; for I remembered, though not very distinctly where, that some theatrical costumiers had shops in that district.

"The day was cold, with a nipping wind down the northward running streets. I walked fast to avoid being overtaken. Every crossing was a danger, every passenger a thing to watch alertly. One man as I was about to pass him at the top of Bedford Street, turned upon me abruptly and came into me, sending me into the road and almost under the wheel of a passing hansom. The verdict of the cab-rank was that he had had some sort of stroke. I was so unnerved by this encounter that I went into Covent Garden Market and sat down for some time in a quiet corner by a stall of violets, panting and trembling. I found I had caught a fresh cold, and had to turn out after a time lest my sneezes should attract attention.

"At last I reached the object of my quest, a dirty fly-blown little shop in a byway near Drury Lane, with a window full of tinsel robes, sham jewels, wigs, slippers, dominoes and theatrical photographs. The shop was old-fashioned and low and dark, and the house rose above it for four storeys, dark and dismal. I peered through the window and, seeing no one within, entered. The opening of the door set a clanking bell ringing. I left it open, and walked round a bare costume stand, into a corner behind a cheval glass. For a minute or so no one came. Then I heard heavy feet striding across a room, and a man appeared down the shop.

"My plans were now perfectly definite. I proposed to make my way into the house, secrete myself upstairs, watch my opportunity, and when everything was quiet, rummage out a wig, mask, spectacles, and costume, and go into the world, perhaps a grotesque but still a credible figure. And incidentally of course I could rob the house of any available money.

"The man who had entered the shop was a short, slight, hunched, beetle-browed man, with long arms and very short bandy legs. Apparently I had interrupted a meal. He stared about the shop with an

expression of expectation. This gave way to surprise, and then anger, as he saw the shop empty. 'Damn the boys!' he said. He went to stare up and down the street. He came in again in a minute, kicked the door to with his foot spitefully, and went muttering back to the house door.

"I came forward to follow him, and at the noise of my movement he stopped dead. I did so too, startled by his quickness of ear. He slammed the house door in my face.

"I stood hesitating. Suddenly I heard his quick footsteps returning, and the door reopened. He stood looking about the shop like one who was still not satisfied. Then, murmuring to himself, he examined the back of the counter and peered behind some fixtures. Then he stood doubtful. He had left the house door open and I slipped into the inner room.

"It was a queer little room, poorly furnished and with a number of big masks in the corner. On the table was his belated breakfast, and it was a confoundedly exasperating thing for me, Kemp, to have to sniff his coffee and stand watching while he came in and resumed his meal. And his table manners were irritating. Three doors opened into the little room, one going upstairs and one down, but they were all shut. I could not get out of the room while he was there; I could scarcely move because of his alertness, and there was a draught down my back. Twice I strangled a sneeze just in time.

"The spectacular quality of my sensations was curious and novel, but for all that I was heartily tired and angry long before he had done his eating. But at last he made an end and putting his beggarly crockery on the black tin tray upon which he had had his teapot, and gathering all the crumbs up on the mustard-stained cloth, he took the whole lot of things after him. His burden prevented his shutting the door behind him—as he would have done; I never saw such a man for shutting doors—and I followed him into a very dirty underground kitchen and scullery. I had the pleasure of seeing him begin to wash up, and then, finding no good in keeping down there, and the brick floor being cold on my feet, I returned upstairs and sat in his chair by

the fire. It was burning low, and scarcely thinking, I put on a little coal. The noise of this brought him up at once, and he stood aglare. He peered about the room and was within an ace of touching me. Even after that examination, he scarcely seemed satisfied. He stopped in the doorway and took a final inspection before he went down.

"I waited in the little parlour for an age, and at last he came up and opened the upstairs door. I just managed to get by him.

"On the staircase he stopped suddenly, so that I very nearly blundered into him. He stood looking back right into my face and listening. 'I could have sworn,' he said. His long hairy hand pulled at his lower lip. His eye went up and down the staircase. Then he grunted and went on up again.

"His hand was on the handle of a door, and then he stopped again with the same puzzled anger on his face. He was becoming aware of the faint sounds of my movements about him. The man must have had diabolically acute hearing. He suddenly flashed into rage. 'If there's anyone in this house,' he cried with an oath, and left the threat unfinished. He put his hand in his pocket, failed to find what he wanted, and rushing past me went blundering noisily and pugnaciously downstairs. But I did not follow him. I sat on the head of the staircase until his return.

"Presently he came up again, still muttering. He opened the door of the room, and before I could enter, slammed it in my face.

"I resolved to explore the house, and spent some time in doing so as noiselessly as possible. The house was very old and tumbledown, damp so that the paper in the attics was peeling from the walls, and rat-infested. Some of the door handles were stiff and I was afraid to turn them. Several rooms I did inspect were unfurnished, and others were littered with theatrical lumber, bought second-hand, I judged, from its appearance. In one room next to his I found a lot of old clothes. I began routing among these, and in my eagerness forgot again the evident sharpness of his ears. I heard a stealthy footstep and, looking up just in time, saw him peering in at the tumbled heap and

holding an old-fashioned revolver in his hand. I stood perfectly still while he stared about open-mouthed and suspicious. 'It must have been her,' he said slowly. 'Damn her!'

"He shut the door quietly, and immediately I heard the key turn in the lock. Then his footsteps retreated. I realised abruptly that I was locked in. For a minute I did not know what to do. I walked from door to window and back, and stood perplexed. A gust of anger came upon me. But I decided to inspect the clothes before I did anything further, and my first attempt brought down a pile from an upper shelf. This brought him back, more sinister than ever. That time he actually touched me, jumped back with amazement and stood astonished in the middle of the room.

"Presently he calmed a little. 'Rats,' he said in an undertone, fingers on lips. He was evidently a little scared. I edged quietly out of the room, but a plank creaked. Then the infernal little brute started going all over the house, revolver in hand and locking door after door and pocketing the keys. When I realised what he was up to I had a fit of rage—I could hardly control myself sufficiently to watch my opportunity. By this time I knew he was alone in the house, and so I made no more ado, but knocked him on the head."

"Knocked him on the head?" exclaimed Kemp.

"Yes—stunned him—as he was going downstairs. Hit him from behind with a stool that stood on the landing. He went downstairs like a bag of old boots."

"But—! I say! The common conventions of humanity—"

"Are all very well for common people. But the point was, Kemp, that I had to get out of that house in a disguise without his seeing me. I couldn't think of any other way of doing it. And then I gagged him with a Louis Quatorze vest and tied him up in a sheet."

"Tied him up in a sheet!"

"Made a sort of bag of it. It was rather a good idea to keep the idiot scared and quiet, and a devilish hard thing to get out of—head away from the string. My dear Kemp, it's no good your sitting glaring

as though I was a murderer. It had to be done. He had his revolver. If once he saw me he would be able to describe me—"

"But still," said Kemp, "in England—today. And the man was in his own house, and you were—well, robbing."

"Robbing! Confound it! You'll call me a thief next! Surely, Kemp, you're not fool enough to dance on the old strings. Can't you see my position?"

"And his too," said Kemp.

The Invisible Man stood up sharply. "What do you mean to say?"

Kemp's face grew a trifle hard. He was about to speak and checked himself. "I suppose, after all," he said with a sudden change of manner, "the thing had to be done. You were in a fix. But still—"

"Of course I was in a fix—an infernal fix. And he made me wild too—hunting me about the house, fooling about with his revolver, locking and unlocking doors. He was simply exasperating. You don't blame me, do you? You don't blame me?"

"I never blame anyone," said Kemp. "It's quite out of fashion. What did you do next?"

"I was hungry. Downstairs I found a loaf and some rank cheese—more than sufficient to satisfy my hunger. I took some brandy and water, and then went up past my impromptu bag—he was lying quite still—to the room containing the old clothes. This looked out upon the street, two lace curtains brown with dirt guarding the window. I went and peered out through their interstices. Outside the day was bright—by contrast with the brown shadows of the dismal house in which I found myself, dazzlingly bright. A brisk traffic was going by, fruit carts, a hansom, a four-wheeler with a pile of boxes, a fishmonger's cart. I turned with spots of colour swimming before my eyes to the shadowy fixtures behind me. My excitement was giving place to a clear apprehension of my position again. The room was full of a faint scent of benzoline, used, I suppose, in cleaning the garments.

"I began a systematic search of the place. I should judge the hunchback had been alone in the house for some time. He was a

curious person. Everything that could possibly be of service to me I collected in the clothes storeroom, and then I made a deliberate selection. I found a handbag I thought a suitable possession, and some powder, rouge, and sticking-plaster.

"I had thought of painting and powdering my face and all that there was to show of me, in order to render myself visible, but the disadvantage of this lay in the fact that I should require turpentine and other appliances and a considerable amount of time before I could vanish again. Finally I chose a mask of the better type, slightly grotesque but not more so than many human beings, dark glasses, greyish whiskers, and a wig. I could find no underclothing, but that I could buy subsequently, and for the time I swathed myself in calico dominoes and some white cashmere scarfs. I could find no socks, but the hunchback's boots were rather a loose fit and sufficed. In a desk in the shop were three sovereigns and about thirty shillings' worth of silver, and in a locked cupboard I burst in the inner room were eight pounds in gold. I could go forth into the world again, equipped.

"Then came a curious hesitation. Was my appearance really—credible? I tried myself with a little bedroom looking-glass, inspecting myself from every point of view to discover any forgotten chink, but it all seemed sound. I was grotesque to the theatrical pitch, a stage miser, but I was certainly not a physical impossibility. Gathering confidence, I took my looking-glass down into the shop, pulled down the shop blinds, and surveyed myself from every point of view with the help of the cheval glass in the corner.

"I spent some minutes screwing up my courage and then unlocked the shop door and marched out into the street, leaving the little man to get out of his sheet again when he liked. In five minutes a dozen turnings intervened between me and the costumier's shop. No one appeared to notice me very pointedly. My last difficulty seemed overcome."

He stopped again.

"And you troubled no more about the hunchback?" said Kemp.

"No," said the Invisible Man. "Nor have I heard what became of him. I suppose he untied himself or kicked himself out. The knots were pretty tight."

He became silent, and went to the window and stared out. "What happened when you went out into the Strand?"

"Oh!—disillusionment again. I thought my troubles were over. Practically I thought I had impunity to do whatever I chose, everything—save to give away my secret. So I thought. Whatever I did, whatever the consequences might be, was nothing to me. I had merely to fling aside my garments and vanish. No person could hold me. I could take my money where I found it. I decided to treat myself to a sumptuous feast, and then put up at a good hotel, and accumulate a new outfit of property. I felt amazingly confident—it's not particularly pleasant recalling that I was an ass. I went into a place and was already ordering a lunch, when it occurred to me that I could not eat unless I exposed my invisible face. I finished ordering the lunch, told the man I should be back in ten minutes, and went out exasperated. I don't know if you have ever been disappointed in your appetite."

"Not quite so badly," said Kemp, "but I can imagine it."

"I could have smashed the silly devils. At last, faint with the desire for tasteful food, I went into another place and demanded a private room. 'I am disfigured,' I said. 'Badly.' They looked at me curiously, but of course it was not their affair—and so at last I got my lunch. It was not particularly well served, but it sufficed; and when I had had it, I sat over a cigar, trying to plan my line of action. And outside a snowstorm was beginning.

"The more I thought it over, Kemp, the more I realised what a helpless absurdity an Invisible Man was—in a cold and dirty climate and a crowded civilised city. Before I made this mad experiment I had dreamt of a thousand advantages. That afternoon it seemed all disappointment. I went over the heads of the things a man reckons desirable. No doubt invisibility made it possible to get them, but it

made it impossible to enjoy them when they are got. Ambition—what is the good of pride of place when you cannot appear there? What is the good of the love of woman when her name must needs be Delilah? I have no taste for politics, for the blackguardisms of fame, for philanthropy, for sport. What was I to do? And for this I had become a wrapped-up mystery, a swathed and bandaged caricature of a man!"

He paused, and his attitude suggested a roving glance at the window.

"But how did you get to Iping?" said Kemp, anxious to keep his guest busy talking.

"I went there to work. I had one hope. It was a half idea! I have it still. It is a full blown idea now. A way of getting back! Of restoring what I have done. When I choose. When I have done all I mean to do invisibly. And that is what I chiefly want to talk to you about now."

"You went straight to Iping?"

"Yes. I had simply to get my three volumes of memoranda and my cheque-book, my luggage and underclothing, order a quantity of chemicals to work out this idea of mine—I will show you the calculations as soon as I get my books—and then I started. Jove! I remember the snowstorm now, and the accursed bother it was to keep the snow from damping my pasteboard nose."

"At the end," said Kemp, "the day before yesterday, when they found you out, you rather—to judge by the papers—"

"I did. Rather. Did I kill that fool of a constable?"

"No," said Kemp. "He's expected to recover."

"That's his luck, then. I clean lost my temper, the fools! Why couldn't they leave me alone? And that grocer lout?"

"There are no deaths expected," said Kemp.

"I don't know about that tramp of mine," said the Invisible Man, with an unpleasant laugh.

"By Heaven, Kemp, you don't know what rage is! To have worked for years, to have planned and plotted, and then to get some fumbling purblind idiot messing across your course! Every conceivable sort of

silly creature that has ever been created has been sent to cross me.

"If I have much more of it, I shall go wild—I shall start mowing 'em.

"As it is, they've made things a thousand times more difficult."

"No doubt it's exasperating," said Kemp, drily.

Chapter 24

The Plan That Failed

"But now," said Kemp, with a side glance out of the window, "what are we to do?"

He moved nearer his guest as he spoke in such a manner as to prevent the possibility of a glimpse of the three men who were advancing up the hill road—with an intolerable slowness, as it seemed to Kemp.

"What were you planning to do when you were heading for Port Burdock? Had you any plan?"

"I was going to clear out of the country. But I have altered that plan rather since seeing you. I thought it would be wise, now the weather is hot and invisibility possible, to make for the South. Especially as my secret was known, and everyone would be on the lookout for a masked and muffled man. You have a line of steamers from here to France. My idea was to get aboard one and run the risks of the passage. Thence I could go by train into Spain, or else get to Algiers. It would not be difficult. There a man might always be invisible—and yet live. And do things. I was using that tramp as a money box and luggage carrier, until I decided how to get my books and things sent over to meet me."

"That's clear."

"And then the filthy brute must needs try and rob me! He has hidden my books, Kemp. Hidden my books! If I can lay my hands on him!"

"Best plan to get the books out of him first."

"But where is he? Do you know?"

"He's in the town police station, locked up, by his own request, in the strongest cell in the place."

"Cur!" said the Invisible Man.

"But that hangs up your plans a little."

"We must get those books; those books are vital."

"Certainly," said Kemp, a little nervously, wondering if he heard footsteps outside. "Certainly we must get those books. But that won't be difficult, if he doesn't know they're for you."

"No," said the Invisible Man, and thought.

Kemp tried to think of something to keep the talk going, but the Invisible Man resumed of his own accord.

"Blundering into your house, Kemp," he said, "changes all my plans. For you are a man that can understand. In spite of all that has happened, in spite of this publicity, of the loss of my books, of what I have suffered, there still remain great possibilities, huge possibilities —"

"You have told no one I am here?" he asked abruptly.

Kemp hesitated. "That was implied," he said.

"No one?" insisted Griffin.

"Not a soul."

"Ah! Now—" The Invisible Man stood up, and sticking his arms akimbo began to pace the study.

"I made a mistake, Kemp, a huge mistake, in carrying this thing through alone. I have wasted strength, time, opportunities. Alone—it is wonderful how little a man can do alone! To rob a little, to hurt a little, and there is the end.

"What I want, Kemp, is a goalkeeper, a helper, and a hiding place, an arrangement whereby I can sleep and eat and rest in peace, and unsuspected. I must have a confederate. With a confederate, with food and rest—a thousand things are possible.

"Hitherto I have gone on vague lines. We have to consider all that invisibility means, all that it does not mean. It means little advantage for eavesdropping and so forth—one makes sounds. It's of little help, a

little help perhaps—in housebreaking and so forth. Once you've caught me you could easily imprison me. But on the other hand I am hard to catch. This invisibility, in fact, is only good in two cases: It's useful in getting away, it's useful in approaching. It's particularly useful, therefore, in killing. I can walk round a man, whatever weapon he has, choose my point, strike as I like. Dodge as I like. Escape as I like."

Kemp's hand went to his moustache. Was that a movement downstairs?

"And it is killing we must do, Kemp."

"It is killing we must do," repeated Kemp. "I'm listening to your plan, Griffin, but I'm not agreeing, mind. Why killing?"

"Not wanton killing, but a judicious slaying. The point is, they know there is an Invisible Man—as well as we know there is an Invisible Man. And that Invisible Man, Kemp, must now establish a Reign of Terror. Yes—no doubt it's startling. But I mean it. A Reign of Terror. He must take some town like your Burdock and terrify and dominate it. He must issue his orders. He can do that in a thousand ways—scraps of paper thrust under doors would suffice. And all who disobey his orders he must kill, and kill all who would defend the disobedient."

"Humph!" said Kemp, no longer listening to Griffin but to the sound of his front door opening and closing.

"It seems to me, Griffin," he said, to cover his wandering attention, "that your confederate would be in a difficult position."

"No one would know he was a confederate," said the Invisible Man, eagerly. And then suddenly, "Hush! What's that downstairs?"

"Nothing," said Kemp, and suddenly began to speak loud and fast. "I don't agree to this, Griffin," he said. "Understand me, I don't agree to this. Why dream of playing a game against the race? How can you hope to gain happiness? Don't be a lone wolf. Publish your results; take the world—take the nation at least—into your confidence. Think what you might do with a million helpers—"

The Invisible Man interrupted Kemp—arms extended. "There are footsteps coming upstairs," he said in a low voice.

"Nonsense," said Kemp.

"Let me see," said the Invisible Man, and advanced, arm extended, to the door.

Kemp hesitated for a second and then moved to intercept him. The Invisible Man started and stood still. "Traitor!" cried the Voice, and suddenly the dressing-gown opened, and sitting down the Unseen began to disrobe. Kemp made three swift steps to the door, and forthwith the Invisible Man—his legs had vanished—sprang to his feet with a shout. Kemp flung the door open.

As it opened, there came a sound of hurrying feet downstairs and voices.

With a quick movement Kemp thrust the Invisible Man back, sprang aside, and slammed the door. The key was outside and ready. In another moment Griffin would have been alone in the belvedere study, a prisoner. Save for one little thing. The key had been slipped in hastily that morning. As Kemp slammed the door it fell noisily upon the carpet.

Kemp's face became white. He tried to grip the door handle with both hands. For a moment he stood lugging. Then the door gave six inches. But he got it closed again. The second time it was jerked a foot wide, and the dressing-gown came wedging itself into the opening. His throat was gripped by invisible fingers, and he left his hold on the handle to defend himself. He was forced back, tripped and pitched heavily into the corner of the landing. The empty dressing-gown was flung on the top of him.

Halfway up the staircase was Colonel Adye, the recipient of Kemp's letter, the chief of the Burdock police. He was staring aghast at the sudden appearance of Kemp, followed by the extraordinary sight of clothing tossing empty in the air. He saw Kemp fell, and struggling to his feet. He saw him rush forward, and go down again, fell like an ox.

Then suddenly he was struck violently. By nothing! A vast weight, it seemed, leapt upon him, and he was hurled headlong down the staircase, with a grip on his throat and a knee in his groin. An invisible foot trod on his back, a ghostly patter passed downstairs, he heard the two police officers in the hall shout and run, and the front door of the house slammed violently.

He rolled over and sat up staring. He saw, staggering down the staircase, Kemp, dusty and disheveled, one side of his face white from a blow, his lip bleeding, holding a pink dressing-gown and some underclothing in his arms.

"My God!" cried Kemp, "the game's up! He's gone!"

Chapter 25

The Hunting of the Invisible Man

For a space Kemp was too inarticulate to make Adye understand the swift things that had just happened. The two men stood on the landing, Kemp speaking swiftly, the grotesque swathings of Griffin still on his arm. But presently Adye began to grasp something of the situation.

"He is mad," said Kemp; "inhuman. He is pure selfishness. He thinks of nothing but his own advantage, his own safety. I have listened to such a story this morning of brutal self-seeking! He has wounded men. He will kill them unless we can prevent him. He will create a panic. Nothing can stop him. He is going out now—furious!"

"He must be caught," said Adye. "That is certain."

"But how?" cried Kemp, and suddenly became full of ideas. "You must begin at once. You must set every available man to work. You must prevent his leaving this district. Once he gets away, he may go through the countryside as he wills, killing and maiming. He dreams of a reign of terror! A reign of terror, I tell you. You must set a watch on trains and roads and shipping. The garrison must help. You must wire for help. The only thing that may keep him here is the thought of recovering some books of notes he counts of value. I will tell you of that! There is a man in your police station—Marvel."

"I know," said Adye, "I know. Those books—yes."

And you must prevent him from eating or sleeping; day and night the country must be astir for him. Food must be locked up and secured, all food, so that he will have to break his way to it. The houses everywhere must be barred against him. Heaven send us cold

nights and rain! The whole countryside must begin hunting and keep hunting. I tell you, Adye, he is a danger, a disaster; unless he is pinned and secured, it is frightful to think of the things that may happen."

"What else can we do?" said Adye. "I must go down at once and begin organising. But why not come? Yes—you come too! Come, and we must hold a sort of council of war, —get Hopps to help—and the railway managers. By Jove! it's urgent. Come along—tell me as we go. What else is there we can do? Put that stuff down."

In another moment Adye was leading the way downstairs. They found the front door open and the policemen standing outside staring at empty air. "He's got away, sir," said one.

"We must go to the central station at once," said Adye. "One of you go on down and get a cab to come up and meet us—quickly. And now, Kemp, what else?"

"Dogs," said Kemp. "Get dogs. They don't see him, but they wind him. Get dogs."

"Good," said Adye. "It's not generally known, but the prison officials over at Halstead know a man with bloodhounds. Dogs. What else?"

"Bear in mind," said Kemp, "his food shows. After eating, his food shows until it is assimilated. So that he has to hide after eating. You must keep on beating. —every thicket, every quiet corner. And put all weapons, —all implements that might be weapons, away. He can't carry such things for long. And what he can snatch up and strike men with must be hidden away."

"Good again," said Adye. "We shall have him yet!"

"And on the roads," said Kemp, and hesitated.

"Yes?" said Adye.

"Powdered glass," said Kemp. "It's cruel, I know. But think of what he may do!"

Adye drew the air in between his teeth sharply. "It's unsportsmanlike. I don't know. But I'll have powdered glass got ready. If he goes too far—"

"The man's become inhuman, I tell you," said Kemp. "I am as sure he will establish a reign of terror—so soon as he has got over the emotions of this escape—as I am sure I am talking to you. Our only chance is to be ahead. He has cut himself off from his kind. His blood be upon his own head."

Chapter 26

The Wicksteed Murder

The Invisible Man seems to have rushed out of Kemp's house in a state of blind fury. A little child playing near Kemp's gateway was violently caught up and thrown aside, so that its ankle was broken, and thereafter for some hours the Invisible Man passed out of human perceptions. No one knows where he went nor what he did. But one can imagine him hurrying through the hot June forenoon, up the hill and on to the open downland behind Port Burdock, raging and despairing at his intolerable fate, and sheltering at last, heated and weary, amid the thickets of Hintondean, to piece together again his shattered schemes against his species. That seems to most probable refuge for him, for there it was he reasserted himself in a grimly tragical manner about two in the afternoon.

One wonders what his state of mind may have been during that time, and what plans he devised. No doubt he was almost ecstatically exasperated by Kemp's treachery, and though we may be able to understand the motives that led to that deceit, we may still imagine and even sympathise a little with the fury the attempted surprise must have occasioned. Perhaps something of the stunned astonishment of his Oxford Street experiences may have returned to him, for evidently he had counted on Kemp's cooperation in his brutal dream of a terrorised world. At any rate he vanished from human ken about midday, and no living witness can tell what he did until about half past two. It was a fortunate thing, perhaps, for humanity, but for him it was a fatal inaction.

During that time a growing multitude of men scattered over the

countryside were busy. In the morning he had still been simply a legend, a terror; in the afternoon, by virtue chiefly of Kemp's drily worded proclamation, he was presented as a tangible antagonist, to be wounded, captured, or overcome, and the countryside began organising itself with inconceivable rapidity. By two o'clock even he might still have removed himself out of the district by getting aboard a train, but after two that became impossible. Every passenger train along the lines on a great parallelogram between Southampton, Manchester, Brighton and Horsham, travelled with locked doors, and the goods traffic was almost entirely suspended. And in a great circle of twenty miles round Port Burdock, men armed with guns and bludgeons were presently setting out in groups of three and four, with dogs, to beat the roads and fields.

Mounted policemen rode along the country lanes, stopping at every cottage and warning the people to lock up their houses, and keep indoors unless they were armed, and all the elementary schools had broken up by three o'clock, and the children, scared and keeping together in groups, were hurrying home. Kemp's proclamation—signed indeed by Adye—was posted over almost the whole district by four or five o'clock in the afternoon. It gave briefly but clearly all the conditions of the struggle, the necessity of keeping the Invisible Man from food and sleep, the necessity for incessant watchfulness and for a prompt attention to any evidence of his movements. And so swift and decided was the action of the authorities, so prompt and universal was the belief in this strange being, that before nightfall an area of several hundred square miles was in a stringent state of siege. And before nightfall, too, a thrill of horror went through the whole watching nervous countryside. Going from whispering mouth to mouth, swift and certain over the length and breadth of the country, passed the story of the murder of Mr. Wicksteed.

If our supposition that the Invisible Man's refuge was the Hintondean thickets, then we must suppose that in the early afternoon he sallied out again bent upon some project that involved the use of a

weapon. We cannot know what the project was, but the evidence that he had the iron rod in hand before he met Wicksteed is to me at least overwhelming.

We can know nothing of the details of that encounter. It occurred on the edge of a gravel pit, not two hundred yards from Lord Burdock's lodge gate. Everything points to a desperate struggle, —the trampled ground, the numerous wounds Mr. Wicksteed received, his splintered walking-stick; but why the attack was made—save in a murderous frenzy—it is impossible to imagine. Indeed the theory of madness is almost unavoidable. Mr. Wicksteed was a man of forty-five or forty-six, steward to Lord Burdock, of inoffensive habits and appearance, the very last person in the world to provoke such a terrible antagonist. Against him it would seem the Invisible Man used an iron rod dragged from a broken piece of fence. He stopped this quiet man, going quietly home to his midday meal, attacked him, beat down his feeble defences, broke his arm, felled him, and smashed his head to a jelly.

He must have dragged this rod out of the fencing before he met his victim; he must have been carrying it ready in his hand. Only two details beyond what has already been stated seem to bear on the matter. One is the circumstance that the gravel pit was not in Mr. Wicksteed's direct path home, but nearly a couple of hundred yards out of his way. The other is the assertion of a little girl to the effect that, going to her afternoon school, she saw the murdered man "trotting" in a peculiar manner across a field towards the gravel pit. Her pantomime of his action suggests a man pursuing something on the ground before him and striking at it ever and again with his walking-stick. She was the last person to see him alive. He passed out of her sight to his death, the struggle being hidden from her only by a clump of beech trees and a slight depression in the ground.

Now this, to the present writer's mind at least, lifts the murder out of the realm of the absolutely wanton. We may imagine that Griffin had taken the rod as a weapon indeed, but without any

deliberate intention of using it in murder. Wicksteed may then have come by and noticed this rod inexplicably moving through the air. Without any thought of the Invisible Man—for Port Burdock is ten miles away—he may have pursued it. It is quite conceivable that he may not even have heard of the Invisible Man. One can then imagine the Invisible Man making off—quietly in order to avoid discovering his presence in the neighbourhood, and Wicksteed, excited and curious, pursuing this unaccountably locomotive object—finally striking at it.

No doubt the Invisible Man could easily have distanced his middleaged pursuer under ordinary circumstances, but the position in which Wicksteed's body was found suggests that he had the ill luck to drive his quarry into a corner between a drift of stinging nettles and the gravel pit. To those who appreciate the extraordinary irascibility of the Invisible Man, the rest of the encounter will be easy to imagine.

But this is pure hypothesis. The only undeniable facts—for stories of children are often unreliable—are the discovery of Wicksteed's body, done to death, and of the blood-stained iron rod flung among the nettles. The abandonment of the rod by Griffin, suggests that in the emotional excitement of the affair, the purpose for which he took it—if he had a purpose—was abandoned. He was certainly an intensely egotistical and unfeeling man, but the sight of his victim, his first victim, bloody and pitiful at his feet, may have released some long pent fountain of remorse to flood for a time may have flooded whatever scheme of action he had contrived.

After the murder of Mr. Wicksteed, he would seem to have struck across the country towards the downland. There is a story of a voice heard about sunset by a couple of men in a field near Fern Bottom. It was wailing and laughing, sobbing and groaning, and ever and again it shouted. It must have been queer hearing. It drove up across the middle of a clover field and died away towards the hills.

That afternoon the Invisible Man must have learnt something of the rapid use Kemp had made of his confidences. He must have found

houses locked and secured; he may have loitered about railway stations and prowled about inns, and no doubt he read the proclamations and realised something of the nature of the campaign against him. And as the evening advanced, the fields became dotted here and there with groups of three or four men, and noisy with the yelping of dogs. These men-hunters had particular instructions as to the way they should support one another in the case of an encounter. But he avoided them all. We may understand something of his exasperation, and it could have been none the less because he himself had supplied the information that was being used so remorselessly against him. For that day at least he lost heart; for nearly twenty-four hours, save when he turned on Wicksteed, he was a hunted man. In the night, he must have eaten and slept; for in the morning he was himself again, active, powerful, angry, and malignant, prepared for his last great struggle against the world.

Chapter 27

The Seige of Kemp's House

Kemp read a strange missive, written in pencil on a greasy sheet of paper.

"You have been amazingly energetic and clever," this letter ran, "though what you stand to gain by it I cannot imagine. You are against me. For a whole day you have chased me; you have tried to rob me of a night's rest. But I have had food in spite of you, I have slept in spite of you, and the game is only beginning. The game is only beginning. There is nothing for it, but to start the Terror. This announces the first day of the Terror. Port Burdock is no longer under the Queen, tell your Colonel of Police, and the rest of them; it is under me—the Terror! This is day one of year one of the new epoch—the Epoch of the Invisible Man. I am Invisible Man the First. To begin with the rule will be easy. The first day there will be one execution for the sake of example—a man named Kemp. Death starts for him today. He may lock himself away, hide himself away, get guards about him, put on armour if he likes; Death, the unseen Death, is coming. Let him take precautions; it will impress my people. Death starts from the pillar box by midday. The letter will fall in as the postman comes along, then off! The game begins. Death starts. Help him not, my people, lest Death fall upon you also. Today Kemp is to die."

Kemp read this letter twice, "It's no hoax," he said. "That's his voice! And he means it."

He turned the folded sheet over and saw on the addressed side of it the postmark Hintondean, and the prosaic detail "2d. to pay."

He got up, leaving his lunch unfinished—the letter had come by

the one o'clock post—and went into his study. He rang for his housekeeper, and told her to go round the house at once, examine all the fastenings of the windows, and close all the shutters. He closed the shutters of his study himself. From a locked drawer in his bedroom he took a little revolver, examined it carefully, and put it into the pocket of his lounge jacket. He wrote a number of brief notes, one to Colonel Adye, gave them to his servant to take, with explicit instructions as to her way of leaving the house. "There is no danger," he said, and added a mental reservation, "to you." He remained meditative for a space after doing this, and then returned to his cooling lunch.

He ate with gaps of thought. Finally he struck the table sharply. "We will have him!" he said; "and I am the bait. He will come too far."

He went up to the belvedere, carefully shutting every door after him. "It's a game," he said, "an odd game—but the chances are all for me, Mr. Griffin, in spite of your invisibility. Griffin contra mundum—with a vengeance."

He stood at the window staring at the hot hillside. "He must get food every day—and I don't envy him. Did he really sleep last night? Out in the open somewhere—secure from collisions. I wish we could get some good cold wet weather instead of the heat.

"He may be watching me now."

He went close to the window. Something rapped smartly against the brickwork over the frame, and made him start violently back.

"I'm getting nervous," said Kemp. But it was five minutes before he went to the window again. "It must have been a sparrow," he said.

Presently he heard the frontdoor bell ringing, and hurried downstairs. He unbolted and unlocked the door, examined the chain, put it up, and opened cautiously without showing himself. A familiar voice hailed him. It was Adye.

"Your servant's been assaulted, Kemp," he said round the door.

"What!" exclaimed Kemp.

"Had that note of yours taken away from her. He's close about here. Let me in."

Kemp released the chain, and Adye entered through as narrow an opening as possible. He stood in the hall, looking with infinite relief at Kemp refastening the door. "Note was snatched out of her hand. Scared her horribly. She's down at the station. Hysterics. He's close here. What was it about?"

Kemp swore.

"What a fool I was," said Kemp. "I might have known. It's not an hour's walk from Hintondean. Already!"

"What's up?" said Adye.

"Look here!" said Kemp, and led the way into his study. He handed Adye the Invisible Man's letter. Adye read it and whistled softly. "And you—?" said Adye.

"Proposed a trap—like a fool," said Kemp, "and sent my proposal out by a maid servant. To him."

Adye followed Kemp's profanity.

"He'll clear out," said Adye.

"Not he," said Kemp.

A resounding smash of glass came from upstairs. Adye had a silvery glimpse of a little revolver half out of Kemp's pocket. "It's a window, upstairs!" said Kemp, and led the way up. There came a second smash while they were still on the staircase. When they reached the study they found two of the three windows smashed, half the room littered with splintered glass, and one big flint lying on the writing table. The two men stopped in the doorway, contemplating the wreckage. Kemp swore again, and as he did so the third window went with a snap like a pistol, hung starred for a moment, and collapsed in jagged, shivering triangles into the room.

"What's this for?" said Adye.

"It's a beginning," said Kemp.

"There's no way of climbing up here?"

"Not for a cat," said Kemp.

"No shutters?"

"Not here. All the downstairs rooms—Hullo!"

Smash, and then whack of boards hit hard came from downstairs. "Confound him!" said Kemp. "That must be—yes—it's one of the bedrooms. He's going to do all the house. But he's a fool. The shutters are up, and the glass will fall outside. He'll cut his feet."

Another window proclaimed its destruction. The two men stood on the landing perplexed. "I have it!" said Adye. "Let me have a stick or something, and I'll go down to the station and get the bloodhounds put on. That ought to settle him! They're hard by—not ten minutes—"

Another window went the way of its fellows.

"You haven't a revolver?" asked Adye.

Kemp's hand went to his pocket. Then he hesitated. "I haven't one—at least to spare."

"I'll bring it back," said Adye, "you'll be safe here."

Kemp, ashamed of his momentary lapse from truthfulness, handed him the weapon.

"Now for the door," said Adye.

As they stood hesitating in the hall, they heard one of the first-floor bedroom windows crack and clash. Kemp went to the door and began to slip the bolts as silently as possible. His face was a little paler than usual. "You must step straight out," said Kemp. In another moment Adye was on the doorstep and the bolts were dropping back into the staples. He hesitated for a moment, feeling more comfortable with his back against the door. Then he marched, upright and square, down the steps. He crossed the lawn and approached the gate. A little breeze seemed to ripple over the grass. Something moved near him. "Stop a bit," said a Voice, and Adye stopped dead and his hand tightened on the revolver.

"Well?" said Adye, white and grim, and every nerve tense.

"Oblige me by going back to the house," said the Voice, as tense and grim as Adye's.

"Sorry," said Adye a little hoarsely, and moistened his lips with his tongue. The Voice was on his left front, he thought. Suppose he were to take his luck with a shot?

"What are you going for?" said the Voice, and there was a quick movement of the two, and a flash of sunlight from the open lip of Adye's pocket.

Adye desisted and thought. "Where I go," he said slowly, "is my own business." The words were still on his lips, when an arm came round his neck, his back felt a knee, and he was sprawling backward. He drew clumsily and fired absurdly, and in another moment he was struck in the mouth and the revolver wrested from his grip. He made a vain clutch at a slippery limb, tried to struggle up and fell back. "Damn!" said Adye. The Voice laughed. "I'd kill you now, if it wasn't the waste of a bullet," it said. He saw the revolver in midair, six feet off, covering him.

"Well?" said Adye, sitting up.

"Get up," said the Voice.

Adye stood up.

"Attention," said the Voice, and then fiercely, "Don't try any games. Remember I can see your face if you can't see mine. You've got to go back to the house."

"He won't let me in," said Adye.

"That's a pity," said the Invisible Man. "I've got no quarrel with you."

Adye moistened his lips again. He glanced away from the barrel of the revolver and saw the sea far off very blue and dark under the midday sun, the smooth green down, the white cliff of the Head, and the multitudinous town, and suddenly he knew that life was very sweet. His eyes came back to this little metal thing hanging between heaven and earth, six yards away. "What am I to do?" he said sullenly.

"What am I to do?" asked the Invisible Man. "You will get help. The only thing is for you to go back."

"I will try. If he lets me in will you promise not to rush the door?"

"I've got no quarrel with you," said the Voice.

Kemp had hurried upstairs after letting Adye out, and now crouching among the broken glass and peering cautiously over the

edge of the study window sill, he saw Adye stand parleying with the Unseen. "Why doesn't he fire?" whispered Kemp to himself. Then the revolver moved a little and the glint of the sunlight flashed in Kemp's eyes. He shaded his eyes and tried to see the source of the blinding beam.

"Surely!" he said, "Adye has given up the revolver."

"Promise not to rush the door," Adye was saying. "Don't push a winning game too far. Give a man a chance."

"You go back to the house. I tell you flatly I will not promise anything."

Adye's decision seemed suddenly made. He turned towards the house, walking slowly with his hands behind him. Kemp watched him—puzzled. The revolver vanished, flashed again into sight, vanished again, and became evident on a closer scrutiny as a little dark object following Adye. Then things happened very quickly. Adye leapt backwards, swung around, clutched at this little object, missed it, threw up his hands and fell forward on his face, leaving a little puff of blue in the air. Kemp did not hear the sound of the shot. Adye writhed, raised himself on one arm, fell forward, and lay still.

For a space Kemp remained staring at the quiet carelessness of Adye's attitude. The afternoon was very hot and still, nothing seemed stirring in all the world save a couple of yellow butterflies chasing each other through the shrubbery between the house and the road gate. Adye lay on the lawn near the gate. The blinds of all the villas down the hillroad were drawn, but in one little green summer-house was a white figure, apparently an old man asleep. Kemp scrutinised the surroundings of the house for a glimpse of the revolver, but it had vanished. His eyes came back to Adye. The game was opening well.

Then came a ringing and knocking at the front door, that grew at last tumultuous, but pursuant to Kemp's instructions the servants had locked themselves into their rooms. This was followed by a silence. Kemp sat listening and then began peering cautiously out of the three windows, one after another. He went to the staircase head and stood

listening uneasily. He armed himself with his bedroom poker, and went to examine the interior fastenings of the groundfloor windows again. Everything was safe and quiet. He returned to the belvedere. Adey lay motionless over the edge of the gravel just as he had fallen. Coming along the road by the villas were the housemaid and two policemen.

Everything was deadly still. The three people seemed very slow in approaching. He wondered what his antagonist was doing.

He started. There was a smash from below. He hesitated and went downstairs again. Suddenly the house resounded with heavy blows and the splintering of wood. He heard a smash and the destructive clang of the iron fastenings of the shutters. He turned the key and opened the kitchen door. As he did so, the shutters, split and splintering, came flying inward. He stood aghast. The window frame, save for one crossbar, was still intact, but only little teeth of glass remained in the frame. The shutters had been driven in with an axe, and now the axe was descending in sweeping blows upon the window frame and the iron bars defending it. Then suddenly it leapt aside and vanished. He saw the revolver lying on the path outside, and then the little weapon sprang into the air. He dodged back. The revolver cracked just too late, and a splinter from the edge of the closing door flashed over his head. He slammed and locked the door, and as he stood outside he heard Griffin shouting and laughing. Then the blows of the axe, with their splitting and smashing accompaniments, were resumed.

Kemp stood in the passage trying to think. In a moment the Invisible Man would be in the kitchen. This door would not keep him a moment, and then—A ringing came at the front door again. It would be the policemen. He ran into the hall, put up the chain, and drew the bolts. He made the girl speak before he dropped the chain, and the three people blundered into the house in a heap, and Kemp slammed the door again.

"The Invisible Man!" said Kemp. "He has a revolver, with two

shots—left. He's killed Adye. Shot him anyhow. Didn't you see him on the lawn? He's lying there."

"Who?" said one of the policemen.

"Adye," said Kemp.

"We came round the back way," said the girl.

"What's that smashing?" asked one of the policemen.

"He's in the kitchen—or will be. He has found an axe—"

Suddenly the house was full of the Invisible Man's resounding blows on the kitchen door. The girl stared towards the kitchen, shuddered, and retreated into the dining-room. Kemp tried to explain in broken sentences. They heard the kitchen door give.

"This way," cried Kemp, starting into activity, and bundled the policemen into the dining-room doorway.

"Poker," said Kemp, and rushed to the fender. He suddenly flung himself backward.

"Whup!" said one policeman, ducked, and caught the axe on his poker. The pistol snapped its penultimate shot and ripped a valuable Sidney Cooper. The second policeman brought his poker down on the little weapon, as one might knock down a wasp, and sent it rattling to the floor.

At the first clash the girl screamed, stood screaming for a moment by the fireplace, and then ran to open the shutters—possibly with an idea of escaping by the shattered window.

The axe receded into the passage, and fell to a position about two feet from the ground. They could hear the Invisible Man breathing. "Stand away, you two," he said. "I want that man Kemp."

"We want you," said the first policeman, making a quick step forward and wiping with his poker at the Voice. The Invisible Man must have started back. He blundered into the umbrella stand. Then, as the policeman staggered with the swing of the blow he had aimed, the Invisible Man countered with the axe, the helmet crumpled like paper, and the blow sent the man spinning to the floor at the head of the kitchen stairs. But the second policeman, aiming behind the axe

with his poker, hit something soft that snapped. There was a sharp exclamation of pain and the axe fell to the ground. The policeman wiped again at vacancy and hit nothing; he put his foot on the axe, and struck again. Then he stood, poker clubbed, listening intent for the slightest movement.

He heard the dining-room window open, and a quick rush of feet within. His companion rolled over and sat up, with the blood running down between his eye and ear. "Where is he?" asked the man on the floor.

"Don't know. I've hit him. He's standing somewhere in the hall. Unless he's slipped past you. Doctor Kemp—sir."

Pause.

"Doctor Kemp," cried the policeman again.

The second policeman struggled to his feet. He stood up. Suddenly the faint pad of bare feet on the kitchen stairs could be heard. "Yap!" cried the first policeman, and incontinently flung his poker. It smashed a little gas bracket.

He made as if he would pursue the Invisible Man downstairs. Then he thought better of it and stepped into the dining-room.

"Doctor Kemp," he began, and stopped short.

"Doctor Kemp's in here," he said, as his companion looked over his shoulder.

The dining-room window was wide open, and neither housemaid nor Kemp was to be seen.

The second policeman's opinion of Kemp was terse and vivid.

Chapter 28

The Hunter Hunted

Mr. Heelas, Mr. Kemp's nearest neighbour among the villa holders, was asleep in his summer house when the siege of Kemp's house began. Mr. Heelas was one of the sturdy minority who refused to believe "in all this nonsense" about an Invisible Man. His wife, however, as he was to be reminded subsequently, did. He insisted upon walking about his garden just as if nothing was the matter, and he went to sleep in the afternoon in accordance with the custom of years. He slept through the smashing of the windows, and then woke up suddenly with a curious persuasion of something wrong. He looked across at Kemp's house, rubbed his eyes and looked again. Then he put his feet to the ground, and sat listening. He said he was damned, and still the strange thing was visible. The house looked as though it had been deserted for weeks—after a violent riot. Every window was broken, and every window, save those of the belvedere study, was blinded by the internal shutters.

"I could have sworn it was all right" —he looked at his watch—"twenty minutes ago."

He became aware of a measured concussion and the clash of glass, far away in the distance. And then, as he sat open-mouthed, came a still more wonderful thing. The shutters of the drawing-room window were flung open violently, and the housemaid in her outdoor hat and garments, appeared struggling in a frantic manner to throw up the sash. Suddenly a man appeared beside her, helping her—Dr. Kemp! In another moment the window was open, and the housemaid was struggling out; she pitched forward and vanished among the

shrubs. Mr. Heelas stood up, exclaiming vaguely and vehemently at all these wonderful things. He saw Kemp stand on the sill, spring from the window, and reappear almost instantaneously running along a path in the shrubbery and stooping as he ran, like a man who evades observation. He vanished behind a laburnum, and appeared again clambering a fence that abutted on the open down. In a second he had tumbled over and was running at a tremendous pace down the slope towards Mr. Heelas.

"Lord!" cried Mr. Heelas, struck with an idea; "it's that Invisible Man brute! It's right, after all!"

With Mr. Heelas to think things like that was to act, and his cook watching him from the top window was amazed to see him come pelting towards the house at a good nine miles an hour. "Thought he wasn't afraid," said the cook. "Mary just come here!" There was a slamming of doors, a ringing of bells, and the voice of Mr. Heelas bellowing like a bull. "Shut the doors, shut the windows, shut everything! The Invisible Man is coming!" Instantly the house was full of screams and directions, and scurrying feet. He ran to shut the French windows himself that opened on the veranda; as he did so Kemp's head and shoulders and knee appeared over the edge of the garden fence. In another moment Kemp had ploughed through the asparagus, and was running across the tennis lawn to the house.

"You can't come in," said Mr. Heelas, shutting the bolts. "I'm very sorry if he's after you, but you can't come in!"

Kemp appeared with a face of terror close to the glass, rapping and then shaking frantically at the French window. Then, seeing his efforts were useless, he ran along the veranda, vaulted the end, and went to hammer at the side door. Then he ran round by the side gate to the front of the house, and so into the hillroad. And Mr. Heelas staring from his window—a face of horror—had scarcely witnessed Kemp vanish, ere the asparagus was being trampled this way and that by feet unseen. At that Mr. Heelas fled precipitately upstairs, and the rest of the chase is beyond his purview. But as he passed the staircase

window, he heard the side gate slam.

Emerging into the hillroad, Kemp naturally took the downward direction, and so it was he came to run in his own person the very race he had watched with such a critical eye from the belvedere study only four days ago. He ran it well, for a man out of training; and though his face was white and wet, his wits were cool to the last. He ran with wide strides, and wherever a patch of rough ground intervened, wherever there came a patch of raw flints, or a bit of broken glass shone dazzling, he crossed it and left the bare invisible feet that followed to take what line they would.

For the first time in his life Kemp discovered that the hillroad was indescribably vast and desolate, and that the beginnings of the town far below at the hill foot were strangely remote. Never had there been a slower or more painful method of progression than running. All the gaunt villas, sleeping in the afternoon sun, looked locked and barred; no doubt they were locked and barred—by his own orders. But at any rate they might have kept a lookout for an eventuality like this! The town was rising up now, the sea had dropped out of sight behind it, and people down below were stirring. A tram was just arriving at the hill foot. Beyond that was the police station. Was that footsteps he heard behind him? Spurt.

The people below were staring at him, one or two were running, and his breath was beginning to saw in his throat. The tram was quite near now, and the Jolly Cricketers was noisily barring its doors. Beyond the tram were posts and heaps of gravel—the drainage works. He had a transitory idea of jumping into the tram and slamming the doors, and then he resolved to go for the police station. In another moment he had passed the door of the "Jolly Cricketers," and was in the blistering fag end of the street, with human beings about him. The tram driver and his helper—arrested by the sight of his furious haste—stood staring with the tram horses unhitched. Further on the astonished features of navvies appeared above the mounds of gravel.

His pace broke a little, and then he heard the swift pad of his

pursuer, and leapt forward again. "The Invisible Man!" he cried to the navvies, with a vague indicative gesture, and by an inspiration leapt the excavation and placed a burly group between him and the chase. Then abandoning the idea of the police station he turned into a little side street, rushed by a greengrocer's cart, hesitated for the tenth of a second at the door of a sweetstuff shop, and then made for the mouth of an alley that ran back into the main Hill Street again. Two or three little children were playing here, and shrieked and scattered running at his apparition, and forthwith doors and windows opened and excited mothers revealed their hearts. Out he shot into Hill Street again, three hundred yards from the tramline end, and immediately he became aware of a tumultuous vociferation and running people.

He glanced up the street towards the hill. Hardly a dozen yards off ran a huge navvy, cursing in fragments and slashing viciously with a spade, and hard behind him came the tram conductor with his fists clenched. Up the street others followed these two, striking and shouting. Down towards the town, men and women were running, and he noticed clearly one man coming out of a shopdoor with a stick in his hand. "Spread out! Spread out!" cried someone. Kemp suddenly grasped the altered condition of the chase. He stopped, and looked round, panting. "He's close here!" he cried. "Form a line across—"

"Aha!" shouted a voile.

He was hit hard under the ear, and went reeling, trying to face round towards his unseen antagonist. He just managed to keep his feet, and he struck a vain counter in the air. Then he was hit again under the jaw, and sprawled headlong on the ground. In another moment a knee compressed his diaphragm, and a couple of eager hands gripped his throat, but the grip of one was weaker than the other; he grasped the wrists, heard a cry of pain from his assailant, and then the spade of the navvy came whirling through the air above him, and struck something with a dull thud. He felt a drop of moisture on his face. The grip at his throat suddenly relaxed, and with a convulsive effort, Kemp loosed himself, grasped a limp shoulder, and

rolled uppermost. He gripped the unseen elbows near the ground. "I've got him!" screamed Kemp. "Help! Help! Hold! He's down! Hold his feet!"

In another second there was a simultaneous rush upon the struggle, and a stranger coming into the road suddenly might have thought an exceptionally savage game of Rugby football was in progress. And there was no shouting after Kemp's cry—only a sound of blows and feet and heavy breathing.

Then came a mighty effort, and the Invisible Man threw off a couple of his antagonists and rose to his knees. Kemp clung to him in front like a hound to a stag, and a dozen hands gripped, clutched, and tore at the Unseen. The tram conductor suddenly got the neck and shoulders and lugged him back.

Down went the heap of struggling men again and rolled over. There was, I am afraid, some savage kicking. Then suddenly a wild scream of "Mercy! Mercy!" that died down swiftly to a sound like choking.

"Get back, you fools!" cried the muffled voice of Kemp, and there was a vigorous shoving back of stalwart forms. "He's hurt, I tell you. Stand back!"

There was a brief struggle to clear a space, and then the circle of eager faces saw the doctor kneeling, as it seemed, fifteen inches in the air, and holding invisible arms to the ground. Behind him a constable gripped invisible ankles.

"Don't you leave go of en," cried the big navvy, holding a bloodstained spade; "he's shamming."

"He's not shamming," said the doctor, cautiously raising his knee; "and I'll hold him." His face was bruised and already going red; he spoke thickly because of a bleeding lip. He released one hand and seemed to be feeling at the face. "The mouth's all wet," he said. And then, "Good God!"

He stood up abruptly and then knelt down on the ground by the side of the thing unseen. There was a pushing and shuffling, a sound

of heavy feet as fresh people turned up to increase the pressure of the crowd. People now were coming out of the houses. The doors of the Jolly Cricketers stood suddenly wide open. Very little was said.

Kemp felt about, his hand seeming to pass through empty air. "He's not breathing," he said, and then, "I can't feel his heart. His side—ugh!"

Suddenly an old woman, peering under the arm of the big navvy, screamed sharply. "Looky there!" she said, and thrust out a wrinkled finger.

And looking where she pointed, everyone saw, faint and transparent as though it was made of glass, so that veins and arteries and bones and nerves could be distinguished, the outline of a hand, a hand limp and prone. It grew clouded and opaque even as they stared.

"Hullo!" cried the constable. "Here's his feet ashowing!"

And so, slowly, beginning at his hands and feet and creeping along his limbs to the vital centres of his body, that strange change continued. It was like the slow spreading of a poison. First came the little white nerves, a hazy grey sketch of a limb, then the glassy bones and intricate arteries, then the flesh and skin, first a faint fogginess, and then growing rapidly dense and opaque. Presently they could see his crushed chest and his shoulders, and the dim outline of his drawn and battered features.

When at last the crowd made way for Kemp to stand erect, there lay, naked and pitiful on the ground, the bruised and broken body of a young man about thirty. His hair and beard were white—not grey with age, but white with the whiteness of albinism, and his eyes were like garnets. His hands were clenched, his eyes wide open, and his expression was one of anger and dismay.

"Cover his face!" said a man. "For Gawd's sake, cover that face!" and three little children, pushing forward through the crowd, were suddenly twisted round and sent packing off again.

Someone brought a sheet from the Jolly Cricketers: and having covered him, they carried him into that house.

Chapter 29

The Epilogue

So ends the story of the strange and evil experiments of the Invisible Man. And if you would learn more of him you must go to a little inn near Port Stowe and talk to the landlord. The sign of the inn is an empty board save for a hat and boots, and the name is the title of this story. The landlord is a short and corpulent little man with a nose of cylindrical protursion, wiry hair, and a sporadic rosiness of visage. Drink generously, and he will tell you generously of all the things that happened to him after that time, and of how the lawyers tried to do him out of the treasure found upon him.

"When they found they couldn't prove who's money was which, I'm blessed," he says, "if they didn't try to make me out a blooming treasure trove! Do I look like a Treasure Trove? And then a gentleman gave me a guinea a night to tell the story at the Empire Music 'all—just to tell 'em in my own words—barring one."

And if you want to cut off the flow of his reminiscences abruptly, you can always do so by asking if there weren't three manuscript books in the story. He admits there were and proceeds to explain, with asseverations that everybody thinks he has 'em! But bless you! he hasn't. "The Invisible Man it was took 'em off to hide 'em when I cut and ran for Port Stowe. It's that Mr. Kemp put people on with the idea of my having 'em."

And then he subsides into a pensive state, watches you furtively, bustles nervously with glasses, and presently leaves the bar.

He is a bachelor man—his tastes were ever bachelor, and there are no women folk in the house. Outwardly he buttons—it is expected

of him—but in his more vital privacies, in the matter of braces for example, he still turns to string. He conducts his house without enterprise, but with eminent decorum. His movements are slow, and he is a great thinker. But he has a reputation for wisdom and for a respectable parsimony in the village, and his knowledge of the roads of the South of England would beat Cobbett.

And on Sunday mornings, every Sunday morning, all the year round, while he is closed to the outer world, and every night after ten, he goes into his bar parlour, bearing a glass of gin faintly tinged with water, and having placed this down, he locks the door and examines the blinds, and even looks under the table. And then, being satisfied of his solitude, he unlocks the cupboard and a box in the cupboard and a drawer in that box, and produces three volumes bound in brown leather, and places them solemnly in the middle of the table. The covers are weatherworn and tinged with an algal green—for once they sojourned in a ditch and some of the pages have been washed blank by dirty water. The landlord sits down in an armchair, fills a long clay pipe slowly, gloating over the books the while. Then he pulls one towards him and opens it, and begins to study it—turning over the leaves backwards and forwards.

His brows are knit and his lips move painfully. "Hex, little two up in the air, cross and a fiddle-de-dee. Lord! what a one he was for intellect!"

Presently he relaxes and leans back, and blinks through his smoke across the room at things invisible to other eyes. "Full of secrets," he says. "Wonderful secrets!"

"Once I get the haul of them—Lord!"

"I wouldn't do what he did; I'd just—well!" He pulls at his pipe.

So he lapses into a dream, the undying wonderful dream of his life. And though Kemp has fished unceasingly, and Adye has questioned closely no human being save the landlord knows those books are there, with the subtle secret of invisibility and a dozen other strange secrets written therein. And none other will know of them

until he dies.
